the second-rate, it has as often meant seeing things in their true proportions: and it is this which one looks for in the case of *Jacob Jordaens*, whose turn it is today. If the curator of the Plantin-Moretus Museum in Antwerp brings this "most Antwerpian of seventeenth century Antwerp painters" into a sort of fellowship with Rubens and Van Dyck, it is only fair to the biographer and critic to note that he does so with the same misgivings which his reader feels—for while Rubens was a colorist beyond compare, and Van Dyck a kind of poet-painter, Jordaens was always the most burgherly of burghers—in his work as in his life at Antwerp. Yet it is precisely as the interpreter of his time and class that this arch-realist must attain his highest fame: and not as burgher-painter alone—appreciative of the Fleming love for beer and skittles; of the inspiration that lurks in fish-markets and animal-life and a frank materialism—but also as one who stood outside the all-pervasive Italian influence and even, during the greater part of his career, largely independent of Rubens himself. Rooses's account of Jordaens lacks something of what one may, for lack of a juster term, call *composition*; yet one would scarcely know whither to turn for a better-qualified interpreter of his life and art than the present author—whose study of Rubens is known to all. The running commentary on the representative product of this painter of bourgeois portraits, peasant groups, and banqueters (one must here pass over his ecclesiastical subjects—almost always perfunctory and sometimes even artificial—as, too, his excursions into the mythology; and his contributions in tapestries, etching and watercolors), is supplemented by the biographical narrative, a complete list of Jordaens's works, and a well-made index. But one lingers longest over the illustrations of which the volume is the rich treasury—140 of them in text, and 32 as full-page photogravures. The fact that Jordaens was frankly repetitious will not disturb the reader of this volume; in the study of the various treatments given to a single theme by this somewhat commercial yet always interested artist, lies one of the most abiding charms of the text and its illustrations. Max Rooses has provided here a letter-press

admirable for its measured enthusiasm and unfailing sanity in treating a subject worthy of just this quality of consideration.

Highways and Byways in Surrey. By Eric Parker. With illustrations by Hugh Thomson. Pp. xix, 452. New York: The Macmillan Company. \$2.00.

After the numerous volumes of motor travel in England, whose authors carry one with a rush from north to south, from east to west, of the little island, until one holds one's breath with fear lest the next plunge should be over the edge into the sea, Mr. Parker's *Highways and Byways in Surrey* comes as a real relief. There is no hurry in Mr. Parker's pages. He has plenty of time to walk, to saunter, even to get lost in the lanes and byways. A little scorn of the motor car and the bicycle peeps out here and there in his pages—the feeling of the man to whom Nature really belongs, the man who loves and cherishes all her beauties, for the people who condescend now and again to leave the cities for a hasty glance at her. Battles and general elections, treason and poetry, literature and fishing, there is scarcely a note in English life which is not struck by Mr. Parker in his entertaining pages. Surrey is but a small county, and except for its share of London's suburbs, it does not contain even a second-sized city. But being so near to London, and, moreover, as a thoroughfare to the English Channel, it has shared in almost every movement of importance since Julius Cæsar landed on Albion's shores. Nevertheless and with all its nearness to the great metropolis, no county in England has preserved more of the Old World color and feeling in its towns and villages than Surrey, and in spite of blatantly new "improvements" in both public and private buildings, the Old World streets, the quaint low-roofed houses with crumpled lichened tiles, the elaborate carved and painted doorways, knockers, lunettes and steps are still in evidence in almost every town and village in the county. It will be a rarely fortunate reader of Mr. Parker's pages who can hope to follow his example. Where is the man or woman who is so abundantly endowed with health and leisure as to be able to make some forty excursions on foot in one single county of England?

But even those who cannot hope to emulate Mr. Parker may learn their England better from his pages—and that tho he describes but one county—than from twenty more pretentious treatises.

Literary Notes

....*Our Colonial Curriculum, 1607-1776.* (Central Pub. Co., Washington, \$2.) In this book of 300 pages the author, Dr. Colyer Meriwether, after very wide research, has aimed to describe not only the courses and subjects of study in all grades of education then, but to show what was actually attempted in the school room, and what was accomplished. This is a useful reference work for any educational library, as it is the only book covering this field.

....The demand for Socialist books would seem to be increasing. The Charles H. Kerr Company, of Chicago, the principal publishing house in this line, continues to pour forth a stream of volumes upon the various phases of "orthodox" Socialism. Of more recent works, not before mentioned in these columns, these original productions are to be noted: *The Rise of the American Proletarian*, by Austin Lewis; *Evolution, Social and Organic*, and *Ten Blind Leaders of the Blind*, by Arthur M. Lewis; *The Russian Bastille*, by Simon O. Pollock; *The Theoretical System of Karl Marx*, by L. B. Boudin; *The Common Sense of Socialism*, by John Spargo; *Marxian Economics*, by Ernest Untermann, and *The Republic*, by N. P. Andresen. Both Mr. Boudin's and Mr. Untermann's books have to do with Marxism, pure and simple. The former is controversial, the latter is expository. Both will be found exceedingly valuable by students of Socialistic economics. Mr. Spargo's book has achieved an immediate popularity as a simple exposition of the elements of Socialism. Austin Lewis's book gives an excellent account of the genesis and development of the working class in the United States. Arthur M. Lewis's first book is a popular treatment of physical and social science, and his second a criticism of the utterances of certain anti-Socialists. Mr. Pollock gives a graphic account of the persecutions of political prisoners in Russia who were incarcerated in the Schlüsselberg Fortress. Mr. Andresen discusses in dialogue form many of the social problems of the day, and concludes with an argument for the cooperative commonwealth. Of the translations published the most important is the second volume of Marx's *Capital*. This work has not before appeared in English, tho it was published in German in 1893, ten years after Marx's death. The translation is by Ernest Untermann. Engels's "Anti-Duehring," *Man in mind, the true commonwealth of Scientific Socialism*, also appears for the first time in English. It is translated and edited by Austin Lewis. Winifred H. Baylford translates Paul Lafargue's *Changes in the Theory and Tactics of the French Social Democracy*. George Plechanoff's excellent little work, *Anarchism and Socialism*, translated some years

ago by Mrs. Aveling, is republished with an introduction by Robert Rives La Monte. Marx's *Value, Price and Profit*, and *Revolution and Counter-Revolution*, also translated by Mrs. Aveling, are republished, and Paul Lafargue's *The Right to Be Lazy and Other Studies*, translated by Charles H. Kerr, appears for the first time in English. All of these books are published at popular prices. About half of them are priced at 50 cents each, the remainder at \$1.00 (excepting the Marx volume, which is \$2.00).

Pebbles

AN editor of a Western exchange recently began worrying about how he would get his shirt on over his wings after reaching paradise. An envious contemporary sarcastically observed that his difficulty would likely be in finding out how he could get his hat on over his horns.—*The Gayman (Kan.) Herald*.

THE MAN—I'd give anything if you would kiss me.

The Maid—But the scientists say that kisses breed disease.

The Man—Oh, that's all right. Go ahead and make me an invalid for life.—*Chicago Notes*.

A YOUNG man went to see his sweetheart, and it began to rain. She asked him to stay all night. While she was getting his room ready he went out. Half an hour later he came in dripping wet and all out of breath. She asked him where he had been. "I just ran home for my nightshirt," he replied.—*Success*.

A MATHEMATICAL professor had been invited by a city friend to visit him at his residence in a certain square and had promised to do so. Meeting him some time afterward, the friend inquired of the professor why he did not come to see him.

"I did come," said the mathematician, "but there was some mistake. You told me that you lived in a square and I found myself in a parallelogram, so I went away again."—*Woman's Home Companion*.

OBSERVING a passenger with the unlighted butt of a cigar in his fingers, the street car conductor requested him to put it out.

"It is out, you chump," responded the passenger.

"Pardon me," resumed the conductor, "if I have failed to make myself clear. The condition to which I had reference was not one of mere temporary non-combustion, but of elimination, the eradication, I might say, of the physical presence of your nicotine-laden remnant, this process followed necessarily by cessation of the odor now permeating an atmosphere already somewhat deficient, I fear, in the essential element of ozone. I'm an humble conductor, and my aim is to please, but, you big porcine stiff, you throw that cigar thru the door, or I'll throw you and it both. See?"

"Excuse me, professor," replied the passenger meekly, and the incident was closed.—*Philadelphia Public Ledger*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.
One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The President's Inaugural

It must be remembered that this is not a Message to Congress, but an Address to the People. President Taft wishes the people to understand what his attitude is to public affairs, and he will later make definite recommendations to Congress.

He has said many times before what he now repeats about tariff revision. Only one thing he adds, and that is significant—that "in the making of a tariff bill the main purpose is taxation, and the securing thereby of a revenue." That sounds almost like a Democratic heresy. We are used to the cry of "Tariff for revenue only," but from the other political side. To be sure, Mr. Taft does not say "only"; he said "mainly"; and to be sure he proposes such duties as will balance the cheaper cost of production abroad; but the emphasis is changed. It is not chiefly protection, but revenue, and that is well. The Republican party has been tied long enough to that burden of the protective doctrine. It was no part of the original Republican party's platform, and it was added when, after the War, it was necessary to find all excuses for heavy taxation. Perhaps now

we may look for relief and for more scientific principles in taxation, and the Republican party may get back to Republican principles of reform.

Of course, President Taft says what he had often said, and could in duty only say again, on the special reforms which will for all time make the last administration notable. But while that administration was in a way revolutionary, this will be administrative. It will perfect methods and processes which Mr. Roosevelt inaugurated. Now, to enforce those reforms Mr. Taft says will be a principal object before him. Much has been accomplished. Railroad abuses and corporate lawlessness have been largely corrected, but there are restrictions of the anti-trust law that need to be relieved, and the President will propose such legislation next December; but now he would have Congress in this extraordinary session give itself wholly to tariff revision.

An extremely important matter which the President calls attention to is the protection of aliens from injustice and violence. At last may we not hope that Congress, besought by two Presidents to put the protection of aliens under Federal courts, will do its duty. It is a disgrace to the country that when by treaty and by international law we are under obligation to protect citizens of other countries living with us, we are not able to do it as a nation, but leave their protection to the States in which they happen to be. It is humiliating to have to tell Japan or Italy, when one of its citizens is murdered, that the United States did not have an arm long and strong enough to protect him, because, forsooth, Congress had not taken pains to take up the matter, but had left their protection to local prejudice. We have had again and again to pay damages for such injury, while we could not punish those that did it. We need such a law to maintain friendly relations with other nations.

Mr. Taft defends a strong navy, ample to protect our interests. We appreciate the argument that the best way to protect ourselves is to be abundantly able to protect ourselves, but we have not believed that there is any such need of protection as has been proclaimed by

the navy men. Mr. Taft suggests quite another danger than that from Japan or Germany. He says that in the East there may arise complications as to the open door, and that if we wish to have our voice heard we must be able to enforce our position. That means that in Manchuria Russia may shut the door, and we should be able to insist that it be kept open, and back up what we say. That is to be considered. It means, of course, that there is fear that Russia, if Russia be in mind, would not consent to refer the difficulty between us to The Hague. We do not believe Russia would dare refuse.

The President speaks with wisdom on various other subjects, such as the Panama Canal, the government of the Philippines, economy of appropriations, postal savings banks and mail subsidies; but we will comment on but one other subject presented—the negro question. He expresses himself as quite devoid of race prejudice. He would give men equal treatment, with no regard to color. He calls on the people of the South to administer the laws as to suffrage with strict impartiality, shutting out white and black illiterates with absolute impartiality. But that is impossible, because of the “grandfather” clauses, under which pretty much any illiterate white man can vote, because his father or grandfather was in the Confederate army, while the negro slaves were not in the army. But if the registrars will admit to the polls negroes who can read as freely as they do whites, that will be fairly satisfactory, and that is only elemental justice, which any one ought to approve. There is more question as to his announcement that, in the best interests of the negroes themselves, he does not think it best to put negroes in office in districts where their appointment will occasion friction. But that rule would shut out negroes entirely from appointive office in States in which there are more than half, or nearly half, the population. That is not a square deal, and doubtless Mr. Taft sees it; but he believes that a square deal will do more hurt than good. Perhaps so—we are not certain; but this we know, that it is a disgrace to any class of citizens, white or black, who will insist selfishly

on keeping all the offices for themselves and exclude another class. Luckily for the humbler offices the civil service will give equal chance to all, and it is their own fault if any race does not get its share. We trust that if President Taft accepts the general exclusion of negroes from appointive offices in certain States, he will to some extent balance the wrong elsewhere. We believe he is at heart the best friend the negro has had since Lincoln. He believes a man's a man for all the tint of his skin or the kink of his hair.

A word for the general tone of this address to the people. It is different from one of Mr. Roosevelt's even when he proclaims the same policy. Mr. Taft's tone is that of the bench, not that of the platform or pulpit. President Roosevelt was at heart a preacher, an exhorter, and a very good one, too. He did not spare emphasis. We thank him for this his attitude, for it did good. We shall now hear a milder rhetoric, only the cool, dispassionate decision of a judge—of what is wise more frequently than of what is right. We do not mean that Mr. Taft has a less keen conscience than Mr. Roosevelt, but he says less about duty and justice and the basal ethics of which we usually hear too little. Mr. Roosevelt was the eager prophet of reforms; Mr. Taft will be the judicial voice of law; both needed—Roosevelt then, Taft now.

The Cabinet

WITH the President goes his Cabinet; but of Mr. Roosevelt's Cabinet two remain. Secretary Wilson will still preside over the Department of Agriculture. For twelve years he has held the office, its first occupant, and serves under his third President, and if, now seventy-two years old, he shall live thru this year, he will have surpast the record of Albert Gallatin, who was Secretary of the Treasury for twelve years and nearly nine months. It seems to be held that the Department of Agriculture is not political, and, further, that Secretary Wilson has been a most capable official.

The other hold-over is Secretary Meyer, but he is transferred from the Post Office to the Navy. He and Mr.

Wilson are the only two members of the Cabinet who are not lawyers, Mr. Wilson a farmer, and Mr. Meyer a merchant. To be sure, Mr. MacVeagh is a merchant—or was till the other day, but he was a lawyer first. Mr. Meyer has had large experience in business, in politics, and in diplomatic service, and ought to be a useful adviser.

The Secretary of State is Premier of the Cabinet, and in case of the death of the President and Vice-President would succeed to the Presidency. An abler man for the place could hardly be chosen than is Mr. Knox. He is a lawyer of supreme ability, like his predecessor, Senator Root, and has previously had Cabinet experience. It makes comparatively little difference who are at the head of other departments, but it may affect the whole history of the world who is Secretary of State. His action will maintain peace or create war. He has charge of all our foreign relations, and very serious they may be. The President in his Address calls attention to the question of the open door of trade in the East, and intimates that its closing may lead to war. He also refers to the obligation of our country to protect American citizens, native or naturalized, when visiting abroad; and he further calls attention to the international difficulty which may arise if we do not, in our turn, properly protect citizens of other countries living with us. These are all matters with which the Department of State has to do, and they require the highest ability and experience. Perhaps no man has in larger measure these qualities, with which to continue the good service of John Hay and Elihu Root. Fortunately President Taft also has these qualities in supreme degree, so that we may be assured that our country will be admirably served in its foreign relations. We may hope that the men chosen as Ambassadors and Ministers to other countries will be such as will fill and not merely occupy their positions.

The new Secretary of the Interior is Mr. Ballinger, of Oregon, the Attorney-General is Mr. Wickersham, of New York, and the Secretary of Commerce is Mr. Nagel, of Missouri, all experienced lawyers and competent for their posts, tho not so well known to the public as

to the legal profession. These are the positions which require special energy and ability to carry out the new reforms inaugurated by Mr. Roosevelt. The honesty of the Administration and its success will depend very largely on their faithful performance of their duties. They have to do with interstate commerce, with land frauds and Indian frauds, with rebates and watered stocks, with the restraint of railroads and corporations, with internal waterways and a hundred other matters which come close to the people. On them will come the selection of those agents who will see that the laws are executed and offenders punished. Take, for example, one of the smallest, and yet one of the most conspicuous bureaus, that of Indian Affairs. A most devoted man has been at the head of it under Mr. Roosevelt; but Mr. Leupp must resign, and everything depends, now that we are closing up that business, on the selection of a man who knows the work and has the interests of the Indian at heart, and will not sacrifice them to those of the dominant race.

The politician of the Cabinet is Mr. Hitchcock, who succeeds Mr. Meyer as Postmaster-General, and comes from the same State of Massachusetts. And yet we sincerely hope that the Post Office is to be less and less a political machine. It is a great business; and business and politics are incompatible. If he will forget that he has managed a great political campaign, and will try to make the Department serve the people, and can extend its province, as so often recommended, he may win honor equal to that of the highest of his older associates. It is a disgrace that our Post Office should be more backward than in any other of the great countries. It is rival business selfishness that prevents its better service.

The only ex-Democrat in the Cabinet is Mr. Dickinson, of Tennessee, a suitable choice. The post is one which will become, we hope, before very long a survival and then be dropt. At present the Navy Department, held by Mr. Meyer, is the more important, but both are concerned with the un-Christian sorts of energy which will one of these days cease to be reputable. Even now they are excused no longer as agencies of offense, but solely of self-defense. We will soon

straighten that out, and give to internal improvements the hundreds of millions we now give to the game of war.

Notwithstanding these two departments, which linger over from the Stone Age of savagery, it is a good Cabinet, and we anticipate an admirable Administration.

An Experience Meeting on Woman Suffrage

THERE are two questions of special importance now before the American people, woman suffrage and prohibition. Like most political movements these have followed the lines of the weather maps, the storm centers originating in the West and sweeping over the country eastward. Both subjects are now actively discussed in almost every State, but the discussion is too theoretical, too abstract. We hear people asking, "Would woman suffrage (or prohibition) work?" What they should ask is rather, "How does it work?" For whatever else may be said about these two systems they are certainly not novelties or experiments. Both have been for more than a generation in complete operation in some of our States and in partial or local operation in most of them. Talk is cheap. Experience is dear. We want to get the more valuable of the two before the readers of *THE INDEPENDENT*. We have only to raise our office window and whistle down Fulton street to bring to us plenty of practised writers who would turn in good, readable articles on either side of these or any other questions before next press day. But instead of taking the easiest way we are going to ask our readers, including those who are not practised writers, to give us the benefit of their personal observations in the form of brief articles or letters.

One thing at a time. We will take up first the question of the extension of the rights of women rather than the question of the restriction of the rights of saloonkeepers. Do you know anything about the actual workings of woman suffrage? Does it have the direful and beneficial effects predicted by its opponents and advocates? Does it break up the home and defeminize the enfranchised voters? Does it abolish all the

masculine vices or any of the feminine vices? How does the price of women voters compare with that of the men?

We do not want these testimonies confined to the four States where women are completely enfranchised. There are twenty-nine States where the school suffrage is extended to them and others where municipal or other limited rights prevail. Do you live in one of these? If so, do you vote? If not, why not? This is not confined to women. We want to hear from the men who do or can vote quite as much as from the women. We want letters from all parts of the country and from those who know at first hand of the working of equal suffrage in other countries. And, as having an important bearing on the question, how does woman suffrage work where it is not; that is, how well are things run where the men have a monopoly of voting privileges? What part do women take in politics or administration in the States where they cannot vote? What influence do they exert and what public services do they perform on commissions or unofficially?

If you have any information that will throw light on this question send it to us before the 1st of May. Between 250 and 300 words is the best length. If over 400 the article is liable to be omitted or cut down. Make it personal and specific. We want anecdotes rather than statistics. State what opportunities you have had for observation, where and how long; what you have found out and what conclusions you draw from it, but informally, not in this order. Some photographs also would be welcomed on whatever points related to the subject are susceptible of illustration.

Agriculture in the South

THE South has been devoted to agriculture from the outset. This has worked to its advantage, yet some ills have been developed thru the dominance of a single industry. It has led to a kind of agricultural pride, and there has grown a conceit for established ways. There is not a Southern State that might not today go ahead of Illinois and Ohio but will not. Nature has furnished no other section of the country with anything like the material for making and

enriching soil. Legumes of all sorts abound, ready to call nitrogen out of the air. It is possible to grow alfalfa and crimson clover, but it does not pay in the presence of such legumes as velvet bean and beggar-weed. The soil is easily worked and the climate is less wearing, while the expenses of life are considerably less than in the Northern States. All the same the Southern farmer is rarely getting rich, except in favored spots where truck growing commands the market ahead of all competitors.

The Southern farmer has, however, learned how to use commercial fertilizers; but he is relying upon them almost all together. As a result we are not likely to find land as badly worn out as it was by the old-time tobacco growers. These fertilizers, however, act as a sort of makeshift rather than make soil. They enable the plant to get at the life of the soil, and to some degree take life out of the atmosphere. What is now needed is a general knowledge of the value of the materials Nature offers without charge. If the farmer, instead of burning these, will compost them, he will annually add to the soil a great body of humus, and have his fertilizer at the same time. The whole South has been burned over every year for half a century, to accommodate free running stock. This simply throws back into the air what Nature has woven into grass and leaves and weeds, leaving as soil material only a few ounces of potash to the acre.

Southern agriculture has, however, recently gained in the development of manufactures; for the two industries work together far more advantageously than either alone. The North has always carried manufactures with agriculture. The result has been a tendency to innovate, to push forward, to try new methods—to be accurate and resourceful. In this the South is gaining, altho a Southerner likes nothing so well as to laugh at innovation. He has never been called "Old Hayseed"; never had to go thru the tunnel of agricultural depression, such as created the era of deserted farms. Yet a Southern proprietor has hardly more indulgences than a Northern hired hand. Northern farming had the bitter experience of having its rival industry pro-

tected. Two generations of this policy reduced farming to contempt, turned the best brains over to the factories, built up enormous cities at the cost of the country. Southern agriculture never went thru this rivalry; never had its conceit modified by a sharp struggle. Now manufacturers are invading the country and the conditions are getting to be quite like those of fifty years ago in New York and Massachusetts.

Meanwhile the Agricultural College is an institution of every State, and touches the spirit and the life of the South very much as it does the thought and work of the North. It is crowding its common sense methods and scientific principles, not quite as fast as in Illinois and Michigan, but with a good deal of determination and success. Farmers' institutes are held in every Southern State, and all the leading papers have departments which express the spirit of the Experiment Stations. The South needs, however, more farmers' clubs, well led, for the discussion of a wider range of questions. The correlation of agriculture to all our social movements must be felt. The Cracker, who has been laughed at as the poorest of the poor whites, is after all more responsive to new ideas than the imported Northerner, who generally is a dry goods clerk or invalided professional man, gone South to undertake fruit growing or truck raising. The Cracker really knows something about land, but these fellows have everything to learn.

Florida, which stands for advanced agriculture, perhaps the most of any Southern State, is laboring under the weight of an invasion that began as long ago as the seventies. Settlers came in under the influence of an orange craze. They were mostly from cities; some of them clerks or teachers, and all seeking cash rather than homes. They made clearings in the pines, planted orange groves, invested every dollar they could borrow at fifteen and twenty per cent.; then came the freeze of 1895, and left a bankruptcy as absolute and complete as the world ever saw. Those that were not immediately driven from the State were mainly tradesmen and storekeepers, and for a few years farmers were scarcely discoverable. The trouble now is that

as the country fills up again, it is very easy to buy. When New England pioneers went westward they undertook to raise nearly all that they needed for home consumption, but settlers in the South do not undertake anything of the sort. They have long store bills, buying their milk and honey and eggs and butter, if not also their vegetables. The cow is an animal to run loose on the ranges, and she scarcely gives milk enough to suckle her own calf. Country life must be independent, and when it is not it has lost its meaning.

All this, however, is undergoing a steady change. There are more home builders coming in, and the Crackers and the negroes are learning how to keep away from the store. There are fewer animals on the ranges, and more cows in pasturage or on soilage. Good butter can be bought in nearly all small country districts, and Crackers are opening milk routes; while negroes are learning that to work for themselves is the real genius of farming. Negrophobia is wearing out just about in proportion as the negro becomes a home builder. Nobody really fears the negro. Pretense to that effect is the desire to hide inferiority. Northern settlers lock up their houses, and leave their property for six months, and return in the autumn to find not an article touched. It is simply a matter of color. Unfortunately the devil was painted black, and the negro happens to have the same color. On the whole the American negro is a fine fellow. He is a pretty good product of American civilization. Whites begin to ride in Jim Crow cars without sniffing, and a decent sort of negro is sure of good treatment in the white people's church. A negro neighborhood is socialistic, and they hold things a good deal in common. The poor whites live apart, are shy, and generally reticent. They make up for their solitary lives by very freely collecting news when in town. On the whole the Cracker element is full of promise, now that slavery is out of the way. As farmers there is very little choice between the two elements, but the Cracker will always be more independent.

The South stands today for what the North represented about fifty years ago. It lacks the stock law which will turn its ranges into private pastures, and get rid

of such pests as the cattle tick. Such laws are, however, already in sight, and we shall soon hear the last of the razor-back hog and the hardly less razor-back cow. A good deal is being accomplished by migratory farming and the establishment of some really up-to-date agricultural homes. Some of the railroads are helping admirably, but others care only for tourists, and are working on a principle that absolutely ignores farming evolution. They are doing as little as possible to develop homes, unless it be on swamp lands owned by themselves. The great waterway system, which is projected to go clear around the North and the South, is going to bind together the two sections, and very materially help in a closer interchange of ideas and methods. There are difficulties to be overcome in this pioneering southward as there were in pioneering westward; there are sections that will be brought under tillage only with great difficulty; yet the Southern States are moving normally and hopefully along the lines which the North has trodden successfully.

Making the Environment

MAN is transforming the surface of the world nowadays, in a large and literal way. When the Panama Canal is completed there will be a continuous steamer route around the earth nearly at its greatest girth. Already iron highways encircle it. By means of gigantic dams for storing the waters of the Nile, the marvelous productiveness of ancient Egypt will be doubled or trebled. By irrigation works and deep borings millions of acres in what was once described as the great American desert, have been converted into superb farming lands. After three generations of wanton destruction, the people of the United States are awakening to the vital importance of saving the forests that are left to them and of reforesting areas that have been devastated.

It is natural that the impression should extend that the human race, which, in the evolutionary process, has been developed thru adaptation to a pre-existing environment, is now so far in command of its situation that it can make environments to suit itself, and

thereby fashion itself to its own liking. Certain social philosophers, like Lester F. Ward and most of the Socialists, have promulgated or defended this view. It is in a measure true, but before building all imaginable castles of the air upon imaginary new environments, it is well to make a few preliminary investigations.

Thus far the greater part of all human action upon the physical world has been destructive, and nothing which it is possible now to do can recreate all that has been lost. For example, from early Roman writings we know that those parts of Central Europe which now are included in the empires of Germany and Austria were densely forested, and that the energetic blond stock of the early European population which was distributed along the entire length of the valleys of the Danube and the Rhine had acquired both physical and mental characteristics from ages of forest life. European governments may conserve great and valuable forests, but they can never again give over the best part of the arable land of their continent to the tree crop of the olden time. On an even larger scale in North America plow-land and paved streets have displaced timber, and human beings have displaced the incredibly vast herds, swarms and bands of wild creatures that once populated this western world.

Merely to admit facts like these is to acknowledge that there are definite limits to what can be achieved by artificial environment-making. There is a wonderful equilibrium in the natural world, and to disturb it is to make changes so far reaching that no mind can follow them to the end. We can, if we choose, increase the forest area, but, unless the population of the world is to be diminished, we cannot greatly curtail the area devoted to agriculture, mining, manufacturing and transportation. Probably we have very nearly reached the limit of profitable conversion of forest into arable land. What physical, chemical and economic limits there may be to intensive cultivation we do not yet know.

It is pretty safe to say that most of the talk about an indefinite multiplication of the human race thru a wiser fashioning and a better utilization of the physical environment is rather wild. It is easy

enough to say that the State of Texas could support a population larger than the present population of either Europe or the United States; and so it could, other things being multiplied in proportion. But it is certain that some other things cannot be multiplied in proportion. Such a population would have to live in ways quite unknown to the present generation, or make demands upon the products of other parts of the world which there are no present means of meeting, and which it is not at all certain can be devised and provided.

Even more important than the question of the quantity of human life in its relation to the environment, is that of its quality. If it should turn out to be true that, as Professor Ripley and some other anthropologists maintain, the European blond stock which has played a great and distinctive part in human history is being lost in the brunet blood of Southern Europe and the United States, and if the new product is likely to have different ideas and standards from those which have been the warp and woof of Grecian, Roman, Teutonic, Gallic and English civilization, could any possible reconstruction of an environment, in connection with eugenic experimentation reproduce that old Danubian race? We have to admit that the probabilities seem to be negative.

What is the moral of all this? Well, we are not moralizing. Perhaps it is only the old and well-tested wisdom that it is an excellent plan to combine habits of thrift with a cultivation of moderate expectations.

Poverty in England

AFTER three years of investigation the British Royal Commission on the condition of the poor has issued a report of staggering length, of which we give an account in the "Survey of the World." In forty volumes of statistics, evidence, special investigations and conclusions they diagnose and prescribe for that disease of poverty which is eating toward Britannia's vitals.

It is three-quarters of a century since a similar report, a document that has been the standard authority since, was issued by the most famous of all com-

missions, a report which resulted in a new Poor law, the breakdown of which this latest commission records.

At the end of the eighteenth and the beginning of the nineteenth centuries the industrial revolution and a bad system of poor relief, inherited from the reign of Queen Bess, were threatening the destruction of England's manhood. So indiscriminate and preposterous was the State's bounty that women were sometimes married for the sake of the public charity they were receiving; the honest laborer lived worse than the able-bodied pauper he was paying to support and taxes sometimes absorbed the whole income from property. Revelations of these absurdities roused the self-supporting inhabitants to drastic action, and a new Poor law, stern, scientific, bloodless, a bitter medicine for an alarming condition, was enthusiastically adopted.

It provided against pauperization by sentimental kindness; but it could not foresee nor provide against the cruel results, now apparent, of converting Britain into a huge factory. In 1846 the odious Corn laws, the product of landlord parliaments, were repealed, in order that manufacturers, paying low wages, might not see their workpeople absolutely starve before their eyes. Gradually these manufacturers had been winning strength in the legislature, and when, thru the appalling potato famine in Ireland, John Bright said, "Famine against which we had warred suddenly became our ally," their victory was won. A little later the prairies of America began to pour cargoes of wheat into England's ports, prices fell lower and lower; the farmers, all paying high rents for their lands, were ruined; and great tracts, especially in the eastern counties, went out of cultivation.

Meanwhile the cities were spreading like leprous spots, blasting the fair beauty of which Chaucer and Shakespeare sang, and sucking the rosy cheeked rustics into their maws. Among the statesmen the territorial magnates railed and mourned over declining rents and depopulated country sides; but their long day of power was over. Remembering the lean days of the Corn laws few heeded their selfish laments. The manufacturing bourgeoisie, installed in the seats of the

mighty by the enfranchisement of the middle classes, were making hundreds per cent. A race of prophets, Dickens, Ruskin, Carlyle, Kingsley, Morris, were like voices crying in the wilderness. The rulers, blind with fatness and drunk with luxury, could see only one danger—a war in which Britain's navy should fail to defend the argosies which daily fed her industrial hosts. So millions upon millions, and yet again millions, were lavished on ships of war, while all the time the physical and moral stamina of the men who must be put behind the guns was rotting in foul slums. "The serious feature of our report," says Lord George Hamilton, chairman of the commission, "is the deliberate statement that the conditions of life in London and other big towns are such as to produce a degenerate race, morally and physically enfeebled."

Gradually the conscience of the more moralized parts of the nation has been awakened and the more skilled and better paid of the workmen roused, with the result that a small pension, beginning this year, is paid to the needy over seventy years of age and the puzzle of unemployment dominates politics. For the solution of that puzzle England is in a bad position, for her economic life is lopsided. By land monopoly her agriculture has been half-strangled. The pride and greed of the few families which own the soil has made small holdings and intensive farming, which would have counteracted the effects of cheap wheat, except in rare cases, impossible. Every aspiring proletarian has been driven to the city, where, at any rate, "the career was open to talent." Consequently, when an industrial crisis contracts England's trade and damps down her factory fires an overwhelming fraction of her people is affected. In America the seaboard cities and the Pittsburg district may be half-paralyzed while the spacious rural areas feel no pang. So long as natural causes, commissions on country life, and the sound sense of the nation maintain that condition America will not know such poignant pains as England now suffers. For John Bull no permanent relief is possible until he smashes the strangling land monopoly and puts more of his people back upon the soil.

Inauguration Day

Senator Depew has offered in the Senate a resolution looking to changing Inauguration Day to the last Wednesday in April, by an amendment to the Constitution. There are some things to be said against it. As it is, the interval is too long between the election of President and the accession of the new Administration. That would make the interval nearly two months longer, during which the will of the people would not be achieved, and the old Administration would be dying its lingering death. The change of date of Inauguration ought to require a deferring of the election to February, which is about the worst month in the year. Indeed, no winter month is fit for election day; and the people electing are to be considered rather than the comfort of paraders at Washington. The election is the serious thing to be considered; the show of the function must not dominate that, or the other interests of the country.

Mr. Roosevelt as Editor

No sooner is Mr. Roosevelt out of the President's chair than he appears—the very next day—as an editor of *The Outlook*, and the kind of an editor much approved by that magazine, who signs his name to what he writes. Altho there are two sides to it, it is a way which has advantages and gives personal distinction. It would be too bad to lose the distinction which would be mist if the new editor were not to affix his signature. Mr. Roosevelt's first essay is devoted to praise of the work of his associates, and he does it with enthusiasm. He describes the bad sorts of journals which *The Outlook* is not, and by contrast shows its excellence. We seem to recognize some of those journals which have abused or ridiculed him, and at which he has sometimes struck back. After a characterization of one of these pernicious sorts of journalism, Mr. Roosevelt turns an admiring glance at his new sanctum:

"This style of sordid evil does not even constitute a temptation to *The Outlook*; no influence of any kind could make the men who control *The Outlook* so much as consider the question of abandonment of duty; and they hold as their first duty inflexible adherence to the elementary virtues of entire truth, entire courage, entire honesty."

We hope that when he starts in a few days to be lion hunting—we trust not *lion hunted*—he may leave behind him a sufficient supply of editorial articles to last during his absence.

The Princeton Divinity Students

One would think things must be in a parlous state when about seventy-five students—so the papers agree—of the Princeton Theological Seminary signed a petition to the trustees, asking them to require that the professors—or three of them who teach natural religion, and Old and New Testament—be required to make their instruction "more intelligible." They also wanted a course in Christian Sociology. The Seminary is one of the most largely manned of all in the United States. It has twelve professors and four instructors. It has five men who teach theology in various ways, besides two who teach it under the guise of History, and two who teach it under the name of Homiletics and Practical Theology. It has four chairs of Hebrew and Semitic languages, and two teachers of the New Testament. One would think that there were teachers enough for all needs, considering that the Professor of Practical Theology ought to be familiar with Christian Sociology, and considering that the students are advised to go to the University for instruction in pretty much anything they want. Can it be, as a certain authority has lately told us, that the students for the ministry have fallen off in caliber, and are not capable of following the instruction of President Patton and his associates? We have inquired of the head of one of our largest seminaries and he tells us that the quality of theological students is as high as it ever was. Dr. Patton treats the matter very cavalierly, and says a seminary is no Sunday school, that the studies require sharp attention, and that the faculty need no advice from the students as to the courses. That is rather airy, and it may be that even theologs may know what is good teaching. We sincerely hope that the faculty will so far listen to this appeal as to see to it that the philosophy and theology taught—and, if possible, the Hebrew and Greek—are made intelligible to the students; other-

wise how, when they get into the pulpit, can they hope to be "understood" of the people?

We join the appeal to Congress that when it revises the tariff it will give us free art. No American artists want protection for their paintings or statuary. They know that the general cultivation of a love for art will help them. There are some things that ought to be free, such as are for education of the people. So we would have the kind of things that museums seek enter free even if not bought by museums, for they will very likely finally come to museums. This includes not only the fine arts, but archeological treasures. Were a statue like the Venus of Milo discovered and purchased by Mr. Morgan he would have to leave it in London, or be fined tens of thousands of dollars by the Government for the privilege of letting Americans see it in this country. And equally we would have all purely technical books of science, such as are needed by experts and specialists, enter free, even if in the English language. There are publications of the British Museum, say copies of the Hymyaritic inscriptions, on which a Columbia professor has to pay duty simply because the title page is in English—foreign languages come in free.

Dr. Crum's letter of resignation, as Collector of the Port of Charleston, S. C., was as creditable to him as it ought to be humiliating to the white people of that city who have been guilty of insult by objecting to his color. He wisht to relieve President Taft of any disagreeable complication, and so sent his resignation to President Roosevelt. Charleston can now have a white Collector, who will suit them better, even if he should prove a defaulter, or no such gentleman as is Dr. Crum. Even the *Charleston News and Courier*, which represents the opposition, has had to admit that he has been a model official; and he has had only agreeable relations with those under him of all chromatic shades.

Nothing less than horrible have been the disclosures in the trial of the Sugar Trust, which ended last week in the verdict of guilty. It was proved that the Government has been swindled out of

vast sums of money by the most contemptible sort of stealing, pure stealing by ingenious false weights, and stealing of which the responsible heads of the Sugar Trust must have been cognizant. This stealing has been going on for many years, no ordinary grafting or rebating or "financing" such as we hear of and hear defended, but nothing less than vulgar stealing. Is it a coincidence that the sudden death of Mr. Havemeyer followed the exposure? These disclosures will hardly help the Sugar Trust when the question comes of tariff relief to the Philippines.

This centennial year of so many distinguished men is the semi-centennial of a famous discovery, that of the Comstock mine, out of which more money came than from any other ever known—\$600,000,000 of precious metals—and that mine made famous millionaires, Senators and Governors and Congressmen. Among those men were Mackay, Flood, Crocker, Huntington, Stewart, Jones, Fair, O'Brien, Stanford and Mills. All those men were products of the wonderful Mother Lode. These are the men who have created great universities, railroad and telegraph lines, and ruled the Pacific Coast. So it is when the money finds the man.

In the late Cuban census there is one unusual item. We are told that of the total population of 2,048,980, there are 423,537 legally married, and 79,458 "consensually" married, that is, by mutual agreement without legal sanction, a very large number, owing to the fees required, which under Spanish rule were more than many could pay. A little more than half of the males of voting age cannot read or write, but the percentage of children attending school has risen rapidly.

We take no umbrage at the reported comment of Mr. Birrell, Chief Secretary for Ireland, on the passage in President Taft's address in which he defended a big navy. Mr. Birrell spoke of it as shattering humanity's hopes that the United States might take the lead in reducing instead of increasing armaments. We, too, wish he had felt able to curb the fears of the military men.

An Instructive Exhibit

ONE of the larger life insurance companies once published an instructive exhibit containing particulars regarding the pecuniary circumstances of beneficiaries under policies matured by death in 150 consecutive cases, some reference to which will be found by no means out of place today. The 150 men who were policyholders left 95 widows and 181 children. Five of them left mortgaged homes, and in 44 cases the estate was to all intents and purposes the money represented by the insurance policy. One hundred of the insured men were less than fifty years of age. They had 134 children, nearly all of whom were of school age or under. Twenty of the younger men left no families, but most of these unincumbered ones were more or less indebted or had dependents who were vitally interested in their policies. In six cases only was it true that the insured left ample means outside of the estate created by his life insurance. There is a serious lesson in all this that is worth the most careful consideration.

Carelessness Regarding Fire Insurance

It is a trifle curious that, while most men insure their business property according to some well defined plan that is calculated to cover the hazard involved more or less adequately, when it comes to the insurance of the private property of these same men, the idea of adequacy seems to disappear. This is particularly true of household furniture, books, jewelry, etc. How many men ever take an inventory of their household belongings? But in case of a settlement of a fire loss this would be one of the requirements of the interested fire insurance companies. There is too much haphazard about this very important class of insurance. It is safe to say that not one householder in a thousand even reads the terms and conditions of his policy contract, that often covers exceedingly valuable property. Carelessness regarding the matter of insurance was strikingly illustrated from the

known fact that of the hundreds of thousands of dollars' worth of clothing, jewelry and other personal effects on the destroyed steamer "Republic," only a few thousands were covered by insurance. If some more attention was universally paid to the matter of fire insurance, it is unlikely that we in this country would long continue to pay from five to ten times more per capita than what citizens of London or Berlin have long been accustomed to pay for similar protection.

SOME interesting as well as startling details appear in the report of Fire Marshal Peter Seery, covering the year 1908. There were 8,642 fires during that period in the boros of Manhattan, Richmond and the Bronx, which was 163 more in point of numbers than the preceding year. The fire loss resulting from these 8,642 fires was estimated at \$6,197,893, or an average loss for each fire of \$717.00 in round numbers. Ninety-five persons were arrested for arson during the year. It would certainly seem as if there was a wide field for a good system of fireproofing.

ACCORDING to the *Argus* the following compiled from official records were the moving causes of fires in Chicago during 1908:

Boiling oil	48	Inconspicuous	1
Careless use of matches	700	Oil lamps	10
Careless use of candles	56	Oil stoves	8
Christmas tree	13	Overheated furnace	147
Cigar stub	32	Overheated stove	2
Defective flues	192	Plumbers' torch	10
Electric wires	93	Sparks from chimneys	110
Explosion of chemicals	27	Sparks from locomotives	10
Explosion of gas	112	Spontaneous combustion	10
Explosion of gasoline	37	Steam pipes	10
Fireworks	28	Stoves	10
Gas jet	114	Supposed accidental	10
Hot ashes	68	Unknown	10
Hot box	20		
Lightning	24		

The *Locomotive* publishes a summary of boiler explosions from October 1st, 1867, to January 1st, 1900, from which it appears that during that period there were 10,051 boiler explosions; 10,884 persons were killed in consequence and 15,634 were injured. Boiler insurance would seem to have a place that is somewhat larger than some of us have been accustomed to think.

Steel and Wages

THE Lackawanna Steel Company's reduction of wages by 10 per cent. has been followed by reductions at some of the Eastern furnaces. Thus far, however, no change in the wages rate at the mills of the Steel Corporation or of its largest competitors in the Pittsburg district has been made. The action of the leading producers will probably be determined by the provisions of the new tariff bill. These will be made known to the public within two weeks. The rates fixed by the committee may not be adopted, it is true, but as a rule they will not be far from the rates of the law to be enacted next summer. Undoubtedly there will be reductions in the iron and steel schedule. Without regard to the probable effect of tariff revision, prices in the steel industry have for a long time been maintained at a high and artificial level, partly by means of agreements. In some measure wages have been adjusted to these prices. If the prices decline and remain at a lower level, either because of diminished consumption or an account of tariff reductions and possible competition from abroad, then there must be a decline and readjustment of wages. The truth is, however, that there has already been such a readjustment, following the panic, altho it has not appeared in the rates. Many thousands of employees have had no work at all, and others have been on short time. Artificial prices were sustained on a narrowed market, and the wages rate was preserved, but the number of those to whom it was paid was greatly reduced. It may be that a general reduction of the rate is impending and will be made before the tariff bill becomes a law. Such a reduction may not be injurious to the public interest or to the body of employees directly affected.

The New Haven Road's Trolleys

THE final decision of the Supreme Court of Massachusetts concerning the trolley property of the New York, New Haven & Hartford Railroad Company in that State was anticipated by the com-

pany, whose officers say that the property has already been sold. The trolley lines which the company is not allowed to own are those of Springfield, Worcester and Berkshire County. So far as trolleys in Massachusetts are concerned, the purpose of the national Government's suit is accomplished by this decision, but the company's extensive trolley interests in Connecticut and Rhode Island, of course, are not affected. The Government would have the company divest itself also of these trolley holdings. This suit under the Sherman act is not clearly in the public interest. There is evidence that the steam road's control and operation of local trolley systems has served public convenience. We do not hear that its acquisition of the trolleys was followed by any reduction of service or increase of rates. On the contrary, it is generally asserted that the service has been improved and that there has been no restriction of the natural competition.

....Russia's Minister of Finance said last week, in the course of debate on the budget, that the gold reserve of that country now exceeds \$600,000,000.

....Payments from the employees' relief fund of the Pennsylvania Railroad Company since the relief departments were organized amount to \$25,765,403.

....A cargo of oats from the Argentine Republic arrived at New York last week. The high price of American oats permits such importations to be made profitably.

....In February, twenty new national banks were authorized to begin business. The entire number of national banks is now 6,907, having an authorized capital of \$130,320,275.

....The holdings of the Steel Corporation have been enlarged by the purchase of the Pacific Steel and Wire Company, for about \$2,000,000, by one of its subsidiary companies.

....New York City sold \$10,000,000 of fifty year 4 per cent. bonds last week at an average price of 101.57. In November last the average received, for \$12,500,000, was 102.385. The bids last week amounted to \$43,068,000.

The Independent

VOL. LXVI NEW YORK, THURSDAY, MARCH 18, 1909

No. 3146

Survey of the World

Washington Topics

During the past week, a minority of the Republican members of the House, who have been called the insurgents, sought to compel a revision of the rules by which procedure in the House has been governed. The retention of these rules was desired by the majority and by Mr. Cannon, who was virtually the only candidate for Speaker. Representatives of each faction had conferences with President Taft. It was admitted that the insurgents could not accomplish anything except by a temporary alliance with the Democrats. The President opposed such an alliance and expressed the opinion that it was expedient to defer a contest over the rules until the regular session in December. He feared that such a contest at the beginning of the special session, involving, as it must, a division of the Republican majority and more or less bitterness, would tend to delay the passage of the tariff bill. An attempt was made to show that Mr. Roosevelt was assisting the insurgents, reference being made to a letter said to have been received by an insurgent leader from the chief editor of the magazine with which the ex-President is connected, stating that the editors favored a revision of the rules. It was explained, however, that the editorial policy had been adopted before Mr. Roosevelt became connected with the magazine, and that those controlling the magazine thought it might be wise to defer revision or reorganization until December. The editor, it was added, had not sent such a letter to an insurgent. The number of the insurgents was said to be about thirty. There are 391 members, and 218 of them are Republicans. Thirty Republicans, voting

with all of the 173 Democrats, would make a little more than a majority. But it was said that several Democrats, desiring to be regarded with favor by the Speaker and to obtain prominent places in committees, would not assist a movement hostile to him and his policy. At the Republican caucus, on the night of the 13th, Mr. Cannon was nominated for Speaker, receiving 162 of the 186 votes cast. Thirty-two Republicans were absent, and nearly all of these were insurgents. At Mr. Cannon's suggestion, a concession was made, in a provision that the members of the important Committee on Rules should be selected by the House, but those who were thereafter nominated for this committee by the caucus were the members whom Mr. Cannon would have appointed. It was voted that the old rules should be adopted. In his address, Mr. Cannon, speaking of the impending revision of the tariff and also of the rules, said:

"It is not only necessary that we do our work well; it is essential that we do it as quickly as is consistent with thoroughness. The industries of over 80,000,000 of people await our motions. The wisdom of those who have preceded us has left us a system of rules the most efficient that ever guided a legislative body as large as the House of Representatives. Every step in making those rules efficient was resisted bitterly and the men who stood up for the rules were misrepresented by every interest affected by their action and criticised by a large army of innocent victims of misrepresentation. But misrepresentation dies with the day. Now those men so much criticised then are commended on every hand, while a new brood of misrepresentations arouses new criticisms against those who today continue the work of the past. These things will also pass and when present misunderstandings have died away we also shall have the commendation of the future if only we remain true to ourselves and to our trust."

It was conceded that at the opening of the session Mr. Cannon would be re-elected Speaker, altho the action to be taken concerning the rules was not so clearly foreseen.—George T. Oliver, of Pittsburgh, has been nominated by the Republicans of the Pennsylvania Legislature to succeed Mr. Knox in the Senate. Mr. Oliver was born in Ireland sixty-one years ago. For a time he practiced law. Then he gained a large fortune in the steel industry, and he owns two Pittsburgh newspapers. He was an intimate friend of Senator Quay.—A new census bill has been prepared, and it will be past. It provides for appointments in accordance with a modification of the merit system. As it is more acceptable to the advocates of that system than the bill that was vetoed by President Roosevelt, its supporters think that President Taft will sign it.—With an appropriation of \$1,000,000 for such work, the Commissioner of the Land Office is getting ready to investigate thoroly all land cases in which fraud is suspected. The suit of the Government against the Union Pacific Railroad Company, to recover coal lands in Wyoming valued at \$1,500,000 and alleged to have been acquired fraudulently by means of "dummy" entries, has been discontinued, the company having restored to the Government the entire tract.—Among the last official acts of President Roosevelt was the signing of proclamations adding 4,980,736 acres to national forests in Nevada, South Dakota, New Mexico and Arizona. About 1,500,000 acres are added to four forests in New Mexico, 500,000 to two in Arizona, and 2,275,000 to seven in California, two of the latter lying partly in Nevada.

Labor Questions

At the conferences, in Philadelphia, on the 11th and 12th between representatives of the coal miners' union and the railroad presidents and others representing the owners of the anthracite mines, no agreement was reached. The miners' chief demands were for recognition of the union, an increase of pay, collection of union dues by the operators, and an agreement for only one year. The operators rejected all of them, and

proposed a renewal of the present agreement for three years. It is understood that they will consent to nothing else. President Lewis, of the union, and his associates will report to a convention to be held at Scranton on the 23d, and then will confer with the operators again. One reason given by the operators for refusing to recognize the union was that, as they alleged, the union was controlled by bituminous miners and interests. On the other hand, the union's representatives say that their signatures to an agreement can be worth very little if they are not the signatures of persons representing an organized body of mine workers. In a publisht statement, the operators assert that they stand now, as in the past, for the "open shop." Wages cannot be increased, they continue, without increasing the price of coal to consumers, and such an increase they will not make. The present condition of business, in their opinion, points to a reduction of wages, rather than an increase, and "if either side should be eager to renew the agreement, it is not the operators but the mine workers."—The Court of Appeals of the District of Columbia has sustained the granting, by Justice Gould, of the injunction against Samuel Gompers and his associates in the case of the boycott against the Bucks' Stove and Range Company, but has modified the terms of the restraining order so that it will permit the publication and circulation of comment upon the complainant and its business:

"The decree goes too far when it enjoins the publication or distribution of the *Federationist* or other periodicals containing any reference to complainant, its business, or its product. It should merely prohibit the printing of the name of the complainant, its business or product in the 'We don't patronize' or 'unfair' list *in furtherance of the boycott*. The last five words should be added, for when the conspiracy is at an end the Federation will have the same right that any association or individual now has to comment upon the relations of the complainant with its employees."

Chief Justice Shepard dissented, holding that the court had no power to restrain the publication, and that the decree abridged the freedom of the press. This decision does not touch the contempt proceedings and the appeal from the jail sentences.

Quarrels in Central America

It was reported at the end of last week that an engagement had taken place between three Nicaraguan gunboats and Salvador's gunboat, the "Presidente"; that the "Momotombo," leader of the attacking flotilla, had been disabled and had withdrawn for repairs, and that there had been a second engagement, results unknown. But on Sunday the Presidents of the two republics, answering inquiries by telegraph, said the reports were false. Our Government has ordered warships to patrol both coasts of Nicaragua and has directed John H. Gregory, United States Chargé d'Affaires in Nicaragua, to return to Washington, thus practically severing diplomatic relations with that country. Minister Coolidge resigned some time ago because of the futility of his negotiations for a settlement by arbitration of the claim of George D. Emery. This claim relates to a concession for cutting mahogany. It is said that President Zelaya violated the terms of the concession, seized Mr. Emery's property, and unjustly demanded from him a fine of \$500,000. Owing to indications that Zelaya is disposed to ignore the agreements of the recent peace conference for a reference of all disputes to the new Central American Court of Justice, it is said that the United States and Mexico may shortly decide to intervene and by force to put an end to the annoying quarrels of the four republics north of Costa Rica. There are rumors that the annexation of Guatemala and Honduras by Mexico, and of Nicaragua and Salvador by the United States has been considered.

Mr. Roosevelt on Intervention

There have been published the following extracts from a letter said to have been sent, on December 4th last, by President Roosevelt to Sir Harry H. Johnston, the English author and explorer, who was then at New Orleans:

"Just a hasty line so that it may reach you before you leave New Orleans. I do not think that we shall intervene in Hayti. Of course we ought to, but this people of ours simply does not understand how things are outside our own boundaries. Of course I do not desire to act unless I can get the bulk of our people

to understand the situation and to back up the action; and to do that I have to get the facts vividly and clearly before them. In Panama, Cuba, Santo Domingo and Porto Rico it needed months or years of preparation before we could get our people to see things straight, and the worst of it is that the educated northeasterners are not merely blinded, but often malevolently blind to what goes on. We ought to have interfered in Venezuela again and again during the last seven years. We ought to have interfered in Central America and Hayti. In all three places we ought now to do something of the same kind that we are doing in Cuba, Santo Domingo or Panama, according to the exigencies of the case. But the American people simply were not alive to the situation."

When Mr. Roosevelt's attention was directed to this, he said: "As a general thing, when a private letter has been divulged, as this one has been, it is pretty sure to be more or less garbled."—Ex-President Castro has engaged passage on a steamer leaving Bordeaux on the 26th for Venezuela, but it is said that the journey will be made only by his wife, who will seek to obtain possession of the property which he left in that country. If he should land in Venezuela he would at once be arrested and tried for conspiring to assassinate President Gomez.

Murder of Detective Petrosino

Joseph Petrosino, a lieutenant in the New York police force, and for the last four years the head of a group of detectives dealing with the crimes of Italian immigrants belonging to so called "Black Hand" organizations, was assassinated on the 12th in Palermo (Sicily), where he was obtaining evidence to be used in preventing the admission of Italian criminals at American ports or in causing the deportation of such criminals already admitted. Petrosino, who was born not far from Naples, had been in the New York police force for twenty-six years and had made a remarkable record as a detective in connection with the offenses of "black hand" blackmailers, kidnappers and bomb-throwers. About 500 convictions had been placed to his credit, and he had caused the deportation from New York of not less than 100 Sicilian or Calabrian criminals. It is supposed that he was murdered by some of these men. In 1906, it is said, he was condemned to

death by the Camorra because he caused the expulsion from New York of one of the leaders of that organization. He sailed for Italy on February 8th, his purpose being to obtain the evidence already mentioned and to arrange for joint action by the Italian and the United States authorities in order that the emigration of Italian criminals to this country might be prevented. Several arrests have been made in Palermo, but at last reports the assassins had not been captured.

The Philippine Islands

The employees of the street railroad company in Manila have been on strike since the 4th, when the company refused to increase their pay. A boycott prevents the natives from using the cars. Up to the end of last week there had been no disorder. Non-union conductors and motormen are accompanied by armed policemen.—Governor-General Smith has decided that Dominador Gomez, leader of the Federation of Labor, who was recently elected a member of the Manila Municipal Council, cannot hold the office, because he is not a citizen of the islands and has been convicted of crime. He was found guilty of selling opium unlawfully. Not long ago he was sentenced to be imprisoned four months for inciting disorder in connection with a labor dispute. Sentence having been confirmed on appeal, he was taken to jail last week.—Teodoro Kalaw, editor of *El Renacimiento*, the organ of the radical element among the Filipinos, has been found guilty of libeling Commissioner Dean C. Worcester, and sentenced to be imprisoned nine months and to pay a fine of 3,000 pesos.—Nicholas Zamora, a Filipino Methodist minister, has withdrawn from the Methodist Episcopal Church, and with about 1,000 followers is organizing an Evangelical Methodist Church of the Philippines. This movement is said to be due to no doctrinal differences, but merely to the desire of the seceders for an independent organization.

The bill forbidding aliens to buy Cuba land has been rejected in the House by a vote of 49 to 11. In the course of the debate Congressman Viondi answered as follows the complaint of Congressman Garcia that

Americans were rapidly increasing their holdings of land in Cuba:

"I want to say the Americans are our friends. The world has marveled at people who twice have had our liberty in their hands and permitted us to become free and independent. I, as a lover of my country, was as much concerned and jealous as any one on the two occasions when the Americans occupied the palace, but I have seen them go and feel they are our friends."

Under the provisions of the general amnesty bill, which was signed last week, 800 prisoners have been released. Among these are several notorious criminals. One of them was serving a cumulative sentence of ninety-eight years for homicide, robbery and other offenses. The House has past a bill permitting cock-fights, but only on Sundays and holidays, and excluding from such entertainments persons under twenty years of age. A bill repealing General Wood's prohibition of bullfighting has been introduced, and the passage of it is expected. An appropriation of nearly \$1,500,000 for the army has been granted by the Senate. The two factions of the Liberal party have laid aside their differences and united.

French Income Tax Bill

The Income Tax bill for which the Government has been working for over two years has past the Chamber of Deputies by a vote of 407 to 166. It now goes to the Senate, which is expected to reject it, or very materially change it, but if the people of the country support the Government as they have for the last few years, it will be undoubtedly forced thru in time. M. Caillaux, Minister of Finance, to whom the bill is chiefly due, defended it on its final passage in a speech which was placarded thruout France by vote of the Chamber. He said that the new system would reduce taxation on land, agriculture and commerce and throw the burden directly upon those who can best afford to carry it. Only about one person in 146 of the population would be materially affected by the bill. The new income tax will take the place of taxes on real estate, improved and unimproved, on personal property, on doors and windows, and on stocks, bonds and commercial transfers. Incomes from real estate, stocks, bonds and other forms of capital, except savings deposits, will pay 4 per cent. In-

comes derived from the profits of commercial and industrial undertakings and from farm production will pay $3\frac{1}{2}$ per cent. Salaries and pensions above \$250 per year will pay 3 per cent. There is also a complementary tax imposed upon all incomes above \$1,000. This is progressive, ranging from \$2 at lowest to 4 per cent. upon all incomes above \$20,000. The income of foreign residents is estimated at seven times the amount of rent they pay. The new taxation system is expected to give a revenue of \$140,000,000.—M. Picard, who as Minister of Marine has undertaken to reform the French navy, has come into conflict with M. Caillaux, Minister of Finance, on account of the pecuniary difficulty. Picard wanted \$44,750,000 for the navy, but Caillaux was unwilling to grant more than \$30,000,000. A compromise was finally arranged on \$38,000,000, which will be used for ammunition, enlargement of docks and other improvements, but not

for new ships. The first instalment of \$6,000,000 will be placed at his disposal this year. The management of the navy in the past has been scandalously extravagant and inefficient. Supplies have been ordered to favored naval contractors at high prices without any regard to the necessities of the service.

✽

French Government Employees

The question of the right of men employed in the Government service to strike has been a disturbing factor in France for several years. The General Federation of Labor has endeavored to bring the Government employees under its control, while, on the other hand, the Government has always held that a strike of its employees should be treated as mutiny and desertion. The struggle has been brought to a crisis this week by a strike of the employees of the postal service. The Government wishes to introduce into the civil service the sys-

tem of promotion by merit in place of the present custom, in which seniority alone decides the matter. This was regarded with disfavor by the postmen, and after a meeting on the evening of March 12th several hundred of them marched to the telegraph bureau and tried to induce the telegraphers to join them in a strike. A riot ensued in which the telegraph instruments were broken and the police had difficulty in clearing the office. On the following day few of the telegraphers appeared and not much work was done. The office was glutted with telegrams and the service generally disorganized. Many of the telephone operators joined in the strike, and it is feared it will be extended to the railway clerks, accountants, linesmen and other employees in the national system of communications. Forty of the leaders of the postmen have been suspended and eight of those who took part in the riot in the telegraph bureau in the post office have been arrested. The striking Government employees will also receive the support of the electricians, and Secretary Pataud of that union has threatened to put Paris in darkness, as he did twice last fall. Mr. Pataud appeared at the Hotel Continental one evening last week, when two big banquets and a ball were to be given, and when the manager of the hotel refused to see him he ordered all the lights of the hotel cut off. The Continental had established a private electric plant for such an emergency, but when the men were called upon it was found that they had joined the union and refused to work. The manager of the hotel was compelled to send for M. Pataud and agreed to pay 20 cents a day more to all employees of the hotel, at which the light immediately appeared. The Hotel Continental has since replaced its striking electricians with non-union men and begun a civil action against M. Pataud. The Government has ordered 200 military telegraphers to Paris to take the places of strikers if necessary.

Suffrage in Sweden and Denmark

The report cabled to this country a few weeks ago that a universal suffrage law had passed the Swedish Parliament giving the ballot to all the inhabitants of that country over twenty-four years of age was generally

interpreted in the United States as an extension of the suffrage to women. This, however, was an error. The ballot is still restricted to men, altho women are privileged to hold village and parish offices.—The first municipal election under the new Danish law was held on March 12th, and the women took an active part both as voters and candidates. Shelters were provided at the polls where mothers could leave their baby carriages while they voted. About 7 per cent. of the candidates elected in the provinces were women. The new Municipal Council of Copenhagen will be composed of thirty-five men and seven women.

The Italian Election

The second ballot for members of the Chamber of Deputies in the thirty-four districts where there was no majority in the recent election was held Sunday and resulted in increased gains for the radical wing. The Pope's removal of the *Non-expedit* prohibition has had an effect opposite to what was intended. The Clerical vote thus admitted proved less formidable than was supposed and at the same time caused the Anti-Clericals to rally to the support of the Government. The Socialists and Radicals will have some thirty more seats than in the last parliament and will have more influence on the administration because they belong to the more moderate wing of the Socialists. The Sindacalists or revolutionary Socialists have lost control of the party, and those who are now coming to the front favor the achievement of socialistic reforms by gradual and constitutional methods. That the moderate movement is the more popular is shown by this election. Signor Bossolati, representing the constitutional wing, has now charge of the Socialist organ *Avanti*, replacing Signor Enrico Ferri, of the more violent party, and in this election Bossolati was elected in Rome by a majority of 800 votes against Colonel Santini, a Royalist and a Catholic, who had twice defeated Ferri.

The Wright brothers, who are continuing their experiments at Pau, France, received last month a visit from King Alfonso of Spain and will this month be

visited by King Edward of England. King Alfonso takes a great interest in aviation as well as automobiling, and it was only the protests of his Ministers and the appeals of his wife which restrained him from undertaking a flight. As it was, he contented himself with sitting in the aeroplane and learning how it was managed.—Much dissatisfaction is expressed in English papers and Parliament discussions over the failure of Great Britain to keep up with other countries in aeronautic progress. The Wright brothers ordered six aeroplanes

constructed in accordance with the plans by Dr. Alexander Graham Bell at Baddeck, Nova Scotia. Instead of having two large planes, as used by Wright, Farman and others, the Bell machine is composed of a large number of tetrahedral kites or cells joined together. The Bell machine, "Silver Dart," rose from the ice and made a distance of 11 miles, returning to its starting point. A new and more powerful machine on a similar model, "Cygnet II," is almost ready for testing.—On the occasion of the Hudson-Fulton celebration, to be held between Sep-

IN THE AEROPLANE AT PAU.

Wilbur Wright, with his hand on the lever, explains his machine to King Alfonso of Spain.

constructed in London on the model of the one they are now using and guaranteed to fly for twenty minutes. The Wrights are expected to go to England soon to test them before turning them over to the Government. At Pau, Wilbur Wright has twice risen from the earth without the use of his derrick for giving the machine a start.—Special interest attaches to the experiments being made with flying machines con-

tember 25th and October 9th of this year, arrangements have been made for an aerial contest. Flying machines will start from New York City for Albany above the river on which will be sailing Henry Hudson's "Half Moon" and Robert Fulton's steamboat, "Clermont."—The Zeppelin airship rose over Lake Constance to an altitude of 3000 feet, which establishes a new record for dirigible balloons.

The Opening Session in Westminster

BY JUSTIN McCARTHY

A PARLIAMENTARY session which promises or threatens to be especially momentous has just been opened by King Edward in Westminster Palace. The King's Speech was longer than usual and appeared to me to be thrilling with interest, not only because of the subjects on which it touched, but likewise because of the subjects on which it appeared to refrain deliberately from touching. We heard nothing, for instance, about the question of Home Rule for Ireland, altho we have had repeated assurances from ministerial lips that the Government are determined to bring this great question to a decision at the earliest possible moment. Nor did we hear anything about any determination on the part of the Government to bring to an immediate issue the constitutional question as to the action of the Lords with regard to the Licensing Bill. Mr. Asquith and his

colleagues propose to deal with the Irish Land Bill, the Welsh Disestablishment Bill, to introduce an Indian Reform Bill, and other measures of much importance to the public in various parts of the Empire, and it cannot be denied that the announcements made in the Royal speech promise ample and very useful work for the session. If this were merely a session like any other no impartial observer could possibly say that the Liberal Government could be accused of failing to turn to good account the months of work before it. But then it must at once come up to the mind of every observer that the one great public question which seems to call for promptest decision, the question as to the rival powers of the hereditary assembly and the representative assembly, has been put off to an undefined future. That was the one subject about which the whole public of these countries felt an

THE KING AND QUEEN ON THE WAY TO OPEN PARLIAMENT.

especial anxiety when the opening day of the session came on, and we were all waiting with anxious interest for the announcement to be made in the Speech of the Sovereign.

There were, indeed, many among us who profest to have known for certain during some weeks past the course which Mr. Asquith and his colleagues had made up their minds to take as to the alternative before them. Some of the daily papers affirmed with absolute confidence that the Government had resolved to put off the great constitutional crisis for two years, and in the meantime to get thru a large amount of valuable parliamentary work, and then to make an appeal to the country by means of a general election for a final settlement as to the powers and the privileges possessed by the House of Peers. We ordinary and commonplace members of society were meeting every day with some well-informed personage professing to be in the confidence of the Government who told us that such was the positive decision of the statesmen in office. Now, it appears that, however those well-informed personages contrived to get their information, the information was unquestionably correct. I quite admit that there is a good deal to be said as to the prudence of the course taken by the Government and the practical advantages of getting some useful and much needed measures of legislation past quietly and securely before the great constitutional struggle between Lords and Commons comes to a settlement. The Liberal party outside the House of Commons is at present in a condition which threatens many possible divisions. The labor organizations, the Home Rule question, many subjects belonging to foreign and colonial policy, suggest serious divisions of opinion in constituencies hitherto regarded as quite safe for the Liberals, and thus might well seem to justify the accomplishment of some useful legislative work before the lists are open for the great contest. I must say, however, for myself, that I should have felt better satisfied with the ministerial policy if it had taken up at once the challenge of the Peers and decided to fight out the great constitutional battle at the earliest possible opportunity.

R. BARRY O'BRIEN

Previous to the opening of the session hardly any other subject was receiving so much attention from the London press and the London public as the visit of King Edward and his Queen to the Kaiser at Berlin. There is great hope felt even among those who do not quite believe that the whole fortunes of the world turn upon the meetings of sovereigns, that this friendly visit may do much to bring to an end the wild alarm felt both in England and in Germany as to the immediate probability, if not indeed the immediate certainty, of a war between these two European Powers, which ought to have so many bonds of cordial friendship holding them together. I have no doubt whatever that the main purpose of King Edward's visit to the German court was to bring about the complete restoration of friendly feelings and peaceful relations between these two nations, which may well be described as the two leading Powers of Europe.

The King of England is a man of far greater political capacity and practical common sense than the German Em-

peror, and there is every reason to hope that his visit may have a healthful and happy influence over the somewhat flighty personage who is now the crowned figurehead of the German Empire. What rational object these two Powers could have for forcing one another into a rivalry of war seems impossible for sanity to conceive. Yet we know that there has been a wild outcry in Germany for an increase of its naval armament, and we know, too, that this demand has been made the excuse for a still wilder outcry throughout England for the indefinite multiplying of the British warships in order to resist the landing of a German army on the shores of England, on its way to occupy the English capital. Indeed, we had been given here to understand that the Germans are actually preparing aerial warships to descend upon us from the skies, and thus anticipate or keep time with the landing of the German military forces from their war steamers on our coasts. If the visit of King Edward to Berlin should help in any way to bring back the reign of common sense to the fanatical alarmists among both peoples it will deserve to be recorded as one of the victories of peace which the poet tells us are no less renowned than those of war.

That allusion to the victories of peace and those of war, and the fact that I have been treating of events in Berlin, bring me to another event, in itself of a very different order, which has just taken place in London. That event was the unveiling in St. Paul's Cathedral of a marble bust in memory of the famous war correspondent, the late Sir William Howard Russell. The name and the fame of William Howard Russell live in

New York just as well as they do in London, altho he wrote much which there as well as here must have aroused many a keen controversy. I have associated him, or at least his memory, with the capital of the German Empire, for the reason that one of my early recollections of Russell is of the time when I met him in Berlin on the great historical occasion when the sovereign, who was then King William of Prussia, was created the first Emperor of the newly formed German Empire, called into being after the complete defeat of the Austrian Emperor had been brought

about by the political genius of Bismarck and the military genius of Moltke. Russell was then acting as special correspondent for the *London Times* and I as special correspondent for the *London Morning Star*, the journal which represented the political opinions of Richard Cobden and John Bright. The coronation took place at Königsberg, in the northeast of Prussia, and there again I met Russell several times. That was my one sole expedition as

a newspaper special correspondent.

I may mention the fact that in the same cathedral—St. Paul's, London—where the monument to Sir William Howard Russell has just been unveiled by the distinguished soldier, Sir Evelyn Wood, is another monument to a war correspondent, Archibald Forbes, who made his name as famous in the days of the telegraphic wire as the name of Russell had been in the days of postal delivery by railway carriage. I knew Archibald Forbes well and had followed with deep interest his brilliant career until his too early death. He was war correspondent for the *London Daily News* during several years of the time

ARCHIBALD FORBES.

when I was one of the writers of leading articles for that journal, and, like Sir William Howard Russell, he was the author of many valuable books on his own especial subjects. These two monuments find a fitting place and are fittingly companioned in the great cathedral. The war correspondent has come to be during recent generations one of the most remarkable and important figures in our civilization. In the earlier ages of mankind there were indeed war correspondents also, but then the war correspondent and the maker of war were usually one and the same individual. The Greeks had their Xenophon, who was military commander, historian, essayist and war correspondent all in one, while it seems almost superfluous to add that the Romans had their Julius Cæsar, who would most certainly have won undying fame for himself in any one of these capacities, but who achieved an unsurpass success in all of them, and added to his other distinctions the fame of being, according to no less an authority than Cicero, the greatest Roman orator of his age, even among those who were orators and nothing else. Who shall say what William Howard Russell and Archibald Forbes might not have done as commanders if some sudden stroke of fortune had given to each a chance of commanding an army?

A book recently published which has been much reviewed and talked about in England and in Ireland already is that entitled "Dublin Castle and the Irish People," written by Mr. R. Barry O'Brien, and published by Messrs. Kegan Paul, Trench, Trübner & Co., London. Mr. O'Brien had before this brought on himself some notice as the author of a life of Charles Stewart Parnell, and one of the late Sir Charles Russell, the famous barrister and member of Parliament and Lord Chief Justice, who was afterward created Lord Russell of Killowen. Neither of these works, however, can be said to have called forth unqualified commendation from critics and readers. The general impression was that Mr. Barry O'Brien had not had such opportunities in either case of close personal acquaintance with the subject of his biography as would warrant him in attempting to become the Boswell to his Johnson. I may freely confess that

I shared in this conviction myself. I was, as my readers probably know, a close political associate and personal friend of Charles Stewart Parnell during many years of my parliamentary life, and I enjoyed the close personal acquaintance, and I hope I may say the friendship of Lord Russell of Killowen during many of the most brilliant years of his distinguished career. But when Mr. O'Brien came to deal with the story of Dublin Castle he had found a subject which required for the most part only a study of authentic past history and a close observation of recent events and public men in order to enable a writer of real capacity to endow the reading public with a work of genuine and enduring value. According to the best of my judgment, "Dublin Castle and the Irish People" is such a work. Its very title comes of a happy inspiration. It presents us with a piquant, humorous and highly effective contrast—Dublin Castle on the one side and the Irish people on the other. Dublin Castle has nothing to do with the Irish people, and the Irish people thru many long generations never could, and of later years never would, have anything to do with Dublin Castle. The Viceroy of Ireland ruled during centuries over an island in which the great majority of the inhabitants were Catholics, and in which no Catholic was allowed to hold any state office, or even to give a vote at an election. If it had been a viceregal despotism there might have come some benefit to the people of Ireland thru the possible effects of such a system of rule. There might have come to the viceregal throne some benevolent despot who felt drawn on to a study of the country and its real condition on his own account and might have seen that there were cruel wrongs which cried out for remedy and could be remedied by a stroke of despotic power, and the benevolent despot could have exercised his power accordingly and put the wrongs to right. But, as Mr. Barry O'Brien points out, the benevolent despot would have had no such chance in Dublin Castle. He was always the instrument and servant of the British Government then in power, and such government down to a time very near to our own, whether it happened to be Tory or merely Whig, was alike determined to

treat Ireland as a subjugated and vassal country. Therefore all that the Viceroy and Dublin Castle could do for Ireland was to confer hospitalities on such Irishmen and women as made themselves devotees of the Dublin Court and to exclude from favorable notice any Irishman or woman who acknowledged the slightest sympathy with any of the national demands. Thus the principal effect which Dublin Castle created by its own impulse in Ireland was that of bringing up a set of persons among the middle

classes whom Thackeray might well have described in his "Snob Papers." I hope and believe that we are now coming near to the end of the whole system and that before many sessions of Parliament have been gone thru, Ireland is destined to have her system of national legislation under better and brighter and more enduring conditions than she was allowed to have it before. I hope and believe that Mr. Barry O'Brien's book does not come too late to help toward that end.

LONDON, ENGLAND.

The Girl Who Trims Hats

BY BERTHA POOLE WEYL

[Mrs. Weyl has taken down the following story from one of the girls now in the strike referred to in the last part of the article.—EDITOR.]

I AM a hat trimmer. I was born in a little mountain village of Rumania. When I was six years old my father died, and my mother sold what she had, and we two sailed for America. It took a brave woman to start, without money or a word of English, with a young child, on such a journey, but mother was a brave woman. She was determined to give me what she had never had herself—an education and a chance in life. You couldn't get an education or a chance in Rumania.

For a few years everything went well. We lived in a little flat in Brooklyn next door to a hat factory where my mother got work. As she was young then and quick with her fingers, she could make good wages and keep me in school. I remember her joy the day I brought home my first reader. She took the book in both hands, turned it upside down and over and over. "You, you!" she kept repeating. "My little Rachel, you! What would your blessed father say? A scholar! my little Rachel, a scholar!" And then she put her head in her hands and cried a long time. After that night, as soon as she came home from the factory, I had to read aloud my morning lesson.

These good days did not last long. A slack season came and for weeks and weeks there was very little work. When the factory commenced running full time again we were behind both with our rent and grocery bill.

I was eleven years old then and large for my age, and like all children, anxious to go to work. So when mother told me I would have to stop school for a little while and go into the factory I was the happiest youngster in the block. For six months I sat on a low stool by mother's side making the flat bows that go on men's hats. It was easy work, but the long hours in a badly aired room made me sick, and I was glad enough to go back to school. One year and a half of study, and then we got behind with the rent a second time, and my little earnings were again needed. So on my thirteenth birthday I left school and became a hat trimmer for good. How my mother fought against this! She begged the boss for extra work to take home; she tried at night to do the neighbors' washing, and even crowded our small rooms with two girl boarders. She fretted herself sick over my leaving school. Often in the night I would hear her praying in Hebrew that God would succor His children.

Thirteen is young to stop study, and if it had not been for mother I should have forgotten the little I had learned in school. But she never let me forget. No matter how tired I was or how long her day, each night I had to read aloud, while she sat with hands folded in her lap and a strained look on her face, trying to follow the English words.

She was not as strong as she had been

when we left Rumania. Hat trimming is bad for the nerves, and after eleven years—years of stitching, stitching, stitching—poor mother gave out. She had had trouble for some time with snapping thread and breaking needles, but the thought of quitting work had never entered her mind. Then she got her notice. When you have worked in one factory for eleven years you get to feel that you belong there, and to be turned out without a word, without the boss even saying good bye—well, it comes hard. "If he'd only said, 'I'm sorry,'" mother kept repeating; "if he'd only said, 'I'm sorry.'"

It made me bitter to see how old she grew after that. I wouldn't take her place, even tho the boss offered it to me, and as there was no other work that I could do in Brooklyn, we moved to New York, where an East Side factory had advertised for girls.

Hat trimming is piece work, you know. I can't tell you just how much a girl earns, because the scale is higher in union than non-union shops and the work there steadier. Where I work, in a non-union shop, the scale for binders, as the girls who bind the "stiffs" or Derby hats are called, runs from 25 to 35 cents a dozen. This is all hand work, and takes skill before it can be done neatly. But a girl who has been at it for six months should, in a full day's work, bind nearly six dozen hats. That is, if she has good luck and her needles and thread don't break on her. The trouble is she don't often get a full day's work. In non-union shops a fifth more girls are kept on the pay-roll than are needed, so not one can make a decent living. It's good for the bosses, I suppose, because it keeps the scale down, but it's not fair to the girls. We have to be in our seats every morning at eight o'clock, and wait and wait and wait. The hours I waste in just waiting are sometimes a third of my week.

In union shops there is no such system. Enough girls are employed to give to each a full day's work, and during the slack season the hats are divided, so that each girl has a few hours' work. She knows beforehand at what hour this work will be ready, and can plan to spend the rest of her day as she pleases. You see what a help the union is.

My work commences when the binding

is done, for I am a "trimmer." I have to sew in the lining and leather band, put on the ribbon and make and sew in place the bow. Of this work the leather band is the fussiest. Take any man's hat and count the number of stitches in one inch of the band. In the first grades there are as many as sixteen stitches to the inch. These stitches are so even that you might think they were machine work. But they're not—every one is made by hand. I wish you could see the number of needles that break on these stitches—they cost me, with the thread, almost 20 cents a week. That's another thing the union does for the girls. In organized shops thread and needles are furnished by the boss. And he pays more for his work, too, the union scale running higher per dozen than the non-union. In Newark, where the girls have a strong organization, "trimmers" can make as much as sixteen and twenty dollars a week. But in our shop there's no such money. Our scale runs from 90 cents to a dollar per dozen. Now, I can trim from two to two and a half dozen hats a day, but I don't get the chance. Do you know that, tho my average wage is about a dollar a day, I have made as little as 35 cents? This makes living an awful problem, because you never know what to depend upon.

I think I was seventeen before I felt the need of an education. Before that I had been doing as the other girls in the factory, going to parks and dances and taking walks in the evening. One night when I came home late I found my mother sitting by the table with my little old reader in her lap. She was crying. When I asked her what was the matter, she told me all about her home in Rumania; how she had left there and come to America so that I could have an education and be something different from a factory girl like herself. She told me how this dream had been the one thing that had kept her up all these long years, living in a country where no one understood her language, where she must always feel a stranger. And then she cried some more, and called me her good child, her good little Rachel, and said that I must not mind her crying, for she was getting to be an old woman now, and old women were apt to be foolish.

When I went to bed that night I could

not sleep. Everything my mother had said seemed to burn in me. I thought of the nights when, while a candle shaded my own bed, she had worked over the washtub; I remembered the girl boarders; the years and years of trimming hats. And then it seemed to me that I heard the old Hebrew prayer that God would succor His children. Before I went to sleep I had made up my mind that I would get an education. My mother should not be disappointed.

The next evening, on my way home from work, I stopt at the public library and askt the young lady in charge for a book about some one who had commenced at the bottom and worked up. She gave me Victor Hugo's "Les Misérables." I read that book thru three times. I read it early in the morning, at the noon half hour, in bed at night. It seemed to me the most wonderful book that was ever written.

Then I got out my old school books and began to study. Those were the Brooklyn days over again. Mother would sit beside me while I worked, watching my copybook and sums, holding my book and all the time urging me on. When I could not study any further by myself she helpt me to save, so that one night a week I could pay a girl who had been thru the public school to come and teach me.

That was five years ago. Since then I've been reading and studying by myself, and, of course, I have learned that mother's dream can never come true. It is too late for me to be a teacher. But a girl who sews stitches doesn't have to think stitches. She can think other things. And eighteen months ago the girls in my factory began to think about a union. There were only six of us at our first meeting, and we had to meet in secret. But that was not for long. By ones and twos the girls began to come to our meetings; to listen to us in the factories, and what was better still, to think for themselves. Sometimes we got discouraged, for it was slow work, but we bent at it. We talked and we talked and we talked. We met every week and our local began to grow. Five weeks ago, when the hatters called their big strike, our little local called for the girls and

they answered the call. Not a single trimmer remained at work in an unfair shop.

It takes courage to go on a strike. Some of our girls have mothers and fathers dependent upon them, and lots and lots have families who count on their help. It's hard to see others suffer, and it's awfully hard to say no when the boss offers you double wages and says that he will never take you back unless you come now. We have a little office down on the East Side where the girls meet, and where you hear stories. The picket comes in to tell about a widow who applied for work at the factory where she was on picket duty.

"Don't you know there's a strike on here?" askt the picket.

"Yes," was the answer, "but I'm a widow with two children. The milkman told me I could get work in this factory. I can trim hats and I've got to do it."

Our picket told us that she felt so sorry for the woman she didn't know what to do.

"It's awful hard," she said at last. "It's awful hard on you and it's hard on us all. But if you take this work it means that all we've been fighting for is lost. Are you going to do it?"

"No," said the woman. "God help me. I won't take another woman's job."

That's the kind of story you hear at our office, not one, but hundreds of them. It's the story that doesn't get in the papers, but it's the story that gets hold of you, and makes you feel that we all belong together. We girls know what it costs to refuse another woman's job, and we know, too, the cost to the girl who's engaged to be married to the factory's manager, but goes out on strike. Sometimes it takes an awful lot of courage to belong to a union.

Mother says it's like starting to a new country. She has never once complained all thru these weeks, tho many a time she has gone without her tea, and I know that she is doing the neighbors' sewing. Last night when I came home I found her puzzling over the pictures in the Labor paper, and long after midnight I heard her praying the old Hebrew prayer that God would succor His children.

NEW YORK CITY

According to Osler

BY JAMES HERBERT MORSE

AFTER it had been settled, "definitively," as the word goes, by Dr. William Osler, that "they whom the gods love die young"—that is, die under forty—it was hardly kind of a brother doctor to rake over the ashes again—to pull the old men back, as it were, by the beard, and attempt to prove that the gods still have an abiding affection for a considerable number of old men. But Dr. W. A. Newland Dorland would do it, it seems. Adopting for his text Brother Osler's words, "Take the sum of human achievement, in action, in science, in art, in literature; subtract the men above forty, and while we should miss great treasures, even priceless treasures, we should be practically where we are today," he has collected, as bearing on the subject, the "records of achievement of the world's chief workers and thinkers"—four hundred of them—who may safely be called the "Four Hundred Immortals." Unearthing their immortal parts—that is, their glorious contribution to the world's history, he has been to the trouble of fixing the dates of what he reckons the "magnum opus" of the man in each case, and the duration of his "mental activity." It is a long list, those who have made us laugh and those who have made us cry, those who have lifted civilization and those whose obstructions placed in the way of human progress we would gladly forget. Separating his "Immortals" into decades—those who have ceased their activity at forty, at fifty, at sixty, seventy, eighty, and so on, he begins with the last decade and by a conjectural elimination shows what we might have mist if the men of that period had suddenly dropt out of the list of the world's best workers. "Might have missed," we say advisedly; for everybody knows that there has always been a man or woman ready to step in and accomplish the invention, or discovery just then in hand, if he or she had not been providentially anticipated by just a day or two. In the theater of life

there is ever at hand an "understudy" for every part. As we all know, even Shakespeare's masterpieces could have been easily replaced by Bacon, or if Bacon were not satisfactory, there was always another. "Mother," said a little friend of ours, in his tenth year, "Mother, how would you like me to be a great poet—like Shakespeare, for instance—and *beat him, too?*"

With God all things are possible, and with Dr. Osler's help, somebody *might* have turned up to take the place of Moses, who, as Dr. Dorland shows, expounded the Mosaic law after his eightieth year, thereby making possible some decided improvements in the world's history. Except for Moses, the Israelites might have been wandering to this very day! Well, they *are* wandering; but the milk and honey would have gone elsewhere. Without a competent understudy, where would all the Methodists be today, if John Wesley had not founded their first church after he was eighty-seven years in the world waiting for somebody else to do it? Or, if Confucius had perished at seventy, just before it occurred to him that John Chinaman would need a religion, would it ever have occurred to anyone else that the Chinese intellect needed stimulating? Many serious problems of the sort will suggest themselves to every one, as indeed they do to Dr. Dorland. Some of them could have been easily solved, and with satisfaction, by others. Anyone could have painted Titian's "Last Judgment," or that resplendent "Martyrdom of Saint Lawrence"—both done after the seventy years allotted by the preacher to man had expired. But who would have been selected to experiment on our South American neighbors, if James Monroe had succumbed to the universal destroyer before his sixtieth year? Or who, for that matter, would have been able to find out who the South Americans were, if Columbus, at fifty-five, had failed to make that famous voyage in which he had premonition of President Castro gliding

along the mountain tops of Venezuela? Or if dear old Christopher, after having seen that potent and eccentric gentleman emerging from the stream of forgetful antiquity in some form of cloud-wraith, had at once turned back towards Spain, evading the responsibility of further discovery, who would have given us Mr. Monroe, or Dr. Osler, or quite a number of gentlemen of importance, to say nothing of that admirable monument at the "Circle" hard by the Central Park in New York? There is much history brewing in the kettle of Time, awaiting the escape of some bubble of genius to show the way out of the pot.

From this brief hint of Dr. Dorland's "vital statistics," it is sufficiently evident that the other learned doctor was looking at the world *from an eminence!* To him such small things as migrating nations were but armies of ants rolling up each its little bundle of troubles. Religions were but the shadow of shadows—mere phantasmagoria of colors. He saw not the world but rather that flat disk, that circle of the lands, the "*orbis terrarum*" of the ancients—by no means a globe, nor even one of the gladsome satellites of the solar system, but a mere thin plate which might at any moment have skipped off into cold space. For would not Copernicus and Galileo have ceased mental activity at forty? And who was to tell us that the world is round? Many don't believe it even now. And the facts would have spread very slowly if Gutenberg, long after his fortieth summer, had failed to put the printer's type into harness and set the "printer's devil" to work; if Franklin, furthermore, had not played with the lightning at an age when the average boy has long dropt the kite string for more serious business; if, moreover, Morse, at fifty-odd, had not found a new use for wire, and Watt for steam, and Stephenson for iron rails, and the Steel Trust for its money. Many geniuses, it is true, might have been hit by the hand of Time, without being missed much. We could "blotch along" without them. Demetrius, for instance, and Machiavelli and Mohammed, and Mr. Bryan. With Machiavelli lost to time at forty, all those ingenious diplomacies that have produced the present Balkan mess—

forts would never have come into the world to plague cabinets; and, without Mohammed, who does not see that there would have been no use for diplomacies anyhow? At least in the neighborhood of the Black Sea? Without the followers of Islam, there would have been free passage still for tunny fish, and the Etesian wind, and the descendants of Czar Peter, at the Dardanelles. But setting aside these trifling matters, the world has always been overburdened with serious toil. The young could not have accomplished alone all that has been in the day's stint. They were overpressed for playtime even before the Flood, when their fathers helped with the chores along into the hundreds. Adam was lively until his nine hundred and thirtieth year. Seth lived to be nine hundred and twelve. Enos survived, we are told, well up to his nine hundred and fifth summer. Cainan died at nine hundred and ten; Mahaleel, at eight hundred and eighty-five, and so on. After the Flood, how much the young must have missed these healthy old men. Sad times came then, and the boys went into all parts of the known earth, and *really toiled*. Nimrod, before carrying his gun into Africa, accomplished many useful stunts in the direction of Babel, and Erech, and Accad, and Calneh, in the land of Shinah, where his kingdom began; and no doubt he was helped a good deal by the patriarchs. Dr. Osler quite evidently *sees things small*. From his eminence he has no true perspective, or how could he, in his aeroplane, have failed to descry Darwin toiling in his sixtieth year on the "Descent of Man?" Without that "Descent of Man" science would have been forced back on Adam's line, and from the Oslerian point of view this would have been impracticable, not to say impossible. For, altho it has never been precisely worked out at what age Eve gave birth to Cain and Abel, we know that the father was an hundred and thirty when he was called upon to welcome his third son, Seth, from whom, in due course of time, came Noah, who built the ark when past his six hundredth birthday. The ark surely was a work of "human achievement," involving great foresight and mature powers. The death of Noah—at forty, for instance—

would have been, to employ the usual expression of modest young writers, "disconcerting." With such a catastrophe it is difficult to see how Man could have survived with the Flood. With the ark thus dismantled, and the "Descent of Man" not otherwise provided for, the play *could* not have gone on! Dr. Osler expects too much of his understudies. There are little things dependent on other little things, and these on still other little things. As one acquainted with the brogue says:

"a flea

Has smaller fleas that on him prey;
And these have smaller still to bite 'em,
And so proceed *ad infinitum*."

The good doctor from his aeroplane could not see them all. Take comparatively modern instances. If Cromwell had died before his forties, Charles I. might have kept his head, and what an upset then in English history! Save for the sixth decade, too, we should have lost John Knox and the Scotch Reformation. How uneasy the Scots would be under the old hierarchy! Again, we should mourn Loyola and the Jesuits, who first pointed out the exact location of Ohio, home of embryo presidents. John Adams, it is true, who entered the presidential office at sixty, would not have been missed, for there has always been an understudy in the family. John Hay also may be set aside, until it is seen what is to be the full effect on the Monday's wash of his now famous doctrine—China for the Chinese, with an "open door." But Luther, dead, say, in his forties how was Protestantism to get a start? And without Protestantism, where the Pilgrim Fathers, and other things? In Young Italy, Garibaldi and Cavour would have been greatly missed: in Young England, Canning and Burke; Franklin and Washington and Mr. Roosevelt in Young America. But would there have been any Young America, with Grant, and Sherman, and Lincoln dropping off at forty? Michelangelo would have ceased to exist before St. Peter's came into being. Would anyone then go to Rome—just to see a lot of plain Italians? Mr. Carnegie was long past forty when he secured a "free foot" and began to travel and hand out libraries. But what use for libraries, if,

as Dr. Dorland shows, all the books worth reading had been left unwritten?

But it makes one dizzy to go on. What an upside-down world this would be but for the immortal Four Hundred! One after another the decades are eliminated by the relentless Dr. Dorland, and we grow fainter and fainter. There is one hope left—that is, that he will eliminate a decade or two further. Neither doctor has yet proposed to invade the sacred precincts of the third and fourth division of years. Thinking of that possible elimination, one's spirits revive. Not that we would by any means suggest the *entire* elimination of the happy season between the ages of twenty and forty; but if, by some shrewdly contrived invention of science, the area of "pernicious mental activity" could be located in the gray matter of the brain, and—well, not exactly removed, but restrained by soothing preparations of some moral cocaine, all the other activities, afferent and efferent, being left in full swing, who can measure the peace that would fall upon the surface of this globe? Take wars, for instance. There would be none. For there would be no cause for wars—no *casus belli*. It is well known that one-half of the great wars that have devastated the earth have grown out of the struggles, in the twenties, to set up housekeeping, each Adam with his choice Eve; and the other half have grown out of the necessity of keeping the house up to the standard. If the desire to get the right girl and the best automobile met with no friction—or if, for instance, each man were content to take *any* girl—if love in a cottage would be entirely satisfactory, "honest Injun," as they say—in other words, if love and ambition could be so poulticed as to keep within the temperature compassed by ordinary thermometers, then The Hague Tribunal might indeed take a long vacation. Observation shows, says Dr. Dorland, that "men of an aggressive military trend are born when their fathers are between twenty and thirty years old." That single decade then would, if reasonably attuned, leave our vast armies and navies peeled down to the irreducible minimum necessary for "show days." Think of the evils of the "bellicose vein of youth!" Alexander

broke up the happy family of Greece and disturbed the concert of Asia before he was thirty-two. Napoleon, Frederick the Great, Pizarro, Cortez, Hannibal—all of them presumably descendants of Cain on the mother's side—take away these twenty years of their "pernicious activity," and think how agriculture would have flourished, how cheap pruning-hooks and plowshares would have been! The market would have been stuffed with them. All the necessary wars—if we still must have wars—could

have been served up with dispatch by practiced old men—Von Moltke, for instance, in his seventies; Oyama, Nodzu, Kuroki, in their sixties; Lee, Grant, Sherman—Oku, Nishi, Kodama, Fushimi, after they had surmounted the plateau of "innocuous desuetude." Ah, that happy day! In the words of the old song:

"No fighting men abroad,
No weeping maids at home!"

Jeanette and Jeanot forever at the gate—and no parting.

NEW YORK CITY

Voluntary Bank Deposit Insurance

BY COE I. CRAWFORD

[The following article on Bank Deposit Insurance was written by Mr. Crawford a few days ago when he was Governor of South Dakota. On March 4 he was sworn in as a member of the United States Senate.—EDITOR.]

THE South Dakota Republican platform, adopted at the State Convention, held on the 10th day of July, 1908, contains the following plank in relation to bank deposit insurance:

"Our national platform favors the establishment of a postal savings bank system for the convenience of the people and the encouragement of thrift. The protection of depositors against loss by insolvent and mismanaged banks, and the protection of solvent and well-managed banks against runs and panics, requires that postal savings bank laws be accompanied by efficient laws, State and national, providing for the insurance of depositors against loss. We favor the enactment of such laws."

A national law will soon be enacted establishing postal savings banks. Deposits in these savings banks will be received upon time certificates only. The deposits are not likely to be kept in the local banks, but will, no doubt, be sent to central reserves and thus withdrawn from the State, to the detriment of the local banks, both State and national. The funds thus removed will, of course, become more inaccessible for use in facilitating local business than if the same were kept in the locality where the depositors reside.

The centralizing of savings deposits by their withdrawal from the localities

where the depositors live and earn them will, in a sense, weaken the local banks. A sound system of bank deposit insurance, however, would enable the local bank to maintain its hold upon the public confidence. But this is only one reason. There are many. In the first place, the conducting of a banking business of deposit and exchange is a quasi-public business, as distinguished from a purely private business. The national bank receives its charter from the Federal Government and is under the strict supervision of the Comptroller, with frequent examinations by his examiner.

The State bank in similar manner must get its charter from the State and is under the supervision of the State examiner. One emblazons in gilt letters over its doors, as one of the words in its name, the word "National"; the other the word "State." The man on the street, who has a few hundred dollars to deposit, cannot, in the very nature of things, know about the actual condition of either. But, knowing that the Federal Government has given its name and charter to and has undertaken to check up and watch one of them, while the State Government has given its name and charter to and has un-

dertaken to check up and watch the other, his confidence and trust in the nation or State is the one thing above all others which leads him to deposit in one or the other his hard-earned dollars. In such a case it is the moral duty of the nation or the State, as the case may be, to furnish him some method of protection by means of deposit insurance. There is no parallel between the principle of bank deposit insurance and the guaranteeing of a crop to the farmer, as is sometimes contended, because these chartered banks are permitted, under express statutes providing for their creation and supervision, to hold themselves out to the public as solvent institutions, and to solicit deposits by using the name "National" or "State" in the name emblazoned to the public.

The principle declared for in the South Dakota platform is not for an absolute State guaranty of bank deposits, but rather for a provision for bank deposit insurance.

Laws are past and work successfully providing for the incorporation, regulation and supervision of companies for the purpose of insuring property-holders against loss by fire, hail, tornado and burglary, and to insure persons against loss occasioned by accidental injuries and by death. Certainly, under a carefully drawn and a properly safeguarded law, a statute may be enacted by which depositors in banks chartered by the State may be indemnified, under State supervision, against the loss of their money.

Mr. Alexander H. Revell, one of Chicago's prominent and successful business men—and a Republican—in a pamphlet which he has issued favoring deposit insurance, tells, by way of illustration, of the distress which followed the failure of the Milwaukee Avenue Bank, of Chicago. He says:

"A large community in a comparatively small district was panic stricken. Many depositors were foreigners, workingmen, small tradesmen, and others, who suddenly found the savings of a lifetime taken from them.

"No matter whether anything could be realized on the assets in the future or not, the fact which dazed them was that no one could get his money, that the bank deposits were not negotiable. The plans of thousands of men and children were disarranged, and they were plunged into distress. Frightened, despairing, some committed suicide, others went insane,

others failed. And yet the worst of it is that such a pitiable wreck of human happiness could have been avoided had there been some method of guaranteeing deposits until the assets could have been realized upon; for, in actual fact, the receiver paid 70 per cent. to the depositors inside of five months after the bank closed, without calling upon the further amounts to be collected from the stockholders under the law."

If there had been an adequate insurance of these deposits in force this bank would probably not have failed at all; at any rate, in that case, its failure would have caused no suffering whatever. He says:

"Innocent depositors would have been able to negotiate their deposit books; the only loss to fall upon the insurance fund would have been the insignificant sum—if any—by which the total assets fell short of the deposits; and all that human misery would not have stained the record of our city. . . . The crux of the matter lies in the stringency into which the depositor is plunged who has funds locked up in an insolvent bank, on which he cannot realize anything at the moment of his greatest need.

"Utterly helpless, he is thrown into complete despair; he finds his family and his future jeopardized, his years of labor and economy discounted, for his money, if not lost, is removed from his use for an indefinite period."

An effective bank deposit insurance law would not only protect depositors against loss by insolvent and mismanaged banks, but it would also protect solvent and well-managed banks against runs and panics. No bank, of course, can be prepared always to pay off all its depositors in cash at one time and keep its doors open. Let me cite an incident which occurred in South Dakota at a time when there was not a single insolvent bank in the State:

Only a little over a year ago, one very cold winter night—and Sunday night at that—I was awakened by the repeated ringing of the telephone. Answering the call, I learned that it was from a prominent banker in one of the largest towns in the State. He said he had just come from a midnight meeting attended by all the bankers and most prominent business men of his town; that the situation was very serious; the clearing houses of Duluth, Minneapolis, St. Paul, Sioux City and Chicago had all, by resolutions just past, decided absolutely to ship no currency outside their respective limits; that this would necessitate the suspension of cash payments by banks in

South Dakota at a time when there was need of more than the usual amount for the purpose of moving the crops; that the result would be a panic, unless some effective means could be taken at once to avert the disaster; that he had been requested by the meeting to communicate with me and suggested that I issue a proclamation declaring the following day to be a legal holiday, so that the banks could have legal justification for keeping their doors closed. I replied that in my judgment this course would greatly alarm the public and make the matter worse, but that I would consult with other bankers at once and give him a definite answer in a few hours. I at once called up the bankers in my home town, and also succeeded in communicating by 'phone with leading bankers in three or four of the other larger towns of the State, who were also spending the night in worry over the situation, and they confirmed my judgment that a proclamation would add to the danger. About four o'clock in the morning I reported my final conclusion to the banker who had first called me up. One of the other bankers in his town answered the call and expressed the gravest concern at my decision. He feared that on the next day all the small and associated banks in the little towns in the State would insist upon being supplied with currency to pay for grain, and that a run would follow, which would force the banks to close their doors, but said, if that was my decision, they would have to take chances during Monday, and, if trouble came, they would renew the request that Tuesday be declared a legal holiday. By keeping their heads and taking their depositors into their confidence and allaying their fears, all the banks in the State got thru the stringency period without a single failure. But the thing which saved them was the co-operation and confidence of their depositors. Had there been in force a system of adequate bank deposit insurance at the time, those bankers in South Dakota would have escaped all this worry, because their depositors, protected by insurance, would have felt secure and would have caused them no concern.

The rate of insurance imposed upon the capital stock and surplus of a bank

fully sufficient to support an adequate insurance fund, is so small that it would not be an appreciable burden when spread upon all the property of all the banks. The proportion of the total losses in all the national banks in the United States which became insolvent during a period of forty-three years was only 2.17 per cent. of the average annual amount of deposits, as shown by the report of the Comptroller of the Currency for 1907. The average annual loss was only one-twentieth of 1 per cent. of the average annual deposits. During the forty-three years from 1863 to 1907 the average annual losses to depositors in all the national banks in the United States was less than one-ninth of 1 per cent. of capital and surplus.

That is to say, an annual insurance rate of less than one-ninth of 1 per cent. of the capital and surplus would have been sufficient to cover all losses from all the failed national banks thruout the entire period of the existence of the national banking system. The rule of averages will determine how much of a fund is necessary to be at hand for prompt payment of depositors in case of failure. Uninsured funds in an insolvent bank do not give the depositor any basis for obtaining credit. An adequate insurance of his deposit would make the amount an available asset at once.

The claim is made that the fact that depositors in a bank are insured against loss will tend to make bankers reckless, and that the safe and conservative banker will be held for the improvident and dishonest practices of the bad banker. This argument has no more weight against bank deposit insurance than it does against the insurance of property against loss by fire because some policyholder may set his building on fire.

The proposal in South Dakota is not to attempt to establish an absolute State guaranty by levying and enforcing a tax upon the property of the State banks. That has most serious difficulties in the way. The tax would be confined to only one class of property owners and would involve the principle of taking property by coercion from one and giving it to another. The South Dakota bill, when offered in the coming session of the Legislature this winter, will probably pro-

vide for voluntary bank deposit insurance, so framed that if part of the State banks take the insurance for their depositors, competing banks will likely find it necessary to follow the example in order to hold their deposits. It will probably provide that any bank organized under the laws of the State, which is able to present a written certificate of the State Bank Examiner, issued not more than thirty days previous, that it is solvent and well managed, shall be eligible to become a member of the State Association of Incorporated Banks, which shall be authorized in the proposed act to create and maintain by voluntary payment of premiums, a fund to be known as the State Deposit Insurance Fund, to be held in trust for the security of all depositors in the banks becoming members of said association, and to be invested, administered and paid out under the supervision of the State. That the Association of Incorporated State Banks shall exist and be created by not less than fifty existing State banks, each to be an incorporated bank under the laws of the State, and all having an aggregate capital of not less than \$500,000, sending to the State Treasurer a list containing their respective names and addresses, and the amount of the capital stock and surplus of each, together with the annual premium required of each, which, for each bank, shall be one mill on each dollar of its capital and surplus, and by requesting the State Treasurer to place the premium paid by each bank to its credit in a fund to be known as the State Deposit Insurance Fund; and that he enter the name of each of said banks in a recorded list as members of the State Association of Incorporated State Banks; also by sending at the same time to the State Bank Examiner a copy of the list sent to the State Treasurer, together with notice that the annual premium for each proposed member has been remitted to the treasurer. It will further provide that upon the receipt of this list and request accompanied by the payment of the first annual premium, the State Treasurer shall acknowledge the receipt thereof, and shall place the sums received in a fund to be thereafter known as the State Insurance Deposit Fund,

and shall enter in a book to be kept for that purpose the name and address of each of said banks, and opposite thereto, the amount of its capital and surplus and the premium paid by it, with the date of receipt, and shall forthwith transmit to the State Bank Examiner a statement containing the list of said names, addresses, capital stock and surplus and the premium credited to each bank; that the Bank Examiner shall keep a similar record in his office of the information thus received from the State Treasurer, and shall thereupon fill out and sign and attest, under the seal of the State, a certificate for each of the banks thus becoming members and send the same to the bank entitled thereto, declaring that said bank is a member in good standing in the Association of Incorporated State Banks and that its depositors are beneficiaries in the State Insurance Deposit Fund held by the Treasurer of the State of South Dakota for the insurance and protection of depositors in all the State banks which are members of the association; that said bank has paid the annual premium required by law for the period of one year from the date of said certificate, and until the expiration of such year the certificate and insurance will be in full force and effect; that in case of loss to depositors in any of the banks which are members of said Association during the term covered by said certificate, the full amount of the Deposit Insurance Fund, or so much thereof as is required for the purpose, will be applied to the prompt payment and settlement of such loss. The proposed law will also provide that after the State Association of Incorporated State Banks has once been created, any incorporated State bank may become a member of it by sending to the State Treasurer a certificate from the Bank Examiner showing that it is solvent and well managed and its application to become a member accompanied by the annual premium required, and by receiving a certificate of membership from the State Bank Examiner. Failure to pay the annual premium on or prior to the expiration of each year, accompanied by a certificate from the Examiner showing that it is in good condition, terminates the membership of any bank in the Association.

The State Treasurer is required to deposit the State Insurance Deposit Fund in the State depositaries, and all interest received for the use thereof shall be added thereto. He may also, from time to time, invest said fund in revenue warrants and registered general fund warrants of the State, the interest thereon to be added to the fund.

Whenever a bank which is a member of the Association shall fail and become insolvent, and its assets are insufficient to pay the losses sustained by its depositors, as shown to the satisfaction of the State Bank Examiner and the State Auditor by the certificate of the Judge of the Circuit Court in the county in which said insolvent bank is located,

showing the names and addresses of the depositors and the amount of the loss sustained by each, the Bank Examiner shall approve said certificate as a voucher and file the same with the State Auditor, who shall thereupon issue his warrant in favor of the receiver of said bank upon the State Insurance Deposit Fund for an amount sufficient to make good said loss, and the treasurer shall pay said warrant out of the same fund.

It is believed that a statute of the character outlined above will be valid and that it will prove to be successful, and that in a short period of time bank deposit insurance in some form will become general in the United States.

PIERRE, S. DAK.

Christ's Theory and Treatment of Disease

BY SAMUEL McCOMB, D.D.

[Dr. McComb is associate rector of Emmanuel Church, Boston, and with Dr. Worcester is the joint author of the Emmanuel movement, which is spreading so widely thruout the churches. The following article is the substance of a lecture recently delivered in this city.

EDITOR.]

IT is recorded of Jesus Christ that He both taught the people and healed them; that is to say, He had a double message—a message to normal and ordered humanity, and a message to abnormal and disordered humanity. His teaching was so simple that it could be summed up in a few sentences, and yet so original and fundamental that each age finds in it fresh light and inspiration. It must always stand first; because it appeals to the normal man—and, after all, the majority is constituted by normal people—and also because our place in the spiritual scale is determined by our attitude toward the words of Christ. As a whole the Church has been faithful to Christ, and has tried to follow in His footsteps, especially since the Reformation, by the preaching of the Gospel and by teaching the truths of the Kingdom of God. But then she has been so busy during these years with preaching, organization, apologetics and reconstruction,

that she has forgotten largely Christ's message to and treatment of the abnormal, His word to the demoniac, the hysteric, the paralytic; in brief, to those who have lost self-control, and for whom the first and necessary requisite to redemption is a restoration to them of that lost gift.

Today our attention is being called anew to this problem, and the Church is being summoned to the discharge of a neglected duty. It is incumbent on us to study the healing ministry of the Founder of the Christian religion afresh, with whatever light may be thrown upon it by the conclusions of psychological and medical science.

That Jesus himself attached great significance to His curative activity is clearly reflected in the Gospels. When, for example, John the Baptist sent two of his disciples to ask Christ, "Art Thou He that should come, or look we for another?" Jesus made this significant reply:

"Go, report to John what ye hear and see; blind men see and lame men walk, lepers are cleansed and deaf men hear, dead men are raised up and poor men are told good tidings." This saying proves that in Christ's view the coming of the Kingdom of God showed itself by the conquest of pain, misery and disease. He asks that His ministry, which founds the Kingdom, should be judged by its saving and redeeming quality. It is not, mark you, that He emphasizes His healing deeds as signs of supernatural power; but it is that He points to them as the tokens of His boundless love and pity. It is thus that He would differentiate His work from that of the stern and somewhat harsh methods of His great forerunner.

Now we come to examine what is called the triple tradition; that is to say, the material in common to the first three Gospels, and that constitutes the kernel of the evangelical narrative; we find embodied in this tradition the reports of eleven wonders. It is significant that of these no less than nine are healing wonders; the healing of Peter's mother-in-law, of the leper in Capernaum, of the withered hand, of the demoniac of Gadara, of the issue of blood, the reanimation of the daughter of Jairus, of the paralytic, of the epileptic boy, and the healing of the blind men of Jericho.

Of course, we must remember that the descriptions of these diseases are popular and fragmentary, and, therefore, we must fill out the rough outlines as best we can. We must remember, too, that these are only specimens of Christ's healing activity, for we have scattered thru the Gospel narratives a few general notices like this: "At even, when the sun did set, they brought unto Him all that were diseased, and them that were possessed with devils. And He healed many that were sick of divers diseases, and cast out many devils."

The changed attitude today of thoughtful men to these stories is very significant. Writers like Strauss rejected them partly on account of their assumed miraculous character and partly because of a preconceived theory as regards the formation of the Gospel tradition, assuming the Gospel of Mark and the stories of the most wonderful miracles to have

been written at a later period than the other Gospels and simpler stories. Today the substance of the story of the first three Gospels is regarded by every sound Biblical scholar as historical. The stories of Christ's healing ministry are so interwoven with the text of the narrative, so implied in His admittedly authentic words, and they are so psychologically probable in themselves that only a wild and eccentric type of criticism, chiefly of Dutch origin, ventures to reject them.

Speaking for myself, I may say this, that some years ago I knew not what to do with these reports of the healing wonders of Christ. Today I am more than ever convinced of their absolute historical character, and I accept as in all essential matters correct the narratives of Christ's healing wonders common to the first three Gospels.

Let us ask in a general way, What can we learn from them about our Lord's idea of disease and His treatment of it?

First, note that He does not deny the reality of the diseased condition. For Him disease is not a figment of a morbid mind. He does not confound sickness and sin, and refer both to a false belief. As Professor Harnack puts it, "Disease Christ calls disease and health He calls health. To Him all evil and misery is something terrible; it is part of the great tyranny of Satan. He feels the power to save within Him, He knows that it is only by overcoming weakness and healing disease that progress is possible." Christ raises no speculative questions as to the origin of sickness. He appears to regard sin and suffering not always as cause and effect, but rather as two concurrent elements in the kingdom of evil, to overthrow which He came into the world. His aim thruout is practical. He knows himself possessed with boundless faith in God, and confidence that in answer to faith God stands ready to give to all men forgiveness of sin, love, joy, peace and self-control—that is the secret of health.

In the second place, He speaks to man as a whole. For Him there is a living unity of body and soul. He does not distinguish too carefully between moral and physical states; He proclaims a redemption for the whole man, body, soul and spirit.

Third, His healing acts required :

forthputting of power. They were not wrought by a sort of omnipotent wave of the hand. You remember He said, "This kind can come forth by nothing but by prayer," prayer which has power to move the Infinite Power of the universe. He does not undertake to cure disorder without first making a preliminary inquiry into the nature of the disorder. In the case of the epileptic boy He asks the father, "How long a time hath this thing come upon him?" And again, He must have inquired concerning the moral state of the paralytic He healed at Capernaum, for He first lifted from the sufferer's conscience the burden of guilt before He said, "Take up thy bed, and walk."

Fourth, His personality was the great instrument of healing. Occasionally He does not disdain to use a physical instrument. On one occasion He touched with His saliva the tongue of a man who was dumb. Among the ancients saliva was supposed to have curative powers. The same means was employed on the blind man at Bethsaida. As a rule He looks with compassion on the sufferer, speaks to him, lays His hand upon him, and that is all; everything is simple, direct, personal. The psychic energy of His personality was so great that He was able to move powerfully forces of the inner life, which in turn reacted upon the physical state. We know today that in a vast variety of semi-moral, semi-physical disorders the great therapeutic power is a sane personality. How soul touches soul, how one soul can quicken into fresh life another soul we cannot tell, but observation and experience show these things to be facts.

Fifth, He demands faith on the part of the sufferer or his friends or both as a psychological medium for His healing power. That does away with the idea that these things were wrought by sheer omnipotence, else faith on the part of the sufferer would not be necessary. Very significant is the saying of St. Mark, that in Nazareth He could do no mighty works, "save that He laid His hands upon a few sick folk and healed them." And then it is added, "And He marveled because of their unbelief." Christ's power to work these healing deeds seemed arrested in an atmosphere of un-

belief and skepticism. This is confirmed by modern medical experience. We know that the faith of the patient is the most powerful ally of the psychical kind that the physician can rely upon.

Sixth, Christ did not distinguish as modern science does between organic and functional diseases, or curable and incurable. To some of His cures, if we are to accept the reports that have come down to us as they stand, there are no authentic analogies in modern science. And yet it would be a mistake to reject these narratives of the Gospel history, because we do not know how far mind can influence body, nor estimate the power on disease of such a personality as that of Christ. An English medical writer has recently made this striking statement: "Believing that all disease probably involves organic disturbance somewhere, we are prepared to believe that faith and other unorthodox methods of treatment are not necessarily limited to so-called functional diseases at all."

Seventh, Christ does not claim a monopoly of healing power. Others had healing power, He admitted. "Thru whom do your sons cast out demons?" He asked.

There was one type of disorder prevalent in Palestine in our Lord's day, in the treatment of which He was particularly successful. It was known as demoniacal possession. This belief was current in times when as yet the pathology of the nervous system was unknown, and there existed a widespread belief in demons and their activity in the spiritual life. When people saw the strange behavior of the afflicted one, when they noted the change that had past over him, and heard the ravings from his lips, they attributed this to the presence and potency of an evil spirit. This is not the man we knew, they said; it is another spirit that possesses him. We must remember that the belief in demons which prevailed in ancient times would, by the power of suggestion, serve to create and perpetuate this very disorder of demoniacal possession. Wherever at the present day there is a profound faith in the activity of spirits the same phenomenon appears. Dr. Nevius, a distinguished missionary, has written a book on spiritual possession in China. He says that

the phenomenon exists in China today as it did in Galilee in our Lord's time; the same belief, the same double consciousness, the same use of the man's organs of speech. Missionaries today heal these cases chiefly by prayer in the name of Christ, the spirits confessing His name and departing from the sufferer. This very belief in spirits is itself a malady which in one uncontrolled by faith in God is capable of producing the phenomena described. It is appropriate for us to regard the stories of spirit possession as popular ways of regarding mental depression. Otherwise we have no instance of Jesus ever healing an insane person, and there must have been such cases in Palestine in His time.

Let us look a moment at the method of treatment followed in such cases by Christ, as with the demoniac of Gadara, for instance. In the first place, He stands apart from all the exorcists of His time in the procedures He uses. We have here no magical formulas, no incantations, no appeal to the occult powers which were invoked in pagan and Jewish rites of the time. With the force of His bare personality He confronts the kingdom of mental and moral evil; all here is simple and sublime. As Matthew Arnold says:

"His action is like the grace of Raphael, or as the grand style of Phidias. Eminently natural. His action is above the common, low-pitched nature, and is natural in a way not yet mastered or followed out."

He enters into conversation with the man calmly and quietly, and seeks to divert his mind from its disordered fancies. He treats the man, in other words, as tho he were sane; it is with His word that He heals the sufferer.

In the next place, be it noted that He does not blame the demoniac as tho his miserable state was the penalty of sin. It seems to me that if the Emmanuel work did nothing more than this—call the attention of the Church to the value of some knowledge of psychology for the minister of religion, it would be worth much. The minister ought to know when some one comes to him with some miserable nervous worry, he ought to know what he is dealing with, that it is something of a pathological character; he ought to know when to blame and

when to receive with sympathy and with encouragement.

Christ regards the demoniac as a victim of diseased personality. Hence He does not ask for faith in the demoniac, because the psychical energy requisite or implied in faith was not possible to the man. The man has lost himself; he believes he is held fast by a demon, and this belief intensifies his pathological state. Hence the Lord addresses not the man so much as the demon. Only by doing so could He carry conviction to the man and effect the cure.

Finally, the restored demoniac is not permitted to accompany the Master, but is sent to proclaim what God has done for him to his own people. Here again modern medicine vindicates the wisdom of Christ. He recognized the power of unselfish work, which acts at once as a suggestion and re-education of the mental and moral nature. Only thru filling the mind with sound, health-provoking ideas can unsound, morbid, destructive ideas be cast out and kept out.

It is a curious fact that theologians of the Church generally have never known what to do with these healing wonders of Christ. Men of a rationalistic temper have contented themselves by minimizing them as much as possible, while men of an orthodox temper have intensified the miraculous or assumed the miraculous element in them, and said that these things were possible only to Christ himself, forgetting that Christ did not claim a monopoly of this power, and furthermore, that He gave power and authority by the influence of His own spirit of self-sacrifice and self-denial to His immediate followers to do the same things—heal the sick and cast out demons.

I ask the question, Did Christ intend this healing ministry to be continued in the Church, or was it something to be limited to the few years during which Christianity was being founded? Some writers, and among them a recent critic of our work in the *New York Evening Post*, hold that our Lord's healing activity formed no permanent part of His message. If that be true, the evangelical writers were singularly misguided in giving so much space to the records of Christ's wonder-working power. Still further, the Apostolic Church and the

Church of the first three centuries must have misunderstood Christ. If there is one fact in history that stands unshaken it is this, that the Church healed the minds and bodies of men, and as Harnack has shown, this was a powerful agency in the conquest of the Græco-Roman world. In His commission to the Twelve and to the Seventy He gave them authority over all demons, over every noxious and evil energy. Paul not only claimed the power to heal, but exercised it. He mentions gifts of healing. Sick-ness and premature deaths among the Corinthian Christians he traces to a lack of faith, and in some instances to irreverence toward the sacred rites of Christianity. Yet he was no fanatic. His companion on his missionary journeys was Luke the physician; Paul found no contradiction between the exercise of faith and the use of physical instrumentalities so far as they were then known in the cure of disease.

If, then, we accept the Gospel record as historical, we must conclude that the Christian religion has a healing mission to mankind. It is a notable fact that many of the greatest figures in Christian history—Cyprian, Origen, Francis d'Assisi, Swedenborg, George Fox, John Wesley and many others have found in the power of Christian faith to heal the nervous maladies of mankind a convincing proof of the power of Christ to heal the maladies of the world. New times have created new conditions. To ignore or despise the work of the students of

medicine is to be guilty alike of folly and presumption. But I ask, Why should there be any opposition between the functions of the physician of the soul and those of the physician of the body? On the contrary, if the fundamental dogma of modern psychology—the unity of mind and body—is taken seriously, we may expect the best results from a co-operation between sound religion and medical science. God reveals Himself in many ways, in the discoveries of medical science, and they must be utilized for the advance of His kingdom. I plead for a return to the spirit of Christ, to that spirit which always means a creative outpouring of the enthusiasm of humanity upon the hearts of men that have been touched by the things of Christ, and so I close by offering a practical suggestion. Why should there not be in all our great centers of population, in connection with our churches, for example, places of refuge where at any hour of the day or night, for that matter, the distress, the miserable, the would-be suicide, the victim of morbid fears, the slave to degrading habits, would find sympathy and relief at the hands of men who are more or less expert in medicine, psychology, morals and religion, and social work? To some readers perhaps such a scheme may sound visionary and utopian; and yet I believe that only thru its realization will the Church justify her existence and find once more a new and effectual door into the hearts and lives of men.

BOSTON, MASS.

The Nonconformist

BY MARGUERITE OGDEN BIGELOW

MAKE straight a path thru untilled lands,
Thru groves of lusty trees;
Make straight a way o'er roughened steeps,
A way o'er swinging seas;—
For the old path was a good path
For the old who walked thereon,—
But for me and mine the rude path,
The crude path is the good path.
For my young feet the rude path
Is best to tread upon.

I have left the safe and easy house
For a habitation wild;
I have left the harbor's rest secure
For the waves by tempests piled;
Sweet food and drink and the old loves
I left on the way I trod,—
But for me and mine the hard ways
And the barred ways are starred ways,—
For my strong limbs the hard ways
Are the ways that lead to God!

EVANSTON, ILL.

Writing English

BY BRANDER MATTHEWS, LL.D.

PROFESSOR OF DRAMATIC LITERATURE IN COLUMBIA UNIVERSITY.

WHY not write English?

On one of Sir Henry Irving's later visits to the United States he went to dinner at the house of a well known man of letters in New York, and he happened to sit opposite to the artist who was responsible for a portrait of the wife of his host, the painting itself hanging in the dining room in full view of the actor. It was an interesting picture, but it was not wholly satisfactory as a likeness of the lady. When in the course of conversation attention was called to the painting, Irving compared it critically with the living original; and then he turned to the artist with his engaging smile, and thrust at him this question: "When you were painting a portrait of our charming hostess, why didn't you paint a *portrait* of our charming hostess?" And a similar query must often come to the lips of all of us when we are annoyed by the obtrusion of foreign words and of foreign phrases into what purports to be written in English. We are moved to pin the wearisome writer down by insisting on an answer to this interrogation: "When you are writing English, why don't you write *English*?"

There is a certain British professor, who is a most prolific author, and whose style has been called a "piebald jargon," so prone is this writer to besprinkle his pages with casual fragments of foreign languages. And an American professor has recently put forth a volume of reviews and literary criticisms which is disfigured by the same offensive pedantry, and in which we are annoyed by a scattering of Latin and Greek words and by wholesale quotation from French and German writers, transcribed without translation and thus rendering the book well nigh unreadable for the immense majority of Americans who know only their mother tongue. This is most intolerable and not to be endured. No writer is justified in assuming that every one of his readers is possest of his own linguistic acquisitions. It is true that a

large proportion of educated men and women have more or less familiarity with some other tongue than their own. But this second language may be Latin or French or German; and even the reader who has one of the three is vexed when he stumbles over words and phrases from the other two with which he is not on speaking terms.

There is an old anecdote about a British bishop who once preached in a little village church to a congregation of country bumpkins and who was so lost to the fitness of things as to indulge himself in the vain luxury of quoting Hebrew. And when a friend called his attention to this vagary, he airily waved the protest aside with the assertion that "everybody knows a little Hebrew." It would be easy to maintain the contention that everybody ought to know a little Latin and a little French. But it is an inexorable fact that everybody doesn't, and that those who do know a little Latin may have no French, and that those who have a little French may have no Latin. It was Fox—was it not?—who asserted that "it is not necessary for a gentleman to know Latin, but he ought at least to have forgotten it." And if a gentleman has forgotten his Latin, and if a lady has failed to keep up her French, they are both of them likely to resent the impertinence of the writer who forces them to snatch what meaning they can out of a linguistic grab-bag. After all, it is not unreasonable in us to expect the author who is appealing to us in our language to confine himself to that language. Indeed, it is not unreasonable for us to suspect that the writer who cannot say all that he has to say in his own language—which is ours also—has not yet mastered the craft of writing. He does not know his trade and he has not learnt how to use his tools as they ought to be used.

Perhaps if we look into the question a little more thoroly, we may find ourselves wondering whether this trick of dropping foreign words into English

sentences is not a symptom of that Teutonic influence which is obvious enough and understandable enough in latter day scholarship. The benefits of this Teutonic influence are evident, but so are certain of the disadvantages. The Germans are exact and accurate and painstaking; this we must all admit, and this we may all seek to emulate. But the Germans are not always successful in avoiding the pedantry which is likely to accompany precision. And there is undisguised pedantry in this flux of foreign words. It runs riot in the pages of many profest scholars who have adopted Teutonic methods.

And here is where the influence of the French may come in to counteract the influence of the Germans. The Germans have a tendency toward pedantry, and we who speak English have a tendency toward overt individualism—to self-expression for its own sake without due regard to the best means of transmitting to others what we have to express. But the French are governed always by the social instinct; the French writer thinks of his readers before he thinks of himself. This it is which has helped to give French literature its vogue thruout the world. The French author is not egotistic in his self-expression; he is not self-willed; he is bound by his duty to his reader; he holds himself obligated to the utmost clarity; he believes it to be his prime function to be understood, and to be understood easily and without strain. Indeed, this clarity is as characteristic of the language as it is of the literature, and as Rivarol said: "What is not clear is not French."

The French language and French literature are like the French society, they reflect and interpret; they are all the result of the operation of that social instinct which is the most marked characteristic of the French people and which seems to have been inherited partly from the Latins and partly from the Celts. This taming of individualism may have been cramping to the poetry of the French, but it has been most helpful to their prose. French prose is not only clear, it is noble. It testifies to the good manners of the race. The French writer has ever the politeness which comes from thinking of others before he

thinks of himself. Consider how that ripe scholar, the late Gaston Boissier, took stock of his readers when he set before them the careers of Cicero and Horace. He gaged with intuitive precision the exact extent of their acquaintance with the themes which he had made the study of his life. He had to fortify his narrative now and again by citing the actual words of the Roman authorities he was using, but he never assumed the reader's knowledge—altho this is far more probable in France than in America. If he had to quote Latin, he was careful to translate it, and he put the translation in his text, relegating the original to a footnote, where it would not be an impediment to the full current of his story. And what Boissier did in dealing with the writers of Rome, Taine did in handling the authors of England, and now M. Jusserand follows in their footsteps.

No English author profited more by his study of French literary methods than Matthew Arnold; and while he was tempted more than once to draw on the terminology of French criticism (which is so much richer than the terminology of English criticism), he took pains always to elucidate the precise meaning of the French term he was using, for the benefit of those of his readers who had no French. And in so doing he conformed to a principle laid down by that one of his contemporaries who perhaps owed less to French models than any other prominent English writer of the nineteenth century—Herbert Spencer. It is in his most illuminative essay on style that Spencer reduced the scattered precepts of the earlier rhetorics to a single principle and declared that they were all the result of an effort to "economize the attention" of the reader and to make it easier for the writer to transmit his thought without tare and tret. The author who is careless enough, or pedantic enough, or egotistic enough, or vain enough to parade his familiarity with foreign tongues and to clog his pages with words not easily understood of the people, is wilfully refusing to economize the attention of his readers. He is giving us not a beautiful design in aptly chosen words, but only a linguistic crazy quilt.

The Rose White Maid

A Ballade of Life Unlived

BY GARNET NEEL WILEY

SHE sat so long at her broidering,
The Rose White Maid of that ancient hall,
She stitched so fine that she ceased to sing,
She stitched so close that the rise and fall
Of threads had woven her thoughts among
Them garlandwise; what she might have sung
In gold and green to the fabric clung.

Down over her silken knees it swept,
The shining sheen of that broidered thing,
And round her feet it had crawled and crept
In the sinuous way that serpents cling.
Wave upon wave the deep lengths fell
With a wild sweet swing, a strange sweet
smell,
Winding her soul in their woven spell.

The sun rolled high, and its ray burned South,
And silver glowed on a silver Knight
Who came to woo with his scarlet mouth,
Who came to wed in his armor dight.
Yet all in vain he breathed her name,
And pleading went as he pleading came;
She smiled, and broidered a heart of flame.

The sun rolled low and its ray burned west;
A child cried long at her castle wall;
The fond birds followed their young to nest
As dark rushed in, but his little call
Went low—went low. All unheeding him,
The Rose White Maid with her needle slim
Was broidering beautiful cherubim.

The shadows shake as the long day wanes,
And cold, thin moonlight faint and hoar
Comes gliding down thru the colored panes
To a purple pool on the marble floor.
"All this is the outward husk," she saith,
"Of the inward dark," and she caught her
breath
To broider the lean gray sign of Death.

Down into the West the red moon rolled,
And slow and slower the silken thread
Wove in and out. It was dark and cold;
The Rose Maid shivered and bowed her head.
Her needle snapped with a crimson mark
On her pallid hand. Like a dying spark,
The Rose Maid chilled in the chilling dark.

WASHINGTON, D. C.

Where the Mail Service May Be Improved

BY HENRY A. CASTLE

FORMER AUDITOR FOR THE POST OFFICE DEPARTMENT.

ALTHO the mail system of the United States is easily pre-eminent among the great business institutions of the world, it is still only in the infancy of its usefulness as the handmaid of commerce and the advance agent of civilization.

It has power for creating intellectual and commercial activity thru the medium of cheap postage, and any proper addition to its facilities is always welcomed.

With the unparalleled natural resources of this great continent; with the vigorous moral stamina of our people; with the remarkably keen faculty of inventing and the corresponding valuable faculty of promptly adopting improved inventions, and with our recent sudden

awakening to the great commercial possibilities which lie before us in every part of the world where our manufactured products can be utilized, it must be clear that if we only use to the highest degree every opportunity given us, we will soon begin the march that will end in the triumph of American commerce and American thought in all parts of the globe.

The cheapening of our postal rates and an increase of facilities will contribute an important part toward that end.

During the last fiscal year the postal officials of the United States, mostly postmasters, handled, of postal and money order funds, an average of \$8,000,000 a day—nearly three billions

per annum. The gross earnings of the mail service proper, mostly revenues from the sale of postage stamps averaged \$5,300,000 a day, with a net loss of \$46,000 a day. The total deficit for the year was \$16,910,278.99, and the Postmaster-General officially estimates that the deficit of 1909 will be nearly or quite as much, while unofficial estimates place it at \$30,000,000.

Taking the modern business formula for arriving at the significance of this deficit and assuming the current rate of interest paid by the Government on its bonded indebtedness to be 2 per cent. per annum, this annual loss of \$17,000,000 in the postal service is equivalent to an increase of \$850,000,000 in the public debt.

A practical post-office improvement, which would, in the opinion of its advocates, wipe out this deficit; an administrative reform that may thus seemingly be capitalized at \$850,000,000, is now being examined by the Department.

A patented device for achieving this reform has been presented to the Department. It consists of a postal card and envelope, bearing a specially designed stamp, to be manufactured by the Department and sold to the persons and firms who will later send them out enclosed in circulars for advertising purposes, collection of news, etc. These patrons will pay a sufficient margin above the original cost of the cards and envelopes to reimburse necessary expenditures.

The proposition is that thru a corporation there will be purchased in advance United States postage stamps to the value of \$100,000 (or more if required), which will be deposited with the Department as a nominal prepayment of the postage on all matter returned. The patrons of the system having sent out these cards and envelopes to their correspondents, the latter may use them for mailing replies, orders, etc., without affixing additional stamps, and therefore without cost to themselves. The postage has already been paid, in mass, by the deposit of \$100,000 worth of stamps, as evidenced by the special design on the envelope or card, which, while valueless until actually mailed, then becomes a stamp in fact and in law—the certificate of the Government that the postage has

been paid. The deposit is to be kept intact by daily payments of postage at the receiving offices on all such mail arriving. To wit, on reaching the office of destination these cards or envelopes would, by reason of their distinctive appearance, be quickly separated from other mail, and upon payment in stamps or money of an amount equivalent to the postage, they would be delivered. Daily payment is thus made to the postmaster at the receiving office in full for all this mail matter before the same is taken from the post office.

The plan is manifestly simple. It is claimed to be entirely legal, and can be easily adapted to present departmental regulations.

A device of this kind would doubtless appeal to many classes of extensive business and industrial concerns. Publishers seeking subscribers, mail order houses seeking orders and replies of various kinds, newspapers seeking information, trade publications seeking crop reports, life insurance companies seeking applications for insurance, publications seeking replies to solicitations for advertising—all of these would use this system, and the list can be definitely extended to cover every line of business. As a general proposition, the man who sends a circular wants a reply, and if the circular is worth getting out the reply is worth paying for. But under present crude and wasteful methods only 10 per cent. of cards and envelopes sent out as enclosures ever come back.

Our postal service is the accurate measure of the nation's marvelous expansion in intellectual and business activity. It furnishes the complete nerve system of our continually extending commercial life. The evolution of modern business methods demands that this service keep step in progressive development with that commercial intercourse whereby everything that supplies the necessities, the comforts and the enjoyments of our people may be alike utilized by all, the residents of the great cities and of the rural districts. To that necessary and growing demand the development of legitimate business advertising has a direct relation.

The disposition that is seen of late in all departments of public and private affairs to analyze improper and wasteful

methods and to supplant them, is not the least hopeful sign of our times.

The Treasury Department, in the collection of customs, has adopted a plan in line with that suggested for return postage. It now accepts deposits in bulk from express companies in prepayment of duties thereafter to be paid by deductions from the deposit. This action is in harmony with the opinion of law officers of the Post Office Department, and establishes a timely precedent.

It is admitted as a general principle that the postal service exists for the whole people and that its privileges must be open to all. Yet this salutary rule is subject to obvious exceptions. The privilege of free delivery, of the money order system, and other features are not open to all the people of the country on equal terms, and to many are not open at all. Inevitable discriminations exist everywhere in the mail service. But the return postage plan is open to everybody in the sense that all desiring to avail themselves of the facilities may do so, and one condition of any contract with the Department would undoubtedly be that such rights would be guaranteed.

The contention of the advocates of the system is that its establishment by the Government would add to the revenues of the service, relatively reduce the expense to the business public of conducting correspondence where return postage is involved, greatly facilitates business, and at the same time not take away from any one any privilege which he now possesses. What is proposed is only an addition to the present service. It may be said also with reference to the general proposition that there has been no adverse criticism from any quarter or interest; on the contrary, the only difference of opinion developed has been as to the means by which the end can be accomplished.

The whole purpose of the use of stamps and stamped paper is to certify advance payment of postage. This is secured by the advance deposit of \$100,000 in stamps, as testified to by the special design of stamp impress by the Government in the envelopes and cards furnished. These impress stamps are of no value whatever until the matter is deposited in the mail.

Legislation is apparently unnecessary in this case. Any administrative or accounting officer of the Government can testify that practically all the reforms and improvements he has been able to secure for the service have been those that he has taken the responsibility on himself to introduce. Indeed, the legislative authority seems unable to accomplish the reforms it has itself proposed. In 1906 a commission of six distinguished Senators and Representatives made an elaborate investigation of second-class mail rates, printed a book of half a thousand pages of hearings, report and proposed legislation, but nothing has come of it. In 1907 a commission consisting of practically the same persons examined into the whole subject of postal reform, issued a report of equal size containing many valuable suggestions, introduced a voluminous bill reorganizing the service—and there the matter rests.

The plan proposed for return postage is based on the same principle as that adopted by the Government in receiving deposits of coin and issuing certificates therefor, which circulate as currency. Legislation was required for that proceeding because there was no power conferred by law on the Treasury Department which covered the case. But there can be no doubt that the authority now wielded, under the statutes, by the Postmaster-General is ample for receiving a permanent deposit of stamps and issuing the envelopes and cards contemplated by this proposition.

In a report made to Congress from the Committee on the Post Offices and Post Roads, the careful and well-informed chairman of the committee, Mr. Loud, estimated from such data as he had that it might not be extravagant to say that the stimulus given to the mercantile and commercial interests thruout the whole country, under the operation of this plan, would approximate \$30,000,000 net revenue.

There can be no doubt, at least, that under the advantages proposed by the new system, and with the vigorous campaign that would be made for patronage, the volume of such business would be increased fivefold as soon as it was fairly installed; and on this basis, allowing for the postage on letters mailed in sending

out these enclosures, and deducting the revenues now realized from cards and envelopes that would be displaced, a net increase of \$16,000,000 in the yearly earnings of the mail service is made reasonably probable.

But even if the net increment should be considerably less than this conservative estimate, it would assuredly be a welcome addition to the embarrassant exchequer of our great and beneficent postal system.

WASHINGTON, D. C.

The Collision

BY HARRY H. KEMP

Now, God be thanked for the fuller Wit of a Modern Time;
For the Muse of a Former Day had written with tears for rime.

From the blank white wall of the fog each great ship gathered shape
Like the sudden jutting forth of an earthquake-lifted cape;
Like leviathans at charge with a welter of waves and a roar
They rush and crash in the dark, long leagues from the friendly shore.
The "Republic" reeled and lurched (so the "Merrimac" reeled mid foam,
In the days of our brother strife, when the "Monitor's" ram drove home).
There were cries forlorn in the dark and a wail of women and men
As the liners drifted apart, in the white fog buried again;
Then the vibrant, hysterical voice of the "Florida," out of the night,
Groped around and around. . . . And ever the fog loomed white,
The vast four walls of the fog—and silence, alone, was heard,
The sickening silence that speaks to the soul when there is no word,
Till at last, as Chance would have it, or the gods of the heaving tide,
The "Florida" found the "Republic," and stood with help at her side.

But, or ever the impact was over, the wireless began to cry,
Leaping, and running, and roaring, with the voice of the code, on high:
"Help, send help," it echoed. "We are sinking, sinking at sea."
And the Siasconsett wireless republished the flaming plea
East and north and south—wherever a ship might be!

First the wireless that dwelt on the "Baltic" heard, with its sensitive ear,
And answered its frenzied sister with hastening words of cheer—
And the shore-built station scattered the long blue flashes again
As the code sang in from seaward from the good French ship "Lorraine";
The "Lucania" cried in answer. . . . And then the race began
Between the Death of the Sea and the Newborn Wisdom of Man!

Like voices that cry in the night the signals wandered wide—
Like the moan of a wounded comrade the stricken "Republic" replied.
While the "Florida," looming mute, waited for help, at her side—
And the tethering string of the code drew the groping liners in,
While the huge propellers roared and the sirens' screech made din.

Then, a mammoth apparition, the "Baltic" broke from the mist
To where the two ships floundered, and a mighty cheer uprist!
And well did they cheer, the rescued, for a happy folk were they,
Saved from a sleep in the sea and the Death that rode on the spray!
Yea! Well did the rescued cheer, for ever since Time began
Science had never given a greater triumph to Man!

And God be thanked for the fuller Wit of a Modern Time,
For the Muse of a Former Day had written with tears for rime.

Research and the Smithsonian Institution

BY CHARLES D. WALCOTT

SECRETARY OF THE SMITHSONIAN INSTITUTION

WHILE the history and achievements of the Smithsonian Institution are widely known, it is not generally understood that it receives no grants of money from the United States Government, but is wholly dependent for its maintenance and operations upon means derived from private sources. Nor do the American people realize fully that the Institution was founded by a bequest to their nation, formally accepted by them. A conception of the true position of the Institution is perhaps slightly confused by the fact that it directs research in several Government organizations, notably the National Museum, the Astrophysical Observatory, and the Bureau of American Ethnology, all of which are controlled and supported by annual legislative enactment.

Our people should know that the fundamental purpose for which the Smithsonian Institution was created is the *increase and diffusion of knowledge among men*.

The field of work thus embraces all the intellectual activities of man, in science, literature and art. Thru systematic researches and the publication thruout the world of the results of such researches and of the studies of investigators not directly connected with the Institution, its purpose has been so well carried out during the sixty years of its activities that its name is everywhere a familiar one among intelligent people.

With limited funds, but with a hearty

spirit of co-operation, it has served not only the people of America, but people in every civilized and semi-civilized country on the globe. Its exchange service has now 60,123 correspondents, of whom 48,530 are in foreign countries.

With the changing conditions of time and the evolution of systematic endeavor to benefit humanity, the Institution has reached a point in its development where additional endowment is needed to carry out some of those large objects which it can administer with great effectiveness.

Study of Earthquake Phenomena.—These include the vitally important study of earthquakes, and other movements of the surface of the earth. To do this well there should be established in the city of Washington such a station as will most effectively provide for the systematic study of seismological (earthquake) phenomena. There should also be laboratories in the earthquake regions for

(a) Studying the causes of earth movements and the relation of such movements to known conditions in the earth's crust in all parts of the world.

(b) Studying the factors controlling the distribution of intensity and the consequent destructive effects of earthquakes, both by observation and experimentation.

(c) The intensive study of regions where earthquakes are frequently recurrent, and where the greatest variety of seismic phenomena are likely to occur.

(d) Bringing together and publishing the scattered statements, notes, and re-

ports of earthquake phenomena thruout the world.

Central and South American Explorations.—Another great project is the survey and study of one of the large unsurveyed and unstudied areas of the earth, covering portions of Central and South America and adjacent islands, and the West Indies. The project would require the making of maps and a general survey of the dominant geologic and biologic phenomena with a view to discovering the history of the continent and the origin and development of the faunas and floras that have occupied it at successive periods in the past. It would also include an investigation of present botanical and zoological conditions, and an ethnologic study of the native peoples of those regions. Large collections could be made for the benefit of museums and educational institutions.

It would be particularly fitting that an American institution should undertake to increase and diffuse scientific knowledge of these areas without the thought of exploitation or personal gain. The results could not fail to be of great value to the people of the Americas, and thru them to all countries of the world.

Study of American People.—A department for the ethnologic study of the American people, the general purpose of which shall be a comprehensive biological study of the many and diversified peoples forming constituent elements of the American nations, and the application of the results to promoting the welfare of the nations. The work should include a determination of the character and potentiality of the physical, mental and moral elements which the nations assume to control, direct and assimilate, and the results of the intermingling of the white, black and other races, on physical development, longevity, fecundity, vigor, liability to disease, as well as on the intellectual qualities, and an elucidation of the operations of heredity and the effects of changing social and climatic conditions, so that a firm base of knowledge may be provided for those who are to frame and administer laws relating to these elements and those who

are to direct the policy of the thousands of institutions that deal directly or indirectly with the physical, mental, moral and social welfare of the nations.

The projects outlined are very large ones and will involve the work of a number of experts and assistants for a period of years. Individual parts can be taken up and completed from year to year, but all should be planned with relation to a final outcome of great service to mankind.

Minor Research.—Research is original investigation in any field of science, literature or art. Its limits are bounded only by the knowable. Its success depends upon the advancement it makes upon what has gone before. It should be conducted on a scientific and business basis, and an annual checking up of results made, both for the benefit of the investigator and the administrator in charge.

There are many minor researches that should be undertaken. One of the things I wish to see brought about is to give investigators an opportunity for research in connection with facilities that might be provided in Washington. The Smithsonian supports a table at the Marine Zoological Laboratory on the Bay of Naples. Every year American students take advantage of the opportunities offered there. With means to organize and conduct laboratories for research here, a great service could be done for young men, the men who have the initiative, ambition and force to create and develop new ideas. In association with older permanent members of the research staff, a strong research organization would be developed from which men could be selected for larger and more extended investigations. It would be one of the best methods of finding and utilizing the exceptional man.*

WASHINGTON, D. C.

*The Institution's original endowment of \$547,000 has been increased by gifts and accumulations to \$975,000, yielding an annual income of \$58,375, with an additional incidental income amounting to about \$5,000. This income provides for salaries, maintenance, publication and the general expenses of administration, aggregating \$50,000; of the balance \$6,000 must be applied to a specific investigation, which leaves only \$7,000 for expenditure in the various departments of research in which the Institution is interested.

Literature

The Frontier of Knowledge

EVERY educated person wants to keep up in a general way with the intellectual movements of the day in all lines. He likes to know something about the new developments of music and art, about the tendencies of literature in various countries, and about the progress of science and discovery. Books and magazines keep him sufficiently well informed about literature and the arts, but he finds it practically impossible to keep in touch with those who are engaged in extending the frontier of human knowledge into the darkness that surrounds us on all sides. He has no good way of learning what the men in the laboratories and studies are thinking today. It sometimes takes ten or twenty years for a new theory or mode of thought to become current in the outside world. The men who are doing the new things are generally too busy to tell others what they mean.

That is why we wish to call especial attention to the unusual opportunity for the ordinary reader to catch up with advanced scholarship which is afforded by the volume of *Lectures on Science, Philosophy and Art*, published by Columbia University.* In this course, each department of the university put forward a spokesman to tell of its tasks and triumphs, its aims and ideals, in "language understood of the common people." The volume contains twenty-one such addresses, covering as many different fields of knowledge, and few universities in the world could furnish a list of men more competent to interpret modern thought.

Apart from its convenience as a means of freshening our ideas and bringing our schoolday science down to date, the reading of the collection as a whole brings out in the most striking way the prevailing tendencies of recent philosophy and the variety in points of view. We are reminded of the adage, "One story is good till another is told," for

each man in turn shows that his particular subject is the central theme of all history, the original science from which the others sprang, and the final philosophy toward which they tend; the most useful of all the sciences in the service of man and the one to which all the others act as servants.

A high keynote was struck in the first lecture by Prof. C. J. Keyser. Everybody expected, from its subject, mathematics, that it would be dry, uninspiring and incomprehensible. Popular expectation was not altogether disappointed on the last point, but was most agreeably surprised about the other two. It was a sermon, a poem and a world-philosophy rolled into one. Later lecturers betrayed some nervousness lest they were not successfully taking this high note.

There is, naturally, the greatest variety of style. Some of the lectures are dull, commonplace or staid in expression; others are brilliant, vivacious or strikingly original. Each man gives the reason for the faith that is in him, regardless of the opinions of his colleagues. There is manifestly no compulsory conformity at Columbia. Thus, President Butler, in the lecture on philosophy, pokes fun at pragmatism, "which, when unfolded to the man in the street, makes him howl with delight because he at last understands things," notwithstanding that this lecture follows those of the scientific men, who are decidedly pragmatic in their philosophy, especially the astronomer, Professor Jacoby, and that it is succeeded by the lecture of Professor Dewey, who heralds a new era in civilization due to the extension of "the applied and experimental habit of mind" into moral philosophy.

We have become accustomed to expect rapid progress and sudden transformations in the newer sciences, so the ordinary reader will very likely be more surprised at what he reads of the modern methods in old and assumedly static studies, such as history in general, as expounded by Prof. J. H. Robinson; or Greek history in particular, which Prof. J. R. Wheeler uses as an example in the

*LECTURES ON SCIENCE, PHILOSOPHY AND ART.
New York: Columbia University Press. \$5.00; by mail, \$5.27.

lecture on archeology; or philology according to Prof. A. V. Williams Jackson. The other subjects and authors, which we have barely space to name, are physics (Nichols), geology (Kemp), biology (Wilson), physiology (Lee), botany (Richards), zoology (Crampton), anthropology (Boas), economics (Seager), politics (Beard), jurisprudence (Smith), sociology (Giddings), psychology (Woodworth), metaphysics (Woodbridge), and literature (Peck). On account of its comprehensiveness, condensation and authoritative character the volume is especially adapted for the reference shelves of public and collegiate reading rooms.

In the Field of Art

It is the idea that every age and country needs its Vasari that has prompted the series of "stories" of artists of all nations, of which we have two new volumes, one on English, and one on Flemish and Dutch painters.¹ They are strictly compilations, offering no original material. Even the title pages and bindings are adaptations from notable examples—designs by Bartolozzi and Rubens, and a cover "from a fine original dated Leyden, 1509." This scheme is most commendable, for it gives the reader the best possible material, sifted, authoritative—so far as it ever was so—in a form which, even in a reprint, is a valuable art possession. The two volumes are exactly similar in intent, and vary only thru the personality of their compilers. They are avowedly for the general reader, avoid technical matter, and aim to please. In this they succeed admirably. The two volumes are fully illustrated with half tones and color plates. The latter are, in many instances, unusually good, but the same cannot be said of the former.

Esther Singleton is achieving an enviable reputation as a compiler, and is rapidly becoming a very Baedeker of art. Her handbook on the galleries of Holland² is a worthy addition to her output, and will prove invaluable to the tourist.

It is by no means wholly a compilation, tho the author has drawn freely on authorities to substantiate and qualify the fruit of her own observation. It is not only comprehensive in scope, but salient in matter, and profusely illustrated with illustrations far above the average of more costly volumes.

Finally we arrive at the pictures themselves—one hundred examples, in color, of the Old Masters.³ It is a monumental undertaking, and its manner of achievement fills one with conflicting emotions. To possess these treasures is a delight, but to possess them in a setting that destroys whatever of excellence the reproduction has attained is a tragedy. Much might be said of the quality of the reproduction, but these prints do not stand on their merits; they fall by the serious error which the publisher made in mounting them on gray paper. Drab is the last word in the desolation of color, but gray is the next to the last. It has little place in nature; it should have less in art. As a setting, to bring out the effect of a picture, it is hopeless except for a black and white print, in which case it is only negatively good. If a neutral tint was desired, a warm brown, the color of mother earth, would have been excellent; better than that, a lively green, the most general of all blending agencies; best of all, gold, the universal harmonizer, in some form of dull yellow, since gold itself is impracticable from its costliness. As to the reproductions themselves, the publisher has thrown down the gauntlet. "Many of them," says the cover advertisement, "as we turn the pages, seem to have actually stepped down from the walls of our own National Gallery," etc.; and again, "Here we see the very colors Titian loved." To claim any such triumph for the three-color process in its perfection is absurd; and we all know that, for a variety of reasons, the three-color process is seldom at its best. As a matter of fact, these reproductions are not above the average either in fidelity to the originals or in intrinsic beauty. In a few plates there is beauty and approximate truth in some dominant color note, as, for example, the blue of the cloak in Leonardo's "Madonna Litta," but in

¹English and Flemish and Dutch Painters, by Esther Singleton. New York: The Independent, 1911. Pp. 128. \$1.00.

²Holland, by Esther Singleton. New York: The Independent, 1911. Pp. 128. \$1.00.

such instances the rest of the color suffers. The flesh tones here, for instance, are pallid and false. On the other hand, wherever the reds are particularly good, the flesh is often muddy. Again, in Botticelli's lovely "Madonna of the Magnificat," the beauty of the strange soft reds and beautiful blue is made ugly by the crudeness of the yellow, which is a very strong note in the picture. The most satisfying plates are not those which are truest to originals, but those in which values are good, and the whole harmonious and pleasing. Reynolds's "Lady Cockburn and Her Children" is an example. Again, originals that are rich and deep in coloring have given beautiful plates. Some of Rembrandt's pictures and Dürer's portrait of his father are conspicuous examples.

Chaucer: A Bibliographical Manual. By Eleanor Prescott Hammond. New York: The Macmillan Company. \$3.00.

The character of Dr. Hammond's compilation is wholly scholastic; it is intended for the philological, not the literary student. But within its own province it makes an invaluable manual for the study of Chaucer. Nominally it pretends only to be an exhaustive bibliography of the subject, arranged and classified for easy reference in heads and sub-heads, and supplemented by a fairly copious index. But in reality it amounts to a good deal more than this. In the end it is neither more nor less than a complete digest of Chaucerian scholarship—so much so that there are few matters connected with the subject in which the student will not find it of great assistance in orienting himself. In this respect, too, it is of value, equally, if incidentally, to the reader or literary man for the fundamental facts or data of his study. In spite of the very positive pretensions of philological scholarship, and its frequent sneers at the uncertainty and inexactitude of literary and critical judgments and the dangers of a free play of the intelligence, it is curious to notice that the biographical lists of which the volume is composed form but one long record of conflicting views and disputed conclusions, in which nothing but the most obvious problems have united a clear majority of scholastic suffrages.

The World's Gold. Its Geology, Extraction and Political Economy. By L. De Launay. Translated by O. C. Williams. With an Introduction by C. A. Conant. New York: G. P. Putnam's Sons. Pp. xxxii, 242. \$1.75.

"We live in a gold age," writes M. De Launay, after a summary of the world's gold production, "but let us remark at once that a gold age—an age of large gold production—is not necessarily a happy age; on the contrary, it must correspond, if no circumstance intervenes, with a diminution of the value of gold, a rise in prices and general distress." That the present high prices are in some degree due to the immense increase in gold production of recent years is impressed upon M. De Launay's readers who follow the figures of the gold output of one region only—the Witwatersrand. In 1889 the whole world produced only 185 tons of gold and even in the most productive years of Californian and Australian gold mining, the output never surpassed 202 tons in one year. In 1906, the Rand alone produced 187 tons, and with the Rhodesian mines, the total output of gold for British South Africa was 212 tons. Besides the South African gold, there were produced in 1906, 153 tons of gold in the United States, and 126 in Australasia, and with the smaller quantities from the remaining gold producing countries, the world's gold for 1906 amounted to 608 tons, or a value of \$420,000,000. While M. De Launay is both interesting and reliable in the sections of his book dealing with the geology, the distribution, and the mining and extraction of gold, he is much less reliable when he deals with the politics and economics of the gold question. In spite of the disturbance and distress which he owns can be caused by overproduction of gold, he seems to feel a sort of indignant regret that the policy of the British Government in South Africa should throw any difficulties in the way of cheap, indentured Chinese labor for the mines, and he expresses the hope that Premier Botha may free himself from "the fantastic and *soi-disant* Liberal ideas by which the English Government might have ruined the mines." He also appears to regard the 10 per cent. tax on the gold output as an injustice, and yet the mines produced over 123 million dollars worth of gold in 1906, and the out-

put for each of the succeeding years has shown a large increase. In spite of his great familiarity with his subject—perhaps because of it—M. De Launay makes the old error of confusing gold with capital, and of concluding that gold is the only available wages fund. His prognostication of the future of Socialism in France combines these two errors. "Pushing things to extremes," he writes, "and supposing a general emigration of capital, national labor would cease entirely to be remunerated, having no further object, and at the same time all articles necessary to existence would rise immeasurably in price." This one brief quotation is enough to show that, while M. De Launay may be an excellent professor in the *Ecole Supérieure des Mines*, it would be a huge mistake to transfer him to the department of political economy of any college.

An Incarnation of the Snow. By F. W. Bain. New York: G. P. Putnam's Sons. \$1.50.

Like "A Digit of the Moon," this is a Hindu mythological love story. Few writers have a better vocabulary for translating the moon-capering spirit in Indian mysticism than Mr. Bain commands. As a rule the Occidental's choice of terms is too heavy, too grossly dramatic for interpreting a thing so unsubstantial as Hindu fancy. But Mr. Bain has lived in India long enough for the ghost-mind of the country, its colors and philosophy to rarefy his language, so that he writes his marvelous tales of moon and snow in what may be termed an exquisitely foreign English. The preface to this last volume is really more beautiful than the translation of the Hindu myth which follows. But it betrays one trait of the Occidental temperament, the impatience he always shows at Western forms of spirituality after he has surrendered to those of the Orient. Mr. Bain expresses an irritated contempt for the spiritual crassness of Christianity as associated with Indian Pantheism, for example. He thinks the latter is the greater, more spiritual religion. As a matter of fact, the spirituality of the Orient is not positively re-

ligious. And it is founded upon a philosophy of negation which is the solvent of all religions. Indian spirituality is too nebulous, too passive to conceive of a God who would be any comfort to a man. And therefore it must be forever lacking in the purely religious quality which binds man to God, rather than to a system of asceticism, or philosophy. Now if we must be religious—and it appears that we have curiously persistent inclinations that way—let us have a more realistic idea of God than the opaque spirituality of the Orient suggests. Mr. Bain would do well to confine himself to the mythology of India without confounding it with religion there or elsewhere.

The Fact of Conversion. By George Jackson, B. A. The Cole Lectures for 1908 delivered before Vanderbilt University. New York: Fleming H. Revell Co. \$1.25.

This is an attempt to restate the doctrine of conversion and to interpret it to this generation. The author evidently believes that with the passing of the terminology of the old doctrines there is danger that the present generation will lose some of the essential things thus connoted. He therefore is occupied with an adjustment, in view of the findings of science, in view of the revival in psychology, of the primary facts of the religious life to a sane and scientific philosophy. In other words can a modern man believe in conversion? Mr. Jackson thinks so and he makes it seem so in his book. In none of the recent valuable studies of the psychology of conversion and of religious experience has it been so conclusively shown that spiritual facts are as much facts as those which occur in the natural world. A valuable feature of the book is the estimation of his predecessors in this line of study, Coe, Starbuck and James. Mr. Jackson appreciates their labors and makes some use of them, but in certain important respects is more valuable than any of them. He discredits the *questionnaire* method of seeking his facts, and he attempts, successfully, to portray the normal rather than the abnormal aspects of religious phenomena. The book is worthy of its predecessors in the Cole Lectureship.

Literary Notes

"In the world's broad field of battle,
In the bivouac of life,
You will find the Christian soldier
Represented by his wife."

The story of some of the more illustrious of these female representatives may be read in Canon E. C. Dawson's *Heroines of Missionary Endeavor*. (Philadelphia: J. P. Lippincott & Co. \$1.50 net.

....The H. R. Hunting Company, of Springfield, Mass., issue as the third volume of their *Indian Captivities Series* a reprint of the sixth edition of *The Redeemed Captive Returning to Zion, or the Captivity and Deliverance of Rev. John Williams, of Deerfield* (\$2.50). Williams's account of the sacking of Deerfield in 1703 and the march of his family and parishioners as captives of the French and Indians for 300 miles to Canada and their trying experiences for three years is one of the valuable documents for the early history of New England. This edition, which is limited to 526 copies, is enriched by a bibliography prepared by Mr. Wilberforce Eames, of the New York Public Library.

....The following order addressd by a prominent American bookseller to his London agent may be taken as an indication of the sentiment of many book buyers and booksellers as to the output of fiction in this country and in England during the last two or three years: "Please reduce our standing order for new English novels to one copy. We had supposed that the average American novel was as poor as could be produced. We have reason to think that the English novel can double discount us for absolute lack of any qualification or reason for existence. It is a question whether both of them, the English and the American, are not worse than the old dime novel of America, or the 'Penny Dreadful' of England."—*Publishers' Weekly*.

....It is a brave man who would venture to criticise Prof. Gregory, successor of Lischendorf, in his own field of the study of the Greek manuscripts of the Old and New Testaments. His new volume is nearly all index. Its purpose is to give the completest list known of these manuscripts, classified by their character, and with their designations assigned and arranged in a scientific and orderly manner. First we have the uncials, those in capital letters, 164 in number, more or less complete, designated by capital letters, A, B, C, etc., and by Greek letters and numbers when the Latin alphabet is exhausted. Next come papyrus fragments, of which several are in this country, fourteen numbers. Then follow 2,292 minuscule manuscripts; and after these 1,751 lectionaries. Each is briefly described by its contents, its date, its material (parchment or paper) and the library in which it is preserved. Then we have a cross reference list of previous signs and numbers, and finally a list of libraries with their manuscript treasures. The task of compilation has been an immense one, but is such as Professor Gregory is capable of, and the work of classification and improved numeration needed to be done by a master. (Die

Griechischen Handschriften des Neuen Testaments. Von Caspar René Gregory. 8vo, pp. vi., 336. Leipzig: J. C. Hinrichs. New York: Leucke & Buechner).

Pebbles

MR. BRYAN says he is "not an out-and-out candidate. That is true; he is an out-and-out-and-out candidate. Three times out.—*New York Age*.

A SIGN hung in a conspicuous place in a store in Lawrence:

"Man is made of dust. Dust settles. Are you a man?"—*Boston Record*.

THE following advertisement recently appeared in a New Zealand journal: "Wanted, capable girl, for dairy farm, able to milk. Four good looking sons in the family."—*Ingleside*.

"HE kissed her on the forehead. The proud beauty drew herself up to her full height."

"And then?"

"He could not reach any higher than her lips, of course."—*The Citizen*.

I HOLD it true, with him who sings to one clear harp in divers tones, that men who'd fly, ere they have wings, are apt to break their blooming bones. The birds may think it fully worth their while to soar from tree to tree; but while I live this good old earth is plenty smooth enough for me.—*Emporia Gazette*.

THE big touring car had just whizzed by with a roar like a gigantic rocket, and Pat and Mike turned to watch it disappear in a cloud of dust.

"Thin chug wagons must cost a heap av cash," said Mike. "The rich is fairly burnin' money."

"An' be the smell av it," sniffed Pat, "it must be thot tainted money we do be hearin' so much about."—*Success*.

"AND is this your final decision?" muttered the young man, hoarsely, as he gathered up his coat and hat and prepared to depart.

"It is," replied the beautiful creature, as she sat down listlessly.

"Then farewell!" he hissed; and as he stood on the steps outside a moment later and took a last look at the stately mansion he murmured: "And this is all. A dress suit two nights a week for two months, at \$2 a night, and nothing to show for it!"—*Washington Star*.

THE ship doctor of an English liner notified the death watch steward, an Irishman, that a man had died in stateroom 45. The usual instructions to bury the body were given. Some hours later the doctor pecked into the room and found that the body was still there. He called the Irishman's attention to the matter and the latter replied:

"I thought you said room 46. I wint to that room and noticed wan of thim in a bunk. 'Are ye dead?' says I. 'No,' says he, 'but I'm pretty near dead.'

"So I buried him."—*The Wasp*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowers
130 Fulton Street New York

A WEEKLY MAGAZINE. FOUNDED IN 1848

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the United States Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agent.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and January, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Oil Trust Rebate Case

WHY has the conviction of the Standard Oil Company in 1907, with the imposition of that memorable fine of \$29,240,000, been followed now by the acquittal of the company, in the same suit, and also by the abandonment of several other similar rebate cases in which the company was accused by indictment? It is desirable that the public shall see clearly the causes of this change.

The company was found guilty by a jury. In the indictment there were 1,192 counts, one for each carload of oil shipped at the rate alleged to have been unlawful. Under the law, the fine for "each offense" may range from \$1,000 up to \$20,000. Judge Landis chose the highest sum that was permitted. Then the case was taken up to the local Circuit Court of Appeals, composed of three judges. This court, in the Grosscup opinion, reversed the lower court's judgment and remanded the case for a new trial to be conducted in accord with its rulings.

Unfortunately, the Grosscup decision and rulings were final, altho they were based in part upon misstatements of the record in the lower court. Pointing out these misstatements and also attacking

the rulings as to evidence, the Government asked in vain for a rehearing. It then applied to the Supreme Court for a review, but this was not granted. Therefore, when the case came to trial again, this time before Judge A. B. Anderson, it was necessary that the rulings and instructions of the Grosscup decision should be obeyed. In its petition for a rehearing, the Government had said that these rulings "practically nullified the law," and had asserted that if they should be allowed to stand, successful prosecution of rebate cases would be impossible in the future. The result of the second trial tends to prove the soundness of this opinion.

It is largely on account of the effect of these rulings (which, unfortunately, have not been subjected to the judgment of the Supreme Court) upon rebate prosecutions hereafter that the failure of the second trial becomes a matter of much importance. Already, as we have said, several similar cases have been abandoned, and it is predicted that others will be given up. It must be said, however, that in this second trial the Government's evidence was not sufficiently clear and also was at variance with the charges of the indictment.

It was decided by the appellate court that "each offense" must be, not each carload shipped, but each settlement with the railroad company. As there had been only thirty-six settlements during the three years in question, the fine (in case of conviction) could not exceed \$720,000 and might be only \$36,000. Judge Anderson, of course, obeyed this ruling, but there was no opportunity to apply it. Under its provisions, punishment can be almost wholly avoided, if settlements are made only at long intervals; for example, once a year or once in two or three years. As the Government says, it permits "the shipper and the carrier to elect for how many offenses they shall be prosecuted and how much they shall be fined." But this doctrine is now the law where the appellate court that proclaimed it has jurisdiction.

Another important ruling was that the Government must prove beyond room for doubt that the shipper knew what the lawful rate was and knew that the concession made to him was unlawful. To this the Government objected, altho

it claimed that the evidence showed that the defendant in this case knew what the lawful rate was. With respect to this point, the action taken by Judge Anderson at the second trial appears to have been determined by the fact that the lawful rate was not clearly established by the Government's evidence, and not because of the appellate court's ruling. That is to say, he directed a verdict of acquittal not because the shipper's knowledge of the lawful rate had not been proved, but because there was no sufficient evidence that such a rate had legally been established. While the appellate court had said that judges might reasonably disagree as to the sufficiency of this evidence, Judge Anderson went further and said: "The evidence does not prove the charge."

Those who would reach a fair judgment as to this important case should bear in mind that the Government's evidence was inadequate; that there was presented no absolute proof that the lawful rate was 18 cents, while the Standard Oil Company was paying only 6 cents; that the tariff sheet submitted did not specify such a rate, except indirectly by reference to a classification made by the State authorities; also, that there was much room for doubt as to whether this somewhat indefinite tariff sheet had been so published as the law required. Moreover, Judge Anderson asserted and showed that, with respect to many of the counts, the evidence submitted by the Government was at variance with the charges of the indictment. This variance, he said, was fatal. In substance, as he explained, it was as follows: The indictment asserted that the Alton road's rate from Chappell to St. Louis was 19½ cents, while the Government's evidence showed that 1½ cents of this was the rate of another carrier for the distance from East St. Louis to St. Louis. Surely, to the average man, this variance seems trifling and unimportant, but we suppose the Judge was right.

Owing partly to the requirements of the appellate court's rulings, and partly to defects in the Government's chain of proof, the case was virtually thrown out of court. The American public may still believe that the company knew it was

paying unlawful rates. No one will forget how the power of the great Trust was built up, and how competition with it was crushed by discrimination in railway freight rates. But hasty and unjust censure of the courts should be carefully avoided. Judge Anderson's course appears to have been marked out for him by the appellate court's rulings and by faults in the evidence submitted. If Judge Landis erred in showing a slight excess of righteous zeal and in preferring the extremes of punishment, Judge Grosscup and his concurring associates were clearly at fault in misstating the facts of the record and in their sharp and unwarranted criticism of Judge Landis. Let us hope that all such trials hereafter will be characterized by calm and dispassionate procedure.

Probably the result of this trial suggests that the statute should be amended, but first the rulings of the appellate court should be either affirmed or disapproved by the court of last resort. We trust there will be found some way to procure from the Supreme Court a final decision as to the unit of offense, a shipper's knowledge of lawful rates, the specifications of a rate tariff, and the legal publication of the same. Enforcement of the law against rebating may be prevented by the rulings of the Grosscup decision, and the Supreme Court should say whether they are sound or not. Whether they stand or fall, however, we may all rejoice in the evidence that under the pressure of enlightened public opinion, reform legislation and prosecution, unjust discrimination in railway freight rates has practically ceased.

The Permanence of Taint

We are not going to discuss here the question whether money can be tainted. Altho Vespasian told his son Titus, "*Pecunia non olet*," "Money does not smell," the contrary has been very positively asserted. Roger de Coverley says that "money kept three days stinketh." We do not question that money given for a bad purpose, as to buy ecclesiastical office—called simony—or to buy political office—called bribery—or to control the teaching of a university for a

selfish end, is tainted money. Equally all money acquired by theft, fraud or oppression is thereby tainted and remains tainted so long as it is not restored. The money gained oppressively by Zaccheus was tainted until he had restored fourfold; that restitution cleansed it and him.

We say we are not raising any question as to whether money can become tainted. We do not doubt that it can, and that it can remain tainted till it is cleansed; and we do not believe that Vespasian meant to deny this. No more did St. Augustine mean to deny it when he said of money: "*Est ut lux; si pura mundos transeat, non inquinatur.*" "It is like light; itself pure, if it passes thru unclean hands it is not defiled." We allow that money obtained and held fraudulently or given for a fraudulent or selfish purpose is thereby tainted. What we ask is another question, How long does it remain tainted? For example, is the money obtained for a college by a lottery fifty or a hundred years ago still tainted money?

The question is a practical one in Nebraska and elsewhere. The University of Nebraska might have accepted for its retired professors the advantage of the Carnegie pension fund, but Mr. Bryan appeared before the Legislature and protested against accepting it, on the ground that the money is tainted, because given originally by a notable trust baron and multimillionaire; and by the narrowest margin of votes the Legislature refused to allow the professors to take advantage of the fund. Mr. Bryan is very stern in this matter, much more so than Governor Johnson, of Minnesota; but Governor Johnson is declared not to be as good a Democrat as is Mr. Bryan. Indeed, Mr. Bryan is the law and norm of Democracy.

Let us take another case. A man gets immense wealth by fraudulent control of a railroad. He dies and his property is divided between his children. A daughter—or a son—is like the good son of a bad man described by the Hebrew prophets, and she, or he, uses the money inherited in such a way as to gild with glory the shaded name. Is the money that she, or he, gives so worthily so tainted that it cannot be received by

good people for a good cause? Certainly not. No one will believe so. We have settled that by universal applause.

Now let us revert to the Nebraska case of the Carnegie pension fund. That money belonged to Mr. Carnegie, was acquired by him in the line of business methods which Mr. Bryan believes to be oppressive and wrong. But it past out of his hands, just as much as if he had died. It was given over to the Carnegie Foundation for the Advancement of Teaching, and Mr. Carnegie no longer owns it or has any control of it. The cause is a noble one. Does the alleged taint stick to the money still? Certainly no more than in the other case in which the original accumulator of the wealth has died. St. Augustine's principle applies. The light is not defiled; the money is not tainted; and Mr. Bryan simply lacks the clearness of vision to see the facts and their application. Let Nebraska freely allow her aged professors to receive their pensions.

Will Farmers Help Themselves?

MUCH as the recent investigation by the President's commission on country life has accomplished in the way of revealing some actual conditions in rural communities, it has been able to do no more than to suggest needs and remedies. Conventions and meetings of farmers held since the report was published do not indicate that the advice has been greatly heeded. These gatherings have been devoted, not to discussions of better ways to live or how to get more out of life, but to methods of making more money. The saving of expense in transportation, the securing of necessary groceries cheaper, the means of compelling legislators to vote for certain bills—these have occupied the larger part of every program. If the home life of the farmer was discussed, it came in a paper read by some more literary minded of the delegates. The real interest, the real addresses, the rough and tumble debates, were concerning, not the social life of the farmer, but his bank account.

It has been demonstrated many times that in general it is a poor policy, in seeking to advance the social life of a class, to attempt to do things for its

members; the secret of success is to teach them to do things for themselves. The attitude of the country papers toward the suggestions of the commission on country life and toward all suggestions of farmers' lack of complete happiness has ranged from sarcasm to contradiction. Among the papers that circulate most generally among the farmers, and do more than any other influence to mold the farmers' opinions, it is popular to laud the agriculturist as the epitome of good sense and the possessor of all the good things that mortal here below may desire. They have declared that it is folly for a few Eastern millionaires to tell the farmer he is unhappy, especially while he is selling big crops for high prices. The Western papers are particularly fond of holding up to scorn the workers for the betterment of the farmer's life. They jeer with jeers the idea that anything is wrong, and express the editors' envy of the happy lot of the owner of a half section of land. "How silly," exclaims one interior newspaper, "for a lot of Eastern dreamers to tell us what to do—we farmers of the West. The farmer could give the richest man in Washington pointers on how to be happy"; and much more to the same effect.

It is safe to say that the country papers reflect the sentiment of the farmers themselves, for the country editor prints for the most part just the things that his readers want most to believe. He reproduces their opinions in giving what purport to be his own. It is clear that the farmers as a class are less devoted to the uplift than to the enhancement of the price of wheat. To be sure, the papers tell of a coming convention of farmers in Oklahoma, with the study of social conditions prominent in its plans—but the man calling it is a school-teacher. The Farmers' Union devotes the greater portion of its deliberations to straight business.

Regardless of his interest in the rural life of the nation or of his desires to forward the better things of life as possessions of the farmer, it is difficult to see where the worker is to take hold unless the farmer is so awakened that he will help himself. If he is to sit back and

wait for uplift to come to him it will not be so bad, but if he is going to attend meetings for the raising of wheat prices or to cut down the cotton acreage, it is difficult to see what the outsider may do.

As a class he has been taught and has practised independence and he is showing it in this instance. He laughs at the messages and stays away from the meeting called for his benefit. It comes as a rude shock to him to find that there is doubt concerning his enjoyment of the highest privileges of life, and if we may judge from the expression of country editors is more or less resentful. While in this attitude he gives relief to his feelings by pointed remarks concerning his well-wishers.

Little difference exists between the Eastern farmer and the Western farmer in this respect—both appear to dwell in an atmosphere of self-satisfaction out of which it is difficult to take them. The very fact that somebody has undertaken to investigate their surroundings and to suggest means for their improvement drives them to the other side of the proposition—they have no desire to be the subject of outside charity.

This summary does not perhaps apply to every farmer. Some are quick to understand the animus back of these movements for the uplifting of the tiller of soil. Occasionally one realizes that there are some things in the farmer's house and way of living that might be improved, and he is thankful to any one who will give advice—whether or not he is to follow it. The consciousness that most of his farmer brethren disagree with him has no effect, and he is in a position to maintain his place thru the very element that in other instances works to restrain individual effort.

The conclusion is that the farmer must do most for himself. Outsiders can do little for him—much less, in fact, than can be done for many other classes of workers. His widely separated dwellings, his individual life and his independence are in a sense a handicap to his receiving the assistance that in other conditions is possible. The farmer must help himself more than any one can help him.

Inexcusable Misery

THE exhaustive reports put forth by the Sage Foundation and the Pittsburg Survey on conditions of living among the wage-earning classes in New York City and in Pittsburg are painful reading. It is impossible to discredit them as sensational representations by socialistic agitators, for they come from the other side of the "class struggle" field, and they summarize researches made and reported by non-socialistic investigators. Neither can they be brushed aside as descriptions of the misery of shiftless and idle folk, on whom it were useless to waste sympathy. They are pictures of the life-wasting toil, the hopeless struggle, the pitiable misery of the people that are creating fabulous wealth for men whose fortunes long since surpass the mythical riches of the Midases and Cræsus of ancient days.

The Sage Foundation report, which is entitled: "The Standard of Living Among Workingmen's Families in New York City" is the work of Prof. Robert Coit Chapin, of Beloit College. The purpose of the inquiry was to ascertain whether, as a rule, prevailing rates of wages in this city are adequate to maintain the physical, mental and moral efficiency of the wage-earning population. The report shows conclusively that they are not. Or, to put the matter in equivalent, but perhaps more significant terms, unless the prevailing rates of wages in New York City can be increased, we must face the certainty of a progressive deterioration of the working population. The question discust is not one of "fairness," or "justice," or the "natural rights of man." It is the purely practical one of social economy.

For the purposes of the investigation, families consisting of father, mother and three children under fourteen years of age, were selected, and their expenditures were carefully itemized. These include not only the necessities, food, shelter and clothing, but also such outlays as those for insurance, education, recreation and alcoholic drinks. About four hundred schedules are tabulated and analyzed. The food values are subjected to a yet further analysis made by Dr. Frank P. Underhill, of Yale University.

The incomes vary from \$600 to \$1,100 and more. It is shown that to a great extent even these incomes include earnings by mothers and children, and payments by lodgers. Overcrowding and underfeeding are the general consequences of the attempt to maintain small families on such incomes under prevailing New York prices for rent and food.

If this showing for New York City is distressing, what shall we say of conditions in the greatest steel-making city of the world, revealed by the Pittsburgh Survey? This was a much more extensive investigation, and it was conducted by the most competent and fair-minded experts that could be obtained in this country. The labor reports have been prepared by Prof. John R. Commons, of the University of Wisconsin, secretary of the American Association for Labor Legislation; John R. Fitch, of the University of Wisconsin; Mrs. Florence Kelley, ex-State Factory Inspector of Illinois; E. B. Butler, of the staff of the Russell Sage Foundation; Miss Margaret F. Byington, formerly District Agent of the Boston Associated Charities; Miss Lila V. North, of the Woman's College of Baltimore, and Miss Crystal Eastman, of the New York Bar. Their findings have been published by *Charities and the Commons*, of this city.

It is shown that systematic overwork is pusht to the point of manifest cruelty, especially in the steel mills and railway switch yards, where the working schedule is a twelve-hour shift for seven days in the week. Wages are everywhere adjusted to the needs of the single man in a lodging house, and not to those of the head of a family. Family life is destroyed, not in any imaginary way, but by the appalling number of preventable accidents, and a typhoid fever rate that has already been commented upon throughout the civilized world as a disgrace to the American people, to say nothing of the shameless "better element" of Pittsburgh itself.

The heartless indifference of the wealthy class of Pittsburgh to sanitary conditions, and to industrial accidents, is the most astounding disclosure of this investigation. If the cold, hard facts were not here so presented that there can be no blinking them, we could not have

believed that in this age of so-called civilization such callousness could be found in any respectable community. To say that the well-to-do population of Pittsburgh, piling up wealth as it has almost never before been accumulated, has hitherto shown an utter disregard of civic and moral obligation is to state the case in the mildest terms that can be employed.

Happily, the mere publicity given to such deplorable conditions by these reports will go far to check the worst abuses, and will set in operation great and innumerable moral and legal forces of betterment. It is our opinion that the Pittsburgh Survey reports the lowest level of industrial abuse and resulting misery that we are likely ever to discover in the United States.

The Dead Lion and the Living Ass

It is a pity that the ass always survives the lion. He always does, because there are so many of him. When the lion is dead the ass walks bravely up to the lion, so the old fable tells us, turns tail to him contemptuously, kicks him soundly, and lifts up his head and his tail and brays. They say that if you tie a heavy weight to an ass's tail so that he cannot raise it, neither can he bray. Would there were some equal contrivance to shut the mouths of the human creatures of whom the ass is the ancestral prototype, so that they could not insult the character and record of worthy men whom death or removal from office has left exposed to their cowardly hoofs.

Mr. Roosevelt left his office as President two weeks ago to be a private citizen. No longer is he hedged about with the dignity and authority of office. That respect for his official position which forbade insult, when it did not inspire respect, no longer restrains. The most doltish critic can proclaim himself a historian and a psychologist, and can assert and distort facts and can malign character with easy impunity. The Good Book tells us that tho you bray a fool with a pestle in a mortar yet will not his folly depart from him, but without pestle or mortar he will do his own bray-

ing and his folly will keep coming out of him.

As to Mr. Roosevelt, the good vastly overweighs the bad. He has made himself so conspicuous that his errors or faults have been hidden from nobody. But they were from excess of virtue, righteous overmuch, failings that lean the right way, overloading us with the lecturings we needed, which became sometimes hectorings, saying an undisputed thing in a very solemn way. Sometimes it was tiresome; and doubtless he made some actual mistakes of decision, and was sometimes too ready to act on impulse without waiting for full consultation, as when he suddenly dismissed the negro soldiers at wholesale. But all that is no reason for abusing him now, any more than it was when he was a live President. Even those who pick up his foibles and errors and rehearse and magnify them and gloat over them have to admit that his was a great, a historic administration, that it made an epoch and will count for fresh progress and development. It was perfectly proper to criticise him while President, or to criticise his record now, but not malignantly and unfairly.

The *London Times* draws up a catalog of the things done under Mr. Roosevelt's administration, in the line of international affairs, and puts against them the one thing undone, namely, the failure of the reciprocity treaties, so auspiciously begun by President McKinley. These were dropt quietly, for they were merely economical, and Mr. Roosevelt is strong on moral issues, but not on economical. On the credit side are the following achievements in international affairs: The "Open Door" and "Territorial Integrity" in China; the friendly understanding with the Latin-American Republics, resulting in the Central-American Peace Conference and the establishment of an International Arbitration Court for the five republics; the development of good government in Porto Rico and the Philippines; the pacification of Cuba and the restoration of its government to its own people; the acquisition of the Canal Zone, and the creation of the Panama Canal; the securing a treaty of peace at Portsmouth between Russia and Japan; the initiation

of the Second Hague Conference; the settlement of difficulties with Japan by a memorandum which will have the effect but not the form of a treaty; the approaching complete settlement of all questions of difference with Great Britain as to boundary questions in Alaska and disputes with Canada and Newfoundland; and, finally, the reorganization of the diplomatic service, with a view to securing a trained body of officials abroad, instead of sending out political derelicts and misfits, or rewarding millionaires for large election contributions. This is a wonderful catalog of deeds done for the honor of the country and the benefit of the world by Mr. Roosevelt and his two able Secretaries of State, John Hay and Mr. Root. But the more wonderful thing is that it can be matched by corresponding achievements at home which the country well knows and which have made him, says the *Times* writer, "the most intensely loved and most malignantly hated man in America," with his determination to exercise reasonable control of railways and great industrial corporations, and to create a higher ideal of citizenship, under the plea for "national righteousness."

And that malignant hate now freely expresses itself. It does not cease with the end of the President's term. It shows itself equally in vicious calcitration and in fawning on the new President and telling how fine he will be and how different from his predecessor. Mr. Taft will hardly thank them for their anticipant laudations.

..... That there are good Italians, **Petrosino** equal to the greatest and best men the world has ever produced, we cannot forget if we allow ourselves to think; but here in this country the multitude of people who have come from the "bad provinces" of Sicily and Southern Italy have, by the percentage of criminals, cast discredit on the whole nation. The vast majority are decent, diligent and thrifty, and make good citizens; and there are those who, like Petrosino, arising from humble conditions, ~~are the pride of the country.~~ He was the greatest detective the New York police have ever had, honest, brave, shrewd; and to him was assigned the most diffi-

cult of all tasks, that of ferreting out the criminals of the *camorra* type, who steal children, blackmail their countrymen, and wreck houses with bombs, and use pistol or stiletto for greed, intimidation or revenge. Petrosino had become an international character, and had gone to Italy as representative of the National Government as well as of the New York police, to arrange for agreements between the two countries for the records of criminals. He was followed and murdered in Palermo, but the body of this Italian, the kind of man some folks call a *dago*, will be brought back to this country and will have the grandest funeral ever given to a police officer, for he died a martyr to good government and law. His death will assure determined effort that Italian crime be brought to an end. It is the most serious evil in our cities, and we hope that this assassination will unite Italians to take courage and stamp out the evil. They have been afraid to help the police.

Mr. Carnegie's Peace Proposal In the interest of peace Mr. Carnegie proposes that something like what Great Britain and Japan have agreed by treaty to do in protecting each other's possessions in the East, Great Britain and the United States should also do. He would have a treaty by which the United States shall defend all British possessions upon the Atlantic, while Great Britain should protect the American Pacific Coast and all our possessions on that ocean. That would mean that a British fleet would defend Oregon, California and Alaska, as well as Hawaii and the Philippines against hostile attack, and we should protect England and Ireland as well as Bermuda, Jamaica and British Guiana against any enemies. That is a pretty big contract, particularly for us. But first there ought to be a solid pact between the two countries providing that all differences, of whatever sort, shall be settled by arbitration when negotiation fails. If that were precedent, so that they cannot make war with each other, then it would be proper for the two nations to agree to protect each other against attack; and such a plan as Mr. Carnegie proposes would go far to limit war; at least it would make an attack on either of these two nations hope-

less. But for the present it would require both nations to keep a strong navy, that is, strong as against other nations, but not as against each other. It is not very likely that the United States is yet ready to entangle itself in such an alliance, and the most hopeful method for eliminating armies and navies is by arbitration treaties.

A Compromise with the Saloon

The Raines law in this State was enacted to limit the saloon evil, but it has only increased it. It has been the parent of vice, in that it has created a multitude of Raines law hotels, just fake hotels, with two or three pretended bedrooms, which are resorts of vice. A society has for its purpose to reform them out of existence, and it has offered a new bill which it does not pretend is ideal, but which it thinks will make an improvement on present conditions. In the first place it raises the number of rooms for a hotel license to twenty-five, with kitchen and dining room to match. That seems sufficient. Then it allows saloons to be open on Sunday from 1 to 11 p. m., on paying an extra excise tax equal to one-fourth of the present tax. The belief is that in a city like New York it is utterly impossible to prevent the sale of liquors on Sunday, that the Raines hotels have been created to sell them, that most saloons sell on Sunday, and that police graft allows and will allow it under any attempted prohibition; and that it is a reform to stop the graft, and reduce the number of places where liquor is sold, by allowing the sale to a limited number of saloons at an increased tax, under which it will be to the interest of the excise board, which is always efficient, to see that those who sell pay the required tax. As we say, this is not ideal, but it would be better than present conditions. It will offend those who believe that Sabbath-breaking is a sin more serious than any mere vice. But probably an open saloon on Saturday night is worse than a saloon open Sunday afternoon. We wish saloons could be closed both nights. We find it hard to sympathize with the feeling that providing for Sunday drunkenness is vastly worse than providing for weekday drunkenness. We don't feel so about Sunday murder or theft.

We have not the heart to say anything. We will let a South Carolina paper, the *Columbia State*, speak for us:

"And so in Texas they have burnt another negro. The press dispatches tell us that one thousand savages stood by and watched while the flames swept over the hopeless, depraved, but brave wretch who gave up his life to make a Texan holiday. It is wonderful to think of, strange, almost impossible to believe. This is Texas, this the twentieth century, and this was an assemblage of persons immensely flattered by being described as 'civilized.' And they burned at the stake a human being. One thousand persons, presumably with an admixture of women and children, stood by, watched the horror, gorged their savage instincts, sated their barbarous hates, fatted and regaled upon the sort of spectacle that pleased and edified the wild and untamed Indian.

"How discouraging it is! How hopeless it is—to think that we live in the same country with such people, to think—God forbid—that we may even have such people about us. And yet we—we poor hypocrites—are so good as to look with horror upon such foreign 'scum' as the Russians, the Turks, and to deplore the pillage and disorder that sometimes mark the affairs of their countries. We should hang our heads in shame. We have heard of no Russians burning a man to death at the stake. We have heard of no turbulent Turks straying so far from the dictates of mercy and humanity as to do such a deed.

"Texas, Texas! Is no one to be punished for this crime against civilization and humanity?"

A University Strike

There has been a strike, and a successful one, of the students in the biggest university in the world, at El Azhar in Cairo. It has the largest number of students and the emptiest curriculum. With the approval of the Government, Sheikh Hassuna, Rector of El Azhar, attempted to enforce regulations that students who could not pass examinations after trying several times should be dropt. That made a commotion and 4,000 struck, and were supported by many more who complained of food and lodging. The Khedive instructed officers to suppress the disturbance, but force was resisted, and finally the authorities submitted and the Rector resigned. The trouble was that the Government wanted to wake the sleepy old Moslem institution up and make a real school of it, while the reactionary students regarded El Azhar as a holy

mosque not to be meddled with. The old teaching and the old Koran law were good enough for them, and for the Egyptian nationalism they desired, and they will be left to the ancient somnolence. But that is no way to deliver Egypt from the rule of Great Britain.

It is the rule of the French Academy that each elected Academician shall pronounce a eulogy on his deceased predecessor. So M. J. Richepin sounds the greatness of the late André Theuriet. He praises the touching *naïveté* of his poems, their accent of sincere and profound candor, and their apparent lack of rhetoric and art, and as an example he quotes three verses about the life and death of the charcoal-burner, who lives happier than a king, with the forest his palace and the sky his window, while his children are cradled on the grass and flowers. Born in the woods, there he dies.

"Le charbon cuira
Et son âme ira
Au ciel avec la fumée."

"The charcoal will burn and his soul will go up to heaven with the smoke." Somehow it does not sound very solemn, and it suggests the ascent of Thetis after converse with Achilles, thru the aperture in the roof, as translated by an irreverent collegian:

"The goddess then, as thus she spoke
Flew up the opening made for smoke."

A number, we much wish was larger, of quite retired scholars are an honor to the country. To one of them attention is called in a late issue of the Harvard College Observatory *Circular*. In it Professor Pickering publishes beautiful photographs of Morehouse's comet, the third of 1908, made by the Rev. Joel H. Metcalf, of Taunton, Mass. It is a very delicate task to photograph with a telescope these telescopic comets. Professor Pickering mentions that most of the asteroids discovered in this country in late years have been found by Mr. Metcalf, and the computation of their orbits has, until lately, been made at the Naval Observatory; but for some reason it can no longer do this, and Professor Pickering calls for volunteers who will each take

one or two of the fifteen asteroids for which ephemerides are needed, and which Mr. Metcalf has followed long enough to secure good orbits. This work ought not to be sent abroad. Will any of our mathematical readers volunteer?

What the Young Men's Christian Association is doing in many cities is illustrated by the dedication of the new building in Detroit. It cost \$700,000, covers ground 120 by 210 feet, has nine stories and is absolutely fireproof. It has reading rooms, offices, parlors, bowling alleys, billiard tables, a separate gymnasium and a swimming pool 30 by 75 feet. There is a separate building for boys, where are two floors for dormitories for boys that have no home. There are 22 classrooms and laboratories, which provide a technical institute where youth can be trained in the trades, electricity and chemistry, and where a thousand people can be taught. Four floors of the main building are for dormitories, and the ninth for a restaurant. It was hard times last year, but 83 new Y. M. C. A. buildings were erected in this country costing \$10,000,000, and there will be as many this year.

The agreeable thing in the effort to maintain and require peace in Central America is that the United States and Mexico are working together for it. The United States is not taking to itself the part of the big brother, but there are two big brothers. This will do much to disarm Latin-American suspicion of us. We may have to interfere, but it will not be done by us alone, as we have had to do elsewhere, and latest in Cuba and Santo Domingo, and it cannot be said that it is the Anglo-Saxon against the Spanish-American. But we two nations must see to it that the five Central American republics settle their troubles in the way they have agreed to.

Mr. Asgaard, head of a large Norwegian shipping firm, has issued a valuable circular giving account of the effect of the Japanese subsidies. He says that before the subsidy act of 1896 Japanese shipping interests had met with comparative failure, but that since then

Japan's mercantile marine has increased in a degree perhaps without parallel. In 1892 the total registered Japanese tonnage was only 168,365; in 1900 it was 840,623; and in June, 1906, it had mounted to 1,309,579, and in October of last year to 1,491,564 tons. Ten years ago Japan did not carry 2 per cent. of her commerce in her own bottoms, while now it approaches 50 per cent. Mr. Asgaard believes that while this phenomenal increase is due to subsidies, the removal of subsidy would not now be fatal to Japan's shipping interests. All this bears on our own policy.

Our readers have been informed as to the vogue in Japan of the *uta*, the form of short poem of which we have published examples composed by the Emperor, the Empress and the Poet Laureate of Japan. Every year the Emperor gives out a subject for competition, that for this year being "The Pine in the Snow." The selected ones were read a few weeks ago at a great function in the Imperial Palace in the presence of the highest officials. Only 7 were selected out of a total of 24,311, besides 1,085 that were not in proper form or came too late. These included 12 sent by Imperial Princesses, 108 by nobles, 967 by officials, 16 from the United States, 142 from Korea and 78 from Formosa. There is no other such literary competition in all the world.

More than one correspondent has criticised us for failing to add a footnote to the article by Mr. Knowles on Lincoln in our issue of February 11th, which should inform the reader that there is evidence that Mr. Lincoln's mother was the eighth child from a perfectly legal marriage; but that as her mother married Mr. Hanks, it was not strange that she was known as "Lucy Hanks." Other late evidence proves his father to have been a man of some respectable prominence in his local community. We also offer apology to the State of Texas for the error which put in that State the town of Austin, where a late lynching occurred.

A COMMITTEE of Oxford and Cambridge graduates propose establishing in the heart of China, probably on the Yang-

tse river, a Christian university on English lines, and the Rev. Lord William Cecil has, we believe, gone to China to make plans for it. Our mission boards are uniting their forces in a similar way, and it is no secret that Professors Burton and Chamberlain, of Chicago University, have gone to China to study educational needs and opportunities of a similar sort. The West begins to find its duty to the East.

There is a loud cry going up from the breakfast tables in protest against a tax on coffee. Nobody likes to pay taxes, but everybody has got to; and if we pile up the expenditures for battleships, we don't see but those who want them—and the rest of us—must pay for them; and coffee can pay its share as well as anything else. At any rate, we shall not cry for an untaxed breakfast table until expenditures go down. Besides, a tariff on coffee will help Porto Rico, which may be considered.

Here are ten advertisements shown to us in the *Country Gentleman*, of Albany, N. Y., all of February 18th, all of "wants" for managers of farms, and all must have wife and no children. That is the way race suicide is encouraged, almost compelled. The condition therein indicated is to our shame and loss. A correspondent asks: "Has the Eastern farmer quit raising children, preferring hogs?"

Man, brave Man, has achieved a great victory over Woman in Iowa and Minnesota. In the Iowa Senate and in the Minnesota House equal suffrage for the two sexes has been gloriously defeated, in each case by about three to one. Thus Man is still protected against the invasion of his sole privileges. Let him still rule over Woman, but let Woman still pay taxes.

There are two places where a negro can get equal treatment, a fair show, and no kick coming. One is the saloon and the other the prize ring. A negro is now champion boxer of the world, and the white aspirants are eager for a try with him. The ticket holders will see that he gets justice.

FINANCIAL

Unpaid Franchise Taxes

THE law of New York, imposing special taxes upon the franchises of public service corporations, excited much interest in other States when it was enacted, about nine years ago. Taxes have been levied, under its provisions, but collection has been successfully resisted in many instances. At the present time the great sum of \$41,000,000 remains unpaid, and \$26,000,000 of this is due from railway, lighting and other corporations in New York City. The new Attorney-General, Mr. O'Malley, has set out to clear away these arrears. While the constitutionality of the law has been established, the method by which the value of franchises is determined and the tax assessed by the Commissioners is questioned. Reviews by the courts have been demanded, and the Attorney-General finds that about 3,000 cases have been submitted by the courts to referees. It is said that 400 of them have been sent to one man, and that other referees have so many that their time will be engaged in the work for several years to come. For a long time past very little progress has been made. The Attorney-General recommends that the courts be required to deal directly and promptly with these cases, either at regular terms or at extraordinary terms appointed by the Governor, and he would have the law so amended that it will require the courts to vacate any of these orders of reference upon his application.

In a special message to the Legislature, Governor Hughes says that conditions with respect to proceedings for the collection of these taxes, "are deplorable." He points out that the methods employed have been "dilatory and wasteful"; that "in most of the pending cases, many of them of long standing, no progress has been made, and they are in the same position as when the referees were appointed."

With respect to many corporations, the effect of these methods has been virtually a nullification of the statute. A definite and permanent principle or basis of valuation should be established. Pending cases should be promptly considered by the courts themselves with a view to

a ruling on this point. It is due both to the people and to the corporations that such a principle should be authoritatively defined without delay.

....The Central Trust Company of Chicago, of which Charles G. Dawes is president, having absorbed the Royal Trust Company, will now have deposits of over \$17,000,000. The Central Trust Company was organized by Mr. Dawes in 1902, shortly after his retirement from the office of Controller of the Currency. The present capital is \$2,000,000.

....Willard E. Edmister, who has been elected president of the Hamilton Trust Company of Brooklyn, was born in 1853, and for twenty-five years previous to the recent death of the late president, Silas B. Dutcher had been Mr. Dutcher's partner in the insurance business in this city. He is a director of the Metropolitan Bank and trustee of the Dime Savings Bank, and is well known in Brooklyn. William Berri and Walter C. Humstone continue as vice-presidents, and George Hadden, who entered the service of the company in 1891, the year of its organization, continues as vice-president and secretary. The Hamilton Trust Company has a capital of \$500,000, surplus and undivided profits amounting to \$926,033, deposits of \$6,462,055, and total resources of \$7,950,503.

....Cornelius C. Cuyler, head of the banking house of Cuyler, Morgan & Co., has just been elected president of the United States Mortgage and Trust Company. Mr. Cuyler was born in Philadelphia in 1859 and was graduated from Princeton in 1879, and was a member of the banking firms of Jessup, Paton & Co., and John Paton & Co. He is a life trustee of Princeton College and for three years was president of the Princeton Club of this city. He is also a director in the Casualty Company of America, the Commercial Trust Company of New Jersey and other corporations. The United States Mortgage and Trust Company has a capital stock of \$2,000,000; surplus and undivided profits of over \$4,250,000 and deposits of over \$29,000,000.

The Independent

VOL. LXVI NEW YORK, THURSDAY, MARCH 25, 1909

No. 3147

Survey of the World

Rules of the House of Representatives

At the beginning of the special session of the new Congress, on the 15th, Mr. Cannon was again elected Speaker. For him 204 votes were cast, 12 Republican "insurgents" supporting two or three other Republicans. Champ Clark, the Democratic leader, had the votes of all the Democrats (166) who were present. There was an interesting contest over the rules, the result being substantially a victory for Mr. Cannon and those who stood with him. Mr. Daltzell moved that the old rules be adopted, and asked for the previous question. This was ordered, 194 to 188, the majority including 7 Democrats, and the minority 29 Republican "insurgents." But the following motion, to adopt the rules, was lost, 189 to 193, because a few of the seceding Democrats returned temporarily to their party. The old rules having thus been rejected (for a time), the Democratic leader moved the adoption of the plan approved by his party's caucus. This provided for a revision of the rules by a committee of fifteen members, who were named. The committee would be controlled by Democrats and Republican "insurgents." At this point the tide turned the other way; owing to the action of a group of Democrats. Mr. Clark's motion for the previous question was lost, 179 to 203. Then Mr. Fitzgerald, of Brooklyn, a Democrat, offered a substitute resolution, providing for the adoption of the old rules with several amendments, and this substitute was accepted by a vote of 211 to 172. Mr. Fitzgerald and 22 other Democrats voted for it, with the Republicans. Seven of the 23 were from New York City, 2 from Brooklyn, 5 from Georgia and 2 from Louisiana. The amendments leave to

the Speaker substantially all of the power heretofore exercised by him, and relieve him of some tasks which he had found irksome. While they appear to facilitate action upon bills at the request of individual members, it is not clear that there will be any considerable change of the former practice. It was asserted that a bargain had been made with the 23 Democrats and that they were to be rewarded in some way. At a Democratic caucus it was decided that Democrats should be forbidden to accept committee appointments from the Speaker, unless these were approved by Mr. Clark. Mr. Fitzgerald was afterward appointed to the powerful Committee on Rules, and Mr. Broussard (Louisiana) and Mr. Harrison (New York) to the Committee on Ways and Means, which prepares tariff bills. These are three of the seceding Democrats. As Mr. Harrison undertook to abide by the decision of the caucus, his appointment has been approved by Mr. Clark. When the Ways and Means Committee took final action upon the tariff revision bill, he voted against it, and Mr. Broussard for it. In the gossip published about this contest over the rules, some assert that the Tammany leaders in New York exerted influence which controlled votes enough to turn the scale; also that there was a relation between the action of the seceding Democrats and certain provisions of the tariff bill. In a speech on the 20th Mr. Bryan criticised the twenty-three. "They could not say they did not know," said he, "for any man who did not know that Cannon is the agent of plutocracy ought to be sent to an asylum instead of to Congress. They ought to hear from their constituents." In caucus, the Democrats have appointed a committee of fifteen to

keep all their men in line and to suggest punishment for those who go astray.— On the 18th the House past the amended bill for taking the thirteenth census. The original bill was vetoed by President Roosevelt because it did not provide that the appointments should be made in accordance with the merit principle exemplified in the civil service reform rules. The new bill practically meets the requirements of his veto message.

Revising the Tariff President Taft sent to Congress, on the 16th, a message of about 350 words concerning the tariff, saying at the beginning that he had convened Congress in extra session in order that it might give immediate consideration to a revision of the Dingley act. He continued:

"Conditions affecting production, manufacture and business generally have so changed in the last twelve years as to require a readjustment and revision of the import duties imposed by that act. More than this, the present tariff act, with the other sources of Government revenue, does not furnish income enough to pay the authorized expenditures. By July 1st next the excess of expenses over receipts for the current fiscal year will equal \$100,000,000.

"The successful party in the late election is pledged to a revision of the tariff. The country, and the business community especially, expect it. The prospect of a change in the rates of import duties always causes a suspension or halt in business because of uncertainty as to the changes to be made and their effect. It is, therefore, of the highest importance that the new bill should be agreed upon and past with as much speed as possible consistent with its due and thoro consideration. For these reasons, I have deemed the present to be an extraordinary occasion, within the meaning of the Constitution, justifying and requiring the calling of an extra session.

"In my inaugural address I stated in a summary way the principles upon which, in my judgment, the revision of the tariff should proceed, and indicated at least one new source of revenue that might be properly resorted to in order to avoid a future deficit. It is not necessary for me to repeat what I then said."

In conclusion he "ventured to suggest" that "the less time given to other subjects of legislation in this session the better for the country." On the 17th, Mr. Payne, chairman of the Ways and Means Committee, laid before the House the tariff bill upon which the committee had been at work for four months. It covered 234 printed pages. In a long statement he pointed out the changes recommended.

Reductions in the iron and steel schedule range from 30 to 50 per cent., with ore free; wood pulp and hides are put on the free list; duties on lumber and paper for news print are reduced one-half; bituminous coal and agricultural implements are made free, under reciprocal conditions; paintings and statues are free, if twenty years old; there is a new duty of 8 cents a pound on tea; the internal tax on cigarettes is increased, and there is a new tax on inheritances. There are not many increases of rates. Among the products affected by them are cocoa, chicory, spices, lemons, pineapples and watch movements. Sugar and tobacco may be imported free from the Philippines, within specified limits of quantity. Maximum rates, higher than the ordinary rates by 20 per cent., are provided, and these at present would be applied to four-fifths of our imports. Authority is given for the issue of \$40,000,000 of Panama Canal bonds to reimburse the Treasury for the money paid when the canal property was bought; also for an issue of one-year notes, not to exceed \$250,000,000, if they are needed on account of the deficit. The leading features of the bill are considered in our editorial pages. Having been referred to the committee, the bill was formally reported on the 18th, when the reading of it to the House consumed five hours. There will be a larger allowance of time for general debate than was given when the present tariff was before the House, twelve years ago, but it is hoped that the final vote will be reached before June 15th. The inheritance tax will be strongly opposed, because such a tax is collected now by more than thirty States. Senator Cummins will propose an income tax in place of it. The removal of the duty on works of art is generally approved, but a protest has been forwarded by the artists of Cincinnati. Strenuous objection to the reduction of the lumber duties will be made by Maine, the Northwest and parts of the South. It is pointed out that the removal of the duty on iron ore would be more to the advantage of prominent independent manufacturers of steel than to that of the Steel Corporation, because the former own large deposits in Cuba. A leading subject of discussion will be the maximum rate provisions, which might excite trade hostility abroad.

The Carmack Murder Trial

At the end of a very long trial, on the 20th, in Nashville, Tenn., Col. Duncan B. Cooper and his son, Robin J. Cooper, were found guilty of murder in the second degree for killing ex-Senator Edward W. Carmack in the street on November 9th last. The jury also decided that the two defendants should be punished by imprisonment for twenty years. There had been another defendant, ex-Sheriff John D. Sharp, but the jury had acquitted him on the 19th, the foreman then saying: "We are hopelessly tied as to the Coopers." After the final verdict, and because of this remark, counsel for the Coopers moved that a mistrial be declared. The motion was overruled, and the Coopers were then admitted to bail, in \$25,000, pending a hearing on a motion for a new trial. In this case, thirty-one days were consumed in getting a jury, much testimony was taken, the arguments were very long, there were 30,000 words in the judge's charge, and the jury was out seventy hours. The trial excited much interest, owing to the prominence of the persons involved and their relation to the political campaign immediately preceding the murder. Colonel Cooper's anger had been aroused by editorial articles written by ex-Senator Carmack and published in the *Tennessean*, of which the latter was editor. Walking home from his office in the afternoon, Carmack met the Coopers and the shooting began without delay. He was killed, and Robin Cooper was wounded in the shoulder. The defendants claimed that Carmack began the fight and fired the first shot.

Cuba and Porto Rico

Sergeant Cortes and seven privates of the Cuban rural guards revolted at Vueltas, on the 16th, and took to the woods. At once there were many rumors of a formidable uprising, but they had no foundation. Cortes was angry because his superiors had refused to promote him. It is said that he was urged to revolt by one Lavastida, formerly a captain of the guard, who had been dismissed. Lavastida and several other persons were arrested, and the Government sent guards in pursuit of the rebels. On the 17th, Lavas-

tida was shot and killed while attempting to escape. On the following day Cortes and his companions surrendered. They will be tried by court martial. Friends of Lavastida assert that he was murdered. There will be an investigation. President Gomez issued a proclamation in which he said:

"A few men attempted to disturb the public order at a moment when the republic most needed support. All citizens and the Government did their duty, and the mutineers have fallen into the hands of the authorities to be tried and punished with neither mercy nor cruelty. Tranquillity now reigns, and will continue. The Cuban people have defended the republic bravely, and given the Government full assurances of loyalty."

He was recently reminded by the negroes of his promise that they should have 30 per cent. of the political appointments. —Two commissions are coming to Washington from Porto Rico to explain why the insular House has refused to pass the appropriation bill. One represents the Unionist party, which controls the House, and the other is composed of three officers of the Government. It is said that the House sought, by refusing to make appropriations, to compel the Government and the Executive Council to approve certain purely political bills, proposed in the interest of the Unionist party. For lack of appropriations several of the schools and the public libraries will be closed and work on the roads will be discontinued.

Much space has been given by the daily press to reports about impending war in Central America and about the attitude of our Government toward those who are said to be planning war there, but up to the end of last week the news from Central American countries was of a peaceful character. There is reason to believe, however, that President Zelaya, of Nicaragua, was preparing for an aggressive movement when he was checked by the warnings of the United States and Mexico. He had placed 6,000 soldiers near the boundary of Honduras, in the vicinity of Corinto, where three of his gunboats had been stationed, and it was thought that he was about to attack Salvador. In answer to inquiries from Washington, however, he

said that these forces were to be used only for defense. It is asserted that, at the present time, peace in Central America is menaced only by him. He has been warned that the United States and Mexico will not tolerate any disturbance due to his action. Our Government also insists upon the prompt arbitration of the Emery claim, which relates to a concession cancelled by him. It is expected that our Government will have an investigation made in Central America by Mr. Magoon, recently Governor of Cuba, or by Mr. Buchanan, who negotiated treaties of arbitration with the new President of Venezuela.—Ex-President Castro, of Venezuela, has been formally accused in court at Caracas of murdering General Paredes, a revolutionary leader who was shot, by his order, in February, 1907. Dr. Rojas, recently appointed Venezuelan Minister at Washington, was one of the leaders of the Matos rebellion against Castro.—For three days last week there were riots at the capital of Colombia, and martial law was proclaimed. The disturbance was regarded as a protest against consideration, by the Government and Congress, of the tripartite treaties relating to Panama. President Reyes resigned, but Congress would not consent to his retirement.

Our Immigrants from Japan

In the California House there have been unsuccessful attempts to revive the movement for the exclusion of Japanese children from the public schools. The Senate has rejected, by a large majority, a declaration that California is unalterably opposed to the naturalization of Japanese. There will be no anti-Japanese legislation in Montana during the present session. Two bills have been rejected, and action will not be taken upon a pending resolution asking for the exclusion of all Asiatic immigrants.—Reports sent to Governor Gillett, of California, at his request, by school superintendents, show that in the schools of the cities of the State there are 573 Japanese pupils, this number including 128 in San Francisco, 128 in Los Angeles, 80 in Oakland and 54 in Sacramento.—The Japanese Foreign Office publishes a statement showing

that, in the seven months ending with January, 2,802 Japanese departed for the United States or Hawaii, and that 6,806 returned from those countries. For the United States the numbers were 1,506 and 3,795. As 92 per cent. of those returning crossed the Pacific as third-class passengers, it is assumed that nearly all of these were laborers.—A published letter from Tokio says it is shown by the official records there that in the last quarter of 1907 the sum of \$2,644,011 was received in postal money orders from Japanese, a little more than half of this coming from Hawaii, and the remainder from San Francisco and Seattle.

The Paris Strike

There was very little alleviation of the strike situation during the week and all forms of communication have been more or less completely interrupted. Paris has been cut off from the rest of the world as by a siege and the financial losses are incalculable. The Government telegraphers followed out the postmen, and the telephone girls joined in the strike. Finally the linemen, repairers and other workmen went out and the tie-up was complete. The strike committee demands the dismissal of M. Simyan, Under Secretary of Posts and Telegraphs, whose attempt to abolish promotion by seniority and substitute a merit system precipitated the strike. But the contest is really over the question of the right of Government employees to organize and strike in their own interests like other employees. The labor unions have long been trying to force this to an issue, and if they find that the employees are being beaten a universal strike may be called in their defense. The comparative triviality of the occasion and the great inconvenience to the community has, however, tended to alienate public sympathy, and the firm stand of the Government is generally approved. The matter was brought up before the Chamber of Deputies by interpellations on March 19th, and M. Barthou, Minister of Public Works, defended the course of the Government. He held that the servants of the State, in thus deserting their posts in a body, had put themselves in the position of muti-

neers, and that to make concessions to them now would be to give way to anarchy. The striking telegraphers had destroyed the instruments in the post offices and had cut the wires at the frontier so the Government was at a moment when a Balkan crisis was imminent almost isolated from the rest of Europe. M. Simyan denied the charges of favoritism, and claimed that the disorganization of the civil service was due to the pull which the employees had with the deputies. Subra, the president of the Association of Telegraph Employees, had, he said, the endorsement of nine deputies from the Right as well as the Left. At the conclusion of the debate a vote of confidence in the Government was past by 368 to 211. M. Simyan offered his resignation to the Cabinet, but it was not accepted. The Government has utilized soldiers in protecting the few postmen who were willing to continue their work, and put 3,000 of them at the task of sorting letters, but they made little headway with it. Millions of letters and hundreds of thousands of telegrams accumulated during the week, while no attempt was made to handle the newspaper mail. The offices and stations were filled with stacks of mail sacks. Telegraphers brought in from the country offices in most cases joined the strikers after a few hours' service. For hours at a time there was no communication between London and Paris. King Edward at Biarritz was for three days cut off from his kingdom except for a private messenger service. The strikers offered the Government eight cipher operators to take the diplomatic despatches, but M. Barthou declined to accept any favors from them. The money order offices were closed, and it was difficult to keep Paris supplied with milk, eggs, butter and other country produce. In eight other large cities of France sympathetic strikes were started among the postal employees. Communication between the Paris and London Stock Exchanges was maintained chiefly by messengers sent to the frontier, for the wires were only occasionally available. By the 22d many of the men had gone back to work and their leaders, after conference with Premier Clemenceau, had agreed to use their efforts to stop the strike. The only concession made by the Government is

that none of the men will be dismissed from the service for striking.

✱

The British Naval Score

The British naval estimates as presented to the House of Commons are much more liberal than was expected, but the exposure of the low relative position of Great Britain as a naval power has led to such alarm that the Government may be forced to extend its demands still further. The program provides for a total expenditure of \$175,713,500 to be expended for four "Dreadnoughts," six protected cruisers, twenty torpedo boat destroyers, and a number of submarines, the latter to cost \$5,000,000. The Government also asked to be authorized to start, if necessary in April, 1910, four additional large armored vessels. The estimates involve an increase of \$14,116,000 over the estimate of last year. In presenting the naval plans to Parliament, Reginald McKenna, First Lord of the Admiralty, said that several of the Powers were rapidly developing their naval strength, but none of them at a pace comparable with Germany, altho it was impossible to find out just at what rate Germany is building. Mr. McKenna declared that he only referred to Germany for arithmetical purposes, and without expressing any personal feeling except admiration of her professional and administrative efficiency. Two years ago she had not a ship capable of being compared with a "Dreadnought." Now she has fourteen vessels that could be thus compared and three others are being constructed. By adopting the Government's naval program, Great Britain would have by March, 1912, 20 "Dreadnoughts" as against Germany's possible 17. Mr. Balfour, leader of the opposition, denounced the proposals of the Government as altogether inadequate. It was no longer a question of maintaining a two-power standard, but of maintaining a one-power standard in first-class ships. He stated that he had positive information that the construction work in Germany was now several months in advance of her program, and if continued at the same rate Germany would have in 1912 not 17, but 21, "Dreadnoughts" and perhaps 25. He said that Great Britain would lose her supremacy

on the sea unless eight "Dreadnoughts" were immediately started. He gave notice of a motion for a vote of censure of the Government on the ground that the proposed provision for ships of the newest type is not sufficient to secure the safety of the empire. Most of the opponents of a large navy, in Parliament and out, are either supporting the Government, or keeping silent. In the first division of the House the Government was supported by 322 members and the only opposition came from radicals, laborites and nationalists, numbering 83. Mr. Dillon, speaking for them, declared that the Premier had played to the panic-monger. Great Britain could not hope to outdistance Germany and America. America alone, he said, would be able to fight Great Britain in ten years. The only end to this mad career would be a European war or bankruptcy. Mr. Macpherson questioned the honesty of the Government's efforts to come to a mutual arrangement for reducing armaments, and denounced the capitalists of both countries for combining to precipitate a war. The newspapers of Great Britain have thrown off all reserve and openly discuss the impending conflict with Germany. A profound impression was created by a letter in *The Times* by Frederic Harrison, the positivist philosopher and author. He has for more than forty years been a leader in the anti-expansion and anti-militarist movement, but he has come to believe that England is on the eve of a struggle for national existence. His letter is being circulated by the million thruout the country. The following extracts indicate its character:

It is an antagonism like that between Athens and Sparta, Rome and Carthage, Spain and Britain, Germany and France—one which seems, independent of persons, even of the will of peoples, to be borne on by the elemental springs of national destinies. It seems inevitable. Our supremacy at sea will be met by a determined challenge within a reasonable time.

"The German Navy is not built for distant voyages. It is built to act as the spearhead of a magnificent army. This army, as we know, has been trained for a sudden transmarine descent on the coast, and every road as well as bridge and smithy in East England and Scotland has been docketed in the German War Office. If ever our naval defense were broken thru and the military occupation of our arsenals, docks and capital effected, the ruin would be such as modern history cannot parallel. It would not be the empire, but Britain

that would be destroyed. Occupation by the foreign invader would be to the empire what the bursting of a boiler would be to a "Dreadnought." Capital would disappear with the destruction of credit. Famine, social anarchy, and an incalculable change in the industrial and financial world would be the inevitable result. Britain might live on, as Holland lives on, but before she began life freely again she would have lost half her population, which she could not feed, and all her oversea empire, which she could not defend.

"England's national existence may be in peril within less than a generation from the tremendous navy now being hurried on in Germany, from the domineering ambition of German chiefs and the aspirations and increase of the German race."

✕

Messina Relief Work

It is impossible to conceal the disgraceful record made by the Italian authorities in the rescue work at Messina, altho every effort has been made to keep it out of the Italian papers, and the correspondent of the London *Times* was prevented by the censor from telegraphing even what appeared in the Government organs. The policy of the Central Committee has been to retain nine-tenths of the large sum contributed for future aid to the survivors and care for the orphans and cripples. The committee has now remaining \$3,037,000 for such purposes and proposes to expend it as follows: \$300,000 for earthquake sufferers who were permanently disabled, now numbering 663; \$400,000 for the Patronato Regina Elena for the orphans, numbering about 2,000; \$800,000 for lumber and other material for shelters for the homeless; \$400,000 for aiding the small tradesmen, fishermen, etc., to make a new start; \$200,000 in cash for pressing needs; and the remainder, \$937,000, for completing the education of 200 university and 700 high school students, and various other purposes. The policy of this is a debatable question, but the inefficiency of the organization of a rescue work admits of no dispute. Many of the ruins in which living persons were known to be imprisoned were left untouched by the soldiers for weeks, and some of the remoter villages were overlooked and not visited for two months. British and American committees, which organized their own relief expeditions so far as the authorities would let them, did much more prompt and efficient service. As an instance of

the delay due to red tape it is reported that the clothing sent for the victims of the Calabrian earthquake of 1906 is still stored at Naples, and the officials could not be induced to give it out for the relief of present sufferers. At the time of the earthquake it was reported in various telegrams that the Strait of Messina had been widened, narrowed, deepened and shallowed, but now an official statement from the Minister of Marine informs us that practically no change was made by the earthquake and steamers pass as easily as before. It is officially estimated that about 60,000 bodies of earthquake victims are still covered by the ruins which have not been cleared away. At the present slow rate of working it is likely to be more than a year before they are all recovered.

The cables of the week
The Balkan Crisis from the different European capitals in regard to the difficulty between Austria and Servia have been more pessimistic than before, but it appears now that the danger of an outbreak has been obviated. The Austro-Hungarian note of March 6th, giving as her reason for refusing to negotiate a new commercial treaty with Servia that her warlike preparations rendered such procedure impossible, was replied to by Servia on the 15th in an evasive manner. The main question, the opposition of Servia to the annexation of Bosnia and Herzegovina, was briefly dismissed by saying that the question was in the hands of the Powers by their own request. The Servian note then goes on to argue the advisability of renewing the commercial treaties expiring at the end of this month by a provisional extension to the end of the year since there is no time for negotiating a new treaty. This reply was unsatisfactory to Austria and an aggressive note was prepared, but the representations of the Powers and, it is said, the personal influence of the peace-loving Emperor Francis Joseph, prevented its being sent. It is said that the Powers will agree to Austria's annexation of the two provinces and request Servia to dismiss her reservists. If this is done the conference to be called to make the necessary modifications in the treaty of Berlin will be a purely formal

one to confirm the agreement already reached.

Foreign Notes A private bill introduced into the House of Commons by Geoffrey Howard extending the suffrage to all men and women over twenty-one who have resided three months in the constituency was past at its second reading by a vote of 157 to 122. Premier Asquith said that the Cabinet was divided on the question, and it could not support the bill because it proposed later to introduce a measure of its own for a general electoral reform. The bill was then referred, at his suggestion, to the Committee of the Whole, which is equivalent to laying it on the table indefinitely. The introduction of the bill was not favored by the suffragets.—A report comes from Peshawur, India, that a plot to assassinate the Amir of Afghanistan, the heir apparent, and other members of the royal family has been discovered and that 1,200 arrests have been made and many prisoners have been blown from the mouths of cannon.—The Finnish Government is continuing its anti-Jewish policy by adopting more stringent and vexatious regulations than ever. The killing of animals by the methods prescribed in the Hebrew law has been prohibited, so the orthodox Jew will be deprived of his kosher meat. A law now before the Senate requires all Jews wishing to reside in Finland longer than three months to procure a permit from the Governor, which may be renewed for longer periods only on the recommendation of the local police authorities. The rights of citizenship are conferred on Jews born in the Duchy or who have lived there for ten years.—A committee of the Duma having under consideration the abolition of the death penalty in Russia obtained from the Police Department a report of the number of executions for the three years ending January 1st. According to this there have been 3,319 condemnations to death and 1,435 executions in that period, besides 683 summary executions under the special court-martial law in force August 1st, 1906, to May 3d, 1907.—King Edward visited the aviation grounds at Pau and witnessed two flights by Wilbur Wright, one alone and the other with his sister as passenger.

Mulberry Month in Florida

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OUR HEREDITY FROM GOD," ETC.

THIS morning there was a fog, and that is the way it often is after a night of such sparkling splendor that the stars throw shadows against your windows. It grows cooler all night, and you pull up an extra wrap; then about daybreak the moisture is so condensed that it drops off the pine trees like a shower. It is delicious, and with a shout, Hal and I are out of bed, jolly fresh with a bath, while Phil is off to let out Togo and Hector. Then we all plan the day's work together, and at it with a vim, for really the finest thing in this world is some good things to do. This morning we mowed a lot of coarse grass on the lake front for a compost; all the people down here burn up such stuff—which we refuse to do. It makes splendid raw material for humus, and humus makes soil. Our pet alligator, Samson, stuck his nose out of water; watched us sharply, then slowly rose and showed his full length for a few moments, which is about eight feet. He is a harmless fellow, and I have a strong belief that we can work him into the new *régime*. The sun was already rising, and while we were mowing it heaved the mist into great banks. The fog cloud over the lake repeated itself in the water—immensely down deep in the lake. Such water mirrors I never saw before. All about the circle you can see the pines, headed downward in the lake and headed upward on the banks; but I think you can see them in the lake a little more clearly than you can in the air.

The two collies are digging for gophers, and Hector by sharp practice has captured two or three. These are ground squirrels, with pockets on their jaws that hold a lot of food when needed, and when they are digging tunnels they use them for buckets to bring the dirt up in. It is great fun to see them start this out and dump it. Hector and Togo watch at two entrances of the subterranean digger, and if he is not a sharp listener he is likely to get caught

as he emerges. He will throw up a half bushel of dirt in half an hour, and wherever he works you can tell the kind of soil that is underneath. When we hunt for "concrete" sand we examine what the gophers have brought up. But when they get into your garden, and make tunnels thru your potatoes and beets it is another thing. However, they aerate the earth, and I think that some share of their food is insectivorous.

As the morning wanes the ducks begin to chase each other in long wakes across the water, and their frolics will not end except with the lapse of light. I do not know anything more full of fun than these water fowls, and their games are much like those played by children. That alligator has one cold eye above water, and will possibly take a selfish interest in the frolics; but there are so many of the ducks that if one be taken it will hardly be mist; arguing in this way the alligator will be very much after the human order. Around the rim of the lake there is a great circle of water plants, some of them elegantly fine; great masses of golden beauties, and the sundew with its scarlet pads is everywhere. The singing frogs like these borders, and the blue herons and white egrets like the frogs. You should see the Olympic jumps taken by some of these batrachians—fifteen feet, I think. I wonder if they ever have college athletics. The fish do not allow any larvæ to become mosquitoes, and so we miss our only masters. It is cause of peculiar congratulation, because in some parts of Florida they make most of the year intolerable.

Our peaches are in blossom—that is some of the varieties are; and they have been straggling along all winter, like Peeping Toms, looking in at the windows of the wrong months. Our apples and pears and cherries have all broken buds, and I see ten inches of new wood on the sweet gum and water maples. It is quite needful to have your pruning

knife busy in this climate. Phil and I are at work in the vineyard yet, and we have to touch a bit of hot wax to every cut vine to prevent bleeding. Down on the lake slope we have growing those sorts that in the North must have hot-house culture, such as Black Hamburg. And there we have also Munson's cross-bred varieties, like Headlight, and Wapanuka, and Elondin, and Mericadel; splendid products of American genius—huge bunches hanging down the trellises, all proclaiming the victory of brain. Between the rows of grapes grow quinces and figs, and down there near the lake side are long lows of asparagus. We hold that every man's home should be an experiment station, where one is constantly finding out something, instead of repeating old saws and making the same blunder that our fathers did.

These peach trees that are in blossom threw away their calendar too soon and lost count of the seasons. Some of them blossomed in November, and kept on opening more buds all thru December and January. So I shall have peaches to eat all the way from March until June. According to the almanac these trees should have blossomed in March. That is the way down here; we all get bewildered as to the time of the year; for why should one call it winter when his coat is off and he is picking Marechal Neil roses. I have to think twice or I am muddled myself. I brought some shrubs from my Northern garden last November and set them in my Sorrento lawn. They were completely fooled, and those which, if left in the North, would have started growth in May, were on the jump by New Year's. A slight frost pinched their ears a bit, but they got thru all right. Still, it was a blunder in the long run; for man, beast and plant must all alike have rest in order to reach perfection. This fine art of sleep is half the business of life; it is with mature years, at least. My peaches lack full size and sweetness; so does any human being who turns night into day, and fails to recreate himself every twenty-four hours.

Some of my plants, however, have done nothing of the sort; they have better nerve organization, and sleep right on under a sun of 80 or 85, and a night

of 65 and 70. It is like a sound, round boy, with red blood, who has never read nasty novels, or eaten too much riot-making food—a nice, wholesome boy, with a clean eye and a mind of his own. Well, my peaches must be a pampered breed, as they are. There is very little that is normal in our fruit gardens and orchards. Gradually, however, the blunderheads get worked out; and this would occur all the quicker if men did not interfere.

I was over at Dr. Gazzam's yesterday, and a mocking bird came into the china-berry bush by the door and whistled for Mrs. Gazzam till she went out on the porch, and they two had it out together. Wonderful fellows are these catbirds of the South; not quite so sweet and melodious as our Northern singers, but having a repertoire almost unlimited. They do not sing much until mating time, but this fellow had his whole soul stirred in him by human companionship. We can do much to make birds human and happy. Yes, John Burroughs, that mocking bird had good common sense and courtesy, and you should have both seen and heard his expression. He said it, as plainly as you and I could have done: "You are a wonderful woman; I never saw the like of you; you can whistle almost as well as I can; let's try." And then he had a lot more to say in a language quite as delicate as English and fully as expressive. Meadow larks sing around here all winter, and occasionally a shrike gives us a handsome song. I like this shrike, in spite of his ugly name; and when you call him a butcher bird, it means nothing more than that he is one of the best co-operators a man ever had in his garden. He hunts incessantly for grubs of all sorts, and when he has more than he can eat, spikes them on the barbed wire fences or wild orange thorns, to be eaten at leisure. Once in a while I hear a robin, and their time for gathering in this section is close at hand. Just before going North, they have a habit of collecting in vast flocks in our bayheads and around our lakes. The meadows look positively blue with the immense flocks of the beautiful blue bird that makes spring so cheerful for us in New York. I have not found what it is that they eat, but I

notice the robins hop close around the lake edges and are feeding on something.

Twice each day the turpentine fellows come down the Sorrento road, either to or from the town. Two teams, four mules each, loaded with barrels of crude resin, are on the way to the camp. There are generally two or three negroes to each team; one of them, at least, is astride one of the mules. They are not such bad fellows—altho the average black man hates "turpentine niggers." The fellows bow politely to me and sing out a pleasant greeting. They are proud of my improvements: "Right smart better, suh." "Yes, suh; yo shorely has made a big change, boss!" I like the praise of such fellows; it is a little like the wind blowing on my cheek, but it all counts. It is Nature. I like a bit of flattery from those who do not know how to flatter. They order their mules exactly as white people order them: "Get in the traces thar, yo old fool mule"—not very good English and not very polite, but, from a social standpoint, it evens things up; and the colored fellow feels the better for it. Negroes are not lazy, but their feelings about hurry and worry are not strictly Anglo-Saxon. There is no natural friction between the races; not a bit of it. The race war is a pure fiction. The whites are getting a new angle of vision on this subject—the industrial angle. Their old catechism read: The chief end of a white man is to glorify himself at the negroes' expense. Do not worry yourselves at the North; we are getting along faster toward the Lord and common sense than we did up there before the war. Evolution is common talk down here now.

There is something about one of these Southern noons, even in midwinter, that creates the siesta and suggests sleep. It divides the work day naturally; the fore part full of zest and ambition and the latter half full of retrospect and consideration. This is, I think, the way our days ought to go. Give the schoolboys the forenoon out of doors, with the hoe and trowel, applying what they have already learned from books; and then give them the afternoon indoors with books and talks, preparing for more applied knowledge on the morrow. Do the same

with older folks; half a day for drive and half a day for rest. We will get more done in the long run and will know better what we have learned. At any rate, down here such a division of time fits the atmosphere. In the morning we are full of life and power, but at noon we begin to look toward sunset. The siesta of two hours faces both ways. Sleep part of the time, but keep your accounts and jot down the thoughts of the day during the rest of the time. I do not advise a formal journal or diary, but fasten your best plans and purposes and thoughts in memoranda. Do not think of publishing, but think rather of working them into shape. It is not for the world, this private property of yours; it is for yourself. What you need is to learn to think in good shape, and to carry part of your memory in your pocket. Some of us, alas! are public people; we think only before the foot-lights. It is not easy for us to be simple.

Felix trots his pony (not much of a pony) to my gate, throws the reins over a post and brings me my mail. With coat and vest off, on my broad veranda, I read of the blizzard that has my Northern home in its grip of ice, and sweeps all semblance of life out of the Oriskany Valley. I lift my eyes to two large rose beds that flank my front lawn, where great buds of Marechal Neil, as big as your fist, hang almost open—it takes ten days to open one of these marvelous buds, but *then* it is without competitor, altho it has for close neighbors forty or fifty other varieties of crimson, scarlet and gold roses. I am glad, in this world of restless and resistless progress, to find one perfect thing; but the Killarneys and the Helen Goulds are so near perfection that one may be happy with them.

Down here we have to manufacture our ice, and it is innocent stuff at best, having no power only to melt, and in the process to cool our water. Queer! But the lower down we bore a well the warmer the water that comes up; only it has no suspicious smell of sulfur; and as for our cellars, they are not hot at all, but deliciously cool, and the hottest days are so finely fanned with breezes from the Gulf and from the ocean that we are never toasted, as we are sometimes

in New York and Boston. Everybody gets all the air from a full square mile, or he may have it if he likes, and the big skyscrapers are only great pine trees, one hundred feet tall, that swing their Jovian heads slowly with the wind, while tresses of moss, ten feet long, tell which way the wind blows.

One of my letters asks if there is a chance to get bookkeeping down this way. "Joy of my liver!" I do not see any bookkeeping hereabouts. There is not a lawyer in the town, nor a single saloon, and there is only one doctor. There is also just one church. And there all the people collect of a Sunday morning, to exchange courtesies and news, and the pastor gives them the worth of their money in sound doctrine. The telephone touches us, and the railroad runs two trains a day, each train very nearly on the other train's time. Why not? With all your buzz and your turmoil, your winter trains up North are never on time, and you often get stalled in snowbanks. I waited the other day three hours and forty minutes for the engineer to have his nap out. Poor fellow! he had been at work thirty-eight consecutive hours, and needed rest.

It is just so on the boats. Coming up the St. Johns River, from Jacksonville to Sanford, we met a raft of logs, and a little tug stranded on the sand banks. The river was effectually blocked. Our captain hitched to his puzzled neighbor and pulled. In five minutes we were equally aground, and both pulling. Then we got a hawser around a tree on the bank, but the tree came out, roots and all, and pitched into the water. Then half a dozen more hawsers snapt, and we were already too late to get our cars at Sanford. It cost the two hundred passengers over one thousand dollars, and wasted a lot of patience. At last we got off ourselves and left the other fellows where they were. There is nothing finer than this neighborly courtesy. You need not remind me that the ferryboats go every five minutes from New York to Jersey City or Hoboken, for I have often been on them when blocked in the ice and stove in at fore quarters.

The orange crop taxes the railroads to the utmost; one-fourth more boxes than last year, and the crop not yet all

pickt. It is just so with the trucking crops of lettuce and celery; and when the peach shipments begin in May, closely followed by the melons, weighing forty pounds apiece by the carload, it is no wonder that the railroads cannot keep pace with Florida development. You never tasted such melons nor such peaches unless you have been a happy visitor of this spinal column of the South. Then the lowlands are full of sweet potatoes and Irish potatoes and cassava. And even yet Florida is an unknown land. Nobody knows what it can grow, nor how much of it. This very day I have tasted new carrots, green peas, sweet potatoes and lettuce from my garden, and out of my orchard loquats, oranges, grape fruit, strawberries and mulberries.

The mulberry is a Southern miracle. It is our first spring fruit, for strawberries are really ripe in the middle of winter. When the blood of Nature begins to throb with new life and new growth, the mulberry is first to respond. The trees are hearty fellows, swinging their arms around in a jolly way, and full of blossoms. Every blossom sets, and before you can get your hunger up they begin to turn black. So the tree is covered all over with berries in every stage—green, red and sable. Delicious! And the mocking birds come; and the red-winged blackbirds come; and turkeys come; and the cardinal bird flames in the tree; and the blue jay squalls his delight; and the hens cluck and cackle and eat; and the razor-backs collect from the woods; and the boys sit in the trees with stained hands and faces; and there are mulberry pies, and mulberry shortcakes, and mulberry puddings, and all sorts of mulberry creations out of the kitchen, and with all the rest there is mulberry marmalade, to be carried North with us; and yet there are mulberries all over the ground, and all over the trees, and still mulberries to give away. It is a wonderful berry as we have it down here, but not one too many. March is mulberry month in Florida.

The most golden hours of all are from four o'clock until seven in the afternoon. The air is perfect; the thermometer about 70. A peculiar talkativeness fills

the air; you can hear neighbor Brooks half a mile across the lake; and at the north end neighbor Lent is whistling up his cows to be milked. Just to the right neighbor Hawkins is picking the last of his Golden Navels, Rubys and Tangerines to be packt tomorrow. A lucky gobbler, who survived Christmas, somewhere across the lake is voluble with vanity. The silver sheen on the water grows crimson. The winds from the Atlantic come drifting in thru the pines, and the sun sinks lower toward the lake.

It is now just half-past six, and the afternoon has settled down into a wonderful peace. The sun, thru the pines, is gold, the air is gold, and the reflection in the lake is black with gold setting. The frog fiddlers take the place of a town clock hereabouts, saying five, five, six, six; and, dear me! is there anywhere in this world a crowd of human folk? Is there anywhere a roar of railroad trains? Is there anywhere congestion and fury of trade? It is hard to imagine it. We have half a mile of water mirror to ourselves; hundreds of acres of land, and twice as many acres of sky—all to ourselves. There is a breath of pine about us, and sometimes a smell of resin, and a touch of air that has past over the jessamine bushes. Who cares for skyscrapers and the Pyramids! Here we do not put iron shoes on our horses, for there are no stones and no hard lumps of dirt; and as for automobiles, if one comes here it generally stands still in the sand and whirrs its wheels around helplessly, till somebody's mules drag it out of the country. God be praised for peace. We have named our forty acres Ozone Park; it is dedi-

cated to recuperation and recreation. The gold is toning slowly down to silver, and there is a silver shimmer all over the lake. The moon is climbing up the east, over the haughty pines and over another lake. The great round canopy overhead is full of stars. Out of the distance a fox calls. Whip-poor-wills are in the park. The mourning doves are crooning to themselves in a grove of young pines, where they make their nightly assembly. I never knew moonlight till I came to Florida. The night is a world and a life by itself and to itself. Day shuts down quickly and sharply; night opens at once full of character.

If you wish to get away from zero, do not go to a land where it is neither hot nor cold, but immensely lukewarm; where slush takes the place of snow, and the normal state of a human being is pleurisy or pneumonia. By all means stay in Massachusetts or Michigan if you cannot get as far South as the pines and magnolias. And even here among the lakes you must have your union suit, to exchange for the thinner ones, once in a while. And almost every night is cool—cool enough half the time for a few pine knots or a heap of cones in the fireplace. Then pull off your shoes (your coat is seldom on), show your feet to the blaze, let the rippling, tickling sensation go all thru you; read awhile if you like, but better just look at the flames and flamelets, until you are off among old scenes—anywhere, everywhere, and then—why then you are asleep. The fire also is singing itself to sleep, and the two collies are asleep at your feet. *Pax tibi, tibi!*

SARAH E. LEE

In Te Domine

BY FREDERICK GEORGE SCOTT

The hills may crumble into dust,
The withered reed flow up the sea,
The manger may shake its living rest
In Him whose firm hands molded me.

For when I draw myself apart
From things which make my vision dim,
Deep in the silence of my heart
He meets me and I speak with Him.

QUEBEC, CANADA.

MUSIC ART AND DRAMA

A Flemish Opera

Everybody who has visited European art galleries remembers the many canvases by the old Dutch and Flemish painters depicting low life in taverns—scenes of carousal, love-making and rioting. If great painters deemed such subjects worthy of their brushes, why should not a modern composer find them suitable for operatic purposes?

Such was evidently the attitude of the Flemish composer, Jan Blockx, when he asked Nestor de Tière to prepare for him the libretto on which is based the opera, "La Princesse d'Auberge," which Oscar Hammerstein has just produced at the Manhattan Opera House. Most of the scenes of this opera are placed inside or outside of a tavern. The keeper is tipsy most of the time, but he has three pretty daughters to help attract and take care of the guests. Chief siren is the oldest of these, Rita, who takes pleasure in ensnaring men. One of her victims is Rabo, a burly blacksmith, whom she discards after he has spent all his savings on drink. Her cap is now set at higher game—Merlyn, a young musician of hitherto unblemished character, who is writing a piece to compete for the prize offered by the Prince of Lorraine. His mother has adopted a girl named Reinilde, who loves him, and whom he intended to marry till Rita poisoned his heart. He now squanders his money and time in the tavern, deaf to all entreaties and efforts to redeem him. In the last scene the jealous blacksmith provokes a quarrel and stabs Merlyn, who dies just as voices are heard outside proclaiming him the victor in the musical contest.

The story is an old one, but the Flemish setting makes it fresh and picturesque. Mr. Hammerstein's scene painter and stage manager took great pains to have the scenes true to life in every de-

tail and the result was that the audience got a favorable impression, altho there are not a few dull places in both play and music, especially in the first act. At the close of the second act there is a carnival scene which aroused the enthusiasm of the audience to such a degree that it had to be repeated. Here are dances, processions galore, with allegorical groups, including a huge float decorated with electric garlands and bearing Rita and Merlyn.

The music which Blockx wrote for this scene is as spectacular as the stage pictures. Another splendid musical climax is the final scene, where the proclamation of victory at the moment of death provided a situation to which only dramatic music can do justice. Blockx's melodie faculty is not remarkably fecund, but he is successful in giving his score the aspect of Flemish nationalism, especially in the splendid choruses, while the chimes add another touch. To Mr. Gilibert as the tavern keeper fell the pleasant task of singing a famous old Flemish song which greatly pleased the audience. Others in the excellent cast were Misses Labia, Zeppilli and Gerville-Reache, Messrs. Dufranne, Vieuille, Valles and Crabbe.

A Surfeit Next Year?

There has been much grumbling among concert givers and theater managers for some years because of the deadly competition of the opera houses. "Too much opera," has been their motto, but with the hope that never dies in the heart they have anticipated the time when there would be such a surfeit of opera that the "evil" would cure itself.

Present indications are that more operas will be offered in New York next season than the public will be able to support. The Metropolitan Opera Company announces that its season will open

on November 15, and that it will last twenty weeks, during which 120 subscription performances will take place. In addition to these the Metropolitan Company will give forty performances in the New Theater. This has a smaller auditorium than the Metropolitan, wherefore the operas to be heard there will be of the type that figures in the repertory of the Opéra Comique in Paris.

An extra company of French artists has been engaged for these operas, among which are Massenet's "Werther," Bruneau's "L'Attaque du Moulin," Dukas's "Ariane et Barbe Bleu," which will be new here, and some favorites of the last generation, like "Fra Diavolo," "Les Dragons de Villars," "La Dame Blanche," "Le Postillon de Lonjumeau," "Le Domino Noir," and also some "classic" operettas, like "The Chimes of Normandy," "La Fille de Madame Angot," "La Belle Hélène," "Orphée aux Enfers," and "La Grande Duchesse de Gerolstein."

Mr. Hammerstein also will give more attention to French opéra comique, to which Thursday and Saturday evenings are to be devoted. His season will begin on November 15th and will comprise eighty performances of grand opera and forty of comic opera. A new feature will be several of Wagner's operas in French. Some of the Hammerstein artists, notably Renaud and Dalmores, are among the best of living interpreters of Wagner.

Add the 160 performances of the Metropolitan to the 120 of the Manhattan and you get 280. But that is not all! There is to be in the field a third company, devoted exclusively to Italian opera. How many more performances this company will add remains to be seen. At the very least it will raise the figure to 300 altogether. Can the public pay for all these nippers?

The launching of a special Italian company seems strange in view of the fact that Italian opera is no longer in the ascendant. On the contrary, Mr. Hammerstein has found French opera the more profitable; hence his new plan for Parisian opéra comique; and hence, also, his disagreement with Mr. Campanini. That excellent conductor, tho' thoroly in sympathy with French and Ger-

man music, did not like to see the Italian section eclipsed; in fact, he wanted to secure for it greater prominence, and he wanted to have complete control of the singers and the casts. To this the manager objected on the ground that he wanted to be boss in his own theater. It was therefore announced that Mr. Campanini would not be at the Manhattan next season; but as conductor and manager have remained on the most friendly terms, it is hoped that the breach may be mended and Mr. Campanini remain.

Extending the Field

The foregoing facts and comments concern music-lovers not only in New York, but in several other cities. The extension of grand opera to these cities is one of the most notable phenomena of the times. The discovery that New York is actually able to support two opera companies has created a tremendous appetite for the same pabulum, but unfortunately the New York maxim, "The best or nothing," prevails thruout the country. It is a very foolish attitude, but if people would rather have nothing than half a loaf, what can you do? Henry Savage gave excellent operatic performances thruout the country with good singers, but they were not one-thousand-dollar-a-night stars and after a time he left the field. What the public wants is the same casts as those heard at the Metropolitan and Manhattan opera houses; and these will actually be heard next season, not only in Philadelphia, but in Baltimore, Washington and Boston. Chicago is too far away to be included in this circuit; so it must content itself with a fortnight of Metropolitan operas, as formerly, or get up its own company.

There is a particular reason why managers are eager to extend their field. The competition for the best singers is so great, and there are so few of them, that they have things their own way. They demand not only big sums, but a large number of guaranteed performances. With only one theater it is impossible to grant so many appearances; with two or more theaters in neighboring cities it is easy, and the problem is solved.

Concerning Concerts

In the metropolitan concert halls little of interest and nothing of importance has happened in the last four weeks, except the production of Verdi's Requiem on two Sunday evenings at the Metropolitan Opera House, under the direction of Mr. Toscanini, who not only brought out the dramatic spirit of this great work splendidly, but revealed a number of beautiful details that no one had suspected. It is worthy of note that of the four singers the eminent Italian chose as the best available interpreters of Verdi's work—Destinn, Homer, Martin, and Hinckley—three were Americans.

Walter Damrosch and the New York Symphony Society have completed their Beethoven and Tschaikowsky cycles and are making plans for next season. Wasily Safonoff, who has been conductor of the Philharmonic for three years, makes his farewell appearance in a program devoted entirely to Tschaikowsky, of whom he is acknowledged to be the greatest living interpreter. His place will be taken, for the next two years, by Gustav Mahler, who, it is to be hoped, will make more attractive programs. He will have at least forty concerts to conduct, in place of sixteen or eighteen, the usual number up to the present. What with these extra concerts, and the numerous performances of the New York Symphony Society, and the Boston Symphony Orchestra, it is to be feared there will be a superabundance of concerts as well as of operas.

The production of Paderewski's symphony by the Boston Orchestra did not prove as important an event as had been anticipated. Bearing in mind that his pianoforte concerto and his Polish fantasy are among the most inspired of modern works, one could not but regret that in the symphony the great Polish pianist has followed the method of the modern Germans, who learnedly and laboriously elaborate commonplace themes into interminable movements. His symphony lasted an hour and five minutes, yet still another movement, a scherzo, is to be added to it.

It is with great pleasure that one notes the fact, attested by Sousa and other band leaders, that ragtime music is no

longer in demand and has been shelved. Nahàn Franko goes so far as to say: "The people now like high-class music and are fond of Wagner, Beethoven and Liszt among the older composers, and Victor Herbert and Sousa among the new."

Art Notes

The prize winners at the Academy in this Spring Exhibition are as follows:

First Julius Hallgarten Prize—"Horses," by Daniel Garber.

Second Julius Hallgarten Prize—"After the Ball," by Charles Bittering.

Third Julius Hallgarten Prize—"Elfrida," Ben Ali Haggin.

The Julia A. Shaw Prize—"Woman in Blue," by A. Albright Wigand.

The Clarke Prize—"Playmates," by Lydia F. Emmet.

The Saltus Gold Medal—"A Family Group," by George de Forest Brush.

The Inness Gold Medal—"Early Moonrise," by Ben Foster.

All the above prizes have been awarded presumably for a certain amount of mastery over the technical problems of the painter. Mr. Brush's "Family Group" is particularly lovely in color, quality and modeling.

In each of Mr. Charles Hawthorne's pictures, "The Return from the Catch" and "The Lemon Girl," the flesh painting is wonderfully fine; in our opinion the finest in the exhibition. "The Quiet Corner," by Irving Wiles, is a particularly vivid little picture, showing great mastery of handling. Mr. Dougherty is also to the fore with dashing, spray-battered rocks and the thunderous might of the ocean. "Surf," by Emil Carlsen, while similar in subject to the last mentioned, is a much better digested and bigger effort. It is not difficult to imagine Mr. Dougherty, carried away by the conflict between rocks and ocean, slapping down his notes in almost wild exhilaration, but Mr. Carlsen's picture is the product of a man who apparently approaches his work coolly, grips every detail surely, and with the greatest love and much labor produces eventually a work of art and not simply a reflection of a scene. "Surf" is a powerful glorification of Nature, rendered by a lover who is her master. Gustave Cimiotti, Jr., is another but at present less ac-

complisht artist who has a song of his own to sing. "The Hush of Fall" is the result of much loving study.

The Arts Club has been holding a retrospective exhibition of the works of John W. Alexander. Among the sixty-four oils collected together are portraits, landscapes and delicate studies in lighting of a costumed female figure. The painting is always masterly, but taken as a whole, his work would seem to show Mr. Alexander a painter of *motifs*, altho some of the portraits are strongly characterized, as the Joseph Jefferson and Rodin.

At the Knoedler Galleries there has been an exhibition of some of the work of Mr. John La Farge, mostly studies made in Samoa and Japan, with some few original drawings for large works. Mr. La Farge does not indulge in brilliant brush work, but his drawings are dwelt upon and local color effects realized with much interest and subtlety. The desire to know is evidently much more important to this master than the desire to show what he knows. The depth of this knowledge only dawns upon the observer after much careful scrutiny.

Mr. Macbeth has been showing at his galleries thirty-eight recent canvases by Arthur B. Davies. This was probably one of the most extraordinary exhibitions ever held in New York. Thirty-eight pictures, and almost every one of them full of an overpowering effect of its own. Mr. Davies seems to have the chemist's capacity for extracting essences from Nature, and yet, in making his pictures, his building up is so complete and without flaw that it would be impossible to pull asunder the parts without much study, and perhaps a few tips from the artist. Music undoubtedly is a great source of inspiration to him, as in "Crescendo," but, in fact, everything in Nature is drawn upon for his own good pleasure and our awakening, for it would seem that colors as handled by Davies have a physiological effect, and the artist is able at will to force us to our knees in terror, curdle our blood or thrill us with the sound of unheard murmurs. It is interesting to think of what a perfect atmosphere Mr. Davies must have in which to think out

his problems, and that we are able once in a while, thru Mr. Macbeth, to see the results is a matter for which we may congratulate ourselves.

Mr. Malcolm Fraser is holding an exhibition at the Clausen Galleries. He has a lot of interesting thoughts to express, but some day he will express them with more subtlety of color and drawing.

The collection of drawings in water color by John S. Sargent, recently shown at the Knoedler Galleries, has been purchased by the Brooklyn Institute of Arts and Sciences for the sum of \$20,000. There are eighty-three drawings.

The Grolier Club exhibition is this month concerned with the bronzes and paintings of Antoine Louis Barye, who died in 1875. From the collections of members of the club and their friends have been assembled a magnificent showing made up of 112 numbers. The Grolier collection is well calculated to exemplify the wonderful boldness as well as the striking simplicity of Barye's work. Included in the present exhibition are nine bas-reliefs.

The Sorolla paintings at the Hispanic Society Galleries were followed by an exhibition of paintings by Ignacio Zuloaga, which are characterized by brilliancy and richness, but an inclination toward sadness.

The Art Students' League exhibition, March 15th to 27th, was based on the work of the Woodstock Summer School of Landscape Painting.

Some etchings by Frank Brangwyn were shown at Wunderlich's. The Pratt Art Club, of Brooklyn, had an exhibition of samplers.

Drama

Richard Mansfield always selected the Lenten season for his New York engagement; it was then that theatergoers usually looked forward to some striking production, such as "Ivan the Terrible," "Don Carlos," "The Misanthrope" and "Peer Gynt." But since that actor's death, the early spring theatrical horizon has been overcast; no one has been able to take his place; even the uninspired earnestness of Mr. Robert Mantell has failed to fill the gap.

We are promised a bust of Mansfield in the New Theater. This is as it should be; it is one of the most satisfactory promises that has emanated from that potential institution, unless we consider the probability of bringing Mr. Sothern and Miss Marlowe together again in its company. If the New Theater is to open in November it is time to let the public know something of its policy.

In the meanwhile, Mr. Mantell is supplying us with a series of classic plays. We have called him uninspired, but his high motives are worthy of public support. For his new attraction he has revived "King John," that one of Shakespeare's chronicle plays which is most devoid of hero interest unless we count Philip Faulconbridge, but which is fraught with the touching sentiment around Arthur and Hubert de Burgh. In these days one marvels at the unconcealed political trend of the religious discussions in this play; the fact is, in the perfectness of historical detail Shakespeare has obtained his unity. We are presented with a succession of scenes, lavishly mounted and grouped by Mr. Brady, who prepared the version, cutting, transposing, and, if our following of the text is correct, even changing certain lines. But, barring a few minor excrescences, the management was done in taste, and the stage business, in those cases where it went beyond the text, was wholly in keeping.

The cast was only adequate, lacking in all but traditional study; Miss Marie Booth Russell, as Constance, is the only

one who struck the repeated discordant note; her method is distressingly mellow, her voice throaty and monotonously without color, her emotion mechanical. Her scene where she calls for her son, Arthur, was perhaps least fraught with these mannerisms.

Mr. Mantell's King John was careful; it was intelligent and at times artistically shaded, especially his ordering the death of Arthur, and his own death at the last.

We sometimes wonder, nevertheless, how certain things can be done by an actor, simply for the sake of holding the stage. In the first act, after Faulconbridge is knighted, the court exeunt, leaving the young man for his soliloquy and the scene with his mother, Mr. Mantell remains until the drop of the curtain a most unkindly witness to the scene. The actor's reading is not all it should be, both intonation and accent being contrary to usage at times. Once we thought that these defects in Mr. Mantell were due to constant playing to provincial

ROBERT MANTELL,
Who is presenting Shakespeare's "King John."

audiences on the road; we fear they are innate.

As a whole, "King John" is interesting; present-day playgoers read of Garrick, Macready, Charles Kean and Booth in the rôle; it is a generous motive and a sincere endeavor which prompts this recent revival and we would welcome more like it, in default of better.

If Mrs. Leslie Carter expected a religious vehicle in John Luther Long's "Kassa" she came wide of the mark, for the morality, tho undoubtedly intended, was hidden by the grossness of the scene.

Maeterlinck's *Sister Beatrice*, based on a miracle play, went out for a night to taste of the world and was deceived; Kassa left the convent for a night, remained five years, and then returned, unhealthily repentant. This impression may have been due to the hardness of Mrs. Carter's acting, to the unresponsive personality which was once so dependent upon the Belasco training. But we are inclined to believe that "Kassa" is much more theatricalism than artistic worth.

Thomas Buchanan's comedy of modern life, "A Woman's Way," furnishes Miss Grace George with a most vivacious rôle, which is further enhanced by the wholly satisfactory work of Mr. Frank Worthing as support. The situations grow out of this bare outline: A married man falls in love with another woman, his wife determines to introduce her successor, and invites her to dine. By means of the disillusionizing events that follow, she wins back her husband

The dialog barely escapes farce at times, and the play is too frothy for one to resent the side remarks about divorce and other gossips that circulate at any five o'clock tea. We are becoming bored by such stage conversations to say nothing of the unnecessary humor the theater draws from divorce. But despite this, Miss George and Mr. Worthing elicit praise, while Mr. Buchanan succeeds in being, at times, extremely witty. But it is a wit that doesn't matter.

Mr. Louis Anspacher is a critic of the drama, prompted with strong desire to improve conditions on the stage; he is a student of the theater, and his lectures have brought profit to his hearers. But we fear that he has steeped himself too long in the atmosphere of Continental morality, that he has studied too carefully the worn-out models of characterization, that he does not possess the spontaneous imagination that marks the true creative artist. "A Woman of Impulse," in its form is based on worn-out

models, altho one can see that Ibsen is behind this playwright, and especially Ibsen the feminist. But Mr. Anspacher's plea for the woman with the artistic temperament is melodramatic, not subtle, like Hedda Gabler, or Ellida, in "The Lady from the Sea."

The play is crude and lacks concentration; it is mechanical, with characters that are much more akin to Augustin Daly than to recent dramatists. Thru this production Miss Kathryn Kidder has been brought back to the theater. Her work in "A Woman of Impulse" is sincere and pleasing; there is a surety about it that most women "stars" today lack; it does not show the training of the immediate present, but is rich in worthy tradition. Yet it is a method more romantic than subtle. We would rather see her in "Madame Sans-Gêne" than in Ibsen.

"The Richest Girl" might have been called by any other name; it is a farce, and so nothing matters; you only remem-

MISS MAUDE ADAMS, AS MAGGIE,
IN "WHAT EVERY WOMAN KNOWS"

ber that Miss Marie Doro, Mr. Orrin Johnson and Mr. Frederic Eric are the moving spirits in rapidly moving situations, thru which a surprisingly spoiled young woman has automobile accidents, innocently upsets careers and makes others, and finally, escaping one marriage, falls in love with the hero, upon whom the brunt of misfortune rests. The plot is trivial.

Thomas Addison's "Meyer & Son," which, like Zangwill's "The Melting Pot," attempts to solve the question of intermarriage between Jew and Gentile, is sketchy in construction and plethoric in dialog. The play is lacking in balance and commits the error of robbing the Gentiles of all redeeming virtue and of clothing the Jews with godlike attributes. The dramatist strives to teach a moral lesson, but this lesson is lacking in perspicuity. The rôles were adequate as far as they went, particularly H. G. Carlton as old Strauss. Neither this nor Mr. Goodman's "The Man Who Stood Still" solves any problem, so we await Mr. Zangwill's drama, which has thus been twice forestalled.

A play by Jerome K. Jerome is sure of a welcome in America, for his humor is more akin to our taste than any other British author. But "The New Lady Bantock" is undeniably something of a disappointment—probably because it is

MISS MARIE DORO,
One of Charles Frohman's stars

too slight in substance and characterization. The situation exposed in the first scene is highly amusing, but does not become any more so during the progress of the play; it consists in the discovery that the new Lady Bantock is a Parisian actress whom Lord Bantock wooed incognito, and when she is introduced to the household over which she is to preside, she finds that the butler, housekeeper and servants are her own relatives, the highly respectable non-conformist family from whom she ran away to go on the stage. This is the main *motif*. The acting is satisfactory without being in any case distinguish-

The Harp

BY D. M. HENDERSON, JR.

("Where are your poets?"—James Bryce.)

Lo! On the nation's harp
Mute are the keys!
All the brave music's pent
Waiting till One is sent
With its release.

Pray God the harp shall soon
Answer its lord,
Who shall have tuned his heart
Unto its every part—
Mastered each chord!

Then shall the nation have
Songs for her needs!
Toilers in field and mart
Hearing, shall take fresh heart:
Dare greater deeds!

Come! To thy nation's tread,
Dear master, play!
Rugged her way and steep—
Can she her courage keep
With you away?

BALTIMORE, MD.

The Willipus-Wallipus in Tennessee Politics

BY MRS. L. H. HARRIS

WE discover occasionally what is called a reversion to type in an individual, a polyp man with an Esau hide, or Socialistic tendencies, but it is a sort of hypnotic phenomenon when a whole State suddenly falls into a trance and reverts in mind and spirit to a former period in time. This is what has happened in Tennessee. The people have recently past thru a middle century era in the midst of all the improvements of modern civilization. If an exact account should be written of important events in this State during the past year, no novel of the season could compare with it in sensational features. The one element lacking is erotic decadence. Immorality here is still confined to the instincts, as it was in the middle centuries, and has not become an intellectual phase of social life as it has in fiction, and in reality in some other sections.

Before giving a review of the political drama just enacted, it is best to offer a slight character sketch of the native Tennessean. The rumor is sometimes current that "Hell's broke loose in Georgia." By that expression the reporter means that there is a lot of infernal noise going on in Georgia. The people there have the Gallic temperament. They are endowed with an immense capacity for rage that may be vented in rhetorical sentences, blood curdling threats, and if the worst comes to the worst, in a challenge. But if the person challenged should take the invitation seriously, he would show an obtuseness, a deformity of his wit faculty that would amount to social suicide. And probably no respectable Georgian was ever guilty of the rudeness of walking up to a man and shooting him to death. He has got the courage but not the heart, not the nature, to be guilty of such discourtesy. By nature he is not a killer, but a lover, a good comrade, a wit, a vagabond gentleman on his last legs, even when he is at his worst. The Tennessean is alto-

gether different. He has the anvil temperament. He will not be eloquent, even about God, but he is ready to deliver a lecture on any subject, or to kill a man on less provocation than any other Southerner. He has less of the angel in him than any man alive. He is a perpetual pioneer, a cross between Adam and Andrew Jackson, with academic tendencies toward intellectuality. He has a spirit as tempered and effective as the dirk of a pioneer. His emotions, when he permits himself that extravagance, are primitive blood spurts to the brain. And while he is very far indeed from being a criminal in his instincts, he is just naturally deadly in his disposition, like a frontiersman who is perpetually nerved up to meet a wolf or an Indian. This is why he can so easily kill, and why he has been so powerfully affected by the recent state of affairs in Tennessee. It appeals to the dirk and the Andrew Jackson in him. Upon investigation, it will be found that all native Tennesseans are privately afraid of one another. There are probably fewer threats made and more concealed weapons carried here than in any other State in the Union. Certainly this has been the case during the past year. They are all living a dual existence (of course this writer has no reference to the settled deposits of invincible good people, branches of the great vine, to be found everywhere. They are the preservative red cross element who cure society of its wounds)—one as manufacturers, merchants, artisans, professional men, energetic figures of modern society—another as potential adventurers of the middle centuries. As citizens they are uncertain quantities.

This brings us back to the consequences suffered by the State during the past year thru this hypnotic reversion to an earlier type of manhood, very good in its day, but not suitable to the demands of our times.

Early in the spring of last year Edward W. Carmack announced himself as candidate for Governor against Governor Malcom R. Patterson, and the stage was cleared for action. Tremendous audiences assembled thruout the State to listen to the joint debates between the two candidates. Political campaigns have long supplied the only excitement in towns and rural communities where the people do not attend theaters, race horses or fight chickens, but this particular campaign supplied all the features of the drama, appealed to the same sporting spirit to which the racecourse or the pit appeals, with this added advantage that the audiences took partisan parts in the performance. Carmack ran on the Democratic ticket, supported by the "State wide" Prohibitionists, and opposed by the "machine." Patterson ran on the Democratic platform (there is a difference), supported by his record in office and the "machine," which was thoroly identified with the liquor forces. Carmack was for State wide prohibition, Patterson was for local option. The reputations of both suffered unspeakably, especially Patterson's. But Carmack had this advantage, he shone with all the luster of a man who had repented of his errors and was now running as the representative of the moral element. The enthusiasm he excited was something between that accorded to a popular revivalist in a rural community and that accorded a plumed knight of olden times when he enters the lists at a tournament. The general impression prevailed that he would flay his antagonist alive in the joint debates and ride into office on an triumphant majority. The shock was very great when it was discovered that Patterson could do the most effective flaying. He is a man who finds himself only in an emergency, in the white heat of battle; an unsuitable person as a private citizen, regarded by many as lacking some qualities that make a safe and proper member of ordinary society. The virtues he has belong to the State, but not a modern State, and the courage he has comes to him directly out of the middle centuries. It is not what we call moral courage *now*, not altogether enlightened. It is

just courage of the hard, flinty, Tennessee kind, and shows most physically in the pattern of his chin and jaw, which are remarkably similar to those of Andrew Jackson. The advantage he had over Carmack in debate was the ability to produce a logical argument with simplicity and shotgun directness and on short notice in his own behalf. Carmack had a spectacular mind and more power of exciting sentimental enthusiasm. The liquor element in Tennessee had become flagrant in its disregard of law and in its destructive influences, and if he had been a Crusader leading a host against the red walls of Hades he could not have excited more admiration and confidence. On the day of the primary, this led to a curious exhibition of eighteenth century sentimentality. A long procession of women and children, picturesquely drest and carrying banners, rode to the polls, where they sang songs and served temperate refreshments, and in various ineffective feminine ways added that touch of egregious absurdity to the situation which completely cast it out of drawing with the times.

No one ever will be able to tell why Patterson was chosen instead of Carmack. Some say it was the "machine," some that it was the money of the liquor forces, and a few think it was an involuntary tribute to the invincible personality of the man. He is cordially disliked, even despised, yet there is lodged in him somewhere a middle century integrity about keeping vows, even if he had made them to the devil himself, that appeals to the sense of fair play so highly developed in primitive men. And the tradition in Tennessee politics is to indorse a Governor's administration by electing him for a second term when he has filled the office with any sort of dignity or ability, and Patterson's administration had been markt with phenomenal success in some departments.

From this point the spell of the past deepened in Tennessee. All the right and wrong accomplisht was wrought with the fierce intolerance and bitterness of ancient times. No one was burned at the stake, but in the tobacco districts men were shot down in the open road, on their doorsteps, anywhere. Property

was burned and destroyed. In the cities the liquor forces congregated, and the State Widens, as the prohibitionists were now called, withdrew behind the scenes to prepare a "steam roller," commonly known as a willipus-wallipus, out of the coming Legislature, with which they purposed to crush the "machine" and incidentally all who were connected with it. Those who observed, perceived that the ghosts of the past were at work everywhere. The spirit of Andrew Jackson had slithered back thru his grave chink in the last century and was stirring up things in one circle, while still more remote ghosts walked in other circles. Far out on the rim of things the Night Riders began to ride more boldly to and fro. There was nothing to hinder them. They were the sediment life of the State rising to the top because the "machine" was too busy to notice, because the best element were too busy constructing a still more powerful machine.

There was the usual lull, however, before the bursting of the storm. During this time Carmack accepted the editorship of the *Tennessean*, a morning newspaper in Nashville, that had struggled desperately for a foothold, and had quickly placed its columns at the service of the State Widens. When Carmack became editor, the people settled themselves to enjoy a newspaper scrimmage, just as they had enjoyed the campaign fight. There was a skinning on the editorial page every morning which served to keep the carnivorous appetite of the human imagination excited. Whether his readers agreed or disagreed, they had the privilege of being present, and most of them approved, for Carmack retained what few defeated men can boast of, the enthusiastic devotion of his party. He was absolutely immune to his enemies, and knew himself to be idolized.

Now, given so much Carmack vitriol, so much Patton perversity, so much popular irresponsibility, expressed in ferocious partisanship, with two or three dozen slick hands working the "machine" and two or three thousand modern political mechanics constructing a prohibition willipus-wallipus out of the coming Legislature, regardless of party lines,

with a heated atmosphere everywhere, and you have a psychic combination warranted to prove destructive to the good name and welfare of the State as soon as it begins to work. When both good and evil are accomplished with the same expressions of vindictive hatred, it is difficult to tell the difference.

First came the flash and frightful report from the Reelfoot Lake district. The Night Riders had murdered one man and failed of murdering another only because of his miraculous escape. During the summer everybody was engaged in the campaign or absorbed in watching it. The only part of it that reached the Night Riders was the red, unbridled spirit of fierce partisans. They developed according to their natures along the same lines; but being a trifle more primitive, in the simplicity of their minds they went further and actually killed the men whom they supposed to be opposed to their interests.

Ordinarily officers would have been dispatched to capture the criminals, and the sensation would have past with that week's Sunday editions of the newspapers. But this is an era in Tennessee taken somewhere out of the middle centuries, and things must be done according to the spirit of the sword as nearly as possible. At the head of as much State militia as he could muster conveniently, the Governor set out for Reelfoot Lake. And there was enacted one of the most unique and picturesque dramas of law and order ever witnessed in this country. He did not go to face a mob or quell a riot. The Night Riders had scattered like a mist in the dawn. But he settled himself and his soldiers in green sapling barracks, and in as much glamor as the modern mind is capable of shedding now upon a military adventure. To be sure, it was not much of an adventure, but it was the best he could do, and he carried it thru with astonishing dignity. He acted on a small stage very well according to the sword temper of his spirit. As a matter of fact, he has most of the qualities of a military ruler. He could be that very rare thing, a merciful dictator. He is a man with more of the hero instinct than disciplined virtue. Had he lived as far back as he belongs he would have been

one of the characteristic figures of his times. As it is he is a sort of "flash in the pan," a skyrocket at noon that should have gone off some time during the night of a previous century. At Reelfoot Lake he did the only thing there was to be done—had the infected neighborhood arrested and sifted till enough guilty men were found. The soldiers and barracks were simply the middle century background to the performance.

The curtain had not fallen upon the Reelfoot Lake tragedy before Carmack, whose editorial irony in dealing out personalities reflecting upon the characters of the enemies of his cause had been encouraged and applauded until he fell under an illusion of safety that did not exist, dipt his pen in vitriol once too often and wrote an editorial that cost him his life. The day it appeared the man who was the victim of it and his son met Carmack on the street. Shots were exchanged and the Senator fell dead. It is claimed by his friends that there was nothing in the offensive editorial that should have cost a man his life. And it is not the purpose of this writer to enter into the merits of this case, which is now being argued before a Tennessee jury. The purpose of this article is to show the effects of certain conditions upon the life and *morale* of the State. So, believing in the justice of the claim that there was nothing in the editorials that should cost a life, the fact has not been taken into account that death was in the very atmosphere. All the psychic forces of the State tended toward fury, disorder and destruction. Add to this the fact that the native Tennessean is a terribly fractious man in the region of his shotgun faculties, that there are times when his very veins turn to gunbarrels and his blood to bullets, and you have the real explanation of the crime. It was not the editorials; it was one of the issues bred by the spirit of such times. Following the tragedy the most violent efforts were made to stir up strife to a deeper frenzy. Peaceful citizens caught the infection and quietly, instinctively armed themselves. They could not tell why. Having no real connection with the tragedy, they anticipated death, or dealing death. They were hypnotized by the spirit of a long

past time, when a man's sword was his mistress and his honor depended upon her fidelity. Then to go armed was to go prepared to defend one's life; now it is to be prepared to kill. And the number of killings in Tennessee during the past year has been almost phenomenal.

But with the convening of the Legislature the curtain falls upon the middle century rehearsals and rises upon something new and strange in Tennessee politics—the willipus-wallipus. This is a political steam roller designed to crush the old "machine." One peculiarity of its construction is that it is manned by both Democrats and Republicans who believe in State wide prohibition, and in reformed election laws, and in everything else that suits just them. This has resulted in the desperation and confusion of the old line Democrats who have labored for years to save the State from Republican domination. When bills were introduced prohibiting the sale or manufacture of whisky in Tennessee the willipus-wallipus made its first trip across the situation. The cogs and cranks of the "machine" flew in every direction, and the bills were carried thru both houses by a handsome but profane majority, composed of willipus-wallipus Democrats and Republicans.

The galleries of the House and Senate were filled during this performance with temperance women, who conducted themselves with the energy and enterprise of English suffragets. This is absolutely the only modern feature in public life in Tennessee this year (if we except the willipus-wallipus, which is as much an experiment yet as a political flying machine), and it contrasts oddly with the middle century spirit seen everywhere else. There is, in fact, a greater difference between the Tennessee woman and the Tennessee man than the male and female of any other species. Of the two, the woman is infinitely more modern. This does not mean that she is equal to the man in intelligence, but she has less of the prehistoric anvil in her composition. She is more adjustable to the times in which she lives. She is a fashion lover and will be in the style of the nation, or even a trifle ahead of the style. But a Tennessee man can have a university education, lead a high-

ly intellectual existence, without taking the coonskin cap off of the head of his spirit or the pistol out of his pocket. (This is, of course, a figure of speech. The writer does not mean to imply that all Tennesseans wear coonskin caps and carry pistols.) He is made so that he is incapable of compromises. The willipus-wallipus is constructed upon this basis. The minority in the House and Senate have been brutally overruled upon all occasions. This recently resulted in thirteen of their number absconding from the city and taking refuge in a neighboring State in order to break the quorum and prevent the passage of an election bill. Had their purpose succeeded, after the 19th of March no money could have been paid out of the treasury. But the two houses met in joint session and willipus-wallipused the bill thru. The absconding Senators returned, bringing their tails behind them and at a very humble angle. Patterson shows the same perversity against compromise. In fact, the stanchest principles in Tennessee appear to be composed chiefly of this frowning, stubborn ingredient. He has vetoed every bill past by the Legislature that was opposed to what he regarded as the platform upon which he was elected to office, altho it means his political ruin. At present it is the fashion in Tennessee to deride and abuse him, but the time will come when he will show as one of the most picturesque figures in her history. When a man elects a certain thing for his integrity and when he stands by it, right or wrong, to his own destruction, there is a splendor and grace in the performance. He is something near a hero, cut by the wrong pattern, to be sure, and in that deplorable predicament of a hero who has mist his foothold on the situation; but when all is said, he is a man to be respected for what he is, in spite of what he is not.

Nevertheless he and the middle century spirit which appears to accompany him have been expensive to the State, not so much in money as in ideals. And it is by no means clear to those who observe the structure of the willipus-wallipus that it is a permanent or safe political engine to use. So long as it is

on the side of State wide prohibition and other extremely stringent and popular measures there will be enough satisfaction to hold things together, but if it ever gets in the control of the Republicans, say—who are offensively strong in this State, anyhow—there will be some more middle century dramatics in politics in Tennessee, and some who will even deplore the disabled condition of the old "machine."

Here is the point—when a modern State begins to make history that shall read like a medieval romance, it is safe to conclude that the knees of the breeches of its civilization have become threadbare, and that it needs a new governmental garment. The trouble is, we do not know what civilization is. The most enlightened nations are capable neither of achieving nor of imagining it. We have simply coined an enormous word and failed to work out the definition. So far, it is the name of the temporary illusion in which a generation expresses its contradictory and inadequate ideals of law and art and order. The one permanent, disaffected, invincible thing is human nature. It warps to its shape every science, every belief and every system of government, and outlasts them all. It is the pioneer instinct of life that may be disciplined by a method of control till it wears thru and becomes rampant again. The reformer only appears to have more of it than other people because it is the name of his intolerance for the old, his theory for a new patent for a civilization. But he dies, and the civilization, the bent bow of his century, passes with him, and the next generation springs up, like the first, endowed with the same Genesis human nature. We say it, laugh at it, deplore it, call it depravity, original sin, inheritance, but we do not know yet how to praise it, this great fidelity in us to the Unchanged and Elemental. And we will never work out a lasting civilization until we know more about what it is and which way it tends. Meanwhile, a good place to experiment would be Tennessee, for not even Providence could add a jot or take away a tittle from human nature in that region.

The Author of an Immortal Translation

BY S. A. RICE

IMAGINE a tall, dreamy-looking man, his face tanned with exposure to the sun; moving his head as he walked with a remote, almost a haughty air, as tho he guarded his own secret; wearing an ancient, battered, black-banded, shiny-edged, tall hat, round which he would, in windy weather, tie a handkerchief to keep it in place; baggy clothes of blue cloth, the trousers made short, and his shoes low, exhibiting a gray stocking length; in cold weather trailing a plaid shawl; in hot weather walking barefoot, with his boots slung to a stick. Such was the inconsequent and unconventional appearance of the maker of an immortal translation, the "Rubaiyat" of Omar Khayyam, Edward FitzGerald, who was born one hundred years ago, the 31st of March, 1909.

The father of FitzGerald was named John Purcell. He was an Irish gentleman, and traced his descent from Cromwell. His father and mother were first cousins. The name of FitzGerald's mother was Mary Frances FitzGerald, and her father was a man of great wealth. Upon his death John Purcell assumed his wife's surname, she being her father's heiress.

FitzGerald was brought up in the ease and comfort that freedom from financial limitations entails. Never in his whole life was it necessary for him to depend upon his own efforts for his livelihood. But it was to just these cir-

cumstances that we owe such a work as his translation of the Persian poet and philosopher.

His predominating characteristics—a gift for idealizing his friends, and his perception of and delight in individual oddities of character—were evinced at an early age. The impressions of childhood color and determine mature life to a large extent, and we are told that his interest in Oriental lore can be traced to

his intimacy in boyhood with a portly old Anglo-Indian, who wore a huge white hat, many sizes too big for him, and carried a stick made from timbers of the "Royal George." This old gentleman was the owner of a fine collection of Oriental gods and other curiosities, to which the lad had access, and over which, no doubt, he spent many a dreamy hour.

When Thackeray was asked which one of several intimate friends he loved most he answered readily: "Why, old Fitz, to be sure." This lifelong friendship began when FitzGerald went into residence at Cambridge, entering Trinity College at the age of seventeen. The three Tennysons—Charles, Frederic and Alfred—were his contemporaries at Cambridge, but he did not come to know them until later. He was not an earnest student. Classical authors he read in a desultory way, and occupied himself chiefly with watercolor drawing, music and poetry. Altho he had money in

EDWARD FITZGERALD.

plenty, his tastes were simple. It is related that his wardrobe was never in repair, and when his mother once came to visit him in her coach and four, he had no boots in which to attend her summons. He did manage to take a degree, but this drifting, aimless existence he became wedded to, and led the same sort of life until the end of his days.

After leaving Cambridge he wandered about among his relatives and friends for a time, and finally settled down to the kind of life he enjoyed, lodging with a farmer on his father's estate of Naseby. Here he employed his time with books, walks and the company of village people, and wrote some charming lyrics among considerable other original poetry.

Chief among his friends and associates of that period was a Quaker named Bernard Barton, a clerk in a bank in Woodbridge. Barton was an industrious composer of verse which was favorably received, and gave him a temporary position in the literary world. He corresponded with several notable men of his day among them Charles Lamb, who wrote, when Barton at one time wisht to give up the bank and earn a livelihood by writing, "Keep to your bank and your bank will keep you."

FitzGerald was a constant visitor at Barton's home. After his death FitzGerald wrote a brief memoir of his old friend, and chiefly because he promised her father that she should be provided for, made an ill-assorted marriage, late in life, with Miss Barton, his friend's only daughter.

In 1837, feeling a desire for an abode of his own, he went to live in a cottage containing two rooms, standing by the gate of Boulge Park, the property of his father. This place was described as a scene of desperate confusion, with books everywhere, pictures on easels, music, pipes, sticks, lying on tables or the piano. Here he would sit, unkempt and undavened, in dressing gown and slippers, or moon about the garden. A cat, a dog and a parrot formed his family circle, and he was waited upon by an old couple living on the estate. The best years of his life were past in this fashion, as well as flitting here and there making visits to friends and forming new friendships. A most significant

acquaintance was made during this period with a Sanskrit scholar, E. B. Cowell, afterward professor of that language at Cambridge. He it was introduced FitzGerald to the writings of the Persian philosopher, Omar Khayyam.

It was not, however, until he was past forty years of age that FitzGerald set himself seriously to literary work by translating six plays from the Spanish of Calderon, and beginning the study of Persian, driven to the undertaking by reverses of fortune and other trials, among them trouble with his eyes, strained by over-use at night. In 1856 he married Miss Lucy Barton and went to live in London. After several ineffectual attempts to adjust himself to the new mode of life he went away to visit, and never rejoined Mrs. FitzGerald. There was no definite separation. A liberal allowance was placed at her disposal, they exchanged letters, and she always spoke affectionately of him, but he would never see her again. It was the greatest mistake of his life. After a few years spent in lodgings, he bought a small farm house near Woodbridge. Littlegrange. It was then he made the acquaintance of a sailor, commonly called Posh. To this man FitzGerald became deeply devoted, wasting a good deal of sentimentality over him. It was quite in accordance with the oddity of his make-up that he should dislike to live in his own house. At last he installed himself there, inhabiting only one room, a large downstairs parlor, divided by folding doors. In the hall was an organ, on which he played, always from memory. The rest of the house he kept furnisht for the use of his nieces when they chose to stay with him. But they seldom saw him, as he dined alone.

In 1883, while upon a visit to a friend living at Merton rectory, he died in the night. His body was taken to Littlegrange and he was buried beneath the church tower at Boulge, with the words inscribed upon his tomb, summing up his philosophy of life:

"It is He that hath made us, and not we ourselves."

As the chief interest the memory of FitzGerald has for our day and generation is attached to his translation of the "Rubaiyat," a few words regarding its author may be acceptable.

Omar Khayyam lived about the time of the Norman conquest of England, most authorities tell us. He was a Persian of scholarly tastes, a mathematician, and astronomer, a member of a board who reformed the calendar. The original manuscript is in the Bodleian Library at Oxford, written on yellow paper with purple black ink profusely powdered with gold.

There was a similarity of spirit between the author and translator of the "Rubaiyat," a word which simply means four lines, or quatrains. Both were self-contained and unsociable in temperament, and disinclined to labor; both were dissatisfied with optimism, and tinged with fatalistic ideas. As FitzGerald himself writes:

"Omar sang, in an acceptable way, it seems, of what all men feel in their hearts, but had not expressed before in verse. . . . It is a desperate sort of thing, unfortunately at the bottom of all thinking men's minds; but made music of."

Moreover FitzGerald did not merely transcribe words; he interpreted ideas, and thoughts, and beliefs.

This "immortal translation, which afterward past thru many editions, both in England and America, was first published in a small edition in paper that met with so little success that copies were sold at a bookstall for a penny.

FitzGerald loved ease, culture, and idleness. He had no ambitions; and was probably sincere in the statement he made to a friend that it would be a horror to him to be known as a writer.

His biographer, A. C. Benson, says of him:

"But we may be thankful for so simple, so tender hearted, so ingenuous a life. We may feel that the long, quiet years were not mis-spent which produced, if so rarely, the delicate flowers of genius. To enrich the world with an imperishable poem, to make music of some of the saddest and darkest doubts that haunt the mind of man—this is what many far busier and more concentrated lives fail to do."

WASHINGTON, D. C.

Race Improvement

BY CHARLOTTE PERKINS GILMAN

AUTHOR OF "WOMAN AND ECONOMICS," "THE HOME," ETC.

ONE of the first generalizations of our old scapegoat, Primitive Man, was disapproval of his neighbors. He did not think them all that was desirable, or even all that was possible, and he set about that age-long task, still so visibly unaccomplished, of making people better.

His first process was as sharply simple as that followed by his hairy progenitors; being prompt personal retaliation. If they behaved so, said he, he would kill them. They did behave so, and he did kill them; but there were always new ones, behaving as badly; the killing did not seem to improve them, and was a sometimes difficult and generally expensive process. Where this method of adjustment prevails, the tribe is depleted rather than improved.

Then there arose the beginnings of our vast and complicated penal machin-

ery; first mere customs and tradition, then taboo, then real laws and punishments; thus and thus were men to be treated if they misbehaved.

To this day is the penal law painfully pursuing its task, as a donkey pursues the carrot fastened before him on the stick; to this day it continues slowly and imperfectly to shut the stable door after the horse has been most efficiently stolen. Sometimes it shuts that door with impressive violence; locks, bolts and double bars it, nails it up, yes, walls it up with heavy masonry; but always after the horse has been stolen.

The essential error in our whole laboriously devised and painfully executed system of punishment is that it must of its own nature take place *after the event*. We cannot, with any show of justice, punish a man before he has offended.

The ethical philosopher, pondering

upon human behavior, perceived this unfortunate discrepancy between crime and punishment and essayed other methods of making people better. Religion was early enlisted in this laudable effort; not at first, to be sure; and never in a whole-hearted manner, "good works" being at best a minor adjunct of "the faith." Still, to a considerable extent, our various religions have attempted this same end of race improvement, and to some small extent have succeeded. Perhaps the most conspicuous example of the disconnection between religion and behavior is found in comparing the history of Europe with the Christian faith.

Credit can be given to religion for endless persistence in the attempt, but its success is far from creditable. Surely a given religion cannot claim as its own product virtues which are also found in followers of other faiths. We have but to say, "What especial virtues are inculcated by Buddhism—Moslemism—Zoroastrianism?" and look to see if the Buddhists, Moslems and Zoroastrians possess these particular virtues more markedly than do those who hold other beliefs. If they do not, then their virtues are surely not attributable to their religions alone. As it happens, there is a more "consistent life" to be found among almost any believers of almost any faith than the Christian. The Christian may believe in his group of doctrines as valiantly as the Parsee or Brahmin, but his behavior is not as near the ideal of his belief. Religion alone has been very slow and incomplete in its contribution to this great task of making people better.

Then comes education. This was a great help. This was evidently what was needed. These people were bad because they were ignorant. If we can explain to them what behavior is good they will surely practise it. Education has done wonders. It goes far ahead of punishment, and often shows better results than religion. Most of us would prefer to live in a well educated community that was irreligious than in one grossly ignorant tho devout.

But education also has its limits in this field. It seems often to make people wise but not good. We frequently find

learned and able persons doing much evil both at home and in their public relations. Our great social sinners to-day are by no means ignorant persons.

Here sits the world, in the twentieth century of the Christian faith, still dissatisfied with its citizens. We are, if anything, more critical and disapproving than Primitive Man. Our ideals and desires have gone far faster than our behavior, and we today are more desperately at work than ever before, trying to make people better.

Strange—that we should call patience and perseverance virtues and strive to inculcate them! Patience and perseverance are besetting sins. Never was any vice more conspicuous than the patience of humanity, submitting century and century to unnecessary evils, putting up uncomplainingly with plague, pestilence and famine, battle, murder and sudden death. Patient! No ass, death burdened, sinks beneath his load more meekly than does the toiling peasant, the ancestral slave. We are patient with conditions that any noble natured brute would die in resisting. We die in submitting. It is easier.

Some say of horses, "If they only knew their strength they would not be treated so!" If human workers knew their strength——! But they do not. They are patient. And as to perseverance—what words can measure the perseverance of a creature who goes on several thousand years using a formula that does not work!

Any inventor of new machinery, any teacher of improved methods, can contribute something to form a new opinion of these racial sins of ours, patience and perseverance. Here we have been trying for *all* our conscious life on earth to make people better. That they are better than when they began there is no denying, but does this betterment bear any relation to our efforts? Are many people, unpunished and unafraid, much "better" than the sorry product of our prisons? Are not many, comparatively uneducated, still "better" in many ways than much lettered graduates? And are not many of the ungodly "better" and more useful citizens than some of the most pious?

Measuring these and other discrep-

ancies, noting the improvement and the deterioration of peoples, and the inadequacy of our previous explanations, may we not rationally set ourselves to work on a new problem, namely, 'How to Make Better People'?

This is a different thing altogether. If we don't like our hens, we do not move heaven and earth to drag forth more eggs from their unfruitful frames; we get another kind. If there are no other kind, then we essay, not endless efforts with the individual fowl, but to improve the breed. Not to make those hens better, but to make better hens. We set ourselves to study the nature of hens; why they lay, when they lay, how they lay, and why they do not lay sufficiently. Then, having discovered what conditions are conducive to the production of eggs, *we apply those conditions*—and lo! the hen has become our largest wealth producer.

Here is no patience—waiting forever for the same unworthy hen to lay when she will not lay. This is not perseverance, the ceaseless application of methods long since proved a failure. Here is a study of causes, a willingness to learn, a courage to try new ways—and to stop trying them if they do not work. And here is the natural result of such rational ingenuity—success.

To our own problem let us bring the same intelligence. The human creature is not satisfactory—there is no doubt about that. Just look at him—in the street—every day. And look at her. When you look at her do not pick out the pretty girls only; look at them all from youth to age. Do you like their looks? Go through a public school and study large numbers of children. Are they what we might reasonably expect of twentieth century humanity?

Each of us is pleased with her own children—and so we never think to sum up the effect and study them as a whole. Do you employ labor—and are you satisfied with the average intelligence and honor—to say nothing of skilled efficiency—of the human stock? One race may be ahead of another, but is the highest what it ought to be today?

Most frankly and without cynicism, we are a poor lot compared to our own visible possibilities. That is, seeing how

fine and pleasant and satisfying some human beings are today, we have a right to complain at the number who are coarse, unpleasant, and unsatisfying.

"Ah, but people are not all alike!" cries the defendant. No, truly. Even the pleasant ones are not alike. There is no reason they ever should be alike. A huckleberry may be perfect without in the least resembling a strawberry—or a peanut. We might have every desirable variety of people on earth, and all good—if we chose. Here is the weak spot—in the "we."

So far each of us has stood alone, loving his own folk, whether they deserved it or not, and criticising other folk as if they were an alien growth over which he had no control. Yet this same man, who says he has no authority to move conditions to make better people, who says that human beings are not to be bred like cattle and pruned like fruit trees, who says that we must defend the ideal of personal liberty and the sacredness of human life, this same man will continue to maintain conditions that make people worse, will assist in breeding human creatures with less care than cattle, and will so far interfere, collectively, with the ideal of personal liberty and the sacredness of human life as to imprison, hang, and make war!

If Society, in its own defense, has a right to imprison a man for life, or to take his life, why has it not a right to benefit him—for the same end? May not Society, in its own defense, undertake to extirpate disease—vice—crime? If the State may build a hospital and forcibly take people to it, why not a sanitarium? If the State may prescribe building laws, specify air space and light space and sanitary conveniences, why may it not go further, specify a minimum of health and comfort to be provided for in every house—and make that minimum compulsory? The State is the people surely, and the people have a right to improve themselves—as soon as they know how. No personal preference, no individual liberty, can be allowed to stand against the will of the community.

We will not have nakedness among us. We forbid it by law, and enforce the law. We have as much right to for-

bid hunger—if we choose. We only prevent nakedness because we object to it—it is indecent. Some day we shall object to hunger, too. Our sense of decency will widen. We do not know yet all the conditions required to make better people, but we know some of them. And we know many of those that make worse people. We do definitely know that certain quarters of great cities corrupt and degrade the human stock which is forced to live in them—no matter what it was before. Consider that hideous dictum concerning the effect of the slums of London on the new residents come from the country. "The second generation is weaker and less competent than the first; the third generation is stunted, crippled, sick, degenerate; and *there is no fourth!*" That shows what conditions can do to make worse people.

If Society has the right to build a slum, to force people to live there—by the simple process of not allowing them to live anywhere else—and so to degrade and exterminate them; why has

not Society the right to build exquisite garden cities, force people to live there, and so elevate and improve them? That would be too expensive, the defendant may gravely remark. He is wrong. It would not be nearly so expensive as the slum!

In our infinitesimal, egotistic peephole view of humanity we quite overlook the value of the people to the people—the wealth producing, joy producing, beauty producing value of the human stock. This ruined stock is dead loss to us; being saved and made into good stock it would be great gain to us. Moreover, "us" includes them. The whole level of our rightful pride lies not at humanity's narrow shifting top, but at its broad, dark base, so little lifted for all the years.

Is water clean that is nine-tenths dirty? Humanity is *one*; a living tissue; and our need to make better people is the most vital, the most personal need that can be shown to any human soul.

NEW YORK CITY.

Necessity of Greater Care in Making Laws

BY GEORGE SUTHERLAND

UNITED STATES SENATOR FROM UTAH

FOR the past two years a joint committee of the two houses of Congress has been engaged in the work of revising the laws of the United States, a labor which may be not inaptly characterized as a species of legislative housecleaning, and which entails a systematic review of a vast legislative accumulation. The process brings to light many things that are *out* of date, as well as some that never have been *in* date at all. The Congress of the United States is perhaps the greatest legislative body in the world; nevertheless a vast deal of its work is found, in the retrospect, to be of an exceedingly haphazard character. Laws not only of *doubtful* validity, but occasionally laws which are *clearly* opposed to the plainest constitu-

tional principles, have found their way into the body of the statute law; as, for example, the provision in the Revised Statutes to the effect that the judgment against the principal offender shall be conclusive evidence against the person prosecuted as receiver of stolen goods that the property therein described has been stolen, embezzled or purloined. How such a provision, manifestly opposed to the guaranty of the Constitution that the accused shall enjoy the right "to be confronted with the witnesses against him," could have past the scrutiny of the law committees of both houses, as well as that of the membership of both houses, is beyond understanding.

There are laws—not unconstitutional

—but substantially bad, as that which makes it a *criminal* offense for any person who, having presented a bid for the transportation of the mails and having been awarded the contract, shall wrongfully refuse or fail to enter into such contract; or having entered into the contract, shall wrongfully refuse or fail to perform such service, and provides punishment by fine and imprisonment. To refuse wrongfully to enter into a contract or violate the provisions of a contract already made, even with the Government, is essentially a *civil* and not a *criminal* wrong. Congress not only ignored this distinction, but, apparently fearing that the use of the qualifying adverb “wrongfully” might enable some unfortunate delinquent to escape a term in the penitentiary, thoughtfully added the further proviso that the failure or refusal to enter into or carry out the provisions of such contract shall be *prima facie* evidence in all prosecutions that such failure or refusal was wrongful.

Another statutory provision which is not unconstitutional—nor, perhaps, substantially bad—but simply inane, is the provision in the Articles of War solemnly declaring: “All members of the court-martial are to behave with decency and calmness.” Just what dire consequence may be expected to follow the failure of some impulsive member of the court-martial to maintain his poise of manner or observe the military canons of good behavior, is left entirely to the imagination, as the lawmakers generously refrained from affixing any penalty whatsoever to a violation of this unique enactment.

In enacting some of the laws which have been declared unconstitutional by the Supreme Court Congress cannot justly be censured, because they were of a character calculated to accomplish great public good, and, while their constitutionality was not entirely free from doubt, the reasons in favor of their validity seemed to preponderate, and the Supreme Court itself has declared their invalidity by the narrow margin of a five to four vote.

On the other hand, Congress has passed some invalid laws, and the reasons against their validity have so clearly pre-

ponderated that it is difficult to find any excuse whatever for their enactment. It is not unfair to say that sometimes such laws have been passed in response to an apparently overwhelming public sentiment, and members of both houses have attempted to justify their votes by the comfortable plea that the courts, after all, were the ultimate interpreters of the Constitution, and that the burden of deciding whether the popular demand was contrary to the supreme law of the land might properly be thrown upon judicial shoulders. When it is considered that every member of Congress, equally with every member of the judiciary, is sworn to uphold and defend the Constitution, such a plea is, to say the least, more specious than sound.

Laws that are simply bad in form, as might naturally be expected, are much more frequent. Two or three selected at random will illustrate. In one of the appropriation acts it is provided that no contestee or contestant for a seat in the House of Representatives shall be paid exceeding \$2,000 for expenses in election contests, while the Revised Statutes provide emphatically that no payment whatsoever shall be made to either party in such cases. The general law, therefore, affirmatively forbids *any payment*; the special provision, by implication at least, permits the payment of *as much as* \$2,000; yet there is no repeal of the former by the latter unless by implication merely.

Section 3598 of the Revised Statutes regulates the use of rooms “assigned by law” to be occupied by certain officers, when what Congress meant to say was rooms “lawfully assigned.” The rooms are, of course, not assigned by law, but by an official under the law. Similar illustrations of the inexact use of words and phrases might be multiplied almost indefinitely.

The act of March 3d, 1887, to determine the jurisdiction of the circuit courts, etc., as enrolled and printed, contained so many errors that Congress reenacted the law for the sole purpose of correcting these errors, but in the latter act the arrangement of the clauses describing the various cases in which the Federal courts shall have original jurisdiction is so involved that it became a

controverted question as to whether the jurisdictional limit of \$2,000 qualified all the cases provided for or only a portion of them. The Supreme Court, in deciding the question, was obliged to virtually recast the language.

In the same act, with the purpose of repealing the latter portion of Section 5 of the Act of 1875, Congress, instead of setting forth the precise language, in terms repealed "the last paragraph of Section 5." Section 5, however, is not divided into paragraphs, but consists of a single sentence separated by commas and semicolons.

Much unnecessary confusion has resulted from the loose way in which amendments are sometimes made to existing laws. One method frequently resorted to when an existing act of Congress, or a section thereof, is sought to be amended by striking out or inserting certain words is to provide that "Section —, etc., is hereby amended by striking out (or inserting) the words — in line —, etc." The consequence of such a method is always that those who consult the law must go carefully over the old statute and insert at the proper places the amendments which have from time to time been made in this manner, entailing the altogether needless burden of fitting together the detached portions of the law; and when, as not infrequently happens, the reference to the point where the amendment is to occur is incorrect, or the language is inexact, the result is a jumble, always confusing and sometimes meaningless. Such a process of amendment can result only in disorderly patchwork, not to be justified upon any view of the matter. For the sake of clearness, as well as of convenience, amendments to existing laws should never be made by reference only, but the act or section should be re-enacted at length, and the old law specifically repealed. This practice is now enjoined upon State legislatures by constitutional provision in many of the States of the Union. If, in addition to this, wherever it is practical, the amendatory statute should contain a preliminary recital of the words proposed to be stricken out or inserted as, for example, "Section — is amended by striking out (or inserting) the following words in line —, etc., so

as to read," etc., one consulting the statutes would then be able to see at a glance precisely what change had been made in the old law, without the necessity of comparison. This form of amendment, it is true, has been criticised as being clumsy; nevertheless, I think the additional clearness and convenience which would result from its use would far outweigh any objection of this character.

There are also many enactments which are found to be inconsistent with each other. One past in March, 1875, requires that copies of all Indian Service contracts shall be filed with the Second *Auditor* of the Treasury before any payment shall be made thereon, while another, past in August, 1876, requires that certain abstracts shall be attached to such contracts when they are filed with the Second *Comptroller* of the Treasury. The latter act, obviously past in contemplation of the former, and carelessly misquoting its provisions, seems to have been past during the heat and stress of the "dog days," which may account for the discrepancy.

Section II of the act of July 1st, 1882, provides that in certain contingencies certain authority shall devolve upon the *Capitol Police Commission*. There is a Capitol Police, but there is not and never has been a *Capitol Police Commission*.

A recent and perhaps more remarkable oversight is found in the Immigration Act of March 3d, 1903. Section 2 of this bill, as originally introduced, named among the classes to be excluded persons whose migration had been induced by promises, etc., of work or labor in the United States. This provision was stricken from the bill before it was past, but the second and third provisos, which created exceptions to the classes described in the clause stricken out, were permitted to remain, with the consequence that the qualifying provisos have nothing left to qualify.

In the chapter defining crimes committed within the territorial and maritime jurisdiction of the United States there are some astounding discrepancies. Some crimes are made punishable when committed upon the high seas, or upon the rivers, etc., within the admiralty jurisdiction, or within any fort, etc.,

under the exclusive jurisdiction of the United States; others when committed on the high seas, etc., leaving out forts and places of that character on the land; and still others when committed upon the high seas or within forts, etc., omitting other waters within the admiralty jurisdiction. In short, there is no uniform designation of the jurisdictional elements, the whole chapter being a collection of incongruous provisions without the least attempt to provide any comprehensive and harmonious jurisdictional test.

"An ounce of prevention is worth a pound of cure" in legislation as well as in medicine. Revision is a cure, not a preventive. Perhaps no methods could be adopted that would totally obviate the difficulty, but it is quite certain that the careful observance of the rule respecting the re-enactment at length of all amended laws, and the adoption of some plan by which all changes in and additions to the general law could be carefully compared with and considered in the light of existing provisions, would go far in that direction.

Some profit might be derived from the long experience of the English Parliament, and provision made whereby the various members of the Cabinet, as the responsible heads of the executive departments of the Government, might be permitted to appear on the floor of each house at stated periods to propose and explain legislation necessary and desirable in connection with their respective departments. And in addition, the permanent employment of a corps of expert legislative draftsmen who should be good lawyers, thoroly familiar with the Federal statutes and the decisions of the courts respecting them, as well as the principles of statutory construction, to prepare or supervise the preparation of, or at least carefully review, before final report from the committees, all proposed general laws, to the end that they may be consistent, harmonious and complete, would, I think, prove of advantage.

There is one class of Congressional enactments which has grown to evil proportions, which suggests another much needed reform. It is private or special as distinguished from public or general legislation. Thousands of bills are introduced at every session making appropriations to cover the claims of private individuals against the general Government, to relieve individuals from the effect of some general law, and for many other private purposes. The vast majority of these bills present pure questions of fact, sometimes disputed, sometimes not. The committees to whom they are referred, in considering them, exercise judicial rather than legislative functions. The attention of members is diverted from questions of great moment affecting the general public to a consideration of these matters of purely private concern. There is crying need for the adoption of some plan by which the great majority of these individual grievances could be referred for investigation and final adjustment to some independent tribunal, where fixed legal rules could be enforced and full and comprehensive consideration be given. With rare exceptions, such bills cannot receive intelligent consideration from the members of Congress outside of the one introducing them and the committee, or, more frequently, the sub-committee of the committee, to whom they are referred. Under the present system much of the time of each individual member is given to the preparation, study, care and advocacy of a number of such measures at each session, with the consequent lessening of his opportunity to study and consider the more important general legislation. It would, of course, be impossible to abolish all private legislation, but it would be entirely feasible to get rid of the greater portion by devolving upon some tribunal now existing, or to be created, the authority finally to pass upon such matters under some general law, fixing definite rules respecting the class of cases and methods of procedure.

WASHINGTON, D. C.

Literature

Temple Records from Nippur

FOLLOWING close upon Professor Clay's two admirable volumes* of texts from the Kassite period found at Nippur comes Dr. Radau's portly publication of ninety-nine letters of the same period. Like the documents in Dr. Clay's volumes these letters deal with the affairs of the temple of Bel Enlil, the chief god of Nippur, with this difference, that while Clay's texts represent the accounts, inventories, revenues, workmen's lists and other business affairs of the temple, Radau's volume furnishes official correspondence of a miscellaneous character connected with the administration of the temple, including such matters as reports of inspections, of materials furnished and work done, of dismissals, of complaints, and of other occurrences for any reason reported to the authorities of the temple. The texts are carefully copied by Dr. Radau, indeed with too much care to show the style of the scribe, so that at times the reading is made too difficult. The ideal method of reproducing Cuneiform texts is that of Pinches, King and Thompson, of the British Museum Series, who content themselves with furnishing the characteristic forms of each period, without reproducing the scribe's peculiarities.

Dr. Radau has added an unusually full introduction of over 150 large pages, which gives evidence of careful study of the texts. There is a full index of names of persons, professional and gentile, places, houses, gates, temples, rivers, canals and gods. In the Introduction Dr. Radau discusses the dates of the letters and the questions raised by them, and particularly treats of the Kassite kings, to whom he believes most of them to be addressed. This is done with great fullness and some repetition. Thus documents 24, 35 and 38 are treated two or

even three times. The Introduction would have suffered no loss if the ghost of Lushtamar had been left to rest in peace. Dr. Radau sets up the specious argument that this famous tablet, tho now confessedly written at Sippar, was sent to Nippur, and so became part of the "Library." He seems to forget that Dr. Hilprecht says ("Explorations in Bible Lands," p. 532) that a catastrophe befell Nippur before the tablet could be sent off. We also fail to follow Dr. Radau in his claim that these letters form an exact parallel to those in the famous library of Ashurbanipal at Nineveh. The latter library was much more than the business correspondence of a rich temple. Dr. Radau attempts to magnify the importance of his letters by presuming that seventy-eight of them are addressed to the king, of which fifty are addressed to "My lord," *beliya*. But in not one case is a king's name given, nor is he called *sharru*, king. In one letter addressed to "My lord," reference is made to the king as to a separate person. The official addressed on these topics which do not belong to royal concern is clearly a superior temple official. The discussion by which Dr. Radau fixes the period of these letters by aid of Dr. Clay's texts is the most valuable portion of the Introduction.

The real value of Dr. Radau's studies is marred by such arguments as that for the supposed Babylonian trinity of gods, En-lil, Nin-lil and Ninib. They are too much in line with his earlier speculations in his "Bel and Christ of Ancient Times." To be compared with this latter is his precarious reading by which he now makes Ninib appear as "Savior" and so as "prototpye" of "Christ in the Christian Trinity"! A few years ago it was Bel who was Christ of ancient times. Now it is Ninib, and next it will be Ea's turn. Such vagaries have no place in a serious volume.

One can hardly avoid mentioning that this is an expurgated volume. After being first issued it was withdrawn from the

**Letters to Sharru-kissu from the Temple Archives of Nippur*. By Paul Radau. (Babylonian Expedition of the University of Pennsylvania, Series A, Cuneiform Texts, Edited by H. V. Hilprecht, Vol. XVII, Part II, 1902), pp. 1-144, 68 unnumbered plates and 12 plates of photographs. Philadelphia, 1902.

press because of a review by Professor Montgomery calling attention to its attacks on Professor Clay, editor of previous volumes in the series. These the author, or editor, was required to expunge. Even as it is, enough is left to show a hostile animus, and more could have been well cut out; and it would have been better had all been omitted which was intended to bear on the controversy within the University of Pennsylvania, which ought not to be revived.

Dr. Radau is a young and capable scholar, and this volume is of great value for its texts and translations, and considerable of its discussions. What we criticise are matters of judgment and in part of courtesy.

Our Foreign Critics

MR. BROOKS* reviews the favorable and unfavorable things said of America by foreign critics these last hundred years, compares them, and finds evidence of a great social improvement.

He is careful first, however, to separate the credible from the incredible assertions of our earlier critics, and to discover what motives prompted the more severe denunciations. He has small patience with the poet, Thomas Moore, who wrote the sort of thing likely to make him popular in London drawing rooms; and Capt. Basil Hall, who followed Moore, is also explained as a seeker for social favor at home. Our earlier English critics all knew that a ready market existed for denunciation and ridicule of America. Democratic government was on trial here and the prediction and hope of Tory England was that it would fail. Whoever might aid in confirming that prediction could count on a wealthy and not ungrateful audience.

Moore, Hall, the two Trollopes and others wrote to flatter the prejudices of the English Tories. Harriet Martineau was the fairest, the most studious and most observant of the earlier group. Dickens, in Mr. Brooks's opinion, tho severe in his strictures, generally told the truth. It is a kindly judgment, and can

be made only by forgetting the many ludicrous exaggerations for which the novelist is responsible.

The greater part of the book is given to De Tocqueville, Bryce and Munsterberg; while H. G. Wells, as the latest critic and one with a more advanced view of social and political life, comes in for especial notice. Bryce is by common consent our greatest critic. No one has gone so deeply into all the phases of American life, and none has judged what he has seen from a standpoint so universal. De Tocqueville was equally fair, but less learned; besides he wrote of an epoch that has past, and he concerns us less. Mr. Wells, from a hurried survey, writes with his usual brilliance and assertiveness, but his criticisms cannot be taken for more than the hit-and-miss comments of a transient visitor. Munsterberg piles his sweeping generalizations one after another, and tho some of them have a basis of fact, they are all overdrawn. Mr. Brooks, indeed, gives high praise to the Harvard psychologist; but in spite of this, his criticisms and appreciation of America remain the least valuable of anything recently produced.

From the more credible of the earlier criticisms Mr. Brooks finds a standard for testing our social improvement. Our national characteristic of bragging, upon which all foreign travelers agreed, is less noticeable. Our earlier vulgarity of manners has given way to some measure of politeness and courtesy. We are far more humane to our prisoners and defectives. In spite of modern exposures of graft and corruption, there is plenty of evidence that our ancestors played the game more assiduously than do we. The public conscience is more awakened than of old, and the notion that "public office is a public trust" has gained ground. Our housing and sanitation are incomparably better. We still need, among other things, the development of a spirit of law-abidingness, and of a "genuine humility, a humility without loss of courage or self-respect." With these, in words quoted with approval from another, our "mastery in the art of self-government would easily lead the world."

*AS OTHERS SEE US. By John Graham Brooks. New York: The Macmillan Company. \$1.75.

The Letters of Jennie Allen to Her Friend, Miss Musgrove. By Grace Danworth. Boston: Small, Maynard & Co. \$1.50.

Jennie Allen is a New England "Mrs. Wiggs," with all the kindness of heart of her Southern prototype. Her generosity is more calculating, but no less spontaneous, and her humorous philosophy is of the same racy, indigenous variety. The letters are delightful, altho the spelling is unnecessarily grotesque, and they picture for us very distinctly the workman's family, with its sordid struggle, and its divine affection, its limitations and its aspirations, its home-made fun and the pathos of stunted childhood. But, as Jennie Allen says, "Don't ever waste any sympathy over a little girl with an old doll. She will worship the new doll—costly enough for the Rothschildren—but it's the old one she will love." And a happier group than the Allen family would be hard to find.

Some New Literary Valuations. By William Cleaver Wilkinson. 12mo., pp. 411. New York: Funk & Wagnalls Co. \$1.30.

Professor Wilkinson first made himself known as a critic with some sharp dissections—was it of Lowell?—in the years long ago before he was called to be one of the first professors in the new University of Chicago. Since then he has publisht volumes of poetry, as his "Epic of Saul," and in the present volume he returns to criticisms, often minute and drastic, of Howells, Arnold, Tennyson, Stedman, Morley and Tolstoy. Tennyson and Tolstoy he admires vastly, but he finds fault with them. Tennyson's rimes are not always good, and he cannot always master words to match his desired thought under the slavery of rime. Matthew Arnold's poetry he laughs at, and dissects "Rustum and Sohrab" shrewdly, to the enjoyment of the reader. Of Arnold's prose style Professor Wilkinson definitely says that it "is not good; that it is, in most respects, an example of what is to be shunned rather than emulated." He admits that such close analysis as he gives to the style of a poet will be regarded by many as "minute, microscopic, teasing, carping criticism"; but he thinks, and so do we, that it is well to have such minute criticism applied to the work of accepted

authors, and it must be admitted that there is no writer who is not guilty of verbal and rhetorical lapses. Even Homer nods. Professor Wilkinson's own style is lucid, and at least correct.

Each in His Own Tongue. By William Herbert Carruth. New York: G. P. Putnam's Sons. \$1.00.

Professor Carruth is chiefly known outside the University of Kansas by the title poem of this volume:

"A fire-mist and a planet,
A crystal and a cell,
A jelly-fish and a saurian,
And caves where the cave-men dwell;
Then a sense of law and beauty
And a face turned from the clod,—
Some call it Evolution,
And others call it God."

The four stanzas of which this is the first have been in continuous circulation in newspapers and magazines all over the world since their first publication some fifteen years ago, and they have even come back to America in much distorted form from the Russian. The other poems of this collection are less well known, but some of them hardly less worthy. All of them are filled with the deep religious feeling and moral earnestness characteristic of the author.

The Friendly Craft. By E. D. Hanscom. New York: The Macmillan Company. \$1.25.

The Friendly Craft is an unusual anthology. A collection of American letters, some of them written in the Colonial period and some of them yesterday; all of them particularly human; many of them charmingly easy and conversational, as pleasant, bookish friends talk in a fortunate hour. The editor of the collection has an unerring taste for literary quality, and a sense of humor which shows itself in prankish headlines, such as "James Russell Lowell is not squeamish, but—" "Washington Irving tries to save the country," "Aaron Burr has views on women's education," "And puts them into practice on Theodosia," etc. It is a great favor to the public to bring together in just this informal way the delightful letters of our two centuries of history. The fact that we all treasure, somewhere, missives

from friends of our own, in no way inferior to these, does not militate against the collection in *The Friendly Craft*; it is only an additional proof that Americans can and do write some of the most brilliant and witty letters in the world. Nor are we forgetting the French as we say it.

The Quest Eternal. By Will Lillibridge. New York: Dodd, Mead & Co. \$1.50.

Given a fatal surgical operation, a rascal doctor, a half-crazed convict, a club-footed hero, a young maverick prima donna, and you have a situation from which the worst may be expected. There is no scene, no state of society, in heaven or earth, where such a composition of characters could work out happiness, or even the remnant of peace. Especially when each one is engaged in the quest eternal for love. Romantic love is a disquieting influence in the best regulated story, and in one like this it is fatal. Nature, destiny, work in the dark caverns of it to produce murder, suicide, disease, failure. Nothing fortunate happens till the last sentence on the last page. Then it is too late. The tale is not well constructed, but there is enough of the gruesome and crassly tragical in it to recommend it to many readers who have simple melodramatic imaginations.

A Motor Flight Through France. By Edith Wharton. New York: Charles Scribner's Sons. \$1.50.

The reader must not infer from this title that Mrs. Wharton has committed the common blunder of writers who use an automobile as the vehicle of their imagination, and made the thing the hero of her book. "The motor car has restored the romance of travel" is her introductory sentence, and from that point it sustains the same unconscious relation to her that wings do to a bird in its flight. She starts at once upon the "romance" of her travels thru France. And for beauty of scenes, richness of coloring, it surpasses any book of the year. She has portrayed the land, the people, their manners, art and architecture, the literary birthplaces of the country, its shrines and battle grounds, all in the "bland light" of France. She shows how composite the nation is, how

each social class fits into the others as a glowing part of the fabric of life there. She has given an aerial air to the historic stones and arches of France, as if they were the hexameters of a noble epic, built slowly, with many pauses for war, folly, love, laughter, and war again. Perhaps nothing contributes so much to the opulence and charm of the volume as her ability to cast the golden light of tradition and history over everything, from the roadways to the chateau of George Sand. This effect is enhanced by fifty engravings which illustrate the travels.

A Holiday Touch. By Charles Battell Loomis. New York: Henry Holt & Co. \$1.25.

The reader is warned against the mistake of supposing from the title that this volume of short stories is a series of literary Christmas cards. They are little tales of life all the year around, warranted to please the most unpleasant man at any season. There is something prismatic about Mr. Loomis's method as a storyteller, which leaves out the sediment of life and presents the flower and sweetness of it with refreshing heartiness. There is a lightness, a look of the sun, an honest smile upon every page, as if he had written them all with his hat off, out of doors, in pleasant weather. Poverty is not a curse in such an atmosphere, and so poverty lays the scenes cheerfully for a number of them. The . . .

Literary Notes

...Two juveniles by popular authors are to be published next week by Lothrop, Lee & Shepard Company, Boston: *A Pair of Madcaps*, by J. T. Trowbridge, and *Dave Porter and His Classmates*, by Edward Stratemeyer.

...The spring list of L. C. Page & Co., Boston, contains as usual many travel volumes, among them *The Spell of Italy*, by Caroline Atwater Mason; *Motor Tours in Wales*, by Mrs. Rodolph Stowell; *Italian Highways and Byways from a Motor Car*, by Francis Moulton, and *From Cairo to Cataract*, by Blanche M. Carson. We should also mention *Charles Dickens and His Friends*, by W. T. Shore, and *David Bran*, by R. Morley Roberts.

...The Crown Theological Library, published by G. P. Putnam's Sons, has become quite extensive and embraces many valuable works, especially translations of popular German religious treatises. A recent number is *The Fundamental Truths of the Christian Religion*, by Dr. Reinhold Seeberg, translated by Rev. George E. Thomson and Clara Walentin (\$1.50). Dr. Seeberg is one of the younger German theologians who have attained wide popularity, and he is known as more conservative than most of his confrères. His classrooms are *gut besucht*, and the lectures before students of all classes, which form the basis of the present volume, were very favorably received, and in German have passed through several editions. In English, however, they are not easy reading, and the general reader will not find their expositions sufficiently explicit and thoro to be enlightening or convincing. The first part of the volume seeks to establish that Christianity is the absolute and final faith, and the second part expounds the essential Christian doctrines, especially those connected with the person of Christ.

A BELLEVILLE girl and a young man, both of whom had steady jobs, were married the other day. The day after they were married the girl said to her fond husband: "Oh! George—now that we are married there is only one thing I regret and that is that I have to give up my fine position." The fond young husband stroked the silken tresses of the young wifey's hair, and soothingly replied:

"Now, darling, don't worry. You needn't give up your position. I'll give up mine."—*Kansas City Star*.

Nor long ago a city editor in Ottumwa, Ia., was told over the telephone that a prominent citizen had just died suddenly. He called a reporter and told him to rush out and get the "story." Twenty minutes later the reporter returned, sat down at his desk, and began to rattle off copy on his typewriter.

"Well, what about it?" asked the city editor.

"Oh, nothing much," replied the reporter, without looking up. "He was walking along the street when he suddenly clasped his hands to his heart and said, 'I'm going to die!' Then he leaned up against a fence and made good."

Travels

ADVICE TO A PRESIDENT.

Be gentle with the Senators and soft as chocolate creams,

Be gentle as a female infant child;

Avoid all interference with their little private schemes,

For Tactless Opposition drives them wild

Encase the Hand of Justice in a padded velvet glove,

Address the High and Mighty in the dulcet tones of love,

And speak to Malefactors like a blue-eyed turtle dove.

Be gentle, oh, be gentle, oh, be mild!

Be gentle with the Congressmen and do not muss their fur;

To criticise is wholly unrefined.

Remarks on Deals and Jobbery are sure to cause a stir,

With consequent distressfulness of mind.

Four hundred Gallant Gentlemen, all white as driven snow,

The Welfare of their Country is the only thing they know—

Or if it chances otherwise one must not tell them so.

Be gentle, oh, be gentle, oh, be kind!

Be thankful to the Plunderers for all that they have left,

Be gracious to the Pirates of the Street.

Forbear to mention "Knavery" and never speak of "Theft"—

Explicitness is always Indiscreet.

Employ a Barkless Watchdog who has lost his final tooth;

Remember the Fading Stars with tenderness and ruth,

And never hint their fallings with the same unvarnished Truth.

Be gentle, oh, be gentle, oh, be sweet!

—Puck

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The New Tariff Bill

DURING the preparation of the Payne tariff bill, which was laid before the House last week, the committee undoubtedly realized that public opinion demanded a considerable reduction of the present rates. If a majority of the American people were in favor of these rates when they were enacted, in 1897, a much larger majority now desire to see them revised by reduction. The refusal of the Senate to ratify the McKinley treaties of reciprocity caused public resentment. Reductions by reciprocal agreements were expected. Allowance for them had been made in the Dingley tariff. By the Senate the way was barred, and what had been virtually a promise to the people was thus broken. It came to be understood, therefore, that the rates, in their average effect, were higher than Congress had intended to make them.

There has been a growing conviction, also, during the last twelve years that in many of our industries competition was dying out or had ceased, and that Trusts were taking an unjust advantage of protective duties, exacting from consumers all that

the full rates would permit. There was abundant evidence that these combinations of manufacturers were selling their products to foreigners abroad at prices much lower than those which they were compelling consumers at home to pay. This was proof either that they no longer needed protective duties or that they were robbing the very people who had given them protection. Trusts, even when they do not use tariff rates as instruments for extortion, are not loved by the masses in this country.

While the committee was taking testimony at Washington, Mr. Carnegie published his opinion (afterward given directly to the committee) that the great steel industry no longer needed any protection whatever, so far as its chief products were concerned. Coming from the most eminent and successful of American steelmakers, this declaration had great weight with the public, and the influence of it was felt by the makers of the bill. In our judgment, it has affected the committee's revision of other schedules as well as those relating to iron and steel. During the recent national campaign everybody knew that Judge Taft earnestly desired a real revision, involving reduction as a rule.

Such were the influences by which the revising committee could not fail to be affected. There appears to have been, however, a general expectation that it would not be greatly moved by them. Therefore the bill's concessions in the direction of genuine tariff reform have surprised many. We shall refer briefly to these changes, and to other features of the measure, before speaking of the effect of the new maximum rates upon the entire revision. For a time, at least, those rates would be levied upon four-fifths of our imports.

In the iron and steel industry, iron ore is placed on the free list, and the reduction with respect to other products ranges from 30 to 50 per cent. It is 37½ for pig iron, 40 for structural shapes and 50 for rails. The duties on timber and lumber are cut in two. Wood pulp is made free, and the rate on the paper used by the daily press is reduced by one-half. Bituminous coal is put on the free list, when imported from countries that do not tax our coal. Indeed, now

dutiable at 15 per cent., are made free, and there is an accompanying large reduction of the rates on leather and on boots and shoes. Clothing wool rates are but little changed, but the duty on carpet wool is lower by about 25 per cent. Rates on carpets, oilcloth and cordage show reductions ranging from 20 to 50 per cent. Art works, including paintings and statuary, if twenty years old, are put on the free list. There, also, are agricultural implements, if they come from a country that imposes no duty upon such implements when received from the United States. Among the other rates reduced are those on borax, varnishes, potash, soda, gunpowder (one-half taken off), collars and cuffs (one-third), barley (one-half), bacon, fresh meat, lard, and nearly all kinds of starch. Tallow and cottonseed oil go on the free list. The rate on refined sugar is lowered by less than 3 per cent. Of course, where the duties on products at the base of an industry are reduced, as in the case of iron, there are reductions thruout the list of finished goods of higher grades.

Among the rates increased are those upon perfumes, spices, chicory, figs, peas, wall paper, watch movements, coal tar dyes, feathers, furs, plain envelopes, cardboard, surface-coated papers, lemons, pineapples, and zinc in ore. Crude cocoa, now free, is taxed at 4 cents a pound, and duties on cacao prepared for use are largely increased. The committee's reasons for a majority of these changes are not convincing.

Tea, now on the free list, is made dutiable at 8 cents a pound, or at 9 cents when imported from a country in which it was not produced. Coffee remains on the free list, except under conditions hereafter to be mentioned. From the Philippines every year there may be imported free of duty 300,000 tons of sugar, 3,300,000 pounds of tobacco and 150,000,000 cigars. The internal revenue tax on cigarets is increased. Provision is made for an inheritance tax ranging from 1 to 5 per cent. The present drawback law is broadened, reciprocity with Cuba is preserved, and the rules of foreign countries concerning patents granted to aliens are adopted by the United States.

Justice to the Filipinos called for noth-

ing less than is given in the bill. There should be absolute free trade between the islands and the States. The reduction of the lumber duties is demanded in the interest of consumers and for the preservation of the remnant of our forests. The coal tariff is a burden which trade back and forth across the Canadian boundary should not be required to bear. The removal of the absurd duty on art would promote education and culture, and invite the transfer to this country of collections owned by Americans but now excluded. One of them is said to have a value of \$20,000,000. Domestic control of the steel industry would not be shaken by the changes proposed, but prices would be reduced. There is reason to believe that the benefits of the duty on hides are enjoyed by the Beef Trust, and not by the farmer or ranchman. A duty on tea would not be cheerfully paid by the people. Those who argue that it would be taken out of the profits of importers and wholesale grocers are wrong. But the duty would be one for revenue only. A duty on coffee would also be purely a revenue tax, but two years' supply could quickly be imported, and for two years the duty would yield very little for the Treasury. Inheritances ought to be taxed, and they are taxed now in more than thirty States, where the bill would double the weight of such taxation. As a rule, the rate increases proposed by the committee appear to us to be unwarranted.

The new method of appraising consigned imports which have no open and established market price in the country of production is designed to prevent undervaluation. The effect of it would be confined mainly to imports from Germany. Some say that their dutiable value would be increased 20 per cent. This might offset a part of the rate reductions in the bill.

A much more important change is the one involved in the adoption of maximum rates. These are 20 per cent. higher than the ordinary duties, and they must be collected on all dutiable imports from countries where there is any tariff discrimination whatever against the United States. Even iron ore, hides and coffee are dutiable under the maximum provisions, and a considerable number of

maximum duties would be higher than those of the Dingley tariff. The authorities say that only six countries could now take advantage of the ordinary or minimum duties, and that these countries send to us only one-fifth of our imports. Existing commercial agreements would be cleared away within a few months, and for an indefinite period thereafter the duties upon four-fifths of our imports would be 20 per cent. higher than those proposed in the committee's bill. Under such conditions the reductions we have been considering would be partly or wholly wiped out.

Only by giving to us all the tariff concessions granted to any other country by treaty or otherwise, could any foreign nation take advantage of our ordinary rates. Unfortunately, the proposition in the bill is one of menace rather than of conciliation, and it might cause commercial war instead of peace. Ordinary rates should be the maximum, and rates lower by from 15 to 25 per cent. should be the minimum, inviting the concessions we desire. The committee seeks these favors with a club. The adoption of its method by Congress might nullify many of the proposed reductions, provoke trade wars, and fasten upon the country for a considerable time a tariff worse than the one now in force.

The Race for Naval Supremacy

"If you believe in peace, prepare for war"—that is the new slogan of the militarists. Well, that is a little bit better than the old slogan, "In peace prepare for war," for the latter assumes war as the condition to be expected, with the intervals devoted to preparation for the next war. But both have the same end. "Prepare for war." There is a certain inconsequence in the slogan, "If you believe in peace prepare for war," for one would think the logical apodosis would be different—"If you believe in peace prepare for peace," not for war. Still, it is something—it shows progress, that the motive for military effort is peace, not war. And yet, as a Japanese paper says, any sort of an armed peace prepares for an Armageddon; and during peace, before the Armageddon it impoverishes the nations and is now fast reducing them to bankruptcy.

Let us consider the fearful condition to which the nations have already come. A few years ago it seemed as if their burden of expense and debt was beyond endurance. The principal nations were heavily armed for war. They had settled down to a burden of naval construction which seemed all they could carry. Great Britain depended mainly on her fleet, and her rule was to possess a navy equal to the sum of the navies of any other two Powers and ten per cent. more. The leading nations all had battleships of a standard size, say 15,000 tons, with guns of eight or ten inch bore. They were powerful enough. Then a bright idea came to the British Admiralty. It would build a gigantic battleship, a "Dreadnought," bigger, swifter than any big battleship known, of over 20,000 tons, while the biggest German battleships were only 14,000 tons. It should carry guns that would shoot cannon balls twice as heavy as the biggest in service. The ball of a twelve-inch gun is nearly twice as heavy as one from a ten-inch gun, and that from a fourteen-inch gun nearly three times as heavy. It is estimated that a modern "Dreadnought" is equal to four battleships of two years ago.

Great Britain was very proud of her new battleship. It beat the world. But oh! how short-sighted, for how long would it last? Did it not occur to the British Admiralty or to the British Treasury that what Great Britain could do Germany and France and the United States could and would also do? Did they not see that the old rivalry of 15,000 ton battleships would now become a rivalry of 20,000 and 25,000 ton vessels, with a vastly greater expense? There is no limit to enlargement; no limit to the burdens that can be put on the people. What is the result of this criminal advance? Germany was compelled to follow suit and try to surpass what Great Britain had done. And now we have the great naval scare in England, and Mr. Asquith and Mr. McKenna telling Parliament that two years ago Germany had not one vessel that could be compared with the "Dreadnought," while now she has fourteen, and three others being constructed; and Mr. Balfour, leader of the Opposition, says he has better information, to the effect that by 1912 Germany

will have 21 and not 17 "Dreadnoughts" and possibly 25. Great Britain is in a shivering terror, and this government of peace is hurrying up more "Dreadnoughts," for now the fear is that Germany will be supreme in navy as well as army. Such is the result of the monumental folly and criminality of Great Britain in starting a new rivalry, as if the old horrible rivalry were not horrible enough.

But why will Great Britain and Germany, with the United States following fast after, with yet bigger vessels and heavier guns, not agree to limit their armaments? Mr. Asquith replies that more than once Great Britain has asked Germany to do it, but she has replied that she must consider her own interests. What does that mean? Only this, that she must be ready to fight Great Britain on equal or superior terms, and so this arming for peace must go on. It is hopeless, as things now are, for there is no end but utter collapse, unless nations can be brought to agree to what the friends of peace have so often urged, but what the nations refuse to consider, and which is well expressed by the *Japan Mail*:

"Yet it may even be that in this very costliness lies the best hope of ultimate restriction, if not abandonment—that the sighing of the nations under the heaviness of the burden may at last find expression in the creating of some central controlling Power, drawn from all alike, upon whose omnipotent will shall rest the decision of all issues which, in its absence, might plunge the world in war."

We may suspect that it was the anticipation of what would so soon be revealed in Parliament as to the sudden secret growth of the German armament that gave poignancy to what Mr. Birrell said the other day to his constituents expressing his profound disappointment that so peaceful a nation as the United States had entered the race of rivalry for "Dreadnoughts":

"When I was young America set the example of an unarmed nation, but things have not worked out as was expected. Mr. Taft's speech on the question of United States armaments were words of doom. They have shattered some of the best hopes of humanity, for they show that even across in America they have joined the ranks of the armed and are to be supplied with a great navy and a powerful army. It is a miserable pity that hopes should be shattered, and that we are now to deal with the United States as a fully equipped

military and naval nation. . . . Wherever we go we find armament, armament, armament. We are, owing to this, reduced to the state of people who have to keep a lookout to see what is being done by possible enemies of this country; in absolute self-defense, without the desire to add another acre to our vast territory, we are compelled as ordinary men who love our country to keep our shores safe by the expenditure of an enormous and growing amount of money. It is enough to make angels weep, but still no man who is responsible for this country can ignore the risk or do anything other than provide the necessary money to keep the security of our land. I can see no cure for these terrible things except the fraternization of nations; otherwise they are doomed to this miserable game of 'Beggar my neighbor.' Fraternization is the only way by which we shall be able to reduce armaments and make people say what an infamy and a shame they are."

But does the horrible wickedness of this game of nations, this armed and still arming peace which is next to war, need further argument? It does need ridicule that the people may see its folly; and that has never been better uttered than by Dr. Jefferson in an article in the *March Atlantic*. It is as eloquent as it is convincing. He shows the obsession, the insanity, of the prevalent militarism, its credulity, its recklessness, its contagiousness. He tells us that for this country, and our Pacific defenses, the yellow peril is indeed portentous if we depend on the mailed fist. Instead of sending battleships send emissaries of peace, teachers, publicists, editors, bankers, for a thousand such representatives for a hundred years would cost less than one battleship. He says:

"A nation which buys guns at \$70,000 each when the slums of great cities are rotting, and millions of human beings struggle for bread, will, unless it repents, be overtaken soon or late by the same divine wrath which shattered Babylon to pieces, and hurled Rome from a throne which was supposed to be eternal."

We join his concluding appeal to America:

"Will America become a leader? At present we are an imitator. How humiliating to tag at the heels of Great Britain in the naval procession, haunted always by the fear that we may fall behind Germany! Why not choose a road on which it will be possible to be first? Why not head the procession of nations whose faces are toward the light? This is America's opportunity. Will she, by setting a daring example, arrest the growth of armaments throughout the world? The nation that does this is certain of an imperishable renown."

Results of Animal Experimentation

WHEN the periodical excitement with regard to anti-vivisection makes itself felt because once more the subject is being brought before legislatures, national or State, for legal restriction, a great many educated and humane people are in somewhat of a quandary as to what they should think about it. Apparently so many contradictory assertions are bruited about as to the advantage or lack of advantage, to the successful or unsuccessful results of animal experimentation, that it becomes rather hard for the ordinary man or woman to make up his or her mind as to just what to think of it. Most people are likely to be led by personal considerations to take up one or the other side and then are sometimes startled to find out how much can be said by some advocate for the opposite view. There has been need for a definite diffusion of information, not by rampant advocates of either side, but from men who were in a position to know absolutely the results of animal experimentation and whose personal interests could be depended on not to lead them astray. We are now in possession of that information, thanks to the care of the Committee on Experimental Medicine of the Medical Society of the State of New York, and it would seem that any one really anxious to know how much has been accomplished by animal experimentation can now no longer have any excuse for listening to those whose zeal is beyond knowledge in this matter.

The authorities cited by the Committee on Experimental Medicine are such as are likely to carry weight with every one who knows them or knows our modern science and whose mind is at liberty to accept evidence. For instance, with regard to that very important problem, tuberculosis, Dr. Trudeau, than whom there is not a kindlier man in the country, as literally ten thousands of patients who have met him in the Adirondacks can testify, and who has done more than any one else in this country to solve the problem of the proper treatment of tuberculosis for the poor, tells in no uncertain words the relation of animal experimen-

tation to our knowledge of tuberculosis. He says:

"Everything that has a direct bearing on the prevention of tuberculosis, everything that has changed mankind's attitude toward it from one of apathy and hopelessness to the growing hope of its ultimate conquest, we owe to animal experimentation. . . . Thanks to animal experimentation we know today that tuberculosis is not inherited; that it is communicable and therefore preventable, and that in its earlier stages it is curable."

Surely Dr. Trudeau knows whereof he speaks.

If animal experimentation has done nothing but this, lift the dark cloud that hung over humanity from this most fatal of diseases that was carrying off probably more than one in seven of the human race, surely everything that had ever been done in the line of animal experimentation would be justified. With regard to many other diseases, however, the benefit of experiments on animals is quite as clear. For instance, that scourge of infancy in large cities, diphtheria, has lost most of its terrors entirely as the result of animal experimentation. Dr. William H. Park, Professor of Bacteriology and Hygiene in New York University and Bellevue Hospital Medical College and Director of the Research Laboratories of the Department of Health of New York City, says that while what we now call diphtheria must have existed for thousands of years very much as it is today and its ravages were growing worse as the density of population became greater, conditions suddenly changed for the better with the introduction of diphtheria antitoxin some fifteen years ago; and where nearly one in three of the sufferers from the disease used to be carried off, now the mortality is less than one in twenty; and while nearly 100 out of every 100,000 of the population of large cities died from diphtheria every year, now but twenty die—a reduction in mortality that means in New York alone a saving of over 3,000 lives every year. Every portion of this advance in the recognition of the disease, in the treatment, and above all in the prevention of it, is due to animal experimentation and nothing else. Probably no department of medicine provides such striking evidence of the value of experiments on animals as an advance of our knowledge of diphtheria.

As Professor Flexner, the Director of the Laboratories of the Rockefeller Institute for Medical Research, insists:

"The brilliant chapter in the recent progress of medical science relates to the knowledge of and control gained over the infectious and communicable diseases. This progress has been secured chiefly thru experimental research upon animals. Lord Cromer, whose experience in Egypt, where he saw towns like Ismailia, formerly uninhabitable because of malaria, become, as the result of the labors of experimentalists, quite free from that disease, became last year the president of the Research Defence Society of Great Britain because he wanted these benefits for humanity from animal experimentation continued."

It is not alone with regard to the infectious diseases, however, that great benefit has been derived for medicine, but such affections as diabetes and all the diseases dependent on disturbances of the ductless glands owe their development in recent years to experiments upon animals.

Nor is the knowledge derived from such experiments confined to knowledge of disease and its prevention, but it has also furnished us with most of what we know definitely with regard to many physiological processes. For instance, our knowledge of nutrition has increased very largely in recent years, and Professor Mendel, who holds the chair of Physiological Chemistry in the Sheffield Scientific School at Yale, declares in the words of Prof. Rudolph Heidenhain: "If the opponents of animal experimentation were to assume the right of censorship over physiological publications, and a conscientious censor would erase from a text-book of physiology everything that is based on the knowledge gained thru animal experiments, the result would indeed furnish an unique copy: one-half of the contents would completely disappear, and the other would have become for the most part unintelligible." While Professor Hatcher, of the chair of Pharmacology and Materia Medica in Cornell University Medical College, declares:

"practically all the drugs that have been introduced into medicine in recent years to be specific, all the soporifics, all the local anesthetics, all the antipyretics, all the vaso-dilators and vaso-contractors, which means so much for the treatment of heart disease, we owe to experiments upon animals, while in such drugs as the diuretics, the antiseptics and another great part of our knowledge is due to observations made on animals."

In all of this it must not be forgotten that animals themselves are benefited quite as much as man. The sum of suffering among animals has been lessened, not increased, by these experiments, because we have learned how to prevent diseases among animals and how to treat their various affections as a consequence of the careful observation made on them by laboratory workers. It is no wonder then that distinguished laymen should join with physicians in protests against any undue limitation of experiments upon animals. President Eliot, of Harvard University, said on two occasions before legislative committees:

"Who are the merciful people, the few physicians that superintend the making of anti-toxin and make sure of its quality, or the people who cry out against the infliction of any suffering on animals on behalf of mankind? . . . Such research is absolutely the most humane of human occupations, because it has prevented human suffering and death on a great scale, and because it promises to achieve in the future still greater triumphs over pain and death."

President Stanley Hall, of Clark University, said: "To deprive physiology of the right of vivisection would be to stultify its progress." Bishop Lawrence, of Massachusetts, said: "Thru the sacrifice of the lower animals under the humane hand of the men of science the lives of men and women are saved." Dean Hodges, of the Episcopal Theological School, said: "Medicine taught by book would be like navigation taught by book."

Experiments upon living creatures must be carried on, if not with animals, then with our children."

The Unemployed and the Undisciplined

THAT there is still a large and distressing amount of unemployment is quite certain, altho exact information on the subject is inadequate and only indicative figures can be drawn from Department of Labor bulletins and other fairly trustworthy sources.

The Ethical-Social League, an organization which no one will suspect of putting out sensationalism for public consumption, has issued within the past year some sobering statements. The information is not brought down to date, but

comparisons of figures from 1905 to the beginning of 1908 show how seriously the wage-earning classes were affected by the industrial depression. For example, the trade unions of New York City reported in December, 1905, 6.7 per cent. of their members idle; in December, 1906, 12.8 per cent., and in December, 1907, 34.2. The American Federation of Labor, thru its general organizer, Mr. Herman Robinson, reported that in New York City on the 1st of April, 1908, 40 per cent. of the members of the labor unions were unemployed. That would be 120,000 men. Including non-union workers probably not less than 200,000 men were unemployed in this city.

These figures were confirmed by the relief statistics of that hard winter of 1907-8. The applicants for free lodgings at municipal lodging houses aggregated a 148 per cent. increase over the number of applicants in 1905-6. The families relieved by the Charity Organization Society in 1907-8 were more than 50 per cent. more in 1907-8 than in 1906-7, and the number of homeless men that applied to the Joint Application Bureau of the Charity Organization Society and the Society for Improving the Condition of the Poor was over 200 per cent. more in 1907-8 than in 1906-7. At the same time the withdrawals of savings from savings banks increased within the year over 60 per cent., and the lapsed insurance policies over 50 per cent.

The fact that no organization has felt it necessary to compile and send out similar statistics for the winter now ending is perhaps as good an indication as we could have that the extreme extent and acuteness of economic distress is over, and that industry is once more demanding the competent workers. Nevertheless, as has always happened under similar circumstances, the industrial depression has left a small army of vagrants and criminals supplemented by a large contingent of men and women not actually vicious, but devitalized and inefficient, to prey upon the community and remain as a heavy burden for the merciful to carry.

Must society go on forever regarding this problem of its human wastage as insoluble? The Socialist tells us that in the good day coming, when the means of

production are collectively owned, there will be no more booms and depressions and no more unemployment. Industry will go on in a matter of fact and orderly way. Everybody will have work to do, and adequate remuneration for his toil. This is a pleasant prospect to contemplate, and we should like to be able to look forward to its realization as confidently as our Marxian friends are able to do. But we cannot overlook the fact that in times of prosperity a full quarter or more of all the men and women who are drawn into employment by the active demand for labor are far from being efficient workers, and their addition to the labor force of the great mechanical industries is largely responsible for an appalling waste of property and loss of life thru careless and indifferent service. We have yet to see any sincere handling of this phase of the problem by a socialistic philosopher.

Meanwhile, we observe that the farming interests of the country still find it impossible to obtain satisfactory help; and we cannot help asking the question why the State should not take a hand in the solution of the big problem with a motive and by a method quite different from those ordinarily invoked. Always when reformers and tender-hearted people propose a State provision for the unemployed, the thought back of their suggestion is that the State should carry on certain public works to which the unemployed could at all times be drafted. Experience has not made the world enthusiastic over this plan, and in our judgment something very different should be tried. Why should not the State, instead of trying to give work to the unemployed in the expectation of making it pay directly, take them in hand and train them on great and well-organized training school farms, in the clear recognition that the enterprise would not pay directly, would, in fact, be a costly undertaking, but might be made to pay indirectly and in the long run yield large returns by diminishing the burden of crime and vagrancy thru reclaiming and diverting a **certain reasonable percentage of the present great mass of the inefficient into happy and prosperous farm labor?** We cannot doubt that this experiment would show interesting and encouraging results.

The Wesleyan Situation

THE editorial published March 4th on "The Shame of Wesleyan" brought us some letters of confirmation and approval and some of protest and criticism. In the latter the chief charges were that our language was harsh, that we were biased, and that we misrepresented the state of feeling at Wesleyan. The first charge we are willing to admit; the second depends on the point of view; the third necessitates giving space to a reply. We are glad therefore to have been favored with an authoritative statement from the President of the Undergraduate Body, which we give to our readers entire:

MIDDLETOWN, Conn., March 10, 1909.

To the Editor of the Independent:

DEAR SIR:—Your recent article commenting upon the action of the trustees of Wesleyan University abolishing co-education in that institution, seems to be based upon a very slight knowledge of the facts of the case. It is something to be expected from the *New York* — or some similar publication, to palm upon the public as truth invidious statements for which there is no adequate foundation, but a paper with such a reputation for veracity as THE INDEPENDENT enjoys, should be more careful.

The facts of the matter are these: We undergraduates have, for some fifteen years, been very strongly opposed to co-education, and we have never attempted to keep our sentiments on the subject "hidden under a bushel." The policy adopted by the students has always been to have no social relations with the girls. This end was secured simply by avoiding opportunities of meeting them in a formal way, and, not having been formally introduced to them, it is certainly no reflection on our courtesy if we refrain from addressing them on the streets. Does that argue an "anti-woman" and therefore anti-Christian attitude in all of the undergraduates? The presence of the women has been simply ignored; we have gone on about our business as if they were not present. There is no more reason why we should meet *them* in a social way than any other girls with whom we might happen to come in contact. When a girl has come here as a student, she must have known just what the conditions were, for most of them are residents either in this city or in nearby towns. And the majority of the women in college are not those that would be invited to college social affairs under any circumstances; that does not happen simply because they are women.

The article has been almost one of passive ignoring; so you are going a little too far when you apply such opprobrious epithets to the college as you used in the article in question. The women in college are not opposed

because they are *women*, as you seem to think, but because they are *in college*. Our action has never been taken because of individual dislikes, but always because of the principle involved—the necessity of Wesleyan's being a college for men alone, as it was originally intended. If the spirit here were really such as you indicate, you would naturally suppose that the news of the barring out of women, a step so long and so ardently desired, would have been welcomed with a public demonstration of some kind. You will, therefore, be surprised to know that there was enough gentlemanliness left here so that not even a yell was given. You have probably heard a lot of rumors with no foundation except the malice and imagination of some exponent of theoretical co-education, and have taken advantage of your high position to cast baseless aspersions upon the name of a college that stands for all that is upright in the college life of our country.

Very truly yours,

ROY B. CHAMBERLIN,

President of the Undergraduate Body.

P. S.—There are one or two additional points I neglected to mention, so please pardon a brief postscript. In the first place, the "P.D.Q." Society has never been heard of in Middletown, and, as I said before, its services are entirely unnecessary, because of the fact that all the women live in this vicinity. The Quail Roost has not been painted or any other indignities offered to it at all during the four years that I have spent here. We are not more than properly proud of the mere name of the college, because of the reputation it gives us so frequently of being little more than a Methodist theological school, however, the advisability of the names you so kindly suggest is a matter of opinion.

It seems to me that if your paper is really as fond of the truth as its reputation indicates, you will be willing to make some effort to get at the facts of the case, and, if you have done Wesleyan an unjust injury, do what you can to repair the harm. Now, if you will send the man who wrote the article we object to up to Middletown, at our expense, we will show him just how far his statements are true. Without letting anybody know the reason of his visit, we will let him look over the ground and form his own judgments. It seems to me that this is only a fair request from us, and it is only just for you to comply with it in the endeavor to right a wrong such as you have done the college. Please be so kind as to let me hear from you soon, in regard to the visit of some member of your staff.

ROY B. CHAMBERLIN.

It will not be necessary to accept the fair and generous offer of our correspondent to pay our expenses to Middletown, because we are willing to take as correct his statement of the case. It agrees with the information we have received from women Wesleyans except in

a few details that are not worth further consideration.

What we objected to most strongly in our editorial was not the action of the trustees in doing away with coeducation, but the feeling of the Wesleyan students which resulted in this action, and Mr. Chamberlin presents this feeling with admirable candor. We did not suppose that the boys of the college disliked the opposite sex *in toto* and *per se*; they only disliked them in college. This is just the attitude of the Southerner to the negro as we have not infrequently remarked. The Southerner may love his old mammy, he may prefer negro labor to white, but he objects to having the negro with him in college, in church, in the car, in the graveyard, in office or in any other position that implies equality and social recognition.

Certainly the boys at Wesleyan were not under any obligations to mingle socially with the girls, particularly if, as our correspondent intimates, there were other reasons why they would not be invited to college affairs. But to ostracize them, passively to ignore them, to avoid opportunities of meeting them, and to pursue this policy collectively and persistently, in a small college, seems to us to indicate an insulting and anti-Christian attitude, and to justify the language we used in characterizing it. With this letter before them our readers may judge whether we were improperly severe when we said "We do not see why any girl should want to go there or any decent boy either so long as the present feeling prevails."

We are glad to see that our correspondent agrees with us in thinking it would be better to change the name of the college. It is certainly inappropriate that it should bear the name of the man who had the manliness to remove the ancient ban of "Let your women keep silence in the churches." The action of the trustees makes it impossible for a woman to get a collegiate education in Connecticut. We may have been wrong in calling this a "shame," but we are sure that States like Oklahoma, Wyoming, Idaho and Nevada, with only a small part of Connecticut's feminine population, would be ashamed to have it true of them.

President Taft on President Cleveland

It is not strange that President Taft should eulogize President Cleveland. They have much in common. Even Mr. Taft has a sympathy with Mr. Cleveland's earnestness to reduce the tariff, so near does the Republican come to the Democrat. What is most interesting is that so soon after friction between President Roosevelt and Congress over the limits of each other's authority, and after Mr. Roosevelt had defied Congress by forbidding one of his Cabinet to give information asked of him, President Taft should take pains to specify among Mr. Cleveland's merits his resistance to the encroachments on his rights by a Republican Senate. Said he:

"We hear much in these days of the usurpation of the legislative jurisdiction by the executive branch. As long as the legislative branch has the power of the purse the danger of Executive usurpation is imaginary. The real danger arises from the disposition of the legislative branch to assume that it has the omnipotence of parliament and may completely control the discretion conferred upon the Executive by the Constitution."

There is a spice of surprise in these words. We have been told of late that danger comes from Executive invasion of the Legislative department of the Government. This gives fair but courteous warning to Congress that the President proposes to exercise his entire functions without infringement.

The Sunday Supplements

The flashy pictorial supplements to the Sunday journals are not all yellow. We take two or three of them for Sunday, March 14th, and we find the following: In *The American* one page is given to a remarkable photograph of French peasants on a load of hay looking up with astonishment at Mr. Wright's flying-machine in the sky above them; and beside it is put a painting by Dupré representing peasants looking at a balloon; and with it is a comment by Sir Caspar Purdon Clarke about them. Then come two full pages with illustrations of the lately discovered bones of the earliest man at Heidelberg, and an instructive account of the earlier discoveries of primitive man; and "Man's Ancestral Tree," with pictures showing the development from the lowest amœba to Edison; forty-six

steps all told in picture and description, and made lively for the common reader. Then there is another page of pictures of ants in their various habits and ways, with instructive description. A fifth page reveals the mysteries of the ancient Etruscans, admirably and artistically combined from figured vases, and accompanied by a text that will stimulate the reader. And here is a surprising page of *The World*, all given to the discovery of a temple of the God Adad in Assyria, with an intelligent account of its historical and religious bearing. All these mean that with the mass of pictorial and comic slush that is in these Sunday journals there is also a certain amount of really valuable scientific matter, such as will bear illustrating, and taken from the very latest German and French discoveries. Even the Devil is not as bad as he is painted.

✱
**"The Churchman"
 and St. John's**

The Churchman does not seem dazed by the resounding blow it has received from eighteen rectors of leading Episcopal churches in New York, including Grace Church, St. Mark's, St. George's, St. Thomas's, St. Bartholomew's and Calvary. It is all about the decision of Trinity Church to close St. John's Chapel, of which Dr. Peters gave our readers an account in a late issue, and which had the consent of Bishop Greer. These eighteen rectors, of whom Dr. Peters is not one, quote *The Churchman's* expression of surprise that Bishop Greer failed to give "sympathy, help and guidance" to the congregation of St. John's, but that when appealed to seemed "to care for none of these things"; and they add in a letter to Bishop Greer:

"In view of this gross attack upon you in a quarter where we had a right to expect better things, an attack which, from the nature of the case, it has been impossible for you to notice—the undersigned, speaking not only for themselves, but, as they believe, for many others of their brethren, desire to assure you in the strongest terms both of their warm affection for your person, and of their confidence in your rectitude of purpose and your broad Christian charity."

The Churchman prints it and declares that it has the profoundest confidence in Bishop Greer's purpose and integrity, tho differing from him radically on the subject; and it proceeds in another editorial

to show that neither Trinity nor the Bishop would have treated one of the wealthy chapels belonging to Trinity as St. John's Chapel has been treated. It withdraws nothing, but renews the criticisms of both Trinity and Bishop Greer. It is an extremely healthy condition of things when the leading organ of the Episcopal Church in this city and in the country does not hesitate frankly to criticise its bishop's policy. We commend this example to some other journals of some other ecclesiastical bodies whose fulsome praises of their bishops might endanger their humility. But we would commend to them a certain printed sermon by Dr. Hugh Miller Thompson on the grace of Humility.

✱
 Dr. Burton is hardly settled down in his pastorate of the Church of the Pilgrims in Brooklyn before his people are startled by the proposal to take him away to be president of Smith College. His predecessor, Dr. Dewey, who was Dr. Storrs's successor, left the Church of the Pilgrims only a year and a half ago, and went to the Plymouth Congregational Church in Minneapolis, a church formerly presided over by Dr. Stimson, now of the Manhattan Church in this city. Thus churches and pastors are inter-related. Last week Dr. Dewey's congregation dedicated their new edifice, costing about \$250,000.

✱
 It is almost wonderful that the two Coopers, father and son, have been convicted of murder, tho in the second degree, of Senator Carmack. Mrs. Harris tells this week of the feeling about it in Tennessee. It was a brutal crime, such as the Coopers' style of morality thought perfectly excusable; but a few such convictions as this will teach better morals, unless on appeal they escape, which is not impossible. Indeed, they are now free on bail, and don't seem concerned about the twenty years' sentence.

✱
 We are glad that men of such commanding ability as Robert C. Ogden and his two able associates are willing to go to little Liberia in her troubles and advise and guide. It is to be hoped that they can find some way in which the United States can help the black republic.

One Premium—Then Death

EVERY one is familiar with the saying "There is nothing certain in this world but death and taxes." And yet most of us look upon death as a remote possibility, not as an imminent chance. Most of us cling to the idea of long life in our own cases. Others may die, but we will live. That is the conventional way of regarding the uncertainty of life. Day after day we all of us read the death notices in the papers. Now and then we see the name of a friend, sometimes a near friend, but the majority of readers go on the principle that continued life is a certainty. The insurance solicitor comes and is put off again and again. Every one thinks, if they do not put the thought into words, "I am not going to die soon. Tomorrow, or the day after, or perhaps next week, or next month, I will insure. There is ample time." The fallacy of counting as certain that which is uncertain has recently been very strikingly brought out by the publication in *The Insurance Press* of a table based on

the 1906 experience of fifty companies in the United States, Canada and Mexico, under 2,209 policies held by people who died in their first year of insurance. Disbursements aggregating over \$4,000,000 were made by the interested companies under policies in force one year or less. It is safe to say that not one of these policyholders expected to die during the first year of their insurance protection. It is certain that the insurance agent had to use all of his art to get these people as prospects to sign the several applications for insurance. They probably all used arguments against so doing and wanted to put it off. None of them thought they were going to die. But they did die. Death is of daily occurrence. You who read these lines in the full glow of health and strength may die before another day passes. If you can but realize how true it is that life is uncertain, perhaps the accompanying list of the first-year deaths as compiled by *The Insurance Press*, giving States and amounts, will take on additional interest in perusal:

Locality.	Number of First-Year Deaths.	Insurance Paid.
Mexico	13	\$50,406
Alabama	21	69,290
Arizona	2	6,006
Arkansas	21	48,000
California	18	55,097
Colorado	12	39,008
Connecticut	4	14,000
Cuba	3	25,000
Delaware	1	1,000
District of Columbia...	1	500
Florida	6	18,000
Georgia	25	115,071
Idaho	3	3,971
Illinois	45	113,108
Indiana	18	40,978
Indian Territory	10	11,000
Iowa	4	5,000
Kansas	15	39,317
Kentucky	27	131,211
Louisiana	14	30,600
Maine	15	16,500
Maryland	6	22,000
Massachusetts	14	38,844
Michigan	14	26,080
Minnesota	11	10,000
Mississippi	15	27,000
Missouri	21	43,367

Locality.	Number of First-Year Deaths.	Insurance Paid.
Montana	2	\$4,000
Nebraska	11	15,551
Nevada	2	2,000
New Hampshire	4	6,500
New Jersey	16	40,000
New Mexico	3	8,507

Canada	37	67,315

FINANCIAL

Tariff Revision and Stocks

FOLLOWING the publication of the new tariff bill, on the 17th, securities on the Stock Exchange were firmly held and showed advances at the close of the day's trading. During the remainder of the week the market was dull, and fractional declines were recorded, owing mainly to continuing exports of gold and to reports that the Steel Corporation was about to close its Southern furnaces and mills. For the completed week there was an advance of security prices, ranging from 1 to $3\frac{1}{2}$ points for the most active railway shares. A net loss of $\frac{3}{8}$ for Steel Corporation common was accompanied by gains for the stocks of some other companies engaged in the same industry.

It will be observed that the securities market was not affected by the announcement of the proposed reductions of the tariff bill. The dullness prevailing for some time past, however, has probably been due in part to the inclination of investors and traders to wait for the final action of Congress upon the tariff rates. The market's firmness is noticeable, because of announced reductions of wages. Last week the Maryland and Pennsylvania Steel companies gave notice of a reduction of 10 per cent. for April 1. It is predicted that the Steel Corporation will soon take similar action, but thus far it has confined its reductions to the salaries of highly paid experts, several of whom have resigned because of their dissatisfaction. In the steel industry the tendency of wages will continue for some time to be downward, owing directly to the present low prices and scarcity of orders, and indirectly to the probable reduction of tariff duties. Prices have been so severely cut within the past month, however, that the lower duties may not require further concessions.

If the tariff bill reported last week were to go into effect tomorrow, the reductions, which excite so much comment, would for a time be partly—some of them wholly—nullified by the effect of the maximum rates. These would be applied to four-fifths of our imports and no one could tell how long these imports

would be subject to such duties. The measure of time that must elapse would depend upon the action of foreign nations whose exports are now exposed to the additional tax. If this has been understood for some weeks past where powerful influence can be exerted in finance and speculation, the indifference with which the tariff bill was greeted by the stock market is in part explained.

....The Knickerbocker Trust Company, on the 26th inst., the first anniversary of its reopening, will be practically fifteen months ahead, in payment of deferred deposits, of the time for such payments required in the plans adopted at the resumption of business, owing to its anticipation of instalments.

....The Boston Safe Deposit and Trust Company, of which Charles E. Rogerson is president, in its statement of condition at the close of business on December 31, 1908, shows total assets of \$16,228,262. The company has a capital stock of \$1,000,000, a surplus of \$2,000,000, and deposits of \$12,444,808. This company was incorporated as a trust company in 1874 and commenced business in 1875, and is now constructing a large building on Franklin street, between Devonshire and Arch streets, which will be ready for occupancy next year. The building will have a safe deposit vault, with a capacity of 10,000 boxes or safes.

....The Bowling Green Trust Company, which has been closely identified with the Gould interests, Edwin Gould being president, is to be merged with the Equitable Trust Company, whose capital will continue to be \$3,000,000, with surplus and undivided profits amounting to \$10,600,000. Alvin W. Krech, now president of the Equitable, will retain this position. The stock of the Bowling Green is to be liquidated at about 410. After the merger, the Equitable's deposits will be about \$40,000,000. The absorbed interests will be represented in the new board by Edwin Gould and two or three of the Bowling Green directors.

Survey of the World

The Bolting Democrats

The action of twenty-three Democratic members of the House in the controversy about the rules is regarded by many as indicating a permanent division with respect to important issues. It has caused much bitter feeling and in two or three instances has ended friendships of many years' standing. At a stormy Democratic caucus, on the 22d, in which Mr. Fitzgerald, leader of the seceders, defended his course, the following resolution was adopted:

First. We deplore the action of those Democrats who supported the Fitzgerald plan of saving Cannonism. This action was in conflict with the caucus action of their party, in violation of its platform pledge, and, we believe, of overwhelming Democratic sentiment. The Democratic party in the House disavows their action and disclaims all responsibility therefor.

Second. Under the guise of giving to the Democracy of the House representation on the Rules Committee and on the Ways and Means Committee, Speaker Cannon appointed on the Rules Committee, as a Democratic member, the proponent of the Fitzgerald resolution, who is opposed to the Democracy of the House in its fight to reform the rules and is in accord with the Speaker; he appointed on the Ways and Means Committee, as a Democratic member, a gentleman known to be wholly opposed to the Democratic tariff view, and known, by his vote, to be wholly opposed to any change in the Cannon rules.

New rules were also adopted, one of them providing that all members should be bound by a two-thirds vote of the party caucus. The situation is the subject of much comment thruout the country. Many say that this factional division prevents effective opposition to the pending tariff bill. It is also pointed out, however, that the division was due in part to differences of opinion concerning tariff policy. The speeches made in the tariff debate have already disclosed these

differences on the Democratic side. There continues to be much gossip as to the influence of the Tammany leaders in New York and about bargains affecting tariff legislation.

Tariff Debate in the House

Debate in the House upon the tariff was begun on the 22d by Mr. Payne, chairman of the Ways and Means Committee, who defended the committee's bill. On the following day he finished his speech, which had consumed nearly ten hours. For the Democrats, Mr. Clark then criticised and attacked the bill, and other members followed, the debate taking a wide range. On the 26th there was an altercation between Mr. Fordney, of Michigan, and Mr. Byrd, of Mississippi. The former, a Republican member of the committee, while defending the lumber interests, denied that there was a Lumber Trust. Mr. Byrd asserted that prices in his State were maintained by agreement. Mr. Fordney (who is in the lumber business and who owns, it is said, a lumber mill in Mississippi) used profane words in a sharp reply, and Mr. Byrd was with difficulty prevented from striking him. Apologies followed and peace was restored. The anti-Japanese issue was brought up by Mr. Humphrey, of Washington, who wants a higher duty on shingles, and who asserted that this was required for the defense of labor in the Washington lumber mills against the cheap Oriental labor of British Columbia. There will be an attempt to close the debate and take a vote on April 10th. The decision of the House as to certain prominent features of the bill cannot be foreseen, because it is known that party lines cannot be strictly drawn, owing to the

controversy over the rules, to a demand for lower rates in parts of the West, and to the support, in the South, of protection for some local products. The minority of the committee has submitted a report hostile to the bill and also to the present tariff. It asserts that the bill is in many respects crude, indefinite, sectional and prohibitive; that most of the reductions are apparent rather than real; that the Standard Oil Company has been "handsomely cared for" by the retention of the countervailing duty on petroleum; and that the bill as a whole would increase the cost of living. The maximum rates, it says, should be the ordinary rates, and there should be minimum rates below them. By making a maximum level 20 per cent. higher than the real tariff, the report says, the committee "seeks trade with a club or a meat axe." Since the complete bill was published, merchants have discovered changes that were not seen at first. Reference to some of these is made in our editorial pages. Organizations of women are protesting against the increase of duties on gloves and hosiery. The price of tea is rising in the wholesale market. It is expected that the inheritance tax will be thrown out, because such a tax is now imposed by thirty-six States. Projects for an income tax and a tax on the dividends of corporations are under consideration. A bill for an income tax has been prepared under the direction of Attorney-General Wickersham. In a statement issued by the Ways and Means Committee it is shown that the average ad valorem rate of duty, which is now 44.16 per cent., would be increased by the Payne bill to 45.72 per cent.

A Recall Election in Los Angeles

Under the provisions of the municipal charter for a recall, George Alexander was elected Mayor of Los Angeles, on the 26th, having a majority of 1,515 over Frederick C. Wheeler, Socialist. This was the first mayoralty election of the kind in this country. Several months ago Mayor Arthur C. Harper was accused by a local newspaper of protecting vice in the city. He brought suits for libel, and these are still pending. After his appointment of Edward Kern, Chief of Police, to be a member of the Board of Public Works, in January, the

Municipal League decided to resort to the recall. Mass meetings were held, 11,000 signatures were obtained for the necessary petition, and an election was ordered. Then Kern resigned, and a worthy citizen was appointed in his place, but the opponents of the Mayor were not appeased. About three weeks ago the Mayor himself resigned. It is asserted that additional charges against him were about to be published. His supporters argued that after his resignation no election was required, and that his successor should be appointed by the Council, which was said to be controlled by them. But the City Attorney decided that the election must be held. Alexander was the candidate of the reform element and of the League. Wheeler had been prominent as an organizer of labor unions. It is asserted in press dispatches that the "machines" of the old parties gave much support to Wheeler, and that this accounts in part for his large vote. On the day preceding the election, ex-Police Commissioner Schenck was indicted on bribery charges. It is reported that a politician formerly engaged in the protection of vice has furnished to the reform leaders much interesting evidence, upon which additional indictments will be based.

Municipal Bribery Cases As a result of the bribery investigation in Pittsburgh, six more indictments have been reported. The persons thus accused are Dallas C. Byers, a millionaire iron manufacturer and head of the firm of A. M. Byers & Co., who suddenly went to Europe a few weeks ago; Frank A. Griffin, vice-president and treasurer of the Columbia National Bank; Dr. D. H. Webber, Councilman; Charles Stewart, Councilman; Henry M. Bolger, saloonkeeper; John F. Klein, Councilman. Klein has already been convicted on another charge and is now in jail for refusing to testify before the grand jury. Two other Councilmen were recently convicted, and with them W. W. Ramsey, president of the German National Bank. A. A. Vilsack, cashier of that bank, confessed his guilt. The indictments say that Byers bribed Councilmen to procure the vacation of a street for the benefit of his firm; that Griffin (who has resigned his bank office) paid about \$25,000 to Councilmen in order

that his bank might be made a depository for city funds, and that the others named were corruptly interested in these or similar transactions.—In San Francisco, on the 27th, five men were arrested for stealing, from District Attorney Langdon's office, records and other papers relating to the prosecution of Patrick Calhoun, president of the street railroad company. One of them is R. M. Hamlin, a confidential employee in the office and for two years, past the private secretary of Detective Burns. He stole or copied records and transcripts of evidence which might be useful to the defendants in the bribery cases, and gave them to certain detectives employed by the railroad company. Three of these detectives (Albert McKinley, William Corbin and Joseph Van Wormer) have been arrested. Hamlin made a full confession. He had been bribed by the payment of \$200 a month. The fifth man is E. A. Platt, an employee in the office, who also sold copies of records. On the 28th, policemen and detectives led by Detective Burns searched the offices of the street railroad company, breaking open desks and safes, against the protest of President Calhoun and his employees. They found copies of many of the reports and other documents which had been procured from Hamlin and Platt. President Calhoun is on trial, but eleven weeks have been consumed in selecting a jury, which is not yet complete.

Indian Outlaws in Oklahoma

Five companies of militia started from Henrietta, Okla., on the 28th, in pursuit of a large party of Creek Indians, half-breeds and negroes, who, under the command of the old chief Crazy Snake, had been defying the authorities and had killed two deputy sheriffs. The disturbance began on the 25th, when several deputies attempted to arrest three cattle thieves and were fired upon by a party of outlaws. In a battle which afterward took place, three of the half-breeds were killed, five wounded and forty taken into custody. On the 27th, five deputies went to Crazy Snake's home, intending to arrest him. They were attacked by the old chief's followers, who killed Edward Baum and Herman Odom, the latter being a son of the

sheriff of McIntosh County. Thereupon the Governor sent five companies of militia to the scene of the controversy. Crazy Snake has repeatedly been the leader of lawless bands during the last ten years. He strenuously opposed the allotment of land in severalty and gathered around him a considerable number of half-breeds, negroes and criminals, who robbed and persecuted Indians who accepted the Government's policy.

Castro Sails for Trinidad

Cipriano Castro, the deposed President of Venezuela, sailed from Bordeaux on the 26th, on the French steamship "Guadeloupe," and will land at Trinidad on or about April 10th. The Venezuelan Government warned the steamship company that he would not be allowed to land at any Venezuelan port, and that, if necessary, the ship bearing him would be excluded from Venezuelan waters. He was regarded, said the Government's representative, as a dangerous enemy of the new policy adopted by President Gomez. The company took Castro as a passenger upon condition that he should land at Trinidad. He was very angry, denouncing what he called the treachery of Gomez, and saying that Caracas was full of cowards. Gomez, he predicted, would make Venezuela bankrupt in less than six months. "I am a man of destiny," said he at Bordeaux. "My country needs me. I believe that God and destiny call me back to Venezuela, and I intend to accomplish my mission there, even if this involves revolution." To some persons he expressed his purpose to regain the Presidency, and he appeared to be confident that in a short time he could raise an army. In Paris he had a conference with one Roy, who deals in firearms, and who sold rifles and ammunition to him five years ago. This man afterward said he thought Castro would again be dictator in Venezuela within six months. It is said that Castro took with him \$200,000 and has only \$75,000 left. He has very valuable estates in Venezuela, but the income from them cannot be sent out of the country to promote revolution. In Caracas, the suit against him for the murder of Paredes has been transferred by the High Federal Court to the criminal

court. Judge Abreu, who presided over the latter court, was recently arrested and placed in prison. Publication of certain newspapers that criticised this act of the Gomez Government has been suspended.

✽

Central America No official statement as to the warning recently given to President Zelaya, of Nicaragua, has been published, but the assertion is made by well-informed persons that an attack upon Salvador by his forces, in the interest of Alfaro, a revolutionist in that country, was prevented only by the attitude of our Government and of Mexico. It is said that the 6,000 soldiers assembled on the border were to be used in this project, and would have crossed the narrow strip of Honduran territory lying between Nicaragua and Salvador. News of Zelaya's purpose was promptly sent to Washington by Mr. Gregory, our diplomatic representative in Nicaragua. The warning followed, and several of our warships were at once stationed within a short distance of Zelaya's army. His aim is said to have been to set up in Salvador a ruler of his own selection, in furtherance of his desire to gain control of all the Central American countries.—President Taft has asked Col. Goethals to finish the Panama Canal in 1913, if possible, but the Colonel is unable to promise an earlier date than January 1st, 1915. In a recent defense of the lock type, he said that if the canal should be made at the sea level, two additional canals, one on each side, would be required for the control of floods. These additions would involve a great expenditure. The plan which had been approved, he asserted, presented no doubtful problems, nor any experimental projects; and nothing had occurred to give rise to any question about the stability of the foundations of dams or locks.

✽

The French Postal Strike After their nine days' holdup of business in Paris, the striking postmen, telegraph employees and telegraph girls marched back to their positions in a triumphal procession. They claim to have accomplished the ostensible aim of the strike, which was the removal of M. Simyan, Under Secretary of Posts and

Telegraphs, for altho he still nominally holds his position, he has been virtually superseded and may before long be removed. The Government has agreed not to punish any of the strikers. The placarding of the city after the conclusion of the strike with a poster announcing that the employees would no longer recognize M. Simyan on account of his "malevolence, rudeness and insupportable masterfulness" seemed likely to cause a rupture of the peace that had just been established. The Government resolved to prosecute the authors of the manifesto, but after it was explained that it had been prepared before the settlement of the strike, M. Clemenceau withdrew his objection and decided not to prosecute. The civil service employees openly rejoice at this demonstration of their power to force the Government at any time to accede to their demands. The Chamber of Deputies had expressed again its disapproval of the strike and its intention to support the Government.

✽

Peace in the Balkans The danger of war in the Balkans has apparently been averted during the week by the action of Germany, but it may be questionable whether the arbitrary way in which this action was taken may not ultimately bring more serious trouble upon Europe. The exact method by which Germany forced Russia to acquiesce in the annexation of Bosnia and Herzegovina by Austria is not known to the public, but whatever it was it seems to have been prompt and effective. One report says it was a personal letter from the Kaiser to the Czar. Another report avers that there was a military demonstration against Russia; that German officers and soldiers took the place of the Austrian troops which were withdrawn from the Russian frontier to the Servian. This change in the Russian policy left England and France without sufficient grounds for continuing their opposition to Austria, and at present their efforts are concerned with making the best of the bad situation by securing as favorable terms to Servia as possible. Baron von Aehrenthal, the Austrian Foreign Minister, seems still inclined to provoke Servia by insisting that the terms of the note in which she renounces her claims on Bosnia and Herzegovina

are to be made as sweeping and humiliating as possible, and he refuses to discuss a commercial agreement until this renunciation is made.—Crown Prince George has renounced his right of succession to the Servian throne. Prince George is a man of violent and unruly temper and has been one of the chief promoters of the war party. The failure of this policy may be one reason for his resignation, but a more immediate cause was the popular belief that he caused the death of his valet by kicking him downstairs. The servant died in the hospital from rupture caused by external concussion, according to the report of the post mortem examination. Prince Alexander, the king's second son, is said to have declined to accept the succession to the throne.—The feeling in England over the action taken by Germany is shown by the following extracts from *The Times* and *Spectator*:

"The situation with which Europe is confronted involves much more than the fate of Servia. We trust that it may not mean the permanent overthrow of the balance of power in Europe. But it certainly does mean that for the moment Germany has placed it in jeopardy by throwing the weight of her sword into the scales, not in any quarrel in which she is herself primarily interested, but in order to prove to the world in general and to Russia in particular that with her consent and support treaties can be broken with impunity and small States ground down to the dust, and that without her consent and support the peaceful diplomacy of other powers is doomed to sterile effort.

"The course which she has chosen to adopt may for a moment produce the outward appearance of peace. But it cannot make for permanent peace, for no Power which in the course of history has arrogated to itself the right to dominate Europe and to impose its own will by sheer force has ever insured or secured peace. Russia has been compelled for the moment by sheer necessity to submit to Germany's dictation, and we are not prepared to question the wisdom of the heavy sacrifice which she has made and which she may yet be forced to make in order to avert bloodshed."—*Times*.

"There is one point in the tremendous acceleration of Germany's program which deserves notices. We talk as if the sudden advancement of the German program only concerned us, as if it were not a matter of prime interest to any other Power. We forget the United States.

"It is an open secret that the great navy which the United States has built up is in no way aimed at this country. Its object, to put the matter in the shortest compass, is in the first place to enforce the Monroe Doctrine, which is as dear now as ever it was to the

American people; and, secondly, to secure American interest in the Pacific.

"The able, far-seeing men who control the naval policy at Washington know perfectly well that if the American fleet is not as strong as or stronger than that of Germany there is very little doubt that some day, whether in Brazil, Venezuela or the West India Islands, the Monroe Doctrine will be challenged by the Power whose commercial interests are dominant in many parts of Spanish America.

"For example, Brazil is, so far as the white population is concerned, almost a German country. It was in view of this fact and in all probability at a hint from the United States that Brazil ordered her three Dreadnoughts. We shall not be surprised if Germany's action is answered by corresponding activity in America. Such a result is one for deep regret, but it is no use to deny that Germany's action is bound to lead to a vast waste of human energy not merely here but across the Atlantic."—*Spectator*.

The British Navy

The New Zealand Government has offered to construct a Dreadnought for the British navy, or, if necessary, two. Canada is likely to make a similar offer immediately, and Australia may perhaps follow suit. If this is done the colonies may add to the fleet six Dreadnoughts to supplement the fourteen which are now in the program of the Admiralty. Premier Asquith has telegraphed to New Zealand the Government's "warmest gratitude for this generous and patriotic offer," and he says:

"So far as the coming financial year is concerned, the provisions of the naval estimates afford ample security, but in view of the uncertainty existing regarding the character and extent of the demands that may be made on our national resources the following year, the offer of New Zealand to defray within that period the cost of providing a first-class battleship of the last type, and a second vessel of the same type if subsequent events show it is necessary, is most gratefully accepted."

The Premier stated to the House of Commons that the British Government has been informed that, contrary to their previous information, no acceleration of the German naval program was anticipated, and that while two of this year's ships had been promised by the constructing firm in advance of the usual time, this would not alter the rate of construction. It appeared, therefore, that the British Admiralty was in error in assuming that the German Government would have seventeen Dreadnoughts instead of thirteen by the end of 1912.—Admiral Lord Charles Beresford, commander of

the Channel Fleet, brought his fifty years of active service to an end by hauling down his flag at Portsmouth. A crowd of 10,000 persons waited to receive him, and in his speech to them he expressed the intention of devoting himself in an unofficial capacity to the promotion of an efficient navy.

The German Navy

The German navy estimates past thru the Reichstag with unusual facility owing to the British war scare. Much opposition and a lengthy debate were expected, but the representatives of the various parties conferred together and agreed not to criticise the estimates, so every item was past in rapid succession without any member embracing the opportunity to speak. This unprecedented action of the House is alluded to in the press as "a demonstration the significance of which will be undoubtedly rightly understood at home and abroad." Even the Socialists made no opposition, but confined themselves to announcing that when the Foreign Office brought it before the House they would demand an explanation of the relations between Germany and England. Foreign Secretary Von Schön, in a reply to a question about the statement by Premier Asquith in the British House of Commons that Germany had repulsed England's overtures for a reduction of armament, stated that in intercourse between friendly governments it was customary to avoid presenting formal proposals the consideration of which appeared doubtful. Great Britain, probably for this reason, had avoided addressing a formal proposal to Germany, which therefore had not felt called upon to take up any position toward such proposal. The construction of the German fleet was provided for by law and was measured exclusively by the needs of German protection. It implied no threat against any nation, as had been emphasized repeatedly by the German Government. Von Schön concluded by stating his pleasure that the entire committee had given expression to a hope that Anglo-German relations would not be influenced by occasional outbursts of excitement in England over naval expansion and that they would be further developed in the direc-

tion of the friendship which was the wish of the whole German people. It is expected that Chancellor Von Bülow will lose his office on account of his inability to carry thru the financial reform bill. This provides for a heavy increase of real estate and inheritance taxes in order to make up the increased revenue needed. The Financial Secretary estimates the deficit for 1909 to 1913 at \$50,000,000 to \$100,000,000 annually. The Liberals have been alienated by the Government's determination to tax articles of general consumption, and if the bill is to be put thru it will have to be by the aid of the Clerical party. This will mean the breaking up of the "bloc" or coalition on which the Government had been dependent for its majority. The Emperor has recently renewed his cordial personal relations with the Chancellor, for the purpose doubtless of giving him support in this crisis.

Farthest South

Lieut. Ernest H. Shackleton, of the British Navy, reached a point within 111 miles of the South Pole on January 9th. The expedition therefore practically accomplished its purpose with remarkable celerity in spite of hardships almost unparalleled in the history of polar exploration. The vessel which carried the party to the Antarctic continent was the "Nimrod," a Norwegian barkentine of 227 tons, which left England July 30th, 1907. On January 1st, 1908, the vessel left Lyttleton, New Zealand, and the party landed at McMurdo Bay, near Mt. Erebus, where a hut brought in sections was erected. Lieutenant Shackleton had visited this region in 1902 as a member of the expedition under Captain R. F. Scott, in the "Discovery," when he reached a point 463 miles from the pole. For this new venture he had provided two novel means of transportation, namely, twelve Siberian ponies and a motor sledge, which was propelled by a spiked wheel, but was also provided with substitute runners. From the telegraph report it is not clear that the motor sledge was of much value to him, but the ponies, altho only four of them survived to the time when the dash for the pole was begun, were doubly useful, for they conveyed and fed the party. The narrative of this part of the expedition is best

given in the author's own words in the following extracts:

"The southern party—Adams, Marshall, Wild and I—with four ponies and a supporting party consisting of Sir Philip Brocklehurst and Messrs. Joyce, Marson, Armytage and Priestly, left Cape Royds on October 29, 1908. We left Hut Point November 3 with ninety-one days' provisions. The supporting party returned on November 7.

"We traveled south along meridian 168 over a varying surface, high ridges and mounds of snow alternating with soft snow. The ponies often sank to their bellies. In latitude 81 degrees 4 minutes we shot the pony Chinaman and made a depot of oil, biscuit and pony meat.

"On November 26 we reached the 'Discovery' expedition's southernmost latitude. The surface was now extremely soft, with large undulations. The ponies were attacked with snow blindness. On November 28 the pony Grisi was shot. The pony Quan was shot on November 30.

"Steering south and southeast, we were now approaching a high range of new mountains trending to the southeast. We found on December 2 the barrier influenced by great pressure and ridges of snow and ice turned into land. We discovered a glacier 120 miles long and approximately 40 miles wide, running in a south and southwesterly direction. The surface on December 6 was so crevassed that it took the whole day to fight our way 600 yards.

"On December 7 the pony Socks, breaking thru a snow lid, disappeared in a crevasse of unknown depth. The swingletree snapping, we saved Wild and the sledge, which was damaged. The party was now hauling a weight of 250 pounds per man.

"The clouds disappearing on December 8, we discovered new mountain ranges trending south and southwest. Moving up the glacier over the treacherous snow covering the crevasses, we frequently fell thru, but were saved by our harness and were pulled out with the alpine rope. In latitude 85 degrees 10 minutes we made a depot and left everything there but our food, instruments and camp equipment, and reduced rations to twenty ounces per man daily. We reached on December 26 a plateau, after crossing ice falls, at an altitude of 9,000 feet, thence rising gradually in long ridges to 10,500 feet.

"Finishing the relay work, we discarded our second sledge. There was a constant southerly blizzard, wind and drifting snow, with the temperature ranging from 37 to 70 degrees of frost.

"Finding the party weakening from the effects of the shortage of food and rarefied air and cold, I decided to risk making a depot on the plateau. We proceeded on January 4 with one tent, utilizing the poles of the second tent for guiding marks for our return. The surface became soft and the blizzard continued.

"For sixty hours during January 7, 8th and 9th the blizzard raged, with 72 degrees of frost and the wind blowing seventy miles an hour. It was impossible to move. Members of the party were frequently frostbitten in their sleeping bags. We left camp on January 9 and

reached latitude 88 degrees 23 minutes, longitude 162 degrees.

"This is the most southerly point ever reached. Here we hoisted the Union Jack presented to us by the Queen. No mountains were visible. We saw a plain stretching to the south.

"We returned to pick up our depot on the plateau, guided by our outward tracks, for the flags attached to the tent poles had been blown away. Less violent blizzards blowing at our backs helped us to travel from twenty to twenty-nine miles daily. We reached the upper glacier depot on January 19.

"The snow had been blown from the glacier surface, leaving slippery, blue ice. The descent was slow work in the heavy gale. The sledge was lowered by stages by the alpine rope.

"On the morning of January 26 our food was finished. It was slow going. Sixteen miles were covered in twenty-two hours' march. The snow was two feet deep, concealing the crevasses. We reached the lower glacier depot in latitude 83 degrees 45 minutes on the afternoon of January 27. There we obtained food and, proceeding, reached the Grisi depot, named after the dead pony, on February 2.

"There was no food remaining. Wild was suffering from dysentery, the effect of horse meat. The entire party was prostrated by dysentery on February 4 and were unable to move. The dysentery continued eight days, but, helped by strong southerly blizzards, we reached Chinaman depot on February 13. The food had again run out.

"The blizzards continued, with 50 degrees of frost. We discarded everything except our camp outfit and geological specimens and on February 20 reached the next depot, all our food being finished.

"Helped by the southerly blizzard, which was accompanied by 67 degrees of frost, we reached on February 23 a depot on Minna Bluff, which had been laid by the Joyce party in January. Here we received news from the ship.

"We made a forced march of twenty-four miles on February 26. Marshall was suffering greatly. I left him in camp in charge of Adams while Wild and I made a forced march to the ship for relief. I returned on March 1 with a relief party and all reached the ship at Hut Point on March 4 in a blizzard.

"The total distance of the journey, including relays, was 1,708 statute miles. The time occupied was 126 days. The main result is a good geological collection. We found coal measures in limestone. We also made a complete meteorological record. We discovered eight distinct mountain ranges and more than a hundred mountains.

"We surveyed and photographed many glaciers and found signs of former great glaciation. The South Pole is doubtless situated on a plateau 10,000 to 11,000 feet above the sea level. The new mountains' altitudes range from 8,000 to 12,000 feet approximately. The violent blizzards in latitude 88 degrees show that if the so-called 'polar calm' exists it must be small in area or not coincident with the geographic pole."

Other Results of the Expedition

Besides the Southern expedition under Lieutenant Shackleton toward the geographical pole, another party of four, under Prof. Edworth Davis, was sent northward to the magnetic pole. They left October 5th, 1908, with provisions for ninety-three days, hauling two sledges by relays, the total weight being 600 pounds per man. They crossed the Nordenskiöld barrier, keeping mostly on the sea-ice, and followed up the Drygalski glacier. Beyond the mountains there was fair traveling over an inland plateau at an altitude of about 7,000 feet. The magnetic pole was located in the vicinity of latitude 72 degrees 25 minutes and longitude 154 degrees East. On their return they were cut off by the breaking up of the sea ice. Their provisions ran out and they were living on penguin and seal, when they were discovered by the "Nimrod" returning from Cape Washington. The coast was triangulated with the theodolite from Mc-

Murdo Sound to the Drygalski glacier. In March, 1898, a party under Lieutenant Adams ascended Erebus, the most southerly of active volcanoes. The active crater, one-half mile in diameter and 800 feet deep, was ejecting furious volumes of steam and sulfurous gas to a height of 2,000 feet. The old crater at an altitude of 1,100 feet was chiefly filled with large feldspar crystals, pumice sulfur. The temperature was 50 degrees below freezing and for thirty hours the party was held up by a blizzard. Sir Phillip Brocklehurst had both feet frostbitten, and it is necessary to amputate one of his toes. The auroral displays were exceedingly brilliant thruout the winter. The fossil radiolaria found in the glacial boulders, the coal and petrified wood indicate that formerly the climate of the Antarctic region was very different from what it is now. Lichens, mosses and sea weed were abundant in some places and rotifers and other forms of microscopic life were found in the fresh lakes.

The Stanford Alumnus

SEQUOIA

The Stanford Press

LELAND-STANFORD-JUNIOR-UNIVERSITY

by EDWIN E. SLOSSON

NOW THAT Stanford University is completing her eighteenth year we may regard her as having attained her majority, so she is to be judged, like her sister universities, by attainments instead of promises. It is necessary to adopt this point of view at the outset, in fairness to Stanford, for, like all grown-up infant prodigies, she suffers from a persistence of the implied claim on the public for admiration and indulgence on the score of youthfulness. It is better therefore to make her acquaintance without an introduction, without hearing the gossip about her beauty, wealth, and romantic origin, because then it is more likely to be a case of love at first sight.

About Stanford University the general public has heard too much and knows too little for fair appreciation. We all of us have a rather definite conception of Yale and Princeton before we see them, and if when we do see them we are disappointed, it is in the same way that we are disappointed at Niagara Falls and Cologne Cathedral, because they are too

much like what we expected them to be. But Stanford is so apt to be unlike one's preconceived notion of it that it is better not to acquire one. Therefore I would advise those who intend to visit Stanford not to read about it. The following is written solely for those who have been there or do not anticipate going there. For the most favorable impression, in fact, the stranger should approach it without even knowing there is a university there. We may imagine the stranger getting off the train at Palo Alto because the name took his fancy and then turning his back on the town and striking out for the tall timber, westward of the track, to see if the name be justified. Straight into the woods the road goes, straight toward the mountains, beyond which is the sea. If the stranger be a New Yorker it is advisable for him to take one of the carriages offered him at the station on account of the pleasurable shock that he will receive when he comes to pay for it. The other alternative is to walk, for no trolley or automobile is allowed to profane the favorite drive of this lover of fine horses. It is better to walk anyway, for it gives one the sense of adventure, this penetrating into an un-

GREAT AMERICAN UNIVERSITIES.—This is the fourth of a series of articles on the present condition and future prospects of the larger universities of the United States by one of the editors of THE INDEPENDENT. The dates of publication of these articles are as follows:

known world, unlike anything he has seen elsewhere, least of all like any other university. Certainly the young men in corduroys and sombreros walking past him with a loping western gait do not remind him of the college seniors he has known. Even the trees that hedge in the road on either

saics glowing in the sun, in accord with the colors of the tropical plants, the foothills and the sky, and all with an indescribable air of peace, of spaciousness, of leisure, of freedom, an air of the farm and the frontier, anything but an academic air. The stranger might take it for the hacienda of some lordly Spaniard of artistic ambitions, or for the retreat of some new religious sect, or for a socialistic community designed by William Morris, but not for a university, least of all a school of modern science and engineering.

The mere sight of Stanford University is broadening to the mind, because its aspect is symbolic of its break with traditionalism. One of the reasons why the word "academic" is coming to be an opprobrious epithet is because it is associated in the popular mind with peaked windows and gargoyles. The Gothic tradition is commonly defended because it indicates the de-

scent of the modern college from the medieval cloister. But the Stanford style also preserves this hint of ecclesiastical ancestry. It only taps the stream of Christian architecture nearer its source, getting its inspiration direct from Rome and Byzantium. It is a branch that has kept the southern course, not the roundabout route thru the foggy lands of Northwestern Europe.

But Stanford hardly fulfils the promise of its unconventional architecture and environment. The visitor feels disappointed when he enters one of the buildings and finds teachers and pupils going thru the same old lessons in the same old way as everywhere else, when there are so many different things needing to be taught and so many different ways of teaching them. It shows the power of educational heredity that a university unique in its origin should grow up to be so much like its older sisters.

Stanford University during its formative period was free from most of the restraints of other institutions. Unlike the State universities it was not subject to the caprices of a legislature or bound by its duty toward all the people of a certain

WHAT THE EARTHQUAKE LEFT OF THE LIBRARY

side look strange and semi-tropical, and he can only guess at the names of some of them, giant eucalypti, with tattered raiment hanging from their naked limbs; date and fan palms alternating; twisted live oaks on the foothills, and on the distant ridge a fringe of tall, separate trees altogether out of proportion and spoiling the perspective. If he wanders to the right he gets into a cactus maze and comes to a mausoleum. If he turns to the left he finds a rough red wood building like a hunting lodge, and in the clearing around it men and boys are playing tennis or baseball. It does not look at all like the Colonial Club, of Cambridge, or the Nassau Club, of Princeton, so he does not suspect its purpose. Just beyond is an empty dome suspended like Brunelleschi's in air, the building beneath it having vanished. Finally, straight ahead he sees across a lawn and flower beds a long low arcade, a line of buff sandstone buildings surmounted by red tiled roofing, a church top and a factory chimney in curious juxtaposition; bronze and marble statuary, modern and ancient, realistic and symbolic; façades covered with mo-

district. It was held by no dead hands of charters, testaments and traditions. It had no alumni body to dominate it. It was not dependent upon the fees of stu-

liberal and progressive. They selected as president a man of powerful personality, with independent and radical views on education, and gave him an amount of

DAVID STARR JORDAN.
President of Leland Stanford, Jr., University.

dents, for it gave them all and askt of them nothing. It was not crampt into a few city blocks; it had 55,000 acres to grow in. It had a larger free endowment than any other university ever had. The ideas of the founders were on the whole

authority unprecedented even among American college presidents.

But President Jordan did not create a university in his own image. Whether it was because as an evolutionist he did not believe in that mode of creation, or

whether, as an advocate of freedom and individualism, he was reluctant to make use of the necessary means to mold things in accordance with his personal ideals; or whether he found his material, his financial, professorial, student and climatic material, too intractable to be so molded, it would be presumptuous for me to guess. One would have a fairly correct idea of Harvard from seeing and hearing President Eliot, or of Columbia from President Butler, or of Johns Hopkins from President Remsen, but he would not get acquainted with Stanford University by attending a commencement or inauguration at which President Jordan was the chief speaker. It is necessary to call attention to this because the number of those who have visited the university are few compared with those who know its president. To take a few examples, President Jordan is much in demand all over the country as a lecturer. He has the ability and inclination, both rare among scientific investigators, to write

books and magazine articles in a popular style on timely topics. He is even capable of dropping into poetry in a friendly way. Stanford University, on the contrary, has no extension department, gives no popular lecture courses, and is not remarkable for its literary productivity. President Jordan has done a good deal of public service both at home and abroad, as, for example, by his work on the Fish and Seal Commissions. His faculty do little public work in comparison with the State university faculties, and it was Mrs. Stanford's desire that they be prohibited from engaging in outside occupations, lest they should neglect their teaching. It is hard enough to get first-class men in engineering even when they are allowed to carry on professional work, and this is in most schools regarded as rather an advantage, because it keeps them efficient and up to date. And finally, President Jordan is an earnest advocate of the importance of original research, and he backs up his preaching by

MEMORIAL CHURCH BEFORE THE EARTHQUAKE

his example. No other university president of those here considered has, I believe, done as much scientific investigation while in the office. It is by this test that he would have a university judged.* Now I realize that I am incompetent to judge Stanford or any other university by this criterion. My incompetency has been forcibly and frequently called to my attention of late in the correspondence resulting from such timid criticism as I ventured upon in discussing Harvard, Yale and Princeton. The evaluation of contemporary contributions to knowledge is the most delicate and difficult as it is the most important of critical tasks. The Nobel Prize Committees find it necessary to spend about half their income every year in determining who are worthy to receive the other half. And they only take into consideration five departments of human progress.

Still, having begun these articles by expressing my personal opinions on the question of productive scholarship, I suppose I must in fairness continue to express them, however valueless or misleading they may be. So I will say that I was disappointed in not finding Stanford University so superior to the others in this respect as I had expected it to be. I had assumed that the president would have chosen his faculty primarily for their ability as investigators, for altho he has never underestimated the value of good teaching he has always insisted that the best work in instruction could only be done by those who were zealously engaged in the advancement of human knowledge. Then, too, I remembered Prof. William James' opinion of Stanford,† that "the advantages of the place for steady mental work are unparalleled." It had seemed to me that the men at Stanford being in receipt of a comfortable income—the salaries of the professors there are \$4,000, higher than anywhere else except Columbia and Harvard—not overburdened by the number of students; protected from the cares of outside business; fairly well supplied with library and laboratory facilities; unhampered by lack of room; not obliged to stump the State for the purpose of drumming up students or to make "grand-stand plays"

for the benefit of the Legislature; living in a quiet country place, having easy access to a large city, but untroubled by its noise, distractions and obligations; situated in a region of exceptional beauty and enjoying an equable climate thruout the year; men in such an environment were, it seemed to me, deprived of most of the excuses which I had heard alleged at other institutions to explain why their literary and scientific productions are not more numerous or of a higher order. This unfortunate deprivation subjects the faculty of Stanford to criticism because their achievements in these lines are not so superior to other universities as their presumed advantages are greater, a criticism which is doubtless somewhat unjust because the conditions to which I have referred are, after all, probably not the determining factors in scholarly productivity anywhere.*

Then, again, the professors at Stanford are at something of a disadvantage in not being judged by their own achievements, but are naturally compared with the first faculties of two other universities similarly founded within our memory, Johns Hopkins and Chicago. But it should be remembered that the unique group of men whom President Gilman gathered around him in the seventies was not at that time any more distinguished than the Stanford faculty is now. The University of Chicago was started about the same time as Stanford University, but Presidents Harper and Jordan adopted opposite policies. President Harper, altho he had a much smaller endowment, paid unprecedentedly high prices for men of established reputation in Europe and America, regardless of age, race, color or previous condition of servitude: "headliners" we used to call them. President Jordan, on the contrary, selected young men of promise, mostly those he had personally known in Cornell and Indiana. This difference in policy was, no doubt, partly dictated by circumstances. The pull of the great city is felt as strongly in university circles as elsewhere, and to Eastern professors who

*To be exact on this point the last annual report gives the names of 49 members of the faculty as having published something during the year. Judging by the titles, about 38 of them or 17 per cent of the faculty are engaged in research of some sort. This is about the same proportion as at Yale.

*University Building. *Pep. Sci. Mon.*, 61, p. 330.

†"Stanford's Ideal Destiny," *Science*, May 23, 1900.

thought they were making a great sacrifice in going to a frontier town like Chicago, residence in Palo Alto, Cal., was unthinkable.

President Jordan is popularly reputed to choose his men "by intuition." If this is the case it seems to work as satisfactorily on the whole as a more scientific process of selection, for he has made few mistakes considering the uncertainty of all forms of dealing in futures. It is sufficient to mention the names of Branner, Kellogg, Campbell, Heath, Hempl, Gilbert, Franklin, Young, Peirce, Fisher, Veblen, Cooper, Adams, Starke, McFarland, Ryan and Durand to prove that the faculty is not composed of mediocrities.

Stanford used to have the youngest faculty of any university in the country. Now the average age of its professors, 45.8 years, is a little above the average of Princeton, 45.4 and Columbia, 45.5. Curiously enough its only rival on the Pacific coast has the oldest faculty of any of the leading universities, 51.6 years.*

In many other ways the two great California universities are in contrast. The University of California has a long list of humanistic, scientific and technical publications. It extends its influence thruout the State by means of lecture courses. It is closely connected with the public school systems. Its summer school is large and prosperous. It sends abroad archeological and scientific expeditions. It has been an important factor in the remarkable agricultural development of California. And, in addition to all this, it takes care of twice as many students as Stanford altho its income is less.†

President Jordan, with a frankness characteristic of him but rare in college presidents, admits that the State University "has already gone much further in the realization of the ideals of Governor Stanford" in regard to graduate and technical work "than Stanford University has yet gone."‡

The future development of Stanford will be in the increase of university as distinguished from collegiate work. The foundations have now been laid, and laid broad enough for a high superstructure. The faculty have been

given clearly to understand that a young man stands no chance of promotion to an associate or full professorship without clear evidence of the power and disposition to carry on independent investigation or advanced studies of similar nature which will tend to make him an authority in some branch of his subject. Skill as a teacher, helpful personality, executive ability or long service, tho taken into consideration, are not held to justify promotion above the grade of assistant professor without thoro and therefore productive scholarship. If this policy is consistently enforced it will gradually transform the spirit of the university and will tend to divide the faculty into two classes, collegiate and university, the men whose chief ability lies in teaching being in the former class and the men who are pre-eminently investigators in the second.

This will pave the way for the next step which President Jordan regards as essential in the development of the true American university, that is, the separation from it of the junior college, as the freshman and sophomore years have come to be called. I quote from the most recent public expression of his views:*

"The American universities are not yet universities. They are destined to become such, but not until as a first step the first two years, the students and the teachers of the junior college are relegated to the high school or the college. To abolish the president, or to cut off his salary, to change his powers materially, or to find some other type of man, would not affect the case materially, so long as the teaching of boys is regarded as university business. This is college business. The college is a co-operating organism far more than the sum of all its parts. It has moral duties, more vital than its duties to research. So long as the institution tries to carry this double function of college and university in the same buildings, with the same staff, the present difficulties must persist. In this same period we must bear the double criticism that our professors do not do their part in the advancement of science, and on the other hand that they talk too much of research and give too little attention to mental drill and to the moral and social development of boys under their charge. But in any case half our academic staff are in the nature of things shut out from *Lernfreiheit* as half the students are not ready to attach any real meaning to *Lernfreiheit*."

There is much to indicate that President Jordan is right in regarding this as

* *University of California Bulletin*, 1907, No. 1.

* "The American University and the College Problem," THE INDEPENDENT, November 5, 1908.

the true line of evolution. The professional schools of all kinds are demanding one, two or three years of collegiate work for entrance; most of them seem likely to settle on two. In almost every university there is detectible some hint that here is a natural cleavage plane. It is coming to be generally agreed that freshmen and sophomores require a different sort of training from juniors and seniors. The only question, therefore, is whether they cannot get this better in different institutions than together. It causes no end of trouble to attempt to keep a part of the student body under a different disciplinary régime from the rest. Does a boy get a chance for personal development in a crowd of two thousand or five thousand—it will soon be ten thousand in some places—other boys? There can be but one president of a class, but one editor in chief of the daily, but one champion orator, but one speediest sprinter, and but one star pitcher, however numerous the students. Consequently, the crowd on the bleachers gets bigger year by year.

Segregated in colleges of, say, two hundred to five hundred, they would receive more individual attention and would be less liable to be infected with the mob spirit. They would be under the instruction of men who were primarily teachers by temperament and training, instead of men who regarded students as thieves of their time and so hindrances to their advancement. The position of a professor in a junior college would be one of more dignity and as much salary as if he were in a large university, where he would be overshadowed and regarded as a failure because he did not neglect the important work which he is especially qualified to do in order to attempt what others can do better. Each great university would have a dozen or so of affiliated junior colleges in various parts of the country, preferably outside the large cities, each with a faculty of about thirty and a library of about 30,000, competent to prepare for one or more professional schools. These small colleges would have an opportunity of trying new methods of education impossible under present conditions, and they could adopt such restrictions and discipline as they thought best without being charged with narrowness or sectarianism.

Whether this is the ultimate solution of the problem of the undergraduate or, if it is, whether the time has come for it, are questions that can only be decided by experiment, and for trying this experiment no other university is so favorably situated as Stanford. The State universities must wait upon the high schools. The other endowed universities would lose a large part of their revenue if they dropt the two lower classes. But Stanford, requiring no tuition, would save money by it. The high schools of California are enterprising and already look forward to adding a fifth and sixth year to their course. There are some religious colleges of high standing in the State, and their influence would be extended by such an arrangement. Then, too, the Stanford estate is large enough so that

THE DISTRIBUTION OF STUDENTS AT STANFORD, 1908.

a model junior college could be established upon it seven or eight miles away from the University.

At present President Jordan has against him faculty, trustees and alumni, but presidents have been known to overcome such obstacles as these. In the interests of American educational progress it is to be hoped that he will have an opportunity to carry out his plan, for such experimental evidence as we have is ambiguous. It was projected by President Harper and abandoned, but I am not sure that it was due to any inherent defect in the plan. Johns Hopkins, which was started with substantially this idea,

and for thirty years had only three years of undergraduate work, has lately been forced, in self preservation, to add a fourth or freshman year. Plans for drawing a clear dividing line in the middle of the college course were thoroly discust in Columbia University six years ago,* but the question was not considered purely on its merits because the suggestion that the bachelor's degree be given at the end of the first two years introduced an unnecessary and exciting complication into the discussion. President Jordan suggests the degree of "Associate in Arts" be granted at this point, as in the University of Chicago, but he does not attempt to decide what would become of the bachelor's degree in such a rearrangement, I presume, because he does not care, judging by what he has written on this subject:†

"The college degree is an incident in scholarship a childish toy so far as the real function of building up men is concerned. Prizes, honors, badges and degrees—all these have no necessary place in the machinery of higher education. If our universities had grown up in response to the needs of the people, not in imitation of the colleges of England, we should never have been vexed by these things, and never felt any need of them."

He would find more persons to agree with him now than at the time these words were written, for in the present re-

organization of collegiate courses in accordance with the demand for higher professional education the traditional system of degrees is breaking down all along the line.

Stanford is distinguished from other universities in that it does not want more students. It has all the women its charter allows it to have, five hundred, and it has nearly all the men it can do justice to with present funds and equipment, that is, about a thousand. It is therefore in a unique position to dictate what students shall enjoy its advantages. It has a waiting list of women and will soon have a waiting list of men. It will then be able to pick out its students, like colts for the Derby, years before they are qualified to enter and to watch their progress and tendencies in the preparatory school.*

Now that Stanford is practically full, I cannot refrain from quoting what was said about it, when it was founded, by the *New York Mail and Express*, for it is delightfully characteristic of the Eastern attitude toward Western education:

"It is about as much needed as an asylum for decayed sea captains is needed in Switzerland. The professors for years will lecture in marble halls to empty benches."

Since the aim of the Stanford authorities is to get only the best quality of stu-

dents, it is interesting to see what kind of a system of selection they are working out and applying. We may most conveniently compare its sifting process with that of Princeton, for these two institutions are most nearly alike in being endowed, mainly collegiate and situated in the country not far from large cities. They are of nearly the same size and more concerned with getting better students than more of them. Princeton practically excludes from the university: (1) persons who have not studied Latin; (2) who have not \$150 in cash above living expenses; (3) who did not answer a certain proportion of questions on certain subjects on certain days; and (4) who do not belong to a particular race or sex. Stanford, with the same object in view, namely, the elimination of the unworthy, does not apply a single one of these restrictions—much more than half of its students would be cut out if they were applied—but it has a very different set of rules of admission, which if applied to Princeton would materially reduce its attendance, I would not venture to say how much. The Stanford Committee on Admission is expected by the Academic Council to exclude, as far as possible, three classes of applicants:

(1) Persons of mediocre ability, who give no positive promise of becoming genuine students.

(2) Persons of good ability, but not mature or serious minded, and not likely to make good university students.

(3) Persons of doubtful character, or frivolous disposition, or whose interests are likely to be absorbed by society, athletics, etc.*

It is not desirable to decide *a priori* which of these is the better way. The question of the proper methods of selection is so unsettled that it is a good thing to have these two tests of quite different methods running at the same time. There are also other institutions which do not believe in such strict selection in either of these forms. President Eliot does not object to the presence of "the leisure class" in the university, and he does prescribe certain subjects for entrance. The State universities are obliged to admit all comers who comply with certain minimum requirements, even tho it is well known in advance that they

THE NUMBER OF STUDENTS AT STANFORD UNIVERSITY SINCE ITS OPENING.

are "not likely to make good university students."

Having decided on the particular kind of students it wants, Stanford is now gradually working out its methods for finding them wherever they may be. It has practically discarded the formal examination as an admission test. For the last two years only 3 per cent. of the matriculates have been admitted by examination. The wisdom of this is quite generally conceded, for comparatively few American universities now rely entirely on admission examinations. I have heard insurance men say that their company would do better if it made out a policy for every man who past the office window on the street during the day than if it took only those passing the medical examination, and I have heard university men make similar remarks about entrance examinations. Stanford

*Fourth Annual Report, p. 73.

from the first abandoned the attempt to dictate the course of the secondary school, and now regards its seventeen years of experience with this policy as having proved satisfactory. No particular subject or correlation of subjects is required for entrance. Any high school course of four years is accepted, provided the work has been well done and includes the studies necessarily preparatory to the course which is to be taken in the university. This is another radical concession to the tendency of the times. It is a frank recognition of the right of the secondary schools to adopt their own methods of education, a right which they are beginning to claim all over the country and soon will be able to establish and enforce.

Thirdly, Stanford is losing faith in the certificate system on which the State universities rely. It does not find that the diploma of an accredited high school, even accompanied by a perfunctory recommendation from the principal, insures the proper kind of intrants. The Admission Committee is continually asking for fuller details of the life, work, intentions and disposition of potential students. It may in time come to the point of taking as much pains in searching out a good scholar and getting him into the university as a fraternity does in discovering a congenial brother or the athletic manager a future fullback.

The Admission Committee has not yet constructed the new machinery to replace that which it has sent to the scrap-heap, but it evidently has a clear and somewhat original idea and will eventually develop it in a practical form.

But after the student is admitted to Stanford he is not, as in some of the Eastern universities, foreordained and predestinated to be graduated. The most rigid part of the process of selection is yet before him, a struggle for existence presumably resulting in a survival of the fittest. This is what is called by the students "the flunking-out system." The Stanford ideal is the earnest, hardworking and efficient student. The university has no use for the boy who comes to enjoy a congenial club life, nor for the girl who strolls up to the campus at 12 dressed in her prettiest to take drawing. Delinquent scholarship brings suspension

at the end of the semester. In thus continually weeding out its students Stanford resembles West Point, but on the other hand it resembles Harvard in throwing upon the individual student the entire responsibility for attending to his daily duties. Stanford therefore attempts to combine characteristic features of "the college of discipline and the college of freedom," as President Pritchett calls them. Theoretically, the combination is an ideal one; practically, I am not sure that it works well.

Since we human beings cannot acquire the impersonal imperturbability of Nature, we cannot altogether imitate her process of selection. We have to take into consideration those who are dropt and go home in disgrace or discouragement, their college career interrupted and perhaps abandoned. And it is not at all certain that there is not some good material among those culls, some who might have been saved if they had a little more personal attention, perhaps a friendly word of warning at the right moment against idleness or dissipation. The new machinery of admission being, as I have said, not yet perfected, some students get in unprepared and are flunked out in spite of the hardest kind of work. The faculty at Stanford are not in as close touch with the students as they should be. An effort is now being made to rectify this fault of lack of personal attention by the appointment of an adviser to look after the first year students. This will undoubtedly do good if he is the right sort of a man, but I think it would be still better if every member of the faculty would make himself the "adviser" of a small group. I know some are doing this at Stanford, and I know, too, that their efforts are appreciated by their boys.

We might afford to disregard the fates of the dropt ones if it were evident that the flunking-out process resulted on the whole in a superior class of students. I was not able to convince myself that it does. I am not at all sure that the students at Stanford are as a class superior in earnestness and enthusiasm to the students at the State University. This, of course, is merely a personal impression and may be altogether wrong. It must be remembered, too, that the State Uni-

versity also is much more ruthless in flunking-out than most Eastern universities. But seclusion is traditionally supposed to be conducive to scholarly pursuits, so the students as well as the faculty at Stanford would be expected to be more studious than in the suburb of a great city, and one is naturally disappointed to find no appreciable difference in their favor.

Last year the number of students suspended at Stanford for delinquent scholarship was 232. The comparison between the men and the women and between the fraternity and non-fraternity students, as shown by the following table, is very instructive:

	Total number.	Per cent of failures.
Men	1,186	18.3
Women	552	2.5
Fraternity men	323	28.0
Encina Hall (Non-fraternity men)	350	12.5
Men living in town.....	368	11.4
Sorority women	125	3.2
Roble Hall (Non-sorority women)	112	3.6
Women living in town...	131	1.5

The percentage of failures among the students of both sexes living in the towns of Palo Alto and Mayfield is less than among those living on the campus. The relations shown by these figures are, I think, representative of American colleges elsewhere. I have not been able to get complete statistics, but I believe that the following rules will hold good generally and with comparatively few exceptions:

First, that there are fewer failures in scholarship among women than among men;

Second, that there are fewer failures in scholarship among non-fraternity than among fraternity men;

Third, that students may be classed according to scholarship by residence as (1) highest, those living at home, (2) those living in other private houses, (3) those living in college dormitories, (4) lowest, those living in fraternity houses.

If the third rule is true it ought to be taken into consideration by those who are urging the extension of the dormitory and fraternity system to include almost all of the students.

I have selected for the above table two groups of about the same size, the fratern-

nity men living in the sixteen chapter houses on the campus, of whom 28 per cent. were suspended last year, and the non-fraternity men living in Encina Hall, the college dormitory on the campus, of whom 12.5 per cent. were suspended. Encina is a large and somewhat noisy building with long corridors, not divided into entries like the new dormitories of Pennsylvania and Princeton. The chapter houses on the other hand are more secluded and more comfortably fitted up. Yet it appears that a student who goes into a fraternity stands twice the chance of failure. That this state of affairs is not the accident of a single year is shown by the accompanying diagram giving the complete record of the percentage of men suspended for the last ten years. From this it appears that the delinquencies of fraternity men have always been greater than those of the men of the university as a whole. In round numbers about half of the men who have been suspended belonged to fraternities, altho they have numbered only about a quarter of the masculine student body. The line of the non-fraternity delinquencies would, of course, run considerably below the dotted line, and that of the feminine delinquents would hardly show on this scale. It would be well if every university would keep a continuous record of the scholarship, delinquencies and non-political honors and triumphs of each individual fraternity or similar group of students, and publish this in graphical form. It would be much more interesting than the meteorological and seismographic records now kept, and might be equally useful in foretelling storms and earthquakes. Such published reports would strengthen the hands of those who are working to reform the fraternities from the inside. As it is now, a new student has no opportunity to learn the character and tendencies of the different fraternities. The rushing process does not enlighten him and he is likely to join one quite uncongenial to his tastes and disadvantageous to his future.

The fraternity men might properly be expected to stand higher than the outsiders in scholarship and achievements, for they are probably on the average superior in natural ability and are more apt

to come from wealthy and cultured homes. The fraternities naturally pick their men more for social qualities than anything else, so the brilliant and promising freshmen are likely to be taken and the stupid and unprepossessing ones left. Many persons argue that the advantages of fraternity life more than compensate for the sacrifice of classroom work, but even they would hardly hold that this sacrifice ought to be carried so far as to involve separation from the

tical (half a girl is a negligible quantity, surely). Yet the sororities, like the fraternities, are much more given to society than the Halls. One would think that the numerous social functions with the preliminary and subsequent conversations incident thereto would distract feminine attention from school work, but evidently they do not, at least not seriously enough to affect the record.

We are then driven to the conclusion that there is something about fraternity

Photograph by W. S. S. T. A. S.

ARCADE AND EAST TOWER

university, as in the cases we are considering. Among these advantages one that is rightly held to be important is the opportunity for entering the society of the place.

In this connection it is curious to observe that joining a sorority makes no such difference to a young woman as joining a fraternity does to a young man. Comparing the records of the women living in the six sorority houses on the campus with the non-sorority women living in the college dormitory, Roble Hall, we see they are practically iden-

life, but absent from sorority life, that is antagonistic to scholarship and conducive to infractions of discipline. What this is, it would not be proper for me, not being a fraternity man, to guess. But this conclusion is distinctly encouraging, for it shows that the difficulty is not inherent in chapter-house residence or in active participation in social and other college affairs. It can, therefore, be removed without interference with the fraternity system, and those who believe that the fraternities are irremediable and must be abolished by the universities or

the legislatures have not proved their case. That is, the sororities may save the fraternities. The feeling against secret societies in universities and high schools seems to me to have increased amazingly in the last few years all over the country, but it is not likely to injure them, for a movement has grown up inside the fraternities for the purpose of removing whatever rational ground there may be for objecting to them. The irrational prejudice against them is, of course, irremovable.

The problem of harmonizing predetermination and free will which absorbed the attention of medieval school men is not so much discusst by the school men of today as the similar problem, more practical but almost as interminable, of how to secure continuity of study without infringing on individual liberty. Stanford has a different solution from any of the three universities we have previously considered, the major subject system.* According to this system the student at entrance selects a department in which he is to carry at least one study for the four years; the rest of his work, two-thirds or more of the total, is freely elected from term to term, subject to the approval of the head of the major department. This scheme, like the others, looks very pretty on paper but works out in some curious ways in practice. The student is practically at the mercy of his major professor, and if he happens to be ambitious to build up his department or narrow or prejudiced in his educational views the student suffers. If the department is populous, the head professor has no time on registration days to look into the needs of the individual, and so signs cards as expeditiously as a Harvard adviser. The subordinate professors and instructors of a department are dependent for their students on the disposition of its head professor. Readers who are acquainted with faculty temperaments will see without explanation that this may cause difficulties. There are the usual questions as to the separation or combination of departments, such as whether those who teach hygiene or drawing are entitled to give major courses. Some

major professors give their students complete freedom of election, others practically prescribe all their work. In the undifferentiated college the major system appears to work satisfactorily on the whole, but in the professional courses of law, medicine and civil, mechanical and mining engineering it breaks down entirely, and I see no reason why the attempt should be made to include these necessarily prescribed courses for the sake of purely formal consistency. For example, the new course in mining engineering requires seventeen hours' work a week for five years, besides summer field work, and all of it is prescribed, even to the foreign language, which must be Spanish.

The medical department establisht this year requires a combined course of seven years, three of collegiate work and four of medical, the A. B. degree being conferred incidentally when the student has completed his first year of the medical. The last five semesters are to be given in San Francisco, where the university has taken over the Cooper Medical College.

The character of the work done at Stanford is best shown by the table on page 668, which gives the classification of the students by major studies for every year since its foundation. It must be remembered that the numbers given do not represent the total number of students taking work in a particular department, but only those registered for a four years' continuous course in that department. One interesting point not brought out in the table is the drift of the men and women toward the various departments characteristic of all free colleges.

This is a natural and partial segregation due to real differences in the taste, ability and needs of the two sexes, an entirely different thing from the segregation due to the arbitrary exclusion of women from certain classes or colleges in accordance with a masculine preconception of woman's sphere based on tradition, selfishness or speculative psychology. Under free conditions such as prevail in the State universities and, except for the restriction of the number of the women, in Stanford, the women choose their studies as they choose their occupations in the industrial world, taking

*For discussion of its workings in comparison with its rivals the fixed-group system, the group-elective system and the free elective system, see the Third Annual Report, pp. 71-89.

STUDENTS SUSPENDED FROM THE STANFORD UNIVERSITY, 1898-1908.

either whatever they can do best or whatever is the best they can do.

I quote from the last register the number of students of the class of 1907 electing major work in certain departments:

	Men.	Women.
Greek	0	1
Latin	1	18
German	4	16
Romance	0	8
English	2	18
Mathematics	1	5
Law	30	1
Engineering	44	0

According to this, the studies in which women excel are the languages and mathematics, while the men take mostly to law, engineering and, we may anticipate, medicine. The fact that in the humanistic departments, in which the women predominate, the work is easier than in the technological course, accounts in part for their fewer failures. With both sexes, of course, the occupational motive is influential in the choice. In such subjects as history and zöology the classes are more evenly divided. The tendencies shown in Stanford are, I think, characteristic of co-educational institutions generally.

The objection is sometimes raised that a large predominance of one sex tends to banish the other, or, as it is sometimes very amusingly put, the women "crowd out" the men from the classical classrooms. Doubtless there is something in this, but it is not worthy of consideration. There are students, as we all know, who will refuse to enter a class which contains, for example, a negro, a woman, a Jew, a Japanese or some person whom they individually dislike, but it does not matter at all what such students take.

No university can hope to do much for a person of such weak purpose and strong prejudices as to be deterred from taking a course that he or she needs or wants because it contains too many of the opposite sex.

Senator Stanford's educational ideals were fair and broadminded in this respect as in others:

"We have provided in the articles of endowment that the education of the sexes shall be equal—deeming it of especial importance that those who are to be the mothers of a future generation shall be fitted to mold and direct the infant mind at its most critical period."

And again:

"We deem it of the first importance that the education of both sexes shall be equally full and complete, varied only as nature dictates. The rights of one sex, political or otherwise, are the same as those of the other sex, and this equality of rights ought to be fully recognized."

In the hurry of the opening the university authorities took pains to have Roble Hall occupied on the same day as Encina Hall, altho it was still unplastered, so that the girls could never be called "interlopers," as they are yet at Cornell.

An unfortunate departure from the principles of the founder was made after his death by Mrs. Stanford in arbitrarily fixing the number of the women students at 500. If it were thought necessary to place any restriction on the number of women it would have been better to have made it a sliding scale proportionate to the population of the State or to the total number of the students. Still, so long as the students are, in accordance with Mrs. Stanford's wish, kept to about 1,500 or 2,000, it makes no particular difference. One curious effect of this restriction, which perhaps was not anticipated, but

which, as we have seen, is already becoming apparent, is that the severer entrance requirements imposed upon women tend to raise the average scholarship of the women above that of the men, which suffers by comparison. Some time along in the next generation, when five hundred of the brightest and most earnest women of California are competing with three or four thousand men of more ordinary character there will be sandlotters at Stanford howling for an exclusion act.

At present, however, no such feeling is conspicuous and the relations between the sexes seemed to me quite wholesome and normal. The boys who are in the period of adolescent aversion or completely absorbed in their work have nothing to disturb their peace of mind, and those who incline to some social intercourse find opportunities in formal calls and balls as well as in walks thru the beautiful grounds and picnics on the hills. These two classes of masculine students are called respectively "rough-necks" and "queeners." With that fluidity of language characteristic of campus life, these nouns are turned into verbs as in "I did too much queening last year, so I'm going to rough-neck it for a while." As a contribution to the science of col-

lege slang I may mention that what is called "queening" in the California universities, that is, the seeking of feminine society, used to be called "buzzing" in Kansas twenty years ago, and goes by the name of "fussing" in the Middle West universities at present.

The sororities at Stanford have a pan-Hellenic agreement to postpone inviting new girls to join for a month after the opening of the year. On "Bidding Day," which terminates this rushing season, the invitations are sent out, and as the new girls come out of the classrooms at noon and walk toward the Row there is great curiosity to see which chapter house they will enter, and this interest is not confined to their own sex. I happened to be the guest at several fraternity tables when the rushing was at its height and found their interest in the contest took the usual collegiate form. "Ten to one that Miss Brown makes Pi Beta Phi." No takers, evidently a foregone conclusion. "Who has money to put up on the big Smith girl?" "Even, Kappa Kappa Gamma against the field." "Done!" The betting, as ordinarily the case, seemed to be based on the supposed possession of private tips. Some young ladies to whom I was talking about it afterward exprest to me their high indignation at

THE UNIVERSITY DORMITORY FOR MEN.

the practice, "as tho we were horses," but I dare say—at this distance—that they were not quite so deeply displeased by the interest taken in them as their words implied.

The first students of Stanford, who, by the way, were an unusually bright lot of young people, realized that the university was short on history by one or two hundred years, so they set themselves to inventing student customs and manufacturing traditions. Their successors have kept up this tradition, and have shown something of the enterprise and resourcefulness which the world expects of Californians. The Student Affairs Committee found it necessary to insert a formal announcement in the last annual report to the effect that a single repetition of a proceeding does not establish a student custom henceforward unalterable forever.

The sombrero and corduroys affected by the senior men are picturesque, convenient and indigenous, which is more than can be said of the gown and mortarboard. The headgear of the juniors, the Plug-Uglies, shows an interesting development from the merely grotesque to the artistic and significant, reminding one of the evolution of imagery in primitive religions. I have heard that the smashed-hat custom came originally from the University of Leyden. At any rate it is common and peculiar to the California universities, but at Stanford it is mutating. Year by year the stiff white hats are more elaborately painted in colors according to the taste or, in the absence of taste, the caprice of the wearer; sometimes becoming veritable totem poles, epitomizing in symbol and legend his entire academic career, his fraternity, his athletic and scholastic triumphs, his adventures and his ambitions. I hope that the Stanford Museum is not neglecting to acquire some specimens, for they will be useful material for the anthropologist as well as for the college historian of the future.

Perhaps it was because I was looking for it, but it seemed to me that I detected more of literary and artistic originality, or at least of ambition, in the California universities than elsewhere. It shows itself in their parades, their dramatics and their annuals and magazines. Cer-

tain numbers of the *Stanford Sequoia*, the literary monthly, and the *Chaparral*, the "josh" magazine, have a typographical effectiveness which distinguishes them from the rest of my pile of student publications. As is natural, these journals have at times been more enterprising than judicious. The *Sequoia*, for example, in starting last year its series of articles on "What Is the Matter With Stanford," taking up each department in turn and exposing its deficiencies, is entitled to the credit for good intentions which is always granted to a muck-raking magazine, but it cannot be said that its policy proved advantageous to the university or to the academic career of its editors.

Still the desire for new things, whether it take the form of experimenting with flying machines, novel dramatic effects or strange philosophies, is one of the most encouraging signs in youth, and altogether too little scope for it is allowed in our educational system. For that reason I was pleased to find among my neighbors in Encina Hall a little group who were discussing theosophy and socialism on alternate Sunday evenings, devotees of Madame Blavatsky one week and of Karl Marx the next, and striving to find a suitable literary medium for this remarkable combination.

The students of California take naturally to outdoor spectacles, to parades and pageants. Why should not this tendency be encouraged and developed, instead of being allowed to run wild and make trouble? Could not the artistic instinct be combined with the athletic impulse, as once it was in Greece? Why need our sport be both brutal and ugly? Why should Stanford students imitate the games of a remote and foggy isle? Could they not invent a novel form of athletic contest which would be worth coming across the continent to see?

The demolition of their great gymnasium at the moment of its completion gives them a chance to try. I climbed up one afternoon to the top of a pile of sculptured rocks, a heap of broken capitals and lintels, of heads, limbs and torsos, looking like a Babylonian ruin. From this vantage point I could imagine a spectacle such as I had never seen, a whole school at open-air play, not forced gymnastics, but spontaneous move-

ment for the joy of movement, not drilled to mechanical manoeuvres, but trained to voluntary coöperation. The sunny plain, the lake, the woods and the hillsides seemed alive with people, old and young, youths and maidens, each group with its appropriate part to play, each person with all his faculties engaged. It seemed half a pageant and half a game, spectacular and yet competitive. It was on a California scale, in tune with the big trees, appropriate to Palo Alto and possible nowhere else, on an athletic field of 9,000 acres, miles of rough running, mass plays in three dimensions up and down the steep hillsides. And there was music of many instruments, timed to the play, and in-

a new form, answering each other, challenging from opposing hillsides. I could not follow the game, not knowing the rules, but I could see that it brought into use every muscle and gave scope at unexpected moments to the most diverse individual talents. The young men were utilizing all their strength and endurance while the young women were neither their competitors nor imitators, but played a part of their own calling more for agility and finesse. The men were not dressed in the ugly or ridiculous costume we associate with athletics, but artistically and appropriately, evidently with some individual freedom which found expression in the fanciful and the fantastic. The girls ran like the Winged

THE RUINS OF THE GYMNASIUM.

spiring the players, and from the scattered groups of those who were for the moment idle came songs, a rhythmic chanting, apparently a musical development of the old drilled rooting. These choruses, while waiting their turn to come into the active game again, sang songs, Stanford songs, outdoor music of

Victory, free-limbed and free-bodied, their robes fluttering behind them, seeming to hasten rather than to impede their flight. Theirs was not the dull uniform of the gymnasium, but bright and varied as the flowers and leaves. They were mostly bareheaded, with streaming hair, and I noticed they did not stop every few

minutes, as they do in basket-ball, to pick up shed celluloid. There was in the game an element of pursuit and capture, reminding me dimly of some tribal custom, a suggestion of symbolism which gave a deeper meaning and undefined interest to the play. The maidens played the part they play in life, the triple role of spectators, participants and prizes. None but the brave deserve the fair I saw exemplified as in a tourney or folk-game.

I turned my Kodak at the scene and preest the button. I realized that it was imaginary drama conjured up by the stage setting, yet I remembered reading an article* that Dr. Jordan wrote not many years ago, but when he was very much younger than he is now. It purported to be an account of a seance of the Astral Camera Club of Alcalde on April 1st, at which a photographic plate had been placed in the center of the circle and each member fixt his mind upon it and thought of a cat. The experiment was successful in demonstrating the influence of mind over matter, but the resulting photograph was very confused owing to the fact that each person had thought of a different kind of a cat or of one in a different position. The article excited a great deal of discussion at the time, and I presume Dr. Jordan is still explaining it to anxious correspondents whose intelligence he had overestimated. But my imagination was apparently not strong enough to reduce the silver bromide on this film or else the effect was counteracted by a plunge into reality. For as I climbed down from the ruins I went into the surrounding woods and came out at a large wooden grand stand on which a crowd of idle students were sitting with their elbows on their knees, watching fifteen men going thru some mechanical exercises. They were accoutred in plastrons, leathern greaves and comic masks with big rubber noses, and all they did was to form in line, and then at a word of command rush forward and fall down in the dirt on top of a football, this over and over again, so spending all the afternoon "play period." And I knew that somewhere around the neighborhood, behind some hedge, was a group of young women, solemnly engaged in a similar absurd occupation.

conscientiously working at manly sports in an unmanly way. I think it was the feeling of despair and skepticism of any improvement in athletics, induced by this, which fogged the films in my camera, so I cannot present as definite a plan of reform as I should like, for how can a man develop a faint mental impression in the light of common day?

Young as Stanford University is it has had a stormy and exciting career. A glance at the curve of attendance will show something of its ups and downs, quite unlike the level or smooth upward slant of other universities. It has no sooner got out of one difficulty than it was into another. It has been four times shaken to its foundations, by a financial, a political, a geological, and a moral earthquake. In the first it seemed likely to lose its money; in the second its faculty; in the third its buildings, and in the fourth its students. Since it has successfully weathered all these catastrophes, its future is assured, for what other arrows can its evil genius have in his quiver?

The first shock came in 1893, only two years after the university was opened, when the United States Government laid claim to the Stanford estate. From being the richest university in the world it was like to become the poorest. But by Mrs. Stanford's efforts the case was pusht thru the courts to a final decision with unusual rapidity. The United States Circuit Court in June, 1895; the Circuit Court of Appeals in October of the same year, and the United States Supreme Court March 2, 1896, all decided in favor of the university. But for six years the funds of the university were tied up, and it was only by real personal sacrifices on the part of Mrs. Stanford that it was kept from closing its doors. She did what Queen Isabella only offered to do, she sold her jewels, and whatever else could be converted into ready money, and cut down her own household expenses to pay the salaries of the professors. Most of them stood stoutly by their posts, altho no assurance could be given them of another term's tenure. Even when the business office sent around a note asking "How much money do you have to have the first of the month to settle your grocery bill?" they did not lose courage. Distressing as were these times, yet there are those who look back upon them as

*"The Synagogue," Pop. Sci. Monthly, 12, p. 597.

Stanford's happiest period. For there was a feeling of solidarity and loyalty that has somehow since been lost. President, faculty and students were brought closer together in mutual co-operation and unselfish sympathy than they are now in a time of ease and prosperity. They had been summoned from all parts of the country to the Stanford stock farm by a wave of the golden wand, and they had no common heritage of traditions, no community of sentiment, no attachment to the university, but these developed under the stress of this period. A feeling of real gratitude and affection toward Mrs. Stanford sprang up when faculty and students came to realize that the founding of the university was no millionaire's caprice, but a sincere and lofty purpose.

The second shock to Stanford was the Ross affair in 1900. It is not necessary for me to enter into the discussion of the rights of this historic case, but only to consider its effect on the university. The publication by Mrs. Stanford in her address of April 25th, 1903, on "The Right of Free Speech,"* of much of the correspondence between herself and President Jordan makes sufficiently plain her motives for urging the dismissal of Professor Ross. All would agree with her in holding that a university should be kept free from partisanship and sectarianism, and that professors should not take too active a part in politics, but it is evident from her defense that her views of the safe and proper limits of professorial activity are much too narrow to be imposed upon a great university without seriously hampering its power and usefulness in the world. She gives the reasons which led her to believe that Professor Ross was too indiscreet and partisan to be a proper man for the place he held, in which opinion President Jordan came reluctantly to concur. The publication of his free silver pamphlet four years before had offended her sense of propriety, and she lost all patience with him when she read in the *San Francisco Call* that he had delivered a speech at an anti-Japanese mass meeting in which he said:

"And should the worst come to the worst it would be better for us if we were to turn our guns upon every vessel bringing Japanese to our shores rather than to permit them to land."

This passage, I understand, was repudiated by Professor Ross, and is not to be found in his manuscript.

The dismissal did not injure the reputation of Professor Ross, but it did injure the reputation of the university. He was immediately taken into the University of Nebraska and is now at the University of Wisconsin. Professor Howard, who left at the same time on his account, went to the University of Chicago. But I find that there still lingers in the minds of university people generally a certain suspicion against Stanford, a suspicion I believe to be unjust, as I see no reason for thinking that freedom of speech is unduly restricted. Certainly Professor Veblen, who has recently gone there from the University of Chicago, says things quite as shocking to conservative sensibilities as Professor Ross ever did, though on account of the cryptic language in which they are couched they are not likely to be circulated in a campaign pamphlet with cartoons.

The third earthquake, the literal one, occurred on April 18th, 1906. The visitor at Stanford will have this date impressed upon his mind for punctually at 5:13 a. m. on the anniversary he will be waked by the sound of gongs and bells and will be forced to join the parade in such clothing as he is able to get on before his door is broken in. For this also established a "student custom." The Portolá fault, the slipping of which caused the earthquake, lies about five miles westward of the university. The library nearly completed, which was to be one of the finest buildings of its kind in the world, was demolished, except for the great dome on its steel supports, and the gymnasium just finished was also a complete wreck. Both these buildings were of the general type familiar to us in State capitols. The earthquake also showed its strong prejudice against architectural inharmonics by knocking down the triumphal arch and tearing off the flying buttresses and spire from the Memorial Church, while leaving intact the arcaded quadrangles in the Spanish mission style.

*Trustees' Series No. 6. For the pros and cons at the outbreak of the controversy see articles by C. F. Lummis and E. F. Adams and the report of the investigating committee of American economists, *THE INDEPENDENT*, Vol. 53, pp. 313, 508, 540, 1431.

In the selection of which statuary should be taken and which left the earthquake showed a less discriminating taste. Altogether Stanford lost about \$3,000,000 by the earthquake, a loss which would have put some first-class universities out of commission. As it is Stanford is still seriously hampered, for only \$500,000 out of its entire income can be used for university purposes until the buildings are restored. The outside world, hearing the total endowment of Stanford University, estimated at \$33,000,000, wonders why more is not accomplished with such a sum. The effect of the unprecedented generosity of the Stanfords toward education is very seriously impaired by the manner in which it is administered. Among both students and faculty, recipients of this bounty, gratitude is obscured by a feeling of irritation against what seems to them pettiness and injustice that cannot be entirely concealed even from a stranger. Rents and restrictions on campus houses are building up the outside towns. The dining room in Encina Hall is abandoned, and at the Stanford Inn board has to be cut down to its lowest limit in order to make up the rent. As a consequence many of the students prefer to walk long distances to get their meals outside. This division of the faculty and student body into two groups residing apart destroys the unity of campus life which is one of the chief advantages of a small university. Considering that no other endowed university gives so much for nothing, I think this feeling must be due to a lack of appreciation of the financial difficulties of the institution. If so it could be easily removed by a policy of greater publicity on the part of the trustees. The charter requires an annual financial report to be made to the Governor, but none seems to have been published. I may cite the example of Prince-

SENIOR.

JUNIOR

SOPHOMORE.

FRESHMAN

ton, which has for the last few years given out full details of its investments, income and expenditures.

The fourth earthquake occurred a year ago. It stirred up a good deal of dust, but it was merely a case of moral house clean-

ing such as many another university needs as much and does not seem likely to get. Stanford had had the misfortune to be uniformly successful in intercollegiate contests, and this attracted a class of young men more interested in athletics and other amusements than in work, not at all the Stanford type of student. "Beer-busts" became the custom, a student saloon was established in Menlo Park, and scenes of dissipation and vul-

garity disgraced the campus. The students themselves said that something must be done about it, but when the Committee on Student Affairs attempted to do something they took offense. Various demonstrations of revolt took place and a general strike was threatened. The final result was the suspension of forty-one students and the penalizing of 157 more by adding five or ten unit hours to their requirements for graduation.

It is not necessary for me to give further details; the sooner the affair is forgotten the better, except for its lesson which is the danger of the mob spirit. By yielding to this a large number of decent and well-meaning students were led to rebel against the university authorities in defense of a vice for which they had no sympathy. The students of Stanford have acquired the *esprit de corps*

of Yale and Princeton, but they have not learned the proper use of it as have the students of those universities. They resent being governed, but are not willing to govern themselves. For example, they declined to accept the responsibility of the honor system of examinations in which Princeton glories; they "did not want to spy on each other," etc. The new régime involves nothing more tyrannical than the

prohibition of liquor in fraternity houses and dormitories, a rule common to most universities. Its beneficial results are shown on the chart in the falling off of delinquencies in the last half year. The two elevations in the curve at 1903-4 and 1907-8 coincide with periods of market conviviality on the campus. In talking with the students I found that about all they had to complain of was injustices in the distribution of the penalties, inevitable in such wholesale punishment, and lack of tact on the part of the president. Tact is undeniably a handy thing for a president to have, but there are other qualities quite as rare and no less estimable, such as a disposition to say out loud just what he thinks about anything.

I had expected on visiting Stanford to find some matter for amusement in the forms in which parental sentiment is there displayed. This seems to be the custom of those who "write up Stanford." But somehow I did not feel in the mood for it. I could not help think-

ing of Mr. Stanford's night of grief, and of its dawn, when the inspiration came to him that made him cry out: "The children of California shall be my children." I was impressed, not only by the foresight, good sense and determination with which he carried out his aim, but also by the loving persistency with which Mrs. Stanford carried out hers, that of entwining the thought of her lost boy inextricably in the university, so that it should be a real memorial, so that he should not be deprived of his inheritance by death—for the university would be his forever. The time is not far distant when the personal relics in the museum, the family group in bronze, the hearts sculptured in the capitals, the awkward name fastened upon the university, and all the rest of it, will be the source of inspiration and pride to the students of Stanford. For Leland Stanford, Jr., will be the genius of the place, and the fourteen-year-old boy, like the spirit of immortal youth, will lead generation after generation thru the university that he could not enter.

JUNIOR PLUG-UGLIES.

When Will It Pay?

BY LEWIS M. HAUPT, C.E.

IN MEMORIAM OF THE ERIE CANAL COMMISSION.

"The American public has a right to ask that light shall be let in upon every sphere of our American life and that those who have the welfare of the Republic at heart have the right to information, solely in the interests of truth and honesty."—*Henry Van Dyke.*

THE INDEPENDENT, true to its trust, has rendered the public a service in the presentation of the great benefits derived from the improvement of the channels of the Great Lakes as set forth in the issue of November 26th by that thoro student of waterway economics, Mr. S. A. Thompson.

It leaves no question as to the wisdom and necessity for the immediate and extensive inauguration of a general system of waterways, to which the topography of this country is so admirably adapted, and yet it is a lamentable fact that in his last annual message our retiring and progressive Chief Magistrate is compelled to direct attention to the decadence of water-borne traffic, which he attributes to "the absence of any comprehensive and farseeing plan of waterway improvements." He says:

"We have spent hundreds of millions upon them. We cannot continue thus to expend the revenues of the Government without return. It is poor business to spend money for inland navigation unless we get it."

He deplures

"the utter waste caused by the methods which have hitherto obtained for the so-called 'improvement' of the navigation of the Mississippi."

He directs attention to the absence of results thus far secured on the Ohio, the improvement of which was commenced in 1824, to obtain a boating stage of four feet, modified in 1875 to obtain six feet, and again, in 1902 for nine feet, which may only be completed in "from twenty to 100 years" at a cost of \$63,000,000. In conclusion he states:

"We should have a new type of work and a new method for planning and directing it. The time for playing with our waterways is past. The country demands results."

Following this ringing message there has been held at the national capital the largest and most representative congress

of citizens ever convoked in any country to urge the Government to appropriate a half billion dollars in bonds for this work in the hope that, with ample funds available, the restoration of inland navigation will follow. Is this a necessary sequence?

Look at the record. More than a century ago the States began improving their waterways by granting charters to corporations, with authority to charge tolls for the services rendered to their citizens under reasonable restrictions, and under this policy a comprehensive system of waterways was projected and in large part constructed, but when the great Empire State solicited national aid for the building of the Erie Canal to unite the lakes with tidewater, local jealousies and sectionalisms were engendered, which led to a log-rolling bill setting aside 9,900,000 acres of the public domain as a guarantee fund to be redeemed on the completion of works which would have greatly enhanced the value of these securities, and have provided cheap transportation between and within all the States of the Union. The bill was killed in committee. New York was equal to the emergency, and five years later (1817) began the waterway which was opened in 1825, at a cost of \$5,700,000, and which gave her the commercial supremacy of the United States. At first it was but four feet deep, passing boats of only 30 tons capacity. In 1862 it was made seven feet deep, with boats of 240 tons. The total cost, with interest to 1863, was \$52,491,901, and the total *net* profits were \$59,264,812, or sufficient to pay the total cost with a surplus of nearly \$7,000,000. Between 1862 and 1868 the canal paid to the State in tolls \$25,260,384, *five-sixths* of which were net gain. The State, therefore, having been fully recouped for her investment, was amply justified in remitting tolls, which were abolished in 1882, thus creating a free waterway, which has been invaluable to the railways skirting its banks, in the development of traffic and relief of bulky

freights, as well as to the people in regulating the rates on overland tonnage. Had the State awaited the aid of the nation for the means to build, its loss would have been inestimable.

The Sault Ste. Marie Canal, at the outlet of Lake Superior, which has no peer in the world, was opposed by the Government as being "beyond the pale of civilization, if not in the moon," and right of way was refused, as it would pass thru an Indian reservation, but the State of Michigan, appreciating the great value of this work to her territory as well as to the nation, exercised her reserved rights and granted a subsidy in lands to a corporation which built the first and at the time (1855) the largest locks in the world under the charge of Charles T. Harvey, C. E., who still survives them and their successors. Many other cases might be cited of local or State initiative. It was under this policy of State control and local development that the waterways of the country were improved with beneficial results to all interests, and with a minimum of expense, up to the close of the Civil War, at which date the more than 5,000 miles of canals then in operation had cost some \$150,000,000, or only \$30,000 per mile, of which total sum the Government had contributed less than \$15,000,000.

Subsequent to the war the policy of the administration has been radically changed and, altho the total appropriations have exceeded \$550,000,000 from the national treasury, the canal mileage is reduced to less than one-half of its length, while the President proclaims that "Until the work of river improvement is undertaken in a modern way it cannot have results that will meet the needs of this modern nation."

In short, the sequel shows that the large appropriations made by the general Government during the past forty years are wholly inadequate, even under the most rigid surveillance, to procure the desired relief. The obligations of the Government under this condition are aptly stated by the junior Senator from Pennsylvania, Hon. P. C. Knox, in his address to the Chamber of Commerce of Pittsburgh, wherein he says :

"When the Government assumed charge and control of the navigable waters of the interior it entered into a practical contract with the

States and communities bordering those streams, that their waterways would be improved to their highest capacity. These States were thereby prevented from improving the streams themselves. Corporate enterprise was forbidden to undertake the canalization of important stretches and fix the cost of their works and franchises on the traffic. The Federal Government has made its formal and deliberate declaration that it will do this work. That necessarily involves that it will make the improvements adequate to modern needs and possibilities. To do any less would be a mockery and a breach of good faith."

Thus has the paralyzing hand of the Government fallen upon this most vital element of national development, congesting its circulation and arresting its industrial and social welfare, for it is manifest that the legislative body is wholly unable to meet the demands for the money to carry on all these great utilities in all parts of the United States and the insular possessions; for so long as it is doled out to some sections, others jealously claim their pro rata and enter their protest. It so happens that the districts whose members, by experience, possess the *savoir faire* may secure an item for their isolated sections of streams at the expense of other districts quite as deserving of improvement. Moreover, many projects are hopelessly deferred because of the expectation that at some distant day the paternal Government may come to their relief, and so, like the mendicant, they prefer to wait and starve rather than develop their own latent resources by helping themselves. This spirit is fostered by recent legislation in Congress, which, while recognizing the rights of a sovereign State to improve her own harbors and streams, denied her the privilege of exercising that right at any point where the Government might hereafter "undertake similar work according to its own plans," and "*provided* that the chief of engineers shall have the authority to disapprove said plans and forbid said work, if, in his judgment, the improvements when completed will interfere with navigation or with any works of the United States commenced or proposed to be made; *provided*, further, that no tolls or other charge upon commerce shall be imposed by those making such improvements."

Thus the control of all works proposed to be undertaken by States or corporations, municipalities or private citizens

are intended to be made amenable to the judgment of a single extrinsic authority, who would be overwhelmed by his multifarious duties, both civil and military.

It may be *apropos* to inquire when the mouth of the Mississippi River would have been opened had the late distinguished civil engineer, James B. Eads, had to comply with such provisions under the hostility which embarrassed his operations at the South Pass?

Many striking illustrations might be adduced to explain the present unsatisfactory conditions of our waterways and their utilities as rate and traffic regulators did space permit, but from the above brief it may be seen that it does not necessarily follow that

"the great work of waterway improvement must be done by the National Government, because the nation claims exclusive jurisdiction and exercises supreme control over navigable waterways."

The *assumption* of authority, even by a tacit consent, does not convey the *right* to exercise jurisdiction, which has been expressly reserved to the several States under the Constitution.

Such a condition gives rise to sectional jealousies, destroys local initiative, relieves those in charge from personal responsibility for results because of the frequent change in assignments, prevents communities from relieving their own ne-

cessities, congests traffic at certain centers, raises rates and terminal charges, and makes it necessary to besiege the committees of Congress by personal delegations or by a lobby maintained at the national capital to secure the requisite capital; and yet, when all is said, the system is pronounced a magnificent failure.

The remedy would seem to lie in the direction of a restoration, in part, of the ante-bellum policy under which the turnpikes, canals and railroads of this great nation were constructed, chiefly by private capital in the hands of corporations, under reasonable limitations, honestly administered for the good of their shareholders; with national aid for the great interstate, trunk line waterways and harbors under a permanent organization, with residencies in districts and divisions, accompanied by responsibility for results.

When such a broad and liberal system of co-operation is properly formulated, which will reopen the door to personal and local initiative, then will the wheels of industry revolve with their wonted freedom, and the hamlet by the brookside will vie with the metropolis by the sea both in manufactures and commerce.

This would appear to be the most important step in the reconstruction and rehabilitation of our waterways.

PHILADELPHIA, PA.

The White Christ Man

BY MARY E. KNEVELS

"What is this?" said Christ to His soul—

How should He know, the White Christ man,
The sin that is bred in this flesh of ours,
The world-old stain and the haunting powers;
How should He know, the White Christ man?)

"What is this?" said Christ to His soul—

(Did he recoil, the White Christ man,
When he felt in his own flesh intimate
The earthly desires of our estate;
Did he recoil, the White Christ man?)

"What is this?" said Christ to His soul—

(He wore our flesh, the White Christ man,
The clamorous body we tend and feed,
The low desire and the thirsting need;
He knew them all, the White Christ man.)

"What is this?" said Christ to His soul—

(He measured sin, the White Christ man.
Was it then that He learned the kindly prayer
That He taught to His brothers everywhere?
Prayer made for us, O White Christ man.)

"What is this?" said Christ to His soul—

(Pitiful, loving, the White Christ man.)
"Not into temptation"—of flesh aware
Was the White Christ man in this cosmic prayer,
(Learned in our body, O White Christ man).

WEST ORANGE, N. J.

Polar Exploration During the Year 1908

BY MAJOR GENERAL A. W. GREELY, UNITED STATES ARMY

[The news the past week of the brilliant discoveries near the Antarctic Pole made by Lieut. Shackleton gives special timeliness to this survey of Polar exploration, written previously to the late news by a famous Arctic explorer, and the author of "Three Years of Arctic Service," "Handbook of Arctic Discoveries," etc.—EDITOR.]

THE year just past has been marked by unusual interest, and special activities in connection with the solution of polar problems, both in the Arctic and in the Antarctic regions. The International Polar Commission held at Brussels its first meeting under Captain Cagni, who made a highest-north record in Abruzzi's expedition, and it took steps looking to the study of the polar regions by co-ordinated and cooperative methods. In the field, great and small, there were no less than twelve expeditions, in which were represented Canada, Denmark, France, Germany, Great Britain, Russia, Sweden and the United States.

As illustrating the fascination of polar exploration, it is to be recalled that no less than eight leaders are veterans—Bernier, of Canada; Erichsen and Rasmussen, of Denmark; Charcot, of France; Shackleton, of Great Britain; Geer, of Sweden; Cook and Peary, of the United States.

The American explorer longest absent is Dr. F. A. Cook, well known thru his Antarctic work and also by his ascent of Mt. McKinley. Cook established his base of operations in Rensselaer Harbor, Greenland, where he was landed with supplies and sledges in August, 1907, by Mr. John R. Bradley, under whose auspices the expedition was launched. Dr. Cook wrote in December, 1907, from Wostenholme Sound, that he had secured 100 dogs and fifteen of the best Eskimo hunters. He then expected to start north in January, 1908, over a new route. Crossing Ellesmere Land Cook planned to follow its western shore beyond Greeley Fiord, to the new land to the northwest seen by Peary. Cook's return was to be along the east coast, via Kennedy

Channel to Rensselaer Harbor. It is said that he will be met in 1909 by Mr. Bradley, but his comfort and safety have been cared for by Peary, who landed coal and supplies for Cook in August and left two white men in charge.

The most persistent and successful of the American explorers, the indomitable Peary, is again in the white north. Sending his final word from Etah, North Greenland, August 17th 1908, he reported thirty-five walrus killed, that he had a good supply of Eskimo dogs, all were well, and the "Roosevelt" was steaming north that night. He hopes to winter with his ship on the north coast of Ellesmere Land, in about 82° 40' N., and by a fortunate, well-directed, sledge-journey reach the North Pole in the spring of 1909 or 1910, thus beating his own unsurpassed record of 87° 06' N. on the same ocean.

The return of Mikkelsen and Leffingwell from the Herschel Island region terminates an expedition from which much was hoped in the way of survey of the frozen sea west and northwest of Banks Land. It succeeded in traversing the icepack to a distance of only about 100 miles north of Flaxman Island, on the Alaskan Coast. The sounding observations, with a maximum depth of about 300 fathoms, were valuable as showing the width of the continental shelf in that region. One of Mikkelsen's men, Stefansson, has returned to the lower Mackenzie region, to there make ethnologic studies for the American Museum of Natural History, of New York.

In the Eastern Hemisphere the Imperial Academy of Sciences, of St. Petersburg, sent in March, 1908, an expedition under M. Vollossovitch to exhume the body of a mammoth discovered near

Kazatchie Village, in the Lena Delta. In addition to studying the conditions under which the mammoth was preserved, Vollossovitch was directed to visit Great Liakhov Island, study its geologic features and then to explore the unknown regions west of the Yana River.

As of minor importance may be mentioned the following expeditions: The Canadian, Bernier, surveying the north coasts of America; renewed ethnographic investigations by the Dane, Rasmussen, in the Smith Sound region; the Danish hydrographic expedition studying the fishery conditions along the west shores of Greenland; Baron de Geer's leadership of the Swedish scientists studying the geological features of Ice Fiord, Spitzbergen; and Bénard, in the French ship "Jacques Cartier," making fishery and other investigations in Nova Zemblan waters. These expeditions are of scientific importance, altho not of a character to excite great popular interest.

France is again showing her flag in the Antarctic, under Dr. Jean Charcot, who in a specially built ship, the "Pourquoi Pas?," sailed southward from Punta Arenas December 17th, 1908. It will be recalled that Charcot, in the expedition of 1903, wintered near the southern entrance of Gerlache Strait. His base of operations will be on the coast of Loubet Land, as near Alexander Land as ice conditions will permit, as the main object of the two years' cruise is the exploration of that unvisited land. Charcot has a staff of seven specialists, and hopes to throw light on terrestrial changes in the South-polar Continent thru fossils and other geologic data. With skis for the men and automobile sleds of various patterns for ice travel, both along the coasts and over ice caps, much is expected.

Current Antarctic interest centers, however, on the British National Antarctic Expedition, under Lieut. E. H. Shackleton, R. N., which sailed from New Zealand January 1st, 1908, in the "Nimrod." On her return, March 3d, the ship brought news up to February 22d of the party, which has been forced to establish camp at Cape Royds, close by the Mt. Erebus volcano, where the "Discovery" wintered 1902-1904. The ice barrier was reached by the "Nimrod" January 22d,

and it was found to have materially changed. Altho unfavorable ice conditions did not permit Shackleton to carry out his cherished plan of wintering on unvisited King Edward VII Land, yet the voyage along the barrier was rewarded by the discovery of new land. It consisted of rounded ice-free hills of moderate elevation—under 1,000 feet—some ten miles from the face of the ice barrier. Probably these snow-free hills were dimly seen by Ross in 1841, when he charted for this region "appearance of land."

Under most unfavorable weather the "Nimrod" finally succeeded in landing Shackleton's party of fifteen, with dogs, ponies, motor-cars, supplies and scientific equipment. The motor-cars are relied on for extended journeys over the inland ice of Victoria Land, which is thought to extend to the pole. Capt. R. F. Scott found the so-called ice barrier favorable to travel, its local undulations being broken by few crevasses, and he reached on it latitude $82^{\circ} 17' S$. Ice-capped Victoria Land was also attempted by Scott in 1903, and its traversed surface of three hundred miles was of almost unvarying levelness.

The "Nimrod" again sailed from Lyttelton, N. Z., on December 8th, to bring back Shackleton's party. It is more than possible that she will bring news of an unprecedentedly high southern latitude in the vicinity of the Antarctic Pole.

The most important as well as the most interesting polar results of 1908, shown by map herewith, was the final delimitation of Northeast Greenland, which involved the tragic death in the field of Mylius Erichsen, the commander of the Danish expedition, and his two comrades.

The expedition sailed in the "Denmark" June, 1906, to explore the east coast of Greenland to the north of the seventy-seventh parallel of latitude. The ship reached an unparalleled high latitude for that coast, touching at Isle de France, $77.5^{\circ} N$. Anchoring in a sheltered harbor near Cape Bismarck, shore observatories were built, and by autumn sledge-trips provision depots were established as far as $78.5^{\circ} N$.

The main field party with ten dog sledges left the "Denmark" March 28th,

1908, to trace the coast to Cape Glacier of Peary. Passing Lambert Land (discovered by Lambert in 1670 and not again seen until the voyage of the Duke of Orleans in 1905) reached Mt. Malle-muk, about $80^{\circ} 20' N$. Here provisions were cached, brought by the four supporting sledges, which now returned homeward. As Erichsen advanced he found to his dismay that instead of running northwest, as problematically charted by Peary, the coast of Greenland was steadily trending to the eastward. Cross-

The north coast of Amdrup Land running west, Erichsen decided to divide his party and sent Koch north, where he found game, explored the unknown shores of Peary Land to Cape Bridgman (Peary, 1900), and unfurled the Danish flag in $83.5^{\circ} N$.

With Hagen and Brönlund, Erichsen prest west and followed inland nearly a hundred miles a great fiord (Denmark), which he thought to be Peary Channel. Retracing his steps he had the good fortune to meet Koch at Cape Rigsdag May 28th. Wise counsels would have caused the entire party to return to the ship, but Erichsen thought he was only a few days from Cape Glacier, which he had a noble desire to reach. Erichsen, sending the northern explorers back to the ship, prest on and his party as a whole vanisht from the sight of man.

Summer came and past, and there were no signs of Erichsen. The men at the ship watched the fleeting days with increasing anxiety. As soon as new ice formed a search party was sent out with six sledges, with dangerous and nearly fatal results. In March, 1908, Koch and Tobias took the field with the twenty-eight remaining dogs, and in a most rapid march of nine days reached Lambert Land. Caches to that point were undisturbed, but this depot had been opened. In a cave adjacent to the cairn was found the frozen body of the Greenlander Jorgen Brönlung. Attached to his neck was a bottle containing the skillfully drawn maps of Hagen, and near by his own field journal, carefully enclosed in a box. Erichsen's journal was not found. The last thought of this brave and loyal native was evidently to preserve for the world the results of their labor and the record of their sufferings.

Brönlund's field journal, outlining in simple language the eventful story, ends thus:

"I perished in $79^{\circ} N$. latitude, under the hardships of the return journey over the inland ice in November (1907). I reached this place under a waning moon, and cannot go on because of my frozen feet and the darkness. The bodies of the others (Erichsen and Hagen) are in the middle of the fiord (south of Amdrup Land). Hagen died on November 15, Mylius Erichsen some ten days later."

ing a broad fiord to Amdrup Land and finding that the coast ran nearly due east, conditions were so serious that the question of abandoning the journey was debated, as the increased distance had nearly exhausted their supply of food for dogs and men. Tho realizing the danger of such action they decided to advance, and then cached a small amount of food and everything that impeded rapid travel. A few days later their hearts rejoiced when the extreme east of Greenland was reached—North East Foreland in longitude $12^{\circ} W$., and latitude $80.4^{\circ} N$.—and their most important geographic problem was solved, tho Cape Glacier was yet to be reached.

For more than five months after food had failed these men, living on a most desolate country, present a record of courage and resourcefulness rarely if even surpassed in the annals of polar work.

From the journal of Brönlund it appears that Erichsen, on reaching a new fiord (Hagen), also mistook it for Peary Channel, and so was again obliged to double on his tracks. The detours into the two fiords (Denmark and Hagen) probably sealed their fate, as their journey to Cape Glacier was thereby more than doubled—from a direct route of about 330 miles to a travel exceeding 700 miles.

On June 4th their regular food failed, and the only game was an occasional ptarmigan. Pushing on they reached, June 14th, Cape Glacier, 83° N., 33° W., there connecting with Peary's surveys of 1892 and 1895. With heroic rashness, hoping against hope for musk-oxen, Erichsen extended his march north to Peary Land, discovering there a fiord (Brönlund). On reaching Denmark fiord, after recrossing Peary Channel, the conditions were desperate; the dogs emaciated, food exhausted, with ice so softened that travel across the fiord was impossible. They must summer in the fiord and live on the country. From time to time they killed a stray musk-ox, and again they were obliged to eat one of their famishing dogs. On August 7th Brönlund records: "No more food. Impossible to travel, and we are more than 900 kilometres (563) miles from the ship."

Attempting to cross the fiord-ice they were adrift sixteen days, August 8th-24th. Brönlund writes: "We have yet fourteen dogs, but no more food. We are killing one and eating half of it; the rest will be our food for tomorrow. Half a dog for three men and thirteen dogs is not filling, and after eating we are as hungry as before." August 26th they killed seven hares and thirteen ptarmigan. The whole snow-free land was scouted, with scanty results—now and then a hare or a ptarmigan.

Thus past the short Arctic summer, and with increasing cold and departing sun they came to final extremities. The only chance of life was the crossing of the inland ice from the head of Denmark

Strait to Lambert Land. There remained a sledge, four dogs—mere skeletons—with a little game. Their shelter-tent was in pieces, and the sleeping bags dilapidated. Land travel after game had worn their footgear to fragments, and efforts to make boots from the theodolite case were fruitless thru lack of needles and thread. To crown all the journey must be made in darkness, as the sun left them the day they ascended the ice-cap.

Such a journey under such conditions seems impossible, but they made it. It was a practically barefoot march, over unknown ice, in Arctic darkness, yet they traveled 160 miles in twenty-six days, when they descended to the fiord north of Mt. Mallemuk. There is a limit to endurance even with men of iron will, and Hagen died on November 15th. Ten days later Erichsen perished, almost in sight of the provision depot. There remained only the Eskimo, Jorgen Brönlund, to whose heroic efforts and loyal fidelity the world owes this record. Death must have been welcome, yet this man dragged himself to the depot, secured the safety of Hagen's maps, made his final entry in his journal, and calmly awaited relief by death.

Erichsen's discoveries are of special geographic importance, as well as of general interest. They definitely settle the extent of Northeast Greenland, a much debated matter, which materially differs from that shown on the latest charts, based on Peary's map of 1897, which indicates the coast line as running southeast from the so-called Independence Bay, which does not exist, to Lambert Land.

Based on the reports of Lockwood and Brainard, of my expedition, in their discovery in 1882 of the land now known as Peary Land, my opinion regarded Nordenskiöld fiord as a comparatively short channel to Spitzbergen, and as the north limit of ice-capped Greenland.

Peary, in his unequalled journeys across the inland ice of Greenland, reached $81^{\circ} 50'$ N., $34^{\circ} 05'$ W., and altho the fourteen intervening degrees of longitude, west to the entrance of Nordenskiöld fiord, have never been explored, yet it is accepted that this inlet marks the Greenland boundary. Peary in 1892, and again in 1895, looked to the

northeast from Navy Cliff, and among his results claimed "the determination of the insularity of Greenland," and further says: "We could distinctly discern the broad expanse of the ice-covered sea . . . (and) . . . the distant white horizon of the Northeastern Arctic Ocean." Peary's successful explorations of 1900 naturally confirmed his opinion, as Peary Land terminates in 24° W. longitude.

Erichsen's explorations conclusively show, however, that Peary was mistaken, as his point of view at Navy Cliff was on a waterway a few miles wide and not on the sea, there more than a hundred miles distant, while Greenland extended to the east twenty-two degrees of longitude, or about one hundred and ninety miles.

Apart from this very extensive addi-

tion made by Erichsen to the area of Northeast Greenland, is the fact, important from the oceanographic standpoint, of its unexpected contiguity to Spitzbergen. The Arctic opening of the Greenland Sea is narrowed to about 240 geographic miles, the distance from Northeast Foreland to Spitzbergen.

Important and extensive as are the polar results of 1908, they do not represent final effort. In truth the accumulated wealth, the wonderful inventions, the surplus energy of the twentieth century ensure continuance of such unselfish work. In the future as in the past there will be men of our blood who will so endure and so do as to merit the praise of Purchas: "How shall I admire your heroic courage, Ye marine worthies, beyond name of worthiness?"

WASHINGTON, D. C.

SPLENDID FAILURES

by Gertrude Huntington McGiffert

Men to bay and laurel bow,
As is meet.
But the whole world loving kneels
At the feet

Of the splendid failure hung
On the Tree.
It seems yet I hear him say,
Who will be

To the God within him true?
Who will die
For his vision? Crucified
As was I?

New York City.

A Sixteen-Hour Day

BY THE REV. CHARLES M. SHELDON

AUTHOR OF "IN HIS STEPS," ETC.

THE secretary of a college Young Men's Christian Association has recently made an interesting canvass among high school and university students, asking a great many questions about the choice of a life work. In answer to his question why more of the young men did not enter the ministry, he received the following answer: "The ministry," these young students said, "was not an interesting profession, it did not appeal to their ambitions, it did not have manly qualities to commend it, it was too uniformly dull compared with law, medicine, journalism and politics." The answer implied a general belief on the part of those who gave it that the minister was more or less of a lay figure, clad in good clothes every day in the week, preparing sermons in the forenoon, calling on women and children in the afternoon, marrying the living, burying the dead, and occasionally acting as a judge in an oratorical contest, and once in a while reading a paper on some religious subject at some religious gathering, but for the most part a dry, uninteresting and womanly or rather effeminate creature.

After talking with the secretary and pondering over this answer, I went to my study and took down the notes I made a few days ago on what happened to myself in sixteen hours one day, and the readers of THE INDEPENDENT may be interested, especially those who may think the ministry is "uniformly dry and dull," to know what did happen. I give the main details exactly as I jotted them down at the time:

I arose at 7 a. m. and had breakfast at 7:30. During the meal answered five telephone calls. First, a call to go to the County Jail and see a prisoner and do what I could to have his sentence alleviated by a change of cell and also interest his friends to secure a speedy pardon; second, a request to attend a funeral seven miles out in the country; third, an inquiry from a mechanic in a railroad office, wanting to know what was the best commentary on St. Luke. This man was

a member of a railroad shop Bible class. Fourth, a call from a man, a stranger in town, who wanted to know when he could call and submit a manuscript for reading and criticism. Fifth, a reminder from a member of a committee, of a meeting on the part of some citizens to take steps looking toward the closing up of Sunday evening theaters. Left the house at 8:15. On my way to the study I met a man who was coming to see me, who asked me to go to the Building and Loan Association and help him borrow some money to put up a house. Went with the man and helped him transact this business, finally reaching my study at the church at 9:45. Forty letters were waiting to be answered. Among them was a request from a man in South Carolina, wanting to borrow \$15 to pay the rent on his house. A second letter from a woman in Nova Scotia wanting to know my interpretation of Mat. 16; 16. A third letter from a young man who said he was a member of a Baptist Church and was engaged to a young woman who was a Presbyterian. He said they had talked over the situation frankly and were in considerable doubt as to whether they should get married, and they had finally decided to leave the matter to me and were going to await with great interest my reply. I answered this letter at once and put on a special delivery stamp, hastily disclaiming any authority in the matter and refusing to be dogmatic at the expense of anybody's affections. Another letter from a gentleman in Great Britain saying that a first cousin of his had moved into the Mississippi Valley about twenty years ago and he had lost track of him and wanted to know if I would not hunt him up sometime when I was passing thru. Another letter was from one of my own parishioners wanting to know why I had given up the doctrine of everlasting punishment, and still another letter asking me to examine a book manuscript of 150,000 words. At half past ten I began writing a sermon and wrote on the sermon for fifteen min-

utes. I then had a call from a member of the church who came to see me about the church music and talk over the need of making a change in the hymn books. As soon as he had gone out I began work on the sermon, but had another call from a negro delegation in the neighborhood asking me to look into the feasibility of establishing a new church and help raise the money to build it. I resumed work on the sermon as soon as they had gone out. At the end of fifteen minutes took up a report of the Committee on Missionary Publications and made a digest of it for use at an association meeting, and also outlined a paper on arbitration to be read at the same association meeting. I then had a call from a woman asking about her boy who had begun to use cigarettes, and urging me to frame up a bill and get it thru the Legislature, forbidding the use of tobacco by boys. I resumed my work on my sermon for a few moments. At 12:15 I went to dinner. During the meal I had four telephone calls. The first, from a parishioner who wanted to borrow my horse to drive out into the country to see a sick friend; the second, from one of my Sunday school teachers, wanting to know where she could get a key to get into the church to find her Bible, which she had left the Sunday before. The third call was from another parishioner asking me to go and see a very sick man, not a member of the church or parish, living four miles east of the city. A fourth call was from a member of the church asking me to call that afternoon on some friends of theirs who were visiting them from Philadelphia. During the meal hour I also had three calls at the house. The first was a student who wanted to get my advice on an oration which he was preparing on Abraham Lincoln; the second, a request from one of my neighbors to help him pay his grocery bill; third, from a member of a Committee on Tuberculosis Investigation, asking me to start a fund to send a young man out to New Mexico and also prepare a paper to read before a Tuberculosis Congress which was to meet in the city within a week. Between dinner and 2 o'clock I repaired the kitchen pump, which three different plumbers had tried their hands on without success. From 2 to 4:30 I made nine

calls, covering fifteen miles in the matter of distance. From 4:30 to 5:30 I went to the church to examine and pass on some new stained glass windows, brought by an agent of a company, in answer to request for bids on windows for a new building. At 6 o'clock I went home to supper. During the meal I had five telephone calls. First, from a college asking me to be judge at an oratorical contest; second, to remind me that I was a member of the Committee on Prison Investigation and should have my report ready before the end of the week; third, a call asking for a book on the question of race prejudice; fourth, a call from a church member telling me he "enjoyed my sermon last Sunday very much." Another call from another member asking if something could not be done about the ventilation of the church, saying he had a headache during the entire service. At 7 o'clock I went to my study to work over a report on slum investigation covering a certain district in the city inhabited by negroes. At 8 o'clock I met my trustees, to talk over church finances and outline a plan for reaching every member of the church, present and absent. At 10 o'clock I went home and sat down to read some books sent me on the Emmanuel Movement and review them for a magazine. During my reading I had four telephone calls. The first, from a reporter of a daily paper asking me to give full church statistics of the different denominations in the city. Second, a Sunday School teacher, wanting to know about special music for her department. Third, call from a stranger, who wanted to borrow \$100 to get out of trouble. Fourth, a request from a member of the Legislature to see the Governor about the Equal Suffrage Bill. I got into bed at a quarter of eleven and was called out of it at once by another telephone ring. This time a request from a visitor in the city, stopping at one of the hotels, who wanted to know if the prohibitory law worked in Kansas. I told him it did, but did not tell him I thought there should be a law prohibiting the use of the telephone after 10:30. I did not hear the clock strike 11, so I must have been asleep by that time.

If any young man thinks the ministry is dull and uninteresting or does not

touch life at enough points, if he will come out here and be willing to work on a small salary, I will guarantee to keep him busy without any trouble, or I will keep him busy *with* trouble. I do not know where the idea originated that the ministry was an unmanly or a weak or a narrow profession. If anyone wants to have the largest possible touch with the world, with men, with history as it is being made, and with the universe, he will

not find it in law, or medicine, or journalism, or politics, but in the ministry; and if any man wants an eight hour day, he can easily get one by becoming a minister, who so far as I know has never asked for anything less than sixteen hours, and often prays for more hours in which to do his work. Surely a "sixteen hour day" is worth while to any one who wants to live in the largest possible fashion.

TOPEKA, KAN.

Yuan Shih Kai and His Dismissal

BY HERBERT E. HOUSE

[Mr. House is honorary field secretary of the Canton Christian College and was tutor in the family of Yuan Shih Kai for some time. His article, therefore, is as authoritative as it is timely.—EDITOR.]

YUAN SHIH KAI, universally recognized as one of the foremost men of the world, patriot, statesman, organizer, leader, for twenty years manifesting in public life entire devotion to his country's welfare, strict integrity and consummate ability; a man whose leadership of his bewildered nation during the last five years may be likened to the leadership by Moses of the children of Israel; this man, one of the greatest men China has produced since the days of her sages, has been by the new administration of China dismissed from the service of his country.

What indeed is the cause of this amazing act on the part of the new Regent, the dismissal from the service of his country of the one man of the Empire competent to continue to unite, organize and lead the forces of new China in the great scheme of revolutionary reform which under his leadership has already enabled China to hold up her head among the nations, and which, if unchecked, would within a generation make China one of the great powers of the world?

The dismissal of Yuan is not because of "rheumatism of the leg," nor because of his attitude toward Japan, nor because of his "pro-foreign attitude," nor because there is a shadow of fact in the severe charges made against him by his bitter

enemy Kang Yu Wei, head of the world-wide Chinese Reform Association. Nor is it to be explained by the general anti-progressive character of the Manchu dynasty and the Manchu party.

The dismissal of Yuan is not on account of his character, ability or recent acts. His dismissal from the service of his country is purely a matter of personal hatred, jealousy and revenge, the result of events which occurred in October, 1898. Other elements in the case have at most only played upon these forces.

It is claimed and it is evidently true that "Yuan's disgrace is in consequence of a campaign waged against him by the adherents of Kang Yu Wei," who, under his leadership, have exerted an influence upon the Regent leading to Yuan's dismissal. The Regent himself has peculiar reasons in consequence of the occurrences of October, 1898, to feel both gratitude and resentment toward Yuan, and early events after the Regent came to power seem to indicate that he would not disturb the existing order. Kang Yu Wei, the arch enemy of Yuan, has his grievance, but he is careful not to bring out into the light the fact that disaster overwhelmed the Emperor, himself and his associates, the counsellors of the Emperor in his reform program, in consequence of their own rashness and crim-

inal folly, and that Yuan earned their everlasting hatred by refusing both to shed innocent blood at their command and to sustain with his army a policy which nothing could save from ending in disaster.

It was shortly after the war with Japan that Kuang Hsu, the Emperor, then about twenty-six years of age, feeling the humiliation of shameful defeat and catching the spirit of reform from foreign books and from certain of his instructors, began to gather about him a few of the most enlightened young men of the Empire. Then was inaugurated the brief but glorious era of reform which in little more than a single year of real effectiveness, when reform edict followed reform edict, produced radical changes for the better thruout the Empire.

In spite of the excessive zeal of the Emperor and these reformers, among whom Kang Yu Wei was the leader, in spite of the mistakes they made and the final great catastrophe which they invited, they will ever be remembered as men of noble purpose, pure motive and great achievement.

Two conditions became manifest as the reforms progreed. On the part of the people at large there was an immediate response that revealed the people to be ready for reform of the most radical nature, but on the part of the older officials and scholars, the men of the old order, there was fear, jealousy and opposition.

No one can understand the present rapid progress of New China who does not understand that the people, prepared by many years of contact in various ways with the enlightening forces from the outside world, were even twelve years ago more than ready for radical reforms. The present great reform in China is simply the free manifestation under the liberty giving administration of Yuan Shih Kai of what has been the pent up desire of the Chinese people these many years. China needs no reformer or reform association to urge her into the new path. She needs a leader who can unite, organize and direct the mighty forces stirring the Empire.

In 1897-1898 the populace of the Empire hailed every new edict abolishing some hoary abuse, or inaugurating some reform as a sunburst in an already il-

luminated sky. There was small danger to the reformers from the people, but intoxicated with power, and carried away by the very success of their efforts, they failed utterly to conciliate the officials and scholars of the old order. These together, constituting the real rulers of China, saw with horror the revered traditions and customs of the past ignored and rejected by the reformers, and saw with consternation what was worse, their own power, prestige and even living being taken from them. It was impossible but that strong opposition to the new order would arise from this powerful "conservative" element, and that sooner or later they would bring disaster to the hotheaded reformers.

The Emperor and his associates were as yet but a handful. There had been too little time to rally and organize a support, yet they treated with utter lack of diplomacy the older officials and scholars who were in great numbers and greatest strength about them in Peking. The hostility to the reformers crystallized under the leadership of the Empress Dowager and her chief counsellor Yung Lu.

Yung Lu, who died several years ago, was a Manchu of high rank, a favorite nephew of the Empress Dowager, the father-in-law of Chun, the present Regent, and grandfather of the present child Emperor. He also was the friend of Yuan, and had been the means of advancing him in the public service.

After the war with Japan the Chinese Government saw the need of a modern army. It believed that with this new wine in the old bottle China would be able to withstand the outer world, no other reforms would be required, all would be well and China might continue the slumber from which she had been so rudely aroused. The "New Imperial Army" was therefore organized and soon consisted of 60,000 men gathered in four divisions or branches within a hundred miles of Peking. This army was equipped with up-to-date arms and was being drilled according to the most modern method.

In command of one branch of this New Imperial Army was placed Yuan Shih Kai, then about thirty-seven years of age. He had already distinguished himself with honor during nine years of serv-

ice in Korea, latterly as minister during the troublesome times of dispute between China and Japan over Korea, preceding the war, when by his firm stand for the interests of China he incurred the enmity of Japan, which seems never to have been forgotten.

As commander of the branch of the army under him, Yuan was given a free hand. He at once showed the most remarkable ability as an executive. Within three years his division of the army, consisting then of about 7,000 efficient troops, had the reputation of being one of the best drilled and disciplined bodies of soldiers in the world, and his own reputation was becoming world-wide among military men and statesmen. In the spring of 1898 Lord Charles Beresford, after an all day review of this army, spoke of it in the highest terms, and before leaving China said in Tientsin, "I have met one man in China and that man is Yuan." The same year Timothy Richard, one of the best known and ablest foreigners in China, said to the writer, of Yuan, "He is the best man in China; he is the coming man." Thus was Yuan looked upon at that time wherever he was known as a strong, aggressive, up-to-date man. Among the Chinese he had the peculiar reputation of being honest, a man who did not "squeeze."

For ten years he has been in the very center of the stage. Even his enemies have been unable to bring against him a suspicion of dishonesty, and his amazing enlightenment, wisdom and ability have been known and read of all men.

Faced by the strong and menacing opposition of the conservatives in 1898, the reformers instead of conciliating their enemies, modifying their program in the interest of peace, security and success, and checking their headlong haste, were still so much of the nature of old China that they turned to the ways of her darkest days the headsman's ax, to be rid of the opposition, and ordered Yuan Shih Kai, whom they knew to be as much a patriot and as much a reformer as themselves, to take Yung Lu, the leader of the opposition, behead him and come with his army to Peking to sustain the Emperor in his reform program. It should be understood that Kang Yu Wei and his associates were practically in power, and

any edict from the Emperor would be an edict from themselves. They ordered Yuan to take the life of a man whose crime was that he was a leader of the opposition. Yuan refused to commit the crime appointed to him, he warned Yung Lu of the plot against his life, and remained inactive with his army. Yung Lu hastened to report to the Empress Dowager the plot against his life, and against at least the last vestige of her authority. The blazing fury of the Empress Dowager at this news may only be imagined. The by-product of Yuan's disobedience of Imperial orders, was the sudden uniting of the old forces under the Empress Dowager, who immediately imprisoned the Emperor and beheaded all of his associates upon whom hands could be laid, putting a price on the head of the few who escaped. Of those few, Kang Yu Wei has since become noted as the organizer and leader of the Chinese Reform Association.

This whole dreadful, deplorable and entirely unnecessary disaster was brought to a head by the orders to Yuan. Some such disaster must have soon come in any case as the direct result of the swift movement of the reform, and the utterly undiplomatic and worse treatment of the conservatives by the reformers. Thus ended in night the brief glorious day of this first attempt at reform that had so brilliantly dawned, and thus began the wave of reactionary effort that rolled on in ever-increasing fanatical fury till it ended in the so-called Boxer movement, the effort of the Chinese Government under the Empress Dowager to drive out and to exterminate all foreigners on China's soil.

Once again this man of nerve and wisdom disobeyed an Imperial order. Before the real beginning of the Boxer war Yuan had been sent with his army to be Governor of the province of Shantung. Here he was during the height of the trouble ruling with a firm hand, when he received orders from Peking to destroy all foreigners; instead of obeying he saved his Government from itself, choosing to call the order a forgery and immediately with redoubled energy extended protection to all foreigners and their property and saw them every one safely conducted out of the province; for this

he was called by the reactionaries a foreign devil, and for this he risked the anger of the Empress Dowager and retribution at her hands. For this act alone Yuan deserves everlasting honor and especially gratitude from Americans.

The character of the man is revealed in both these times of crisis. He disobeyed his Emperor because he was wrong, because his order was one that no enlightened man could obey. To have obeyed would have made him the first favorite of the Government and would have opened the way for every advancement. He disobeyed the order of the Empress Dowager, and Yung Lu, her counsellor, because again they were orders which could not be obeyed by an enlightened man.

As the present Regent is a brother of the late Emperor it might be expected that he would blame Yuan for his brother's downfall and cherish resentment accordingly, but on the other hand he might be expected to feel especial

gratitude to Yuan for saving the life of his wife's father and the grandfather of the present child Emperor. Early events after the Regent came into power indicated that he was not hostile to Yuan, and his dismissal is, by every sign, due to influences brought to bear upon the Regent by Kang Yu Wei and his associates.

Yuan is a man who has been for five years the storm center of attack from high officials of the old school on the one hand, and from extreme radicals and enemies, such as Kang Yu Wei and associates on the other, who have persistently sought to undermine him with the Government. He has had every incentive to trim his course, but he has gone straight ahead with supreme energy and far-seeing wisdom. As a man who realized that the time might be short he has served his country with a great devotion, laying in even these few years much of the foundation on which China's future national life will be built.

NEW YORK CITY.

Palestine

BY KATHARINE LEE BATES

First View of the Holy Land.

FAINT in the pearly dawn, a silver line
It gleamed upon the sea; our hearts were
there
Before our vision, your dear heart and mine,
And every face about us was a prayer.

At Bethlehem.

A Russian pilgrim fell with gesture wild
Before the manger; while in circuit shy
A sweet young mother kissed the walls and
smiled
And softly sang a Syrian lullaby.

At Nazareth.

A little Child, a Joy-of-Heart, with eyes
Unsearchable, he grew in Nazareth,
His daily speech so innocently wise
That all the town went telling: "Jesus saith."

At Gethsemane.

There is a sighing in the pallid sprays
Of these old olives, as if still they kept
Their pitying watch, in Nature's faithful ways,
As on that night when the disciples slept.

At Jerusalem.

Jerusalem, Jerusalem, how oft
His Love had gathered thee beneath its
wings
And thou wouldst not!—Love crucified aloft
On Calvary, enthroned the King of Kings.

At Calvary.

O Death, where is thy victory over Love?
Thy worst, the cross of torture, crown of
scorn,
Love took and made exceeding joy thereof,
Illimitable joy of Easter morn.

WELLESLEY, MASS.

Literature

The Acropolis of Athens

PROFESSOR D'OOGHE has chosen a smaller field than Ernest Gardner's "Ancient Athens," and limits himself strictly to the Acropolis.* But his field is large enough; for it includes all that has happened on Athena's sacred rock thruout the ages. From the earliest occupation of it to the present time it has invited the interest of the civilized world. People of culture come to it that they may make some little addition to what is already known. Any, even small, discovery has importance from the fact that it came from this Acropolis. There is no other Acropolis that can compare with it, and we need not say Athenian Acropolis, but the Acropolis.

*THE ACROPOLIS OF ATHENS. By Martin L. D'Ooge, Professor of the Greek Language and Literature in the University of Michigan. New York: The Macmillan Company. \$4.00.

The author has labored long and hard over his work, and has returned to Athens more than once. His work has, however, been a labor of love.

The battered fragments of the Parthenon are eloquent in beauty, and we, the gleaners, still dwell on them and gather them up here and there, mere bits which joined together convey some impression of a grand and beautiful whole. The tooth of time has not succeeded in destroying the fragments. After the passing of the Persians in 479 B. C. came generations which surpass all others in art and literature. An age not to be compared with the Augustan Age, but with one incomparably grander came upon the scene. The Parthenon with kindred buildings arose, and the climax was reached. Jealousy among the small States prevented the advent of a "Saturnian Reign."

Since the establishment of an American School of Archeology in Athens in 1882, there has been a growing interest in working out problems on the spot. Professor D'Ooge, who once presided for one year over the school, returned to study faithfully the stones that spoke. The result is before us in a beautiful book with over 400 pages, 134 cuts, 9 plates, 11 pages of notes and three appendixes covering 55 pages. The careful work has left only the fewest of negligible errors, and the author may well say of his work "*exegi monumentum aere perennius*."

The Erechtheion has in the few last years drawn special attention. D'Ooge has given praise to the work of Heermance, the late director of the American school at Athens, who assisted G. P. Stevens, the Fellow in Architecture of the school. They, with the director and Caskey, a Fellow of the

FROM D'OOGHE'S "THE ACROPOLIS OF ATHENS"

school, have worked hand in hand with Balonos, the Greek architect. After the thoro repairs the Erechtheion has come forth in glory.

Dörpfeld, who discovered the existence of the remains of a Peisistratean temple between the Parthenon and the Erechtheion, has recently by a sudden flash divined that the architect of the Erechtheion had carried out only a part of his projected building. He saw that the most asymmetrical building in Greece demanded but a west wing, and the symmetry was complete. The porch of "the Maidens" was intended to be the center of the whole. The plan was the more daring because of the uneven rock.

Two triumphs of the American School call for mention. Charles H. Weller publisht in 1904 the discovery of a propylon which formed the older entrance to the Acropolis, lying obliquely to and under the later grand Propylaea. E. P. Andrews, in 1896, with infinite pains and at the risk of life or limb, mounting with rope ladders and pulleys studied the nail-holes on the east architrave. Pressing thick sheets of wet paper into the holes he took them down when dry and worked over them. At last he got his clue from the method adopted in placing the nails and deciphered the inscription if we may so call it. The result indicated an honor paid to Nero "by the Areopagos, the Senate, and the people of Athens." The erection of a statue of Nero in front of the Parthenon probably followed. And Athens had come to this!

Some Ladies of Note

ANNE GENEVIEVE DE BOURBON, beautiful daughter of a beautiful mother—a Montmorency at once and a Condé—comes upon the scene as a pupil in a Carmelite conventual school, anxious to live and die a nun. After a brilliant but somewhat unsatisfactory life spent in the blaze of courts, arms and diplomatic intrigue, of which she was no small part, she returns in her sixtieth year to die near the Carmelite sisterhood, ruminating to the last on the strange admixture she had scen of the earthly paradise of kings and the paradise sung by the gentle sisters. During her more actively joyous days

France was ruled by Cardinal Mazarin. Condé and Turenne fought under the French banners, winning victories which still resound in the world's history. The former was her brother; the latter never quite forgot the lovely eyes that had been turned on him in the demure Carmelite period of the young princess. Anne Geneviève de Bourbon, as Duchesse de Longueville, lived in a world of intrigue, saw as little as possible of her husband, as much as was convenient of her adorers—one of them always, Gascon fashion, to the fore—and having ruined her brother, estranged her husband and lost her lover, left the courtly stage with little applause even among her children. A pitiful woman's tale as it is told—and well told—by Mr. Noel Williams,¹ who is gentle with his material and his two heroines, but leaves with us a portrait of the good Prince Henry of Navarre when he had become Henry IV that we must, for its amorousness, hang beside the picture Carlyle gives us of the great Peter, Czar of all the Russias.

In the mad days of our old enemy, King George III of England, the clever Lady Holland kept a private journal,² some parts of which she may have left open for her husband's perusal; but one judges that she intended to produce it in the court of conscience in her old age, as at once her confession and her apology. Like so many confessions of the sort, it now gets into print, giving this generation fresh, if not refreshing, material for a revision of its inherited notion of the character of an attractive, ambitious, and very celebrated lady. Her mother was a Vassall, of the same breed, it is supposed, with the Vassalls who migrated early to Cambridge, Mass., and gave to Washington a convenient headquarters and to Longfellow in later days a beautiful home.

Lady Holland, at twenty-five, and still a woman of "undoubted beauty" and "natural liveliness of disposition," says her biographer, began that glad, successful, ambitious career as mistress of Hol-

¹ A PRINCESS OF INTRIGUE: ANNE GENEVIEVE DE BOURBON, DUCHESSE DE LONGUEVILLE, and her Times. By H. Noel Williams. 2 Vols. New York: G. P. Putnam's Sons. \$6.50.

² THE JOURNAL OF ELIZABETH LADY HOLLAND (1701-1811). With Portraits. 2 Vols. Edited by the Earl of Hchester. New York: Longmans, Green & Co. \$6.00.

land House, whose glories so many distinguished men have sung—men like Macaulay, Sidney Smith, Fox, Grey—conspicuous leaders of the Whig party. A sometime frequenter of that house, the then Prince of Wales, afterward King George IV, is pretty well known to readers of today. Lady Holland, pretty, witty and ingenious, was sure to be the center of the counsels of the Whigs, whose motto seems to have been the same as that of the Cambridge Vassalls—"Always for my country; sometimes for my king." There were ladies also—a few, not many—who came to Holland House. Her poor king was mad when her journal comes to an end in 1814, but Holland House survived long after that date, the mistress continuing to be the brilliant hostess.

Aiming to give less than a full account of the worthy women of Scottish history, Mr. Harry Graham has made his selection, not wholly, but almost too largely for the honor of Scotch womanhood, from a class of women born on the stage of noble action, with all the captivating scenery of public life to help them—women who gave to the stage not so often nobility as notoriety.* Beauty was in most instances the prime element of their charm. The bright light beating on thrones made them conspicuous. They were lively in youth, wayward in womanhood, hard and harsh in old age. It is curious that these features should have so interested our grandfathers—more curious still that they should today so interest us, as they certainly do. Mr. Graham runs thru a wide range of Scotland's amiable and unamiable matrons. Catherine, Duchess of Queensberry—the "lively Kitty," as they called her—with other women equally lively, stormed the English House of Lords in 1739; swore "they would enter in spite of the Lord Chancellor and the whole House of Peers." Failing at first, they "stood their ground from nine in the morning till five o'clock at night," howling and thumping, and finally accomplisht their object by a ruse of rare ingenuity. They agreed to keep absolutely still for half an hour, and did so, whereupon the Chancellor concluded that they had departed, and accordingly

threw open the doors. We commend the plan to the suffragettes.

Miss Jerome, democratic daughter of an American millionaire, whose pride it was to have been "Father of the American Turf," became Lady Randolph Churchill in 1874. Twenty-six years later she says: "I bade farewell to Lady Randolph Churchill, who then took the name of the chronicler of these reminiscences." These twenty-six years were spent in the society of the English "privileged classes," with headquarters from time to time at Blenheim Castle, summer home of the old Churchills, Dukes of Marlborough, since the days of that "famous victory" about which the little Peterkin of the song was so curious. Lady Randolph seems not to have lost her American "horse sense," which finds a home equally at the Jockey Club, at the "hustings" and in the society of dukes. At any rate, she could ride after the hounds, leap a five-barred gate with the best, conduct an election campaign in the absence of her busy husband, and speak, tho with bated breath, in the presence of Victoria Regina herself. With Napoleon III in his exile she had talked; had been *particeps criminis* with the Empress in her flight from Paris; that is, her mother's house had concealed the man who prepared the flight. She had dined with the all-glorious Queen of England, at whose august table, she says, "conversation was carried on in whispers. . . . When the Queen spoke, even the whispers ceased." And she tells of an unfortunate gentleman, invited to the same sort of feast, who had, under his breath and to his immediate neighbor, ventured a poor little joke. The Queen required him to repeat it aloud. Stammering and scarlet, he had done so amid dead silence, and the Queen, "fixing a cold eye upon him," said: "I am not amused."

The Climber. By E. F. Benson. New York: Doubleday, Page & Co. \$1.40.

Mr. Benson favors a vivacious heroine. Lucia Grimson is another "Dodo"; at least, she has the same hectic volubility and nervous intensity of speech, and

* *The Lives of Scottish Women. By Harry Graham. New York: Doubleday & Co. 44 pp.*

* *The Reminiscences of Lady Randolph Churchill. By Mrs. Jerome. Illustrated. New York: The Century Co. \$3.50.*

much of the charm of that fascinating lady of sixteen years ago. Men usually like a woman who talks well; it relieves them from the burden of entertaining, and it is no surprise to find these vivid heroines with several adorers each. Dodo, if we remember, was, however, the better woman. Lucia is the incarnation of a selfishness so complete and so atrocious that she fills us with horror and wins no sympathy even when broken—it is like seeing a wounded serpent dragging its maimed length wearily along the dusty road. The merry days before her undoing are described with the verve and freshness of Mr. Benson's earlier work, and there are some well-rounded minor characters. Lucia's two elderly aunts are remarkably good portraits. Never, perhaps, has the ruthless nature of social ambition, scorning the steps by which it rises, and flinging away the hand of a friend like a worn out glove, as soon as it has given its help, been more sternly unmaskt than in *The Climber*.

E. F. BENSON

goodness as in this new fashion of hero. He gives himself with unthinking generosity, as a child might give a priceless gem, to save the woman he loves from sorrow. He is foolish to throw himself down for Zora's feet to tread upon in the heedless way of her superb self-concentration,

but it is a loveable folly. The story of *Septimus* is not slight or negligible fiction; it cuts pretty deeply into living, pulsating humanity. We feel that Septimus, all goodness and sensitive delicacy, deserves a better fate than his abnegation is likely to bring him; yet we are a little blinded by the light of it, and it is hard to judge his act dispassionately. He is so helpless and so wise; so much of a genius and so much of a big baby, needing a woman's care; so abject in his estimate of his own worth and so worshipful in his adoration of others, that perhaps the author of his gentle being knew best, after all, what disposition to make of him. Clem Sypher is another incurable sentimentalist; an inventor of a patent medicine which becomes a religion with him; he is so grandly in earnest about his "cure" that he is not ridiculous; his obsession is so great it gives him a pathetic dignity. Perhaps that is the secret of Mr. Locke's spell. His creations are whimsical to a degree, the situations bizarre, yet we

Septimus. By William J. Locke. New York: John Lane Company. \$1.50.

A little folly is a lovable thing. The serial title of Mr. Locke's new novel was "Simple Septimus," and never was such simpleness united to such self-forgetful

Courtesy John Lane Co.

WILLIAM J. LOCKE,
Author of "Septimus," "Beloved Vagabond," etc.

love them too much to laugh at them; his people are eccentric in their goodness and in their weakness, but they are not absurd, and we succumb at once to the elusive but very enchaining charm of *Septimus*.

✧

Vronina. By Owen Rhoscomyl. New York: Dodd, Mead & Co. \$1.50.

The scenes of this novel are laid out of sight of the world, in Wales, and the author has secured to an unusual degree the charm of dewy freshness. Everything is green and still and rain-wet, even to a damp sweetness of the face of the woman in love. And to all appearances it is an ordinary love story, with a maid, a rose, and the inevitable "other" man in it, till we reach the concluding chapters. Here the mystery of moral natures revived after enduring for years the narcotic effects of sin is portrayed, and what was a pleasant love affair becomes a tragedy thru the peculiarly nauseating penitence of the scarlet woman, whose confession, as usual, involves all the lovers of good maids and other respectable men in the community. And in the end there is a touch of melancholy mysticism which gives the book significance.

✧

Kincaid's Battery. By George W. Cable. New York: Charles Scribner's Sons. \$1.50.

The prejudice against George W. Cable in the South is a matter for regret when we consider that he can still write better fiction from that section than any other Southern author. His last book is a story of the Civil War, and more particularly of the siege of Vicksburg. The scene opens in New Orleans on the eve of the beginning of the struggle, and the reader is introduced into a society of men and women, where the spirit of life is almost French in its gaiety. Only Cable has been able to reproduce this charming, well-bred facility of manner which belonged to the old Creole circles there. And while he does not call this or that character a Creole, we recognize the type. Kincaid is the captain of a battery which has been presented to the Confederacy by three beautiful and fascinating women, Mrs. Callenders and her two step-daughters. The light-hearted goodness of these heroines will cause the

reader to wonder into what age he has fallen in fiction—where a novelist can still maintain that women may be fascinating without being either perverted or divorced or adultresses. In fact, if one desires to see the psychic difference between the modern bad woman in fiction and the same character as she figured forty years ago, he has only to study Mr. Cable's presentation of Flora Vaucour in this story. She is an adventuress, an intriguer, a thief of another woman's lover, but for all that she is chaste. She is equal to some characters in the novels of the elder Dumas in the accomplished diablerie of her spirit, but she is not of that degraded wickedness found in the most attractive of modern heroines. All told, it is a story where the red fuse of war burns into the drawing-room of a pretty society. And the author misses neither the lightness nor the tragedy of such a situation.

✧

Tono-Bungay. By H. G. Wells. New York: Duffield & Co. \$1.50.

Tono-Bungay is the epic of patent-medicine promoters. It is useless to deny Mr. Wells a certain power in delineating middle-class conditions and characters. Uncle Teddy, the discoverer of Tono-Bungay, who had a "certain Teddity about his personal appearance," Aunt Susan, who is thoroly delightful, and the pale pastel sketch of Marion, the ineffective wife of the unheroic hero, are clever and lifelike portraits. In W. J. Locke's latest novel, "*Septimus*," Clem Sypher stands as the prince among patent-medicine men. He makes a religion out of his "cure"; he is an idealist, a dreamer; we feel his essential nobleness thru all the absurdity of his obsession. Uncle Teddy, on the other hand, has no overweening belief in his Tono-Bungay, except a steadfast faith in its power to make him rich. This difference marks the contrast between the two novels, as well as the two promoters. Simple *Septimus* and George Ponderevo are both inventors, both ill at ease in a world of practical business, but there the likeness ends. *Septimus* is a lovable child-man, an angel astray, full of all nobleness and knightly self-sacrifice. Mr. Wells's here is moody, discontented, selfish, and immoral. In spite of humor, imagina-

H. G. WELLS,
Author of "Tono-Bungay."

tion, a lucid style, a gift of insight into the shams and absurdities of society, *Tono-Bungay* is as uninspiring as a dull, gray day. A cold mist creeps and clings thru its pages, it drips with doubt, and it is fairly clammy with ineffective questions, futile to ask where there is none to answer.

The Bible of Nature. By J. Arthur Thomson, M. A. New York: Charles Scribner's Sons. \$1.00.

Professor Thomson, who is Regius Professor of Natural History in the University of Aberdeen, was invited, on the foundation established by the late Governor Bross, of Illinois, to deliver a course of lectures at the Lake Forest University. The object of the Bross Foundation is

"to call out the best efforts of the highest talent and the ripest scholarship of the world to illustrate from science, or from any department of knowledge, and to demonstrate the divine origin and the authority of the Christian Scriptures; and, further, to show how both science and revelation coincide and prove the existence, the providence, or any or all of the attributes of the only living and true God, infinite, eternal, and unchangeable in His being wisdom, power, holiness, justice, goodness and truth."

The five lectures were delivered last year, the theme chosen being, "The Bible of Nature," which is treated under the heads, "The Wonder of the World," "The History of Things," "Organisms and Their Origin," "The Evolution of Organisms" and "Man's Place in Nature." We have the discoveries of science within the last fifty years and their elucidation as tending to prove the existence of some power which antedates the birth of things in Nature as we understand Nature—a power that produced the beginnings of things, and yet is still contemporary with the transformations of all things in Nature, and so is an ever-acting creative force. The line of argument is that of the evolutionist, and the conclusion reached is that of the agnostic, with a difference. Professor Thomson does not shut himself wholly in the formula, "We do not know." Without passing the lines of a strict scientific

LADY RANDOLPH CHURCHILL

A portrait sketch by John S. Sargent. From "The Reminiscences of Lady Randolph Churchill."

treatment of the great questions of evolution, he yet refuses to close the gates that open into a wider view than that of science. We cannot by science alone reach a conclusion as to the prime origin of the mechanism of life or answer finally the questions sure to be asked by every man: Whence he came why he is here, whither he is going, and what may or may not exist beyond or beside the brief region of sense. His statement virtually is: We do not know, but we do wish to know. We would give all we are to know. We are not heartless or mindless as to the great mystery. "Men of science seek, in all reverence, to discover the Almighty, the Everlasting. They claim sympathy and friendship with those who, like themselves, have turned away from

are things not "explained" by science and that "never can be" things of the spirit, that must be spiritually discerned."

Alaska: The Great Country. By Ella Higginson. New York: The Macmillan Company. \$2 50.

The beauties and merits of our great northwestern possessions form the theme of a growing literature of varied interest to Americans. To Miss Ella Higginson Alaska is the wonderful land—the paradise *par excellence*—if there can be any superiority among claimants to that happy garden state. Its glories, its enormous concealed riches, are celebrated in language that brings tears to the eyes that Providence should have waited so long for a Seward to purchase

MISS HIGGINSON AND HER DOGS
From "Alaska: The Great Country"

the more material struggles of human life, and have set their hearts and minds on the knowledge of the eternal," and he lays stress on the hopefulness of the new view of the evolution of nature and of man from external nature—an evolution that admits of no moment of arrested development in creation. Science does not know the whole process, nor anything that is behind the process. There

and a Sumner to eulogize the rich acres of violets and subterrene minerals. Her trips to the Far West seem to have been by preference by steamer. She explores for us all the bays and inlets from Vancouver to Unalaska, and up the coast as far as the Bering Sea, touching with a scented brush the new cities of wood and brick, the totems, wicker baskets and blankets; the shops, schoolhouses and

railway stations; missions and merchandise; flowers, rocks and icebergs. Everything in that favored land is enchanted. Puget Sound is, as it were, "one great opal which has broken apart and flung its escaping fires of rose, amethyst, amber and green up thru the maze of trembling pearl above it." Even the winds exert a "velvety pressure" on the fair cheeks of ladies and the rough beards of men. Picturesque shores slope down into "cool, shadowy bays," where the shingle is "splashed by spent streams"; where "divinely blue, wooded and snow-pearled ways" lead one to "the final and sublime beauty" of a land which no woman who plays whist ought ever to visit. In sailing along the inland waters of that glorious coast, "the mere vibration of the ship" swishing across the fronts of icebergs is "a physical pleasure by day and a sensuous lullaby at night." In her woman-like ecstasies over this favored possession of Uncle Sam's the author is almost saddened by the lack of appreciation shown by some of the early explorers, who, cold and hungry and homesick, selected their adjectives accordingly. To them the land was "gloomy," the hills were "rugged," the inland valleys "ice-locked, ice-bound and ice-bounded." The snow mountains were—think of it!—"grotesque." It is in this mood of exalted appreciation that we skip along the coast with Miss Higginson, stop at every youthful town for its history, accommodations and present intentions—then slip into the winding valleys to get sight of snow-capt mountains. We admire ice gorges and glaciers, hug with ecstasy spent volcanoes, and at last round into Nome, on the Bering Straits, and sit down to listen to the siren song of that coast. It is an Indian company that voices the song, and they sing it with "evident pleasure," as no doubt our readers will:

"Oni, tsenuan whuduguduwhuta yilh;
Oni, yuwun dutlish, oni nokhlhan,
Oni, dodutalokhlho,
Oni, dodutalokhlho,
Oni, dodutalokhlho,

The Binding of the Strong. By Caroline Atwater Mason. New York: Fleming Revell & Co. \$1.50.

The author claims that this is a "love story"—possibly. But she made a fatal

mistake, so far as the romantic feature goes, when she made John Milton the hero of it. One associates Milton with angry anthems, but not with love. In fact, there is a general impression abroad to the effect that he was not an amiable domestic character. This is natural. A man who could stir up such magnificent strife between heaven and hell was created out of sterner stuff than lovers are made of. Mrs. Mason follows the usual feminine rule in presenting the great poet's domestic relations. She favors him, casts the blame upon his wife. Women writers have idealized all the scamps and disagreeable men of history in similar fashion—all except old Thomas Carlyle. He has not figured yet as the gruel-fed hero of my lady's romance. But it is only a question of time when some one of them shall prove that his wife was to blame both for his dyspepsia and temper. Meanwhile Mrs. Mason admits that John Milton took Mary Powell to wife because her father owned him five hundred pounds, which he was unable to pay. At the same time he was in love with his young pupil Delmé Delon. The book is interesting because it gives pleasant pictures of the day in England when Cromwell was about to take the field against the King. And it closes when Milton, with his wife, are lodged in the palace, he as secretary of foreign tongues, and with his sight failing fast. The author gives no account of the long darkness which followed for him, and in which he lighted the world forever with a great epic.

The Sense of the Infinite. A Study of the Transcendental Element in Literature, Life and Religion. By Oscar Kuhns. New York: Henry Holt & Co. \$1.50.

While Mr. Kuhns's study of transcendentalism is notable for what it leaves out—namely, a certain efflorescence of transcendentalism that has wasted itself in "spiritualism, clairvoyance, magic rites, ascetic practices"—all efforts, in fact, "at making theology and a body of practical rules out of what is essentially spiritual, incommunicable, and not to be bound in narrow rules"—it will be seen from his definition that his field is still broad enough. "Taken in its wider significance, and especially in its *sense*

and more rational use, transcendentalism may be defined as that instinct or sense or feeling of the human soul by means of which it is drawn out of everyday consciousness, and brought into an elevated state of mind, by the contemplation or vision of those things which arouse within us a sense of timeless Being, of the Absolute, the Infinite, the One." To illustrate his definition more fully, he quotes William James, Schelling, Max Muller, Schleiermacher, and then plunges into the history of the unusual in literature, art, religious exaltation, poetical inspiration, restless mental "aloofness"—that is, for the last named, probably what the average man would call the moments when the emptied bins of physical life are being refilled, when the exhausted fires are being replenished with an active fuel—a period which, in too many cases, proves to be that unfortunate time when, as Dante puts it,

"the unsuspecting sheep

Return from the pasture fed with wind."

But the author does not linger to discuss the impoverishment of wind. The true mystic and transcendentalist is fed with better and more spiritually nourishing food. There is the spirit of the wine of immortal life in his higher moods, and man cries out, with joyous exaltation, as if conscious of standing in the presence of the universal and eternal:

"I know not where His islands lift
Their fronded palms in air;
I only know I cannot drift
Beyond His love and care."

This is the mood which the author would most willingly follow, and this he does through various chapters on the "Transcendental View of Nature," "Love and the Transcendental Sense," "Plato and Plotinus," "Platonism, Past and Present," "Medieval Mysticism," "Renaissance and Reformation."

The Life of Chaplain McCabe. Bishop of the Methodist Episcopal Church. By James Milson Bristol. Pp. 376. New York: Fleming H. Wood Company. \$1.50.

How well could the "beloved chaplain" be readily thought of calling him by another name—say, "I am a part of all that I live near." He was a vital and vitalizing force. Virtue went out of him. One could know it by his face. His

fame rests first upon the fact that he went to the front as an army chaplain in the Civil War, and was known ever after as "Chaplain McCabe." There was never another such chaplain. He was large hearted, but erratic. One day the bugle had called the men to the order of the day, but they did not respond. The colonel shouted to the adjutant: "Where are the men?" The reply was: "The chaplain has them all in that church, and he declares that the meeting is so good that he won't let them come." After some bickering the colonel put him under arrest. But two or three days later he lifted the flap of the colonel's tent, put his head in, and said: "You were right and I was wrong; henceforth I will obey orders." Milray's fiasco in the Shenandoah Valley brought the chaplain and a good part of the Ohio regiment to Libby Prison. At that time there was a hitch in the exchange of prisoners. Even the chaplain was not exempt. But he was a ministering angel, and kept up the spirits of the men. For nearly four months he was a blessed, happy man, keeping the other prisoners from despair. When the Methodist Episcopal Church determined upon a "Million for Missions," Chaplain McCabe was the field marshal. His vocation had come. Somehow or other he drew almost any amount of money from the pockets of men who at first had no idea of yielding. Others fell in with joy. Ex-Vice-President Wheeler once wrote to him in reply for some call: "Please get out of this region while I have something left. To reconcile you in some measure to going I inclose my check for \$1,000."

The Life of a Fossil Hunter. By Charles H. Sternberg. New York: Henry Holt & Co. \$1.60.

Mr. Sternberg is well known to all paleontologists as a man having a quick eye for distinguishing a new fossil from a concretion that looks just like it, a deft hand for chipping out a delicate bird bone, and, what is almost as highly appreciated, a genius for getting up a good meal on short notice out of a handful of flour, a can of tomatoes, a bunch of sage brush and nothing much else. He began collecting as early as 1870 in Sassafras

Hollow, whence comes the beautiful leaf *Protophyllum sternbergii*, and many of the years since he has spent in the arid plains of Kansas, once swampy forest. His unpretentiously written narrative brings out perfectly the personality of the man, the indefatigable zeal for research, the joy of discovery, the honest pride in having assisted so many great men in recreating the life of the days when the rock was laid.

Hymns and Poetry of the Eastern Church. Collected and chronologically arranged by Bernhard Pick. New York: Eaton & Mains. Cincinnati: Jennings & Graham. \$1.00.

The Rev. J. M. Neale, a pioneer English translator of "Hymns of the Eastern Church," brought out his tiny volume of that name early in 1862. He had been studying the subject for years and had kept most of these translations by him for nearly a decade. So welcome were these versions from the Greek to English speaking Christians that before the year was out numbers of them had found their way into hymnals and a second edition was issued. In four years, when the third edition was published, eleven of his versions had been included in a single hymnal. But before Dr. Neale's little book was printed Burgess's "Select Metrical Hymns and Homilies of Ephraem Syrus" had been brought out in London (1853) and a number of versions from the Greek had been included in a few German or English collections of Christian hymns. Since Neale's first essay, Bonar, Mrs. Browning, Mrs. Charles, Christ and Paranikas, Chatfield, Julian, Shaff and Shipley have made a study of Eastern hymns and have translated, written about them, or included them in collections. The Rev. Mr. Pick has had all these sources to draw from and has also introduced versions by Dexter, Dix, McMahon, Moultrie and Isaac Williams, who preceded Neale by many years. Of the hundred hymns here collected a few are unrhymed, but most are rhymed and metrical. Two-fifths of the number are drawn from Neale, who, by merely borrowing a suggestion or thought from the Greek, gave us some of our most treasured hymns (*e. g.*, "Art Thou Wearied? Art Thou Languid?"). Chatfield and

Dix follow him with more than ten translations each, while Bonar and eight or ten others supply three, two or one each. The dates of the originals, not counting a few early anonymous writers, range from the time of Clement of Alexandria, who died about A. D. 212, from whose hymn Dr. Henry Dexter adapted his familiar "Shepherd of Tender Youth," to Simeon Metaphrastes, who is supposed to have died about A. D. 959, a period of more than 700 years. A few later anonymous hymns are appended, among them Moultrie's "Behold the Bridegroom Cometh." Mr. Pick has done

FROM CABLE'S "KINCAID'S BATTERY."

good service in making this compilation; and, in his notes and introductions, he has given due credit to other students of Eastern hymnology. There is a simplicity about many of these Greek hymns that makes it comparatively easy for the translator to turn them into good, racy English, a task that the translator of Latin hymns can seldom accomplish.

At Large. By Arthur Christopher Benson. New York: G. P. Putnam's Sons. \$1.50.

The public has been waiting for Mr. Benson's versatility and brilliant vivacity to wear itself out, but book after book

comes from the Knickerbocker Press and still no waning of the old attraction, and so this new volume will be read by an increasing circle. Most of the essays in *At Large* have already had magazine publication, but we prefer to have them collected in a volume more miscellaneous in character than those preceding it. Whatever Mr. Benson's titles—and here he deals with Contentment, Friendship, Travel, Shyness, The Dramatic Sense, Literary Finish, Our Lack of Great Men, The Love of God, and other topics—the welcome thing, the thing we are sure to find, is a genial understanding of the frailties of human life along with a calm optimism, a wealth of thought, and a very fluent style enabling one to wander under any title easily away with the author from the cares that infest the day.

Attic and Elizabethan Tragedy. By Lauchlan Maclean Watt. New York: E. P. Dutton & Co. \$2.00.

It may be somewhat surprising that one should project upon the world of letters a book which seems to demand huge volumes, and is yet unconscionably small. Scholars might pass it by, thinking that it is merely for the vulgar. It is, in fact, a real *multum in parvo*. The drama has nowhere formed so great a part of civic life as in Greece, and especially in Athens and Attica, where Thespis started tragedy on its road to perfection.

"In Athens, under the shelter of religion, it was untrammelled and unrestrained, and it created a public morality so pure and lofty that its own morality was braced by the very atmosphere itself had made."

There are some types which stand out clear: Neoptolemus, free from guile, his father's son; the crafty Ulysses, seeking the common good of the army; Pylades, "who speaks here for the only time in the play." This silent man enters the house of fate when the arm of Orestes falters. Shakespeare rose out of a multitude of dramatists, of which Marlowe was the greatest, "outshining and outstanding all others of this school." "'Kit' Marlowe takes his position as the immediate pioneer of Shakespeare. He had a short life, and fell in a tavern brawl after twenty-nine swift, fiery years." "He lived

and died an irreligious, tender hearted, licentious poet." But he was "Marlowe of the mighty line." It is no wonder that Goethe thought of translating "Faustus" into German. How terrible are the lines beginning:

"Now hast thou but one bare hour to live,
And then thou must be damned perpetually."

But now comes the king of drama. In both comedy and tragedy he is supreme. The devil, Iago, which the poet has created, drops his mask, he is "naked and not ashamed." Macbeth, at first an honest man, led on by his wife becomes a villain dyed in slaughter. Lady Macbeth drops at last her rôle of leadership, and

"with naked fancy stretched upon the rack, lived a long sleepless dream of hell—a miserable woman, whose nerves, all flayed, were scorched forever by the hot breath of her sin."

Occasionally an error drops in, e. g., p. 309: "Richard's victory is the victory and vindication of the cause of good, and of the good God, and, above all, the vindication of England." "Richmond" must have been intended here.

The Grammar of Philosophy. A Study of Scientific Method. By David Graham. Pp. xi, 383. New York: Charles Scribner's Sons. \$2.50 net.

"So much does man delight in knowledge, and in communicating knowledge, or even what he takes to be knowledge," writes Mr. Graham in the introduction to *The Grammar of Philosophy*, "that in this age of letters myriads of people, not contented with oral facilities of communication, seriously commit their thoughts, their observations, their fancies, their musings, their speculations, their guesses to writing and to the creation of books." We may assume that Mr. Graham's book is an outcome of this tendency of the human mind, and that it has fulfilled its mission of satisfaction for its author. Of other value it can have little. The man who can write of the philosophy of Berkeley, Hume, Kant, Fichte, Hegel and Cardinal Newman, on the basis of the shallowest acquaintance with their writings, as "mere exercises in blindness and perversity," and can describe these and other of the world's

great thinkers as "ignorant, presumptuous or hallucinated," "imposters or simpletons," "gibbering futilitarians" and "doddering idiots" is not worthy of any serious attempt at refutation. All writers—theologians and philosophers of schools as wide apart as the poles—with whom Mr. Graham imagines himself in disagreement, are unceremoniously swept away under these epithets; and Mr. Graham proceeds to build up a system of so-called philosophy which he holds ought to be acceptable to the hard-headed common sense of the man in the street. For any higher faculty Mr. Graham has a supreme contempt. But it never seems to have occurred to him that the advice he so freely offers to others might be retorted on himself—"he is to be most strenuously recommended to retain his seat in golden silence."

Daybreak in Turkey. By James L. Barton, D.D. 12mo., pp. 294. Boston: The Pilgrim Press. \$1.50.

Dr. Barton was himself a missionary in Eastern Turkey before he was made secretary of the American Board. There are few men who understand the conditions of Turkey better, or who are better informed as to missionary conditions and missionary policy. These chapters were prepared, in large part, for courses of lectures before the amazing revolution in Turkey, but the chapter on "Turkey and the Constitution" has been added since. Following the history of Turkey and the description of the religious divisions within it we have the story of the first missionary explorations by the first representatives of the American Board nearly ninety years ago, followed by the account of the wonderful work done by their successors, which has had so much to do with the late revolution. It is a volume of special value for study by mission classes or bands.

Araminta. By J. C. Snaith. New York: Moffat, Yard & Co. \$1.50.

A year ago Mr. Snaith published a strange and moving story, "William Jordan, Junior," in which symbolism was pushed to the extreme, and which stands alone as a study of genius. *Ara-*

*mint*a is the antithesis of that somber book. It is full of humor and of good humor, a touch of cynicism like a slight hoarfrost adds piquancy to its clever characterization of a few London types. The heroine is distinctly new. A young lady six feet high, who looks like an ancestral portrait by Gainsborough and talks like an adorable idiot; who has a child's heart and the intellect of a baby, is an unusual person. Mr. Snaith's triumph consists in this: That he makes the reader intensely interested in the

J. C. SNAITH,
Author of "Araminta."

fortunes of the extraordinary creature "named Araminta, but they call me Goose because I am *rather* a Sil-lay," as she explains herself to the astonished nobility of London. Partly because of her simplicity, which is very near the artless art of the best breeding, and partly because of her beauty, she becomes a social success, and we are swept along in the train of her admirers, though we could not give a rational excuse for it; compared with any previous heroine Araminta is preposterous! Yet the hero, who is clever and a "coming" artist, pronounces her "the best, the truest-hearted, the most absolutely genuine girl in the world," and surely he ought to know. And we, too, find her likable and wish the big child all happiness, including the cream buns of which she is inordinately fond.

Literary Notes

....*The Training of a Priest*, by Rev. John Talbot Smith, LL. D., is an enlarged edition of "Our Seminaries," issued in 1896. The author is a Catholic priest, and he is severe on the failure of diocesan seminaries for educating priests; but his earlier volume has done no little good in the direction of encouraging the suppression of worthless, small, local seminaries and replacing them with central ones. Dr. Smith is drastic in his criticisms of medieval teaching. He would have English a chief medium of instruction instead of Latin. Very interesting is the introduction by Bishop McQuaid. We note that in his excellent seminary at Rochester, N. Y., the students are required to converse in Latin at breakfast, in English at dinner, and in German at supper. (Longmans, Green & Co., New York.)

....Prof. Charles Foster Kent, of Yale University, who has done as much as any American scholar to popularize Old Testament knowledge, follows his "Student's Old Testament" with *The Historical Bible* (New York: Charles Scribner's Sons, \$1.00 per vol.) In the first volume, *Heroes and Crises of Early Hebrew History*, instead of printing the several documents in parallel columns, he follows the fuller and more primitive narrative, arranging the text in sections and adding explanatory notes. This volume is almost a complete and consecutive reproduction of the document J, the Judean story of early Israel, and is a useful handbook for the study of that important early record. The advantage of being able to follow this Judean history by itself, without confusion from later traditions, is very great. The second volume proceeds similarly as to *The Founders and Rulers of United Israel*, allowing the student to confine his attention to the remarkable early narratives concerning the fortunes of Saul and David.

....Most of the publications of the Carnegie Library of Pittsburgh are ostensibly compiled for the benefit of the people of Pittsburgh, but the editorial policy is of such high order, that they are exciting a much broader influence thru the country. In 1907 this institution set its bibliographers to work in compiling a "Catalogue of Books, annotated and arranged for the use of the first eight grades in the Pittsburgh Schools." The outcome was marked by sanity, for the inclusions were wise, and the exclusions indicated the excellent standards adopted. A glance thru the pages will show also that the delicate matter of annotation has been adequately met—a feature which other libraries would do well to emulate. For the parent depends on critical comment in her choice of books for children. It is no easy task to put the substance of a volume in a few lines. This bibliography work has been carried on in many directions; the children's department alone has spent some ten years in arriving at a definite method, and the latest issue from the Library Press represents a splendid evidence of its adequacy. We rec-

Books in the Children's Department of the Carnegie Library of Pittsburgh (price, post-paid, \$1.00) for use thruout the country. It is a composite of the excellent features of previous catalogues and shows evidences of careful arrangement and good thinking.

Pebbles

MAGISTRATE—The next person who interrupts the proceedings of this court will be expelled from the room.

Prisoner—Hoo-ray! Whooper-ee! Now lemme go!—*Illustrated Bits*.

FIRST FARMER—What did you tell them, Si, when they askt you in the city whether your milk was properly pasteurized?

Silas—Told them, "Why certainly; all our cows are fed in a pasture."—*Judge*.

THE latest thing perpetrated by the school-boy, who so often gets things mixt, is this: "Vesuvius was a city of two thousand inhabitants who were all destroyed by an eruption of saliva from the Vatican."—*Congregationalist*.

A NEW JERSEY man and his wife have parted by mutual consent. She objected because he chewed tobacco, and he soured on her because she insisted on kissing the cat. There will be adverse opinions as to which of this pair had the better "taste."—*Atchison Globe*.

REPORT by a young English school-girl of a lecture on "Phases of Human Life—Youth, Manhood, and Age": "In youth we look forward to the wicked things we will do when we grow up—this is the state of innocence. In manhood we do the wicked things of which we thought in our youth—this is the prime of life. In old age we are sorry for the wicked things we did in manhood—this is the time of our dotage."—*The Tablet*.

AT Preston, where everything is up-to-date and the people are always planning some new scheme, a shocking thing happened. One of the popular society women announced a "White Elephant Party." Every guest was to bring something that she could not find any use for, and yet too good to throw away. The party would have been a great success but for the unlooked-for development which broke it up. Eleven of the nineteen women brought their husbands.—*Tit-Bits*.

THE following good story from a Liverpool paper shows why (it is one reason anyway) we do not bond public officials in the Balkan Peninsula:

At a recent banquet given at the house of the Prime Minister of one of the Balkan States a distinguisht diplomat complained to his host that the Minister of Justice, next to whom he was sitting, had taken his watch.

The Prime Minister said, "Ah, he shouldn't have done that—I will get it back for you."

Sure enough, toward the end of the evening the watch was returned to its owner.

"And what did he say?" asked the guest.

"Sh-h! He doesn't know I have it back," said the Prime Minister.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Lieutenant Shackleton's Achievement

THERE have been over a dozen attempts to reach the North Pole, and only one or two to reach the South Pole. It has been thought that the North Pole would be more accessible; that one could find an open sea and sail gayly to it, or that one could imbed his vessel in ice and float across it; but the ice barrier has been thus far impenetrable. It is a surprise, an astonishing feat, that Lieutenant Shackleton has been able to reach within about a hundred miles of the South Pole, simply by walking across the reaches of a continent covered with snow and ice. It is a tremendous achievement, even if he came a few days short of his goal. At his next attempt he will probably succeed.

The North Pole and the South Pole of the earth are strangely different from each other. The continents and their outlying islands, Greenland and Nova Zembla, approach much nearer the North Pole than the corresponding continents and their fringes approach the South Pole. But the South Pole is covered not by water, but by a mighty continent probably larger than Australia. Ice barriers

enclose it, and ice covers it. On it lives not a quadruped, not a bird, not a plant, not a thing of life above the lowest algæ or some imperfect insect forms. There is nothing on it to support life. It is very different from the region about the North Pole, where life is fairly abundant, due to the access of ocean currents. Once Antarctica was connected, probably, with New Zealand and South America, and once there was warmth and life as shown by coal measures and Cretaceous fossils, but the connection was broken and everything that lived perished as completely as the mammoths of Siberia were frozen to death. There are over three million square miles of land, all vacant and dead.

Then why should any man risk his life to search its secrets? Not for any good it will do, not for any source of food or comfort, but solely for knowledge, mere useless knowledge, unless knowledge is in itself a value equal to food and clothing. We want to know, independent of any visible physical profit. Astronomy is queen of sciences and the most useless of them all.

Lieutenant Shackleton's discoveries raise more questions than they can answer. Each new fact opens new problems. What does it mean that the South Pole should be covered with a mountain plateau nearly two miles high, while there is nothing of the sort at the North Pole? It would seem that the revolution of the earth on its axis did not at all control the direction of the crumplings of the crust of the earth. Have we not in Antarctica a huge glacial cap, the glaciers moving downward from the plateau and the mountains to the sea, under the influence of gravity; but how is it that there was a similar glacial movement from the North Pole, where there were no mountains? Did that come simply from heaped up miles and miles of glacial snow and ice?

Here is another curious matter, the persistent and fierce winds from the Pole which the brave party had to face. But why these winds, and why do we not hear of corresponding persistent winds from the North Pole? Of course, there are steady currents in the atmosphere, and summer and winter make a difference in currents, and cold air from the Poles may be presumed to take the place of warmer and lighter strata in the Temperate and

Torrid regions; but do the winds at the two Poles follow different laws; and would the South Polar winter show a different aerial current from that met with in the summer by Lieutenant Shackleton's party?

We have thus far only the barest outline of the story of this expedition, but enough to mark it as one of the most daring and the most successful yet undertaken. Not only did it reach the nearest point yet achieved toward either Pole, but it ascended to the summit of the famous volcano, Mount Erebus, 12,000 feet high, finding a crater to compare with Kilauea; and it also found the South magnetic pole. Before Lieutenant Shackleton goes again—for there is no escaping the fascination when one is once captured by it—we must have the full story, with its maps of mountains, its experience with new adjuncts of exploration, the Siberian ponies and the motor car, and what fills us with the greatest admiration, the sturdy climb of these brave, resourceful, enduring men, dragging their loads up mountains and over glaciers, dropping into snow-covered chasms to be pulled out by the rope by which they were attached to each other, and all so far from all possible aid or even knowledge if they should perish, their bodies left to be hidden forever by snow, or possibly to be found unchanged by some hardy explorers a thousand years later. What these dangers mean the reader of any book of polar travel will understand, and they are only indicated by the outlines of one expedition which General Greely tells of in this issue of THE INDEPENDENT.

The Proposed Tariff Revision

WHEN the tariff bill was laid before the House, Chairman Payne introduced with it a long statement purporting to show how the present duties had been changed. This statement was inadequate. Careful examination of the bill itself has brought to light what are called "snakes" or "jokers." It has also given greater emphasis to the popular condemnation of increases that were not disguised, altho the full meaning of them had been obscured. It is now quite well

understood at Washington that a majority of the objectionable changes were made by the committee in response to the appeals of a few persons and to serve special interests.

Among the increases that were not explained are those affecting the cheaper grades of cotton cloth, and these additions were caused in part by new classifications or a new method of determining quality. Dealers in dry goods show clearly that the increases range from 10 to 50 per cent. The duties on cotton stockings were made much higher than they are now, altho the present rates exceed the average of the entire tariff. On the cheaper grades there is an advance from 58 to 82 per cent. There is no warrant for this in the difference of labor costs at home and abroad. Our domestic output of such goods has doubled since 1890, and is seven or eight times the quantity imported. The proposed higher duties would decrease the customs revenue by greatly reducing imports. They would also enable domestic manufacturers to exact higher prices. Such changes weigh heavily upon persons of small means. It is noticeable that the duty on silk stockings remains unchanged. Under the provisions of the bill there would be a duty on coffee, unless Brazil and several other producing countries should repeal their laws which impose an export tax or a tax having a similar effect.

There is a large and inexcusable increase of the duties on gloves, and here again it is the low-priced grades that are so heavily taxed. The present duty much exceeds the difference in labor costs, and the Payne bill, while doubling the rates on such gloves as persons of small incomes buy, also serves the domestic manufacturers by reducing the duties upon their imported raw material. These changes would be for the benefit of a small group of manufacturers in one town of New York State, who have been represented at Washington by one of their number. He was formerly a member of the House and an associate of Chairman Payne. The committee, long-ing to increase the revenue, in this instance sought to reduce it, for our leading merchants say that the proposed

duties would prevent the importation of such gloves. Speaking in defense of this part of the bill, Mr. Payne said:

"Women could get along without the kid gloves, or have fewer pairs of them, or use silk gloves and cotton gloves, and all that sort of thing. They could keep their hands warm, although they could not cover their pride."

He must know, however, that the purpose of this increase is to compel them to buy American gloves of a similar quality at a much higher price.

Why should there be a new and high tax on cocoa, with other increases that add largely to the cost of chocolate? What special and hidden interest was served in this case? By the way, the provisions of the bill relating to cocoa, coffee and spices are distinctly hostile to a growth of trade with the countries south of us, and they would be resented in those countries, whose friendship we have been seeking to cultivate. They are in harmony, however, with the high maximum rates, which would invite commercial war with Europe.

Dealers in paper say that while the raw material of manufacturers is made much cheaper, there are increases of finished products which affect four-fifths of the imports and in several instances would be prohibitive. Duties on timber and rough lumber are reduced by one-half, but the National Forest Conservation League asserts that those upon finished lumber are left so high that they would forbid importation. Because the present rates of the iron and steel schedule are excessive, the proposed large reduction of them would leave ample protection, and consumers might gain some benefit from the lower duties. But are they not entitled to even greater reductions in this schedule? Last week, one of our great steel companies took an order for 10,000 tons of rails to be delivered in Argentina. If our steel manufacturers can undersell European competitors in that distant market, without the help of protection, could they not do it here at home if there were no duty on rails?

For the benefit of what special interest was the duty on watch movements increased? During the last few years certain dealers have asserted that wholesale prices here were fixed by a combination,

and that they could buy American watches in Europe, bring them home, pay the duties on them, and still show a cost below the price exacted in this country. It is said that the duty in the Payne bill, with restrictions that accompany it, would surely exclude all foreign watch movements. Were these changes sought in order that a domestic combination price might be made higher?

It is mainly on account of such increases, obscure or open, that the average ad valorem rate of the proposed tariff would be even higher than that of the tariff now in force. Chairman Payne admits that the rate would be raised from 44.16 to 45.72 per cent. A large majority of the American people desire that the average rate of the tariff tax shall be reduced.

There should be a permanent tariff commission of experts, not empowered, of course, to fix rates, but required to study continuously all the facts and changing conditions that should affect rates, to make recommendations, and to report information which tariff makers in Congress should have. Such a commission would have been able, this year, to show what the labor costs here and abroad are. A bill constructed in accord with the declaration of the Republican platform as to the difference in labor costs and the addition of a reasonable profit would not closely resemble this Payne bill.

Such a commission could have told Mr. Payne and his associates many things which they now admit they did not know. For example, it could have informed them as to the number of foreign countries and the volume of imports affected by the proposed maximum rates. In the face of such a commission's carefully prepared statements concerning the condition of domestic and foreign industries, prices, combinations, commercial treaties, cost of production, prices, etc., no Ways and Means Committee would venture to make and support a bill containing the improper and indefensible provisions which mar the bill now before the House. A competent and trustworthy permanent advisory tariff commission would be worth a great many times the cost of maintaining it.

Undesirable Citizens

SURELY of all undesirable citizens murderers are the worst; and of all murderers the most hateful, the most to be repelled, are the banded, cowardly professional murderers represented by the Camorra, the Mafia and the Black Hand oath-bound societies. There may be something almost manly—for war is called manly—in the raids of the head-hunters of Borneo, for they represent the primitive instincts of savagery; but these organized Sicilian bandits represent the uttermost combination of cowardice and malice, greed and fear that can be conceived.

Think of the cowardice of it. Their business is to live by robbing people, not in the old courageous way, but by frightening people who will not dare to tell of them, who are assured that they will be killed if they tell. They protect themselves by the numbers of their confederates, all oath-bound, all pledged to help each other and to obey the most criminal orders, even to murder, each bound in the most horrible way to silence if arrested, and their victims certain that they also, if they tell of the robberies to which they have been forced to yield will be killed. Accordingly these malefactors go about their awful, murderous profession, sticking knives into men's backs, silent knives that make no noise, confident that no one will know, or, if any one knows or suspects, no one will dare to tell. Thus murder is made safe, cowards get courage, stilettos tell no tales, and eye-witnesses, if such there be, are equally silenced. A whole population is cowed. The entire Italian colony here, or all the people of Sicily, are forced into a confederacy of willing or unwilling crime; and the police are powerless to detect the criminals, where they are not afraid to try.

These are the undesirable citizens we hear of—of one blood, one color, one criminal creation; not some other race of another blood and color, yellow or brown or black, who come to our doors and ask for nothing but the opportunity to work honestly and obey the laws of the land that receives them.

And yet we make laws to exclude yel-

low men from Asia, and we make no laws to exclude the white nationality from which these assassins come. And we ought not to; it is enough to do what Petrosino was sent to do, namely, get the records of criminals abroad, and require those who seek our hospitality and who desire to be citizens with us to show proof that they have no criminal record. Such a law we ought to have, one that would really exclude criminals, as well as the insane and those with infectious disease. That is enough. The rest, honest workers, will add to our wealth and strength, and should be welcomed.

Far be it from us to say one word against Italians as Italians. There is no nobler or abler stock out of which to make citizens. The race of Cicero and Cæsar, of the Gracchi and the Scipios, of Dante and Galileo, of Raphael and Michel Angelo, of Cavour and Garibaldi, is no mean stock. They have not lost the breed of noble men; but it is no strange thing that a race that will breed the best will also spawn the worst. It is enough to exclude the bad and welcome the good.

The difficulty about finding the murderers of Petrosino, and the equal difficulty of finding witnesses willing to tell in our own land what they have suffered by blackmail, or to tell who have robbed them, shows the cowardly devilishness of these pests of society. They go safely among those they have terrorized. But contrast with their cowardice of crime the bravery of the Italian Petrosino. He knew that he was walking every day on the points of stilettos. Hundreds or thousands of people were watching the chance to stab him. But he went faithfully, courageously, day after day along the path of duty for his adopted country's defense, knowing that he would probably be murdered, and yet shrinking and flinching from nothing. That was the true Italian heroism. The race that can produce such men has not lost its virility. Welcome to such Italians. Welcome to those that will carry burdens and dig roads and do any honest labor, and send their children to school, and grow into the love of the country that offers them the highest privilege of man, equal citizenship with us in the best of all coun-

tries. We welcome them, and we ought no more to exclude the Chinese or the Japanese, or any other people who will obey our laws and be one with us.

Massachusetts College

A NOVEL and interesting proposition is now before the Legislature of Massachusetts, that is, the petition of Edmund D. Barbour and other wealthy and philanthropic citizens of Boston for the incorporation of a peripatetic college which will bring higher education to the people of the State at their own homes. High school and similar buildings in any large town are to be utilized in the afternoon and evening for lectures, recitations and examinations. The ordinary college courses will be given and the degree of A. B. awarded at the end of four years' work. The regular student will take three subjects at a time, having in each two periods of lectures and one of recitation every week. The faculty will consist of a permanent staff in each district, supplemented by visiting lecturers drawn from existing colleges. An advisory board of fifty or more, composed of the presidents or representatives of all the important colleges of Massachusetts and other educational officials will supervise the curriculum, entrance requirements, granting of degrees, etc. The State will be to no expense, the local community will merely provide the classrooms, and the students will pay actual tuition, which is estimated at \$34.50 per annum. The charter provides for an endowment of \$3,000,000, which is supposed to be already "in sight." The promoters calculate that there are possibly 20,000 persons of both sexes in the State who would avail themselves of such facilities.

This is an excellent project and undoubtedly feasible. The Legislature should not delay favorable action upon it longer than is necessary to see that it is properly launched. Of course, it is a little humiliating to have to accept private aid in doing what the State should have done for itself, but the State of Massachusetts has got so far behind most of the other States in the matter of higher education that it is necessary to adopt the readiest means of catching up.

Even with this generous aid the people of Massachusetts will be at a disadvantage compared with Western States. In the first place the \$3,000,000 is an absurdly small sum for public higher education in Massachusetts. The University of California, for example, has an income which capitalized at 4 per cent. is ten times that, altho the school population is not much more than half that of Massachusetts. In the second place the tuition charge proposed by Massachusetts College is too high according to Western standards. It is just \$34.50 a year higher than at the University of California. If, as seems reasonable, tuition were made proportional to the cost of living it should be lower on the Atlantic than on the Pacific coast, but this would involve handling minus quantities which is always a bother.

It will be interesting to see what effect this extra-mural competition will have on the residential colleges. In that part of education which consists in the imparting of information and in classroom drill the new college may succeed as well as the older ones; perhaps better, if the author of the article on Stanford University in this number is right in holding that students at home work harder than students in dormitories. On the other hand we have as the unique advantage of the residential institution its "college life." This, however, is not all pure gain. "College life" is injurious to many young men and ruinous to some. When collegiate instruction is brought to the door of the house as it will be by this plan it will give parents a fair chance to judge for themselves whether the "life" in a residential college is worth the extra five hundred or thousand dollars a year it costs.

The pregnant suggestion is made by the promoters of the new college that students successfully completing the first two years of work in their home town will frequently find it advantageous to enter the Junior class of one of the older established colleges. This is likely to be the case and it will work out practically the same as extending the high school course to six years and so preparing directly for professional or other true university work.

There is undoubtedly an element of superstition in the prevailing view that a

college education can be acquired only in the traditional way, that is by bringing all the students to one place and keeping them there for four years. How large this element is and whether it is possible for the colleges to utilize modern methods of communication for the extension of their radii of influence, can only be determined by some such experiment as this and that is why we hope it will be tried.

•

Meddling with Wedlock

THE laws of California forbid marriage between a white person and a yellow person, and the rude crowd insults and jeers at Miss Emery, the daughter of an honored clergyman, when she leaves the State to marry a Japanese "of some education." We do not pretend that marriages between people of different races are to be encouraged—they are to be rather discouraged—but they should not be forbidden. They are the business of those who marry, and who should understand the risk they run. Miss Emery, in a remarkable statement to the public, excellently written, declared that it was nobody's business but her own, and that she loved him, had considered the conditions involved and was ready to marry because she loved him. Love is a first-class reason, and may be a final reason, but prudence must control even love. We offer no criticism of Miss Emery. Her mother supported her and went with her to another State for the marriage. She is now married; we are not interested in her case, but in the principle involved, the folly and wrong of a State which forbids marriage on account of race. Particularly do we approve the spirit and judgment of this young woman as to such prohibitory laws and those who make them:

"That the State of California has seen fit to forbid marriages between members of the Japanese and American races carries little weight with me. I have a pretty good conception of the frothy type of men who make the laws of the State of California, and should consider them the last persons on the face of the earth to be chosen as sponsors of public morals."

Very possibly this particular marriage is one of a multitude of marriages that are unwise and in which love gets the better of prudence. We cannot tell. All

marriages require courage, where they do not involve heedlessness. But there are interracial marriages which call for no regrets. We take a case, that of a mixed marriage we know of here in New York, a marriage that nobody found any fault with, and nobody had a right to.

We knew a beautiful young woman, the daughter of Austrian Jews living in Constantinople. She was ambitious for an education and went to the Girls' College there, and there she joined a Christian Church. She wanted to be a physician and to help the women of her country, and for the sake of an education she came to this country, and was taken under the care of the family of the editor who is telling this story. Here she finished her medical education, supporting herself in good part meanwhile, and then went back to Turkey, but was not allowed to practise as a physician; she might simply be a nurse. She came back to New York and very soon married an intelligent Chinese whom she had known before in certain religious work. He was a lawyer and an interpreter in the courts. She gave herself immediately to medical practice among the Chinese of New York, and few young doctors make a better living at first than she did. She was happy and successful. A Chinese commission sent to this country asked her husband to return to China as a teacher of law in one of the new colleges. He accepted, took first another year of study in a law school, and he returned to China. She remained a little while to attend further medical lectures, while he was getting settled in his new home, and then followed him, to establish a hospital for women in the same city. She is a happy woman, proud of her husband, devoted to the great work she has the ambition to attempt, and a good mother to her child. She has no prejudice of race or caste. Why should she? She is pure white Caucasian, Austrian, Jew, Turk, a legally naturalized American citizen, now Chinese—what is she, Austrian, Turk, American or Chinese? What does she care, this sweet, little, noble woman, who talks half a dozen languages and is satisfied to see God in man or woman under whatever skin? Nobody mobbed her when she married a Chinese, and not a friend

has deserted her for it. Such a marriage is forbidden in California and Oregon. The law is immoral, un-Christian. It winks at the immoral and interdicts virtuous relations.

We know nothing about this young Japanese whom Miss Emery has now married. We wish her as good fortune as that of the young woman whom we know so well. She takes her risk, as every young woman does who dares to love and marry.

Spiritualism and Demonism

WHILE the Society of Psychical Research is seeking evidence that the spirits of the dead may communicate with the living, and while some of our most competent students of physics accept it as a fact that they do, we are forced to the conclusion that such an existence after death as these spirits show us thru Mrs. Piper and other mediums is not worth the having. The platitudinous inanities which these spirits repeat excite no wish for such an existence as theirs.

We would commend to the study of the Society of Psychical Research another side of the question, that of demoniacal possession. Every one believed in it two centuries ago. Most of the attacks on Luther's character are based on his violent and vulgar treatment of devils. Our missionaries have much to say about demonism in China, and Dr. Happer has written a very interesting book on the subject, while other missionaries have declared that Korea is peculiarly infested with devils. They are worth psychologic study.

Now we have an authentic account of them in South Africa. We take the story from *Rome*, a journal published under the walls of the Vatican, edited by an esteemed correspondent of American Catholic papers in this country. It gives a full account of "An Authentic Case of Demoniacal Possession," told by the Right Rev. Mgr. Delalle, Vicar Apostolic of Natal, and for the absolute truth of which he vouches.

For months it had been reported to him by the priest in charge of St. Michaels that two girls in the mission native school were possessed of the devil, and he was asked to allow the solemn

Exorcism. At last he allowed it, but after a time the distressing phenomena appeared worse than before. He finally went himself, accompanied by another priest, to study the cases. The story here told is of one of the two girls, Germana.

He went to see Germana. She trembled and shrunk from him. He told her to kneel down, which she did finally, gnashing her teeth. Then threatened with punishment, she jumped up, tearing her clothes and crying, "You cannot strike a spirit." The bishop left her and consulted the sisters in charge, who said that these girls, sixteen years old, in their fits, could carry enormous weights which a man could scarcely lift, that they understood Latin, and sometimes even spoke it. Things were so serious that the bishop began his solemn Exorcisms. He took four priests and three sisters to help him. He emptied the holy water font and put in it plain water, but put in his pocket a bottle of holy water. Germana was brought in. He first sprinkled her with the plain water from the font. She laughed mockingly and said, "This is not holy water." He then sprinkled her with the genuine holy water from the bottle when she shrieked and cried and begged him to stop. While the ordeal lasted he spoke only Latin, but she obeyed his orders, answered him usually in Zulu, but sometimes in Latin. After some prayers he said to the spirit which possessed her: "*Dic mihi quomodo voceris*," "Tell me what you are called," and she replied, "*Dic mihi nomen tuum*," "Tell me your name," He insisted. When he insisted on being told the name and she, or the devil, still refused, he put on her head a relic of the true cross which she could not see. "Take it away," said she; "it crushes me." "Then tell me your name." "I can't," replied the spirit, "but I'll spell it—D-i-o-a-r." The demon was then required to tell who was his master, and at last answered "Lucifer." The story proceeds:

"Now, I went on, 'tell me why you were cast out from heaven?' 'Because God showed us His Son made man, and commanded us to adore him, but we would not, because He had taken unto himself an inferior nature.'"

The story is a long one, and it took much prayer and two days to get the devil out of her. At last she fell to the

floor and moaned with awful pain; her face swelled terribly, but sunk again at the sign of the cross; there was a convulsion; she fell as dead, and the spirit escaped, filling the room with fetid odor. In ten minutes she opened her eyes, knelt down and thanked God; "Dioar" had gone.

All this is vouched for by the bishop, four priests and three sisters. It is told as truth in *Rome*. It really seems more authentic than the case of the concourse with devils which a few years ago so excited the French clergy. We tell the story just as this good man tells it, who knows faith, but perhaps not psychology.

Birds and Folks

THE Audubon workers of America have undertaken a complete census of the birds over every square mile of the whole United States. Blanks are to be sent out to friends of the birds, with the invitation that they unite in such observations as will enable us to determine the decrease which is going on in the feathered forces necessary to preserve our trees, increase our forests, aid in the development of our crops, and cross-breed our fruits. William Dutcher, president of the National Association of Audubon Societies, believes it is high time that the people of this country are made to realize "the prime economic importance of the efforts made to protect the nation's bird resources." After the census, efforts will be made to place the whole subject before the people, in such a way as will make bird-preservation systematic and thoro.

The New York Audubon Society has initiated measures to establish an international agreement, that will suppress the trade in bird feathers thruout civilized countries. It is proposed to prevent the passages thru custom houses of the plumage of beneficent wild birds. It is proposed by them, also, to make a general movement for the better care of migrating songsters. They suggest to us the planting of viburnums, dog-woods, mulberry bushes, woodbine, mountain ash, and such other bushes and trees and vines as ornamentalists look for these birds to encourage. They add that this work should be systematic thru-

out the whole country. Nesting boxes should be put up for wrens and warblers, and cotton waste and similar material furnisht for orioles' nests. Swallows, because they destroy moths and mosquitoes, are particularly to be encouraged, by leaving for their use heaps of moistened clay. Martins and thrushes like the boxes and the hollows of trees; provisions of this sort should be furnisht.

The subject is peculiarly timely, for our birds are coming back from their Southern vacation, to their Northern homes, and are evidently glad to get here. They are ready to renew the alliance, against all sorts of insect foes, to make sure of fine crops for the Northern farmers. For some reason they will never raise their families in the Sunny South, preferring the shorter seasons of New England and the North in general. They constitute an invaluable asset in the private affairs of every land owner, as well as in the wealth of the whole people. They eat the same fruit, but they protect it also; and while they take some grain from the fields, they do not waste by trampling down, nor do they sting fruit and grain for their eggs; in fact, they take no more than their fair wages, provided those wages are forthcoming. It is, as a rule, the same families of birds, as well as the same species, that come to us each spring; the same individuals, seeking the same trees, of the same homesteads—provided they have a remembrance of hearty welcome and protection.

When we have once thoroly understood this alliance, and have caught the spirit of Nature in bringing it about, we shall see that it is a marvelous provision, and will aim to close up any remaining breach between the birds and ourselves. We call Mr. Burbank a benefactor for cross-breeding and thereby improving our fruits and plants, yet the birds have been doing this very work for many generations. It is certain that a very large part of the evolution of useful berries and fruits, and edible vegetation, as well as beautiful trees, has been brought about by birds carrying pollenized seeds, and planting them about the hillsides and valleys. The fine new berries that the farmer finds starting in his fence corners would never have been there but for the robins and sparrows. Practical economy

and sentiment can work together in this case, and while we are made happy by the singing of the birds, we are fed by their industry. The English sparrow is an example of degeneration; he has broken his alliance with human beings and turned to pillage. Inestimable damage is done by the sentiment that tolerates these outlaws. The list of friends, however, is so much longer than the list of foes, that one can listen to excuses for even hawks and crows. The shrike, altho destroying some birds' nests and young birds, confines most of his attention to destructive grubs and grasshoppers. The kingbird occasionally takes a bee, but he is a splendid fly catcher. Dr. Brewer, watching a pair of mischievous jays, found that in one season they destroyed not less than five hundred thousand caterpillars.

In France the protection of birds has happily past over into the hands of women, and they are forming organizations all thru the rural districts. It is a happy thought, for it is leading not only to an awakened sentiment but to changes in fashion. Every club woman pledges herself never to wear bird plumage, but on the contrary to provide food and shelter and drink, and in all ways count winged friends as members of her family. In this country Boston at least has caught this notion of free entertainment for birds, at public expense. Woman heretofore has been the chief enemy of the birds, and it stands to reason that she should now make some compensation, as their efficient friend. We are glad to know that the herons of the South can no longer be killed in the breeding season to procure their snowy plumage, while the young are left to perish; at least this cannot be done under cover of law. The women of America will do well to imitate the women of France and take bird protection into their special care.

We bespeak for the birds of 1909 such a welcome as was never extended to the migrants before. Why shall we not have a Bird Day all over the nesting States, when we feast them and renew our treaties? Make it early enough to include the robins and blue birds, but late enough for the catbirds and grossbeaks. Let all the population rise up with joy and hold a

holiday; see to it that the flocks are fed as they arrive, and are carried safely thru any casual storms that may occur.

The Limitation of Armaments

The Massachusetts Senate has just indorsed a resolution of Senator Harvey, of Waltham, calling upon President Taft to negotiate arbitration treaties "of the widest possible scope" with all the nations of the world with whom treaties have not already been negotiated, "to the end that the ruinous rivalry and competition in which the leading nations of the earth are engaged to keep their armaments equal to or greater than those of any other nation may be brought to an end." Thus the Hales, Eliots, Meads, Truebloods and Paines prevail over the Lodges, and Massachusetts again sounds the trumpet to the other State legislatures as she did in the historic resolution of 1837, when she first called for an international tribunal, and in 1903 for a world legislature. The limitation of armaments is now the most pressing question before the peace societies of the world, if not before the world itself. The Czar called the First Hague Conference primarily for the purpose of removing the evergrowing and overgrowing burdens of taxation resulting from the expenditures for armaments from the backs of the peoples of Christendom. But the First Conference found the question was premature and referred it back to the governments for study. The governments, however, did nothing, and the Second Conference, altho England and the United States introduced the subject, could only repeat again that "it is eminently desirable that the governments should resume the serious examination of this question." We therefore urge Mr. Taft to appoint a commission of the highest eminence, composed among others of an army and navy expert, a professor of international law, a peace advocate, a historian, and several statesmen to make an exhaustive study of the question of the limitation of armaments, so that our delegates at the Third Hague Conference in 1915 will have enough data available to prepare a practical plan for the consideration of the governments. Indeed it would not be a bad idea to make

the chief members of this commission the next Hague delegates and appoint them very soon. Five years is not too long a time for the study of the problem which is entangled in the very science of government itself. Let the great National Peace Congress to be held in Chicago next month and all the State legislatures unite in calling for an official investigation of this question by our Government, so that the United States can lead the world in whatever is right to be done, and thus hasten the time sure to come when, as Victor Hugo prophesied, "the only battlefield will be the market opening to commerce and the mind opening to new ideas."

Affinities Versus Wives In our issue of September 12th, 1907, we found it necessary to comment on the views and conduct of Ferdinand P. Earle, a New York artist and poet who had shipt his wife and child off to Europe in order to unite with his "affinity and soul-mate," Miss Julia Kuttner. It is, therefore, desirable to call attention to the second chapter of the romance. Last August Earle was put in jail for striking and choking his affinity because she persisted in nursing her two weeks old baby. Now she has brought suit for annulment of marriage and restoration of maiden name on the ground that the marriage was performed before the obtaining of the divorce and that Earle was of unsound mind. So we thought at the time when we found how far he had exceeded his poetic license. But they were both determined to exercise their "freedom of loving," and to the advantage of the world they repeated the experiment that has so often been tried before and usually with the same result. He could not have treated her any worse if she had been really his wife. On the whole we feel justified in advising our readers to stick to their wives regardless of what superior attractions may be offered by affinities.

Top Knot Come Down We hope that the Rev. Charles T. Johnson, pastor of the Broadway Tabernacle, will succeed in his efforts to induce the women of his congregation to remove their hats during service. It

would be a good thing if preachers generally would next Sunday take the familiar text of Mat., 24:17, and preach at as well as to Easter bonnets. The Merry Widows were decidedly out of place in church, and the directiores and peach baskets that have succeeded are still worse. Courtesy is a minor branch of Christianity, and it is humiliating that the ladies of the church are so far behind the ladies of the theater in this respect. A preacher may not be so pretty as an actress, but it is quite as important that he be seen by the audience.

Transmutation of Elements Sir William Ramsay reported to the British Chemical Society that he had succeeded in obtaining carbon from four substances not containing this element, namely, zirconium, thorium, hydrofluosilicic acid and bismuth. The very remarkable announcement would be received with skepticism if it came from almost any other chemist in the world, but Professor Ramsay has several times said things quite as startling and then proved he was right, so critics have become cautious of questioning his statements. Yet his penultimate sensational announcement in this line of experiments, the transformation of copper into lithium by the action of the radium emanation, has not, we believe, been so far confirmed by any other chemist, and Madame Curie repeating his experiment failed to get any evidence of such a transformation. We have heard an amusing explanation of the discrepancy whispered about the laboratories, that Professor Ramsay is an inveterate smoker of cigarets, while Madame Curie, altho a Polish lady, does not smoke, at least during business hours. Cigaret ash contains lithium. It also contains carbon.

Current Stories New conditions bring out new stories, or newly vamped, which pass from mouth to mouth, but do not always get into print. Two that are just now circulating have to do with education and political affairs. Two men were conversing in Boston, and one referred to God. The other looked puzzled at first, but soon a gleam of intelligence showed on his face as he said: "Yes, I know; it is one of the

electives at Harvard." The other story tells of three men who came in succession to the gate of Heaven. The first was met by an old man who asked his name. "I am George Washington. I was the first President of the United States, and I delivered the country from Great Britain." "I will go and look up your record," said St. Peter. He returned in a few moments, saying: "You are all right; come in." Then soon appeared—for the categories of time and place do not count in the other world—a second, who gave his name as "Abraham Lincoln, President of the United States. I liberated the slaves." His record was looked up, and he was admitted. Then came a third with quick strenuous step, and was met with the question: "Who are you?" "I am Theodore Roosevelt. I was President of the United States; but who are you?" "I am St. Peter." "Well, I don't want to see you; I want to see God!"

The Forces of Religion in America

The Rev. D. Ebina, of Japan, lately made a visit to the United States, and it is interesting to read the report of our religious condition which he carries back. He is impressed by the growth of Catholicism, and discusses the influences against its spread. Protestantism, he says, is not much weakened by the fact that men do not go to church as much as they did. They leave the cities Sundays, but they are not indifferent to religion. Then the universities are a stronghold of religion. "The presidents of universities are often pronouncedly Christians, like Doctors Eliot and Jordan, and so are many of the professors. The influence of these men is often greater than that of ordinary pastors." He has no hesitation in saying that the universities of America are the strongholds of Christianity. And to this influence he adds that of the Young Men's and Young Women's Christian Associations, of whose activity the Japanese have no conception. Particularly he speaks of the intelligence of the women in America:

"While their husbands are away at business married women, instead of frittering away time in gossip or at tea meetings, spend the hours in reading. Hence they become well informed on a number of subjects. This makes them good talkers in society. Many of them instruct their husbands. Here when a man

says his women folk ought to go to the temple to worship it implies contempt for their intellects, but in America when it is said the women and children attend church, quite an opposite meaning is attached to the words. The power of women in the States is something formidable."

The Minister of Public Instruction has named M. Loisy professor at the College of France. The great scholar had bought a modest home at Ceffonds, an hour's run out from Troyes, there in peace and retirement to pass his days among his books, his chickens and his lettuce. The town is the traditional birthplace and home of the father of Joan of Arc, whose monument—a simple shaft of stone—is seen from Loisy's study. Visions drew Joan out from her sheep, and friends have just drawn Loisy. He only sent in his name as a candidate after urgent solicitations on the part of his admirers. To his retiring nature the storm that followed was not at all pleasant. The Clericals made his candidacy a political issue. After many ballottings he won out at the College of France, but the Academy of Moral Sciences, which also has a vote, chose another candidate. On further consideration the Academy selected Loisy, whom the Government promptly named. Of one thing we may be certain, Loisy will never by word or pen attack his enemies. He will simply study and give forth the results, no matter whether they hit or help tradition; but he is too great a scholar and too much of a man to give vent to smallness.

Europe's Submission

Europe submits to the dictation of Austria, backed by Germany, and allows Austria to tear up a solemn treaty and annex Bosnia and Herzegovina. To be sure, she occupied them under the treaty and administered them, but it was not final possession. Austria refused to submit the question to a conference of the Powers, and the Powers protested, but yielded to Germany's threat. Russia felt unable to resist, and then Great Britain submitted also. The two provinces are incorporated and the hopes of Serbia and Montenegro are shattered. The nations are all angry and have a right to be angry, for what will treaties be worth? It would seem as if both Aus-

tria and Germany wisht for war. Had Servia declared war and Russia joined her, then Germany would have backt Austria, and the result would probably have been Germany's victory, her seizure of the German provinces of Russia, while Austria would have absorbed Servia and gone to the Mediterranean. We regret the shattering of a hope for a great Balkan kingdom some time in the future. Those small and insignificant states which remain ought somehow to get together. Is it not possible that, with the disappointment and rage in Servia, and the renunciation of the Crown Prince, somehow the peoples may come together? The hostility of Bulgaria and Servia to each other is puerile.

Last week Mr. Roosevelt left us for strenuous rest and reinvigoration, and for the enjoyment of the kind of scientific sport which he personally likes. And it is well that he should withdraw his own imperative personality for a while, and not seem to be questioning or criticising the policy of his successor. And his African vacation is made a help to science and an advantage to the country. He is not hunting lions and elephants; he is simply on a scientific excursion, the fruits of which will enrich our museums, and when he returns he will be ready to do public work again. We trust he has a public future as well as a public past.

President Taft says the negro question cannot be dodged. That is true, but it is the simplest thing in the world to solve it. It only requires application of the Golden Rule. That does not mean that it is easy to induce men to apply it. Just so it is as simple as opening your hand for a drunkard to give up his cups; for all he has to do is to open his hand and the glass will drop, but he does not find it easy to do it.

The Hague Court is meant for just such cases as that of the difficulty between China and Japan, which China asks to have presented to that tribunal. Japan holds on to Manchuria a little tighter than China thinks the Treaty of Portsmouth would allow, and wants the Japanese and the Russians to leave. The

Hague Court could properly arbitrate that difference.

Here is a pretty condition which shows the revenges of time. Roger Williams wrote to John Winthrop in 1664 his apprehension from the advent of Canadian priests "that Prelacy and Papacy, too, will in this wilderness pre-dominate." He had some reason for it, for he wrote in 1670 to Major Mason:

"The French and Romish Jesuits, the fire-brands of the world, for their god belly sake are kindling at our back in this country, especially with the Mohawks and Mohegans, against us, of which I know and have daily information."

This foreboding seems to have been prophetic, for Rhode Island itself has now a French Canadian and a Catholic for Governor in the person of A. J. Pothier.

Mr. Bryan has recovered his courage. After his defeat he was quoted as saying that he would not again be a candidate, but would be satisfied to try to see to it that a man was nominated who represented his principles. Now he does not see how he could well refuse if his party should ask him again to stand for his "well known principles and ideas." They hardly will.

New Zealand offers a "Dreadnought" to Great Britain, but not Australia. It can hardly be any protection to New Zealand in case of war, and may be a danger. New Zealand is not so rich and populous that she can afford to have a navy. Canada has none as yet. Jingoism must be popular in that land of socialism, which is supposed not to be kindly toward militarism.

The Governor of Kansas has appointed a Catholic bishop one of the commission to decide what books shall be used in the public schools of the State. That is a very proper appointment, if Bishop Lillis believes in the public school and encourages his children to attend them.

In an address at Oxford Bishop Gore lately said:

"The Christian religion consists in the historic creeds, the Bible, the Episcopate, the ministry, and the Sacraments—these are the real Catholic elements of Christianity."

Ah?

Savings Bank Insurance

FOLLOWING in the footsteps of Massachusetts, New York is considering the idea of introducing savings bank insurance. This THE INDEPENDENT thinks is a mistake. Savings bank insurance even in Massachusetts, where it originated in this country less than two years ago, has not yet past the experimental stage. So far as we have been informed, but two savings banks in Massachusetts have gone into the life insurance venture. They have, it is true, established agencies, at first in their own vicinity and subsequently in sections farther away, but we are of the opinion that a number of regularly organized insurance companies are in a position to offer a better insurance contract at lower terms than either of the going Massachusetts savings bank institutions, if they have not actually done so. In New England the industrial classes do not take to savings bank insurance. It is a beautiful theory that persons who want insurance or those who ought to have it will "walk up to the counter" and apply for it. It is quite as beautiful as the idea that people who owe money should "walk up to the captain's office" and settle. There is only one difficulty about both these ideas and that is—they don't usually do it. It seems to be a part of human nature to await the moving of the insurance waters on the part of a good insurance solicitor. Any man knows he ought to have insurance, particularly a man who has dependents and who has no adequate estate to provide for wife and children in case he should die tomorrow, as he easily might. Past experience has shown, however, that without the agents that the Massachusetts experiment has tried to eliminate there is insurance only in an infinitesimal degree. New York might well take a leaf out of the English book, where insurance without agents has long been a dream, more than ordinarily nebulous. The tremendous volume of binding insurance in this country and the lesser volume of outstanding insurance

in England were placed on the interested companies books thru agents, who urged prospects to use insurance as the protection it is and ever will be. The agent put up a good argument; he showed the prospect the need of insurance; in many cases he financed the cost, or at the very least he showed how the policy-holder could finance it. If there were no reliable insurance companies it might perhaps be well to drag the savings banks into the insurance business and legalize the insuring of lives by them to the proposed extent of \$500 as a maximum. A savings bank is primarily organized, however, to do business along very different lines than insuring lives. It is a grave question as to whether it is not incongruous for a savings bank to mix up in the insurance or any other kind of business. It would not seem to be a good policy to establish an ice cream and soda water business in a hardware shop, but this contrast and antithesis is not more pronounced in the latter case than it is in the former. The life insurance business calls for expert knowledge and management if it is to be successful, and because a president of a savings institution is a good banker it by no means follows that he is also a good life insurance manager. Possibly the fable of the hare and the tortoise might have some sort of an application to the matter of savings bank insurance in New York. At any rate rapid progress is sometimes made by going slowly, just as good old Aesop pointed out.

BECAUSE of his connection with the insurance investigation Governor Hughes has learned much regarding insurance. It was doubtless because of that knowledge that the Governor has lately taken steps to bring about the insurance of the Executive Mansion now occupied by him, together with its contents. Insurance aggregating \$100,000 has been written on this risk. The binding policy was written on condition that the mansion be re-wired, the cost of which was \$6,000.

Inheritance Taxes

THERE are indications that the inheritance tax, for which provision is made in the Payne tariff bill, will be rejected by Congress, simply because such a tax is now imposed and collected by thirty-six States, which are now (by their Legislatures) beginning to direct their Senators and request their members of the House to vote against the proposition. The total amount of the tax collected in these States during the latest year for which the statistics are accessible was \$11,720,795, and nearly one-half of this sum, or \$5,435,000, was collected in the State of New York. Next in the list, but with comparatively small yields, were Pennsylvania and Massachusetts. A little more than two-thirds of the total was supplied by these three States. As the yield in the States which now impose no inheritance taxes would be small, the committee's estimate of \$20,000,000 must be regarded as excessive.

There are many good arguments in favor of such taxes. They should be imposed, but inheritances ought not to be taxed twice. The States may reasonably say that this source of revenue is one which should be left for their own use. Probably it will be so reserved for them. If the committee's proposition be rejected, consideration of an income tax will be stimulated. Sufficient revenue would not be given by the Payne bill in its present form, and an increase by changes to be made in the customs schedules is not to be expected.

Iron and Steel Trade

FURTHER reductions of prices in the iron and steel trade were made last week, and sales of structural steel were reported at \$4.10 and even \$4 per 100 pounds. Pig iron is accumulating at the furnaces, production exceeding demand. The price of rails has been sustained, but railroads expect lower figures. During the week the following reductions of

wages were announced, to take effect in most cases on April 1st:

Republic Iron and Steel Company, at Youngstown, Ohio, and elsewhere, 10 per cent., 12,000 men; Bethlehem Steel Company, 10 per cent. for furnace men; Hazleton (Pa.) Sheet Steel Company, 10 to 20 per cent., affecting 200 men, who have quit work; Wharton Steel Company, Dover, N. J., 10 per cent., 500; Thomas Iron Company and other similar companies in the Lehigh Valley, 10 per cent., 3,000 to 4,000; Carpenter Steel Works, Reading, Pa., 10 per cent., 700; Reading Iron Company, 16 per cent., rejected by 3,000 puddlers; American Iron and Steel Company, similar reduction, 800 men.

....The Canadian Government has decided to forbid the exportation of natural gas after April 1st. This cuts off about one-third of the natural gas used in Buffalo.

....With the latest purchases of railroad equipment, one-third of the block signal safety devices in the United States are now on the Union and Southern Pacific railroads.

....The New York Central Railroad Company's electric or trolley properties in the State of New York, capitalized at \$23,140,000, have been consolidated under the control of a new corporation, called the New York State Railways, with principal offices at Rochester.

....The Union Exchange Bank, of which Henry S. Herrman is president and David Nevius vice-president and cashier, has become a national institution and is now known as the Union Exchange National Bank of New York. The capital and surplus is \$2,000,000, and the total resources \$11,000,000.

....The demand for pulp wood has caused the recent establishment of a town of nearly 3,000 inhabitants in the central part of Newfoundland, upon what was a wild tract a few months ago. About \$6,000,000 are to be expended upon a great dam, a power station of 45,000 horse power capacity, two railroad lines, 400 dwelling houses and several steamboats. The dam will provide storage for 100,000,000 feet of logs. Great Falls is the name of the town.

VOL. LXVI NEW YORK, THURSDAY, APRIL 8, 1909

No. 3149

Survey of the World

Revising the Tariff

At the end of last week, owing to effective criticism during the general debate and to the demands of groups of Republican members, the House Ways and Means Committee decided to recommend about sixty changes in the Payne tariff bill. The most important of these are the rejection of the duty on tea and of the countervailing duty on coffee, the removal of a countervailing duty which would have nullified (so far as imports from Canada are concerned) the reduction of the duty on lumber, the elimination of the retaliatory provisions concerning patents, and the imposition of a duty of 2 cents a pound on rice from the Philippines, such rice having been on the free list. No changes were made in the proposed increased duties on stockings and gloves, altho almost countless protests against these increases have been received. In Chicago, 10,000 women who are members of clubs or other associations have been procuring signatures to such protests. They expect to obtain 500,000 names. Similar action has been taken in St. Louis, St. Paul, Minneapolis, Detroit and other cities. Nor was any change in the petroleum countervailing duty and drawback provisions recommended. It has been asserted in debate and in the press that these are for the benefit of the Standard Oil Trust. Persons defending them assert that they serve the interests of independent oil producers. The rice duty was restored for the benefit of Louisiana. That State has a new Democratic member in the committee. It was expected that a vote in the House could be reached on the 10th, but complications have arisen which may delay this action. About thirty Republican members have combined to work

against certain important reductions. They demand a duty on coal, a duty of 10 per cent. on hides, and a small one on iron ore, all of which are free in the bill. In this group are three members of the committee. The most weighty Republican influence in favor of a duty on coal appears to be that of Senators Elkins and Scott, of West Virginia, who, it is said, have procured the aid of other Senators and of members of the House in opposition to the bill's provisions concerning coal and several other products. In the Senate, last week, Mr. Elkins sharply attacked the Finance Committee (the Republican members of which have been revising the Payne bill), asserting that New England had an excessive representation in it. He named the three New England men (Senators Aldrich, Hale and Lodge), and asserted that New England for her own benefit sought to place on the free list the raw materials of her manufactures, altho these materials were the finished products of certain other States, and as such were entitled to protection. In his remarks he spoke not only for West Virginia, but also for States further South. It is understood that Mr. Elkins especially dislikes the proposed removal of the duty on bituminous coal. Imports of such coal into New England from Nova Scotia would be increased if there were no duty. It is admitted that the bill, as past by the House, will be wholly recast by the Senate Finance Committee, and that important changes will be made thereafter in the Senate by votes on amendments. The Senate committee has already decided, it is asserted, so to modify the maximum and minimum provisions that the minimum (or ordinary) rates shall be applied to imports from all countries for one

year, and that the maximum rates may hereafter be applied by the President, in his discretion, to those from any country that discriminates against our exports. This plan is said to have the President's approval. There is reason to believe that if we should insist upon a countervailing duty on coffee, Brazil would abrogate the agreement under which she favors imports of American flour, machinery, etc. In conversations with Senators and Representatives, Mr. Taft has expressed his desire for a reduction of the present duties on necessities of life. It is well understood that he would not like to see duties on tea and coffee. In New York, the State Senate has concurred with the House in passing by unanimous vote a resolution urging the State's representatives in Congress to oppose the proposition for a national inheritance tax. If such a tax should be imposed, it is estimated that at least one-third of the revenue yielded by it would be collected in that State.

False Weighing by the Sugar Trust

At a recent trial in the Federal District Court in New York, the American Sugar Refining Company (or Sugar Trust) was found guilty of defrauding the Government by means of the scales used in determining the weight of imported raw sugar upon which duties were to be paid. In the stanchion of each one of the seventeen scales on the company's Brooklyn pier was a steel spring so adjusted that it prest lightly upon the weighing lever, making the weight recorded less than the actual weight by from $1\frac{1}{2}$ to 2 pounds in 100 pounds. The evidence of this cheating was conclusive, and the penalty determined by the verdict was \$134,116. This sum related only to the quantities involved in the suit. The Government will now undertake to collect from the Sugar Trust about \$2,250,000 more, of which, as alleged, it has been defrauded in the same way. This sum includes \$1,239,088 due on sugar weighed for the refinery of Havermeyers & Co. from 1901, about \$200,000 for similar cheating at the Trust's refinery in 1900, \$100,000 due in 1901, and about \$500,000 withheld by fraudulent scales at the first-mentioned refinery prior to 1901. The Trust has already paid \$260,-

000 on account of the re-assessment of duties. In addition to the suits for the money there will be criminal suits against persons responsible for the cheating. The Government will be represented by ex-District Attorney Stimson and W. T. Dennison (formerly his assistant), who conducted the suit by which the \$134,116 was recovered.—In the suit for the dissolution of the Standard Oil Company arguments are to be made this week at St. Louis. The testimony taken amounts to more than 11,000,000 words, and the record is larger than that of any other suit that has been tried in the United States.—Arguments were made last week in the Government's suit for the dissolution of the Terminal Railroad Association, which is composed of transportation lines in the vicinity of St. Louis and is alleged to be an unlawful combination.—A long investigation as to the operations of the great beef companies has been finished by a grand jury at Chicago, and rebate indictments are expected.

Labor Questions

Altho their agreement with the mine owners expired on the 1st, the anthracite coal miners are still at work. At their convention they reaffirmed the demands which had been rejected, but voted to remain at work, allowing their district executive boards to continue negotiations. They also adopted a resolution providing that President Taft should be asked to appoint an arbitration commission if these negotiations should fail. The mine owners insist upon a renewal of the agreement for another term of three years. They will not recognize the union. An impression prevails in the mining districts that there will be no strike and that the mine owners' terms will eventually be accepted.—A strike in the carrying trade on the great lakes is expected, owing to the adoption of the open shop policy by the Carriers' Association.—Several small strikes were reported on the 1st, these being mainly for an increase of wages. This is demanded by 3,000 workmen in the building trades at Chicago, and by the plumbers at Buffalo. About one-third of the employees of the Reading Iron Company have quit work because of a reduction. In Painesburg, a

reduction of 10 per cent., affecting 6,000 employees of the Jones & Laughlin steel works, went into effect last week.

Railroad Topics In Missouri, where the 2-cent fare law was recently pronounced confiscatory and unconstitutional by Judge McPherson, of the Federal Court, after it had been tested for three months, the railroad companies have decided to make a uniform passenger rate of 3 cents for single trips, selling books for 2,000 miles at 2 cents a mile, and books for 500 miles at 2½ cents. In his decision Judge McPherson said that if he could fix the rates he would make them 2½ cents for the strong roads and 3 cents for others.—Official reports show that in 1908 the roads in Illinois, under a 2-cent law, increased their revenue from passenger service by \$3,079,000. Passenger earnings per mile were larger by about 12 per cent. than in 1907.—Demurrers to indictments for rebating that were found in 1907 having been overruled by the Supreme Court, the New York Central Railroad Company paid, last week, a fine of \$10,000 for the offenses in question.

The Philippine Islands Dr. William Jones, an ethnologist of exceptional attainments, engaged in research work for the Field Museum at Chicago, was murdered on the 28th ult. by wild tribesmen at Dumobato, near the headwaters of the Cagayan River. He went to the Philippines two years ago, intending to remain there four years, and recently he had been living among the Ilongots, having become a member of this tribe. He was born in Oklahoma, was a quarter-blood Shawnee, and was educated at Hampton, Andover, Harvard and Columbia. In a recent letter he had spoken of impending danger, due to the hatred of certain sorcerers who controlled one of the tribes.—It is reported that Governor-General Smith will soon retire and be succeeded by Vice-Governor Cameron Forbes. —Dionisio Magbuela, the "Black Pope" of the tribesmen in Negros, and a bandit chief who had led raids upon the coast settlements, sur-

rendered some time ago and was condemned to death. He claimed to be divine. His sentence has now been commuted to imprisonment for life, the authorities believing that his followers can be controlled if they know he is still living, while his execution would make way for the rise among them of some other impostor, who would lead them in attacks upon the coast towns.—In the House, at Washington, the resident Commissioners, Ocampo De Leon and Benito Legarda, have made speeches in the tariff debate. Following the instructions of the Legislative Assembly, they oppose that part of the Payne bill which provides for the free admission of products of the States into the islands, mainly for the reason that it would greatly reduce the insular revenue. Señor De Leon asked for the passage of a resolution favoring the ultimate independence of the islands. Sugar and tobacco planters in the Philippines are striving to induce the Assembly to recede from its opposition to the bill. It is suggested that Congress should compensate for the revenue deficit by an appropriation of \$2,500,000 or \$3,000,000 a year.

Countries South of Us General Barry formally bade adieu to Cuba's President at the palace in Havana on the 30th ult. President Gomez commended the skill and tact shown by the American army during the period of intervention, and asked General Barry to express to the soldiers the gratitude, admiration and affection of the Cuban people. On the following day the American flag over Camp Columbia was hauled down and Cuba's flag was raised in the place of it. Only 837 American soldiers had been left on Cuban soil, and these sailed away on transports.—Sergeant Cortes and his son, two of the seven rural guards who recently attempted to start a revolt, have been tried by court-martial and sentenced to be shot.—The destruction of the Havana Central Railroad Company's terminal wharves and buildings in Havana, by fire, on the 31st, with the Hamburg-American Company's steamship "Altenburg" and three schooners, caused

a loss of \$1,000,000. Fourteen of the steamship's crew were drowned. On the same day the village of La Maya, near Santiago, was burned, the loss there being \$600,000.—Venezuela has reconsidered her former decision and will permit Castro to land at a Venezuelan port, but "at his own peril." He says he will land at Colon. The Governor of Trinidad, expecting his arrival there, has prohibited the exportation of arms, ammunition or military stores.—In a telegram sent to Washington, President Cabrera, of Guatemala, says the report that he has moved troops to the Honduran frontier is "entirely false."

The British Navy The vote of censure which was announced by Mr. Balfour was presented by Arthur Hamilton Lee, and declared

"that, in the opinion of this House, the declared policy of his Majesty's Government respecting the immediate provision for battle-ships of the newest type does not sufficiently secure the safety of the empire."

The leaders of both sides of the House took part in this momentous debate. Mr. Lee said the only way in which the Government could secure the absolute safety of the country was by assuming that every other naval power was a potential enemy. The Opposition would be glad to withdraw the motion if the Government would undertake to lay down eight "Dreadnoughts" in the present year. Referring to Premier Asquith's statement that the agitation was "manufactured and artificial," Mr. Lee said "he ought to be a good judge, as he manufactured it himself." The Foreign Secretary, Sir Edward Grey, in reply said that he would not attempt to minimize the seriousness of the situation. When Germany had completed her program she would have thirty-three "Dreadnoughts," the most powerful fleet the world had ever seen. This imposed upon Great Britain the necessity of building an entire new fleet on a more costly scale than ever before. The type of battleship was constantly changing, and the present "Dreadnoughts" might be almost obsolete within a few years. The apprehension that Germany was preparing to attack Great Britain he characterized as a wild and absurd idea.

He did not consider it a cause for complaint that Germany had not entered into an arrangement with Great Britain, as one could be proposed only on the basis of a superior British navy, which would be a difficult thing for the German Government to put before its people.

"The Germans view their program as one made for their own needs and one which has no reference to our program. Their idea is that if we built fifty 'Dreadnoughts,' or a hundred, they would not build more than the number already decided upon, and if we cease to build altogether, they would not build one less. We have no difficulty in accepting that view without reproach, and just as little difficulty in saying frankly that our view of our own naval needs is that our expenditure is and must be dependent upon German expenditure."

The only difference, he said, between the Government and the Opposition was in regard to what rate of construction was necessary in order to maintain the superiority of the British navy. Mr. Balfour closed the debate for the Opposition with the words:

"I grieve to say that so far as I can observe the public law of Europe shows signs not of strengthening but of weakening and fading away. In these circumstances it behooves the country at this time above all other times to see that our navy, which is the organ of peace, shall be beyond all precedent, beyond all doubt the greatest in the world.

"It is because I cannot make out after all the Government explanations, because I cannot believe after surveying their policy for the last three years, after being brought as an unwilling confidant into their Cabinet quarrels, that in them this great trust can securely be reposed, that without doubt, without questioning, I support the motion that the House be divided."

In speaking later before a meeting of the Chambers of Commerce at the Guild Hall, Mr. Balfour said that unless the Government agreed to construct four additional "Dreadnoughts," it would be compelled to yield to the popular demand for a dozen to be started during the coming year. Mr. Balfour based his argument upon the fact that both the United States and Germany were expending more than Great Britain this year on naval construction.—The Government has suffered another defeat in the by-election for Parliament of the Croydon districts, where the big navy issue was prominent. Sir R. T. Hermon Hodge, Conservative, received 11,989 votes; J. E. Raphael, Liberal, 8,041, and Frank Smith, Laborite, 886. This is

nearly twice as much as the former Unionist majority.—The Government will have great difficulty in preparing a budget to satisfy either themselves or the Commons. The total revenue for the fiscal year of 1908-09, ending March 31st, is \$757,880,000. This is nearly \$25,000,000 lower than last year and falls \$7,500,000 below the estimates. Old age pensions for the current year will cost more than anticipated, and the navy will require \$13,750,000 more than

chine, which sells at \$7,000, is not on exhibition, but several other aeroplanes which have made good records and sell at lower prices are represented. Count de Lambert and M. Tissandier, pupils of Wilbur Wright at Pau, have proved their competency by winning the prizes of the Aero Club for flights of 15 miles, one hundred times the required distance of 250 meters. Count Zeppelin left Friedrichshafen in his airship April 1st for a trip to Munich, 175 miles distant. At

THE OLD AND THE NEW

Wilbur Wright in his aeroplane flies over the head of a French peasant and his oxen.

before. This will make a deficit estimated at about \$65,000,000. By what new taxes the additional revenue is to be raised the Government has not yet disclosed.

Aeronautics The aero exhibition at Olympia, London, is exciting a great deal of popular interest, and many sales of flying machines are reported. The Wright ma-

Munich, Prince Regent Luitpold, of Bavaria, was prepared to receive it on the drill ground, where the troops and populace were assembled. As the airship approached the city the church bells rang out and the cannon fired a salute. Count Zeppelin dropped the airship to within 300 feet of the ground and responded to the salute of the Prince Regent, but there being a heavy wind it was not thought safe to land so near the city, so the air-

ship rose again and past on to Dingolfing, 48 miles northeast of Munich. Here the airship landed safely in spite of the fact that the wind was blowing at the rate of 35 miles an hour and the motor was broken. The troops followed the route of the airship as rapidly as possible and protected it during the night. On the following morning, the airship having been reinflated and repaired, Count Zepelin returned to Munich, and landed on the parade ground, took luncheon with the Prince Regent, and in the afternoon returned to Frederichshafen by air.

The French Postal Strike

The Government telegraph and postal employees, since they have come out victorious in their contest with the Government, or at least have demonstrated their power with impunity, are making a closer alliance with the General Federation of Labor. A mass meeting was held in the Hippodrome last Sunday under the auspices of the unions of electricians and masons. The speeches were of decidedly revolutionary character, as may be judged from the following remarks: "We are told that we are endangering the republic, but what does that matter to us," and "Down with those two Bastilles, Parliament and the State." Secretary Pataud, of the Electricians' Union, at whose command light and power have been shut off from the city of Paris on two occasions, presented a motion for the formation of a secret committee of twelve, composed of state employees and trade unionists, and this was passed. The committee will have power to order a general strike of both these classes of employees at any time they may deem it necessary for the protection of their interests. This power will be used to oppose the plans now being made by the Government for the prevention of strikes on the part of its employees. M. Simyan, the Under Secretary of Posts and Telegraphs, against whom the late strike was primarily directed, still nominally retains his position, although the employers refuse to recognize him. Even those who strongly deplore the revolutionary attitude assumed by the postal employees recognize

the extent of some of the abuses of which they complained—that is, the tyranny of petty bureaucratic methods, inadequate pay, favoritism and unfairness in promotions, and the lack of the weekly day of rest which the recent French law has established for other employees.

China Would Appeal to The Hague

The Chinese Government has notified the Japanese minister in Peking that, in view of the impossibility of the settlement of the questions between the two countries by negotiation, it is the desire of China that the whole case be submitted to The Hague Tribunal for arbitration. The proposal has been unfavorably received in all quarters. The American Department of State has expressed the hope that a mutually satisfactory agreement on these questions may be reached by conciliatory diplomacy. Foreign Secretary Grey stated in the House of Commons that he saw no reason for taking any steps in support of China's proposal. The Japanese Government maintains that the difficulties are not of a nature to permit of arbitration because of the wide range of interests involved. The Japanese Foreign Office states that the proposals of Japan to China were made in a spirit of conciliation and could not be regarded as an ultimatum. The resources of diplomacy have not been exhausted, and therefore the suggestions of Japan show a lack of courtesy. The Japanese statement concludes:

"It is therefore extremely unfortunate that China, failing to take advantage of Japan's complaisant mood, has allowed herself to be persuaded to make the wholly impracticable suggestion of arbitration."

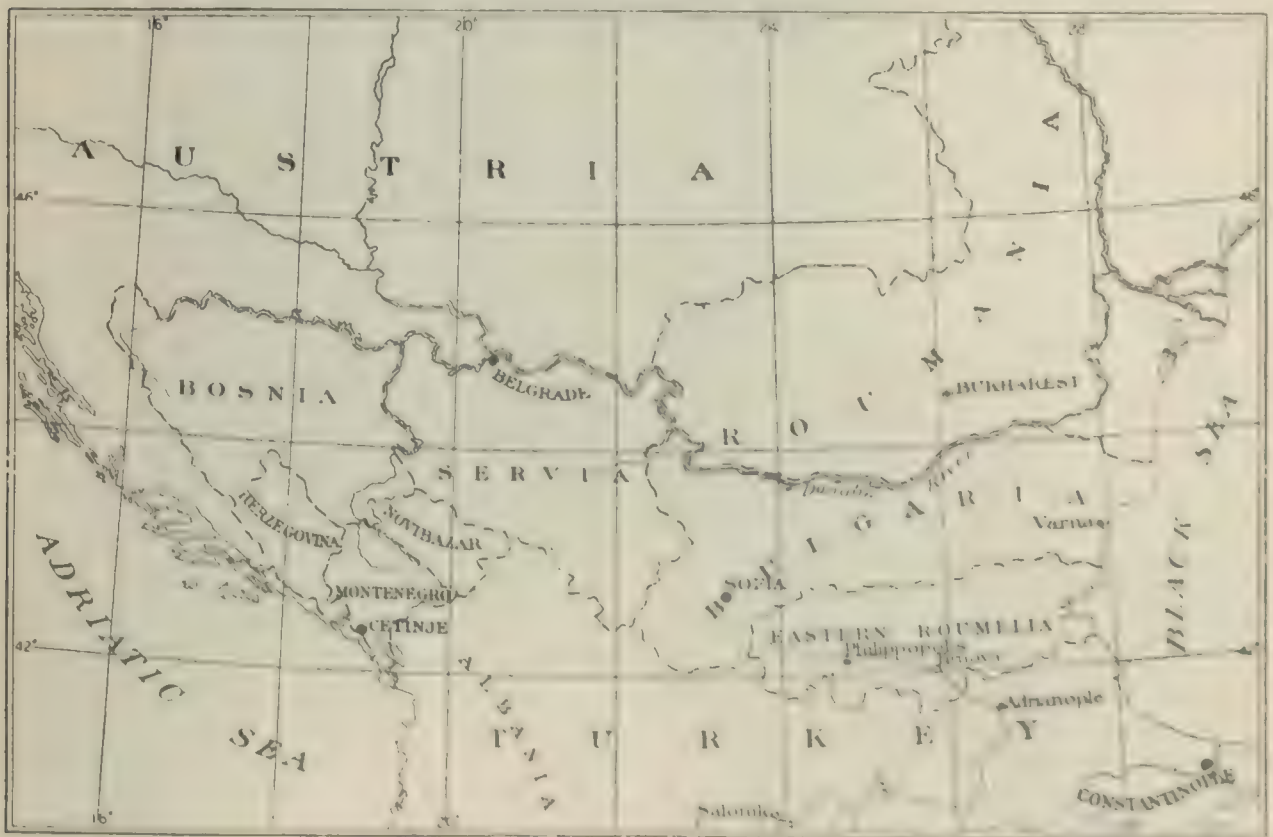

The chief points of difference between the countries are, first, the question of the extension of railroads in Manchuria, which Japan refuses to permit on the ground that it would interfere with her Manchurian railroad, and, second, the ownership of Chien-tao. This is the province lying north of Korea, chiefly settled by Koreans, over whom Japan claims jurisdiction. China, however, maintains that the district is a part of Manchuria, and that the Koreans settling there become virtually Chinese subjects.

—There appears to have been no progress in the settlement of the dispute between Russia and China over the imposition of taxes upon the Chinese inhabitants of the Russian railways owned in Manchuria. The Chinese Government maintains that the convention of 1896 does not grant the Russians the right to exercise administrative functions over such cities as Tsitsihar and Harbin. It is recognized in Russia that General Horvat's action has been untactful, altho it is held to be legally justified, and it is proposed to transfer the administration of the Manchurian municipalities to another governmental department.—The Censors in Peking are continuing the prosecution of the progressive men in the Government employ. Five prominent officers of Manchuria have recently been impeached, all of them belonging to the party of the deposed Yuan Shih-kai and mostly foreign-educated.—The Japanese seemed to be inclined to take revenge on California for her insults and hostility by enforcing the pure food law with extreme stringency against Californian canned fruits and vegetables. The solder on the cans is said to contain 1 or 2 per cent. more than the 50 per cent. of lead allowed by the law. Large quantities of these goods have been confiscated,

altho it is said that products from other countries and other parts of the United States are more leniently dealt with.

The End of the Balkan Crisis

At noon of March 31st the Servian Minister at Vienna, Mr. Simitch, handed to the Austro-Hungarian Foreign Minister, Baron von Aehrenthal, the note in which Serbia, in accordance with the dictation of the Powers, rescinds her protests against the annexation of Bosnia and Herzegovina. Serbia acknowledges that her rights are not violated by the annexation and agrees to accept the decision of the Powers to annul article 25 of the Treaty of Berlin, which provides for the occupation and control of these provinces of Austro-Hungary. Serbia further promises to reduce her army to its normal condition, dismissing the reservists and volunteers, and to prevent border raids by Servian bands. The commercial treaty between Serbia and Austria-Hungary, which has been allowed to lapse, will be immediately negotiated. Rumors are rife that King Peter of Serbia will abdicate, possibly in favor of the Crown Prince of Montenegro. That, however, is a matter on which the Powers would probably have something to say.

How the Primary System Works

BY J. C. HEMPHILL

[The writer of this article is one of the most accomplished journalists in this country. He is editor of *The News and Courier*, of Charleston, S. C., a paper noted for its persistent condemnation of all forms of lawless violence. It has represented the conservatism of the State as against the policies inaugurated by Senator Tillman.—EDITOR.]

IN his last special message to Congress Andrew Johnson, of unhappy memory, suggested three changes in the well-ordered affairs of the American people, which have ever since been the subject of much debate—the election of the President and Vice-President directly by the people, the election of United States Senators in like manner, and the limitation of the term of Federal judges to a period of years. One of the chief contentions of Mr. Bryan in the recent Presidential campaign was the election of Senators by a direct vote of the people. In some of the States this method has been followed, practically, for the last fifteen or sixteen years, and with what result the country is already familiar.

The primary election plan of selecting all public officers was adopted by the Democratic party in South Carolina in 1892. There is, in effect, only one political party in this State, and the primary plan was determined upon by the Democracy, partly for the purpose of holding the party together and preventing any appeal by defeated candidates to the Republican voters at the general election. The contests at the primaries are confined to the membership of the Democratic party. Every candidate for office, whether the office be that of trial justice or Senator, is required under the rules of the party to pledge himself to

abide the result of the primary election and support the candidates nominated at this election. So binding has the obligation thus assumed by the candidates participating in such elections been regarded that there have been few instances of an appeal from the primaries to the general election since the plan was adopted. Since the days of the Greenback movement in South Carolina in 1882 there have been only two tickets for Governor and other State officers in the field except the Democratic ticket, and as long as the Democratic voters, the same being more than 95 per cent. of the white voters in the State, hold together there will never be but one ticket at the general election. In the respect that the Democratic primary plan has received the coöperation of the white people of the State it has demonstrated its efficiency and great value; but I do not think that it can be claimed fairly that it has improved the quality of our statesmanship or the fitness of those who have been selected under its provisions to look after the affairs of the people. It has brought into active political life many very weak and impossible men. One of the Legislatures elected by the primary plan several years ago was characterized by Governor Tillman, himself a beneficiary of this plan, as "a driftwood Legislature," and, certainly, in some of the more populous and important coun-

ties, the most mediocre of men have been brought to the surface, while, speaking generally, the ablest men, the men of the largest constructive force and the best qualified to serve the people in positions of trust and honor, have in great measure wholly retired from active participation in the political life of the State. This is, in fact, the day of small men in South Carolina—the conspicuous talent which under older and better conditions would be available in constructive statesmanship is now devoted to the industrial arts. What the State has lost in politics it has made up in business. Men are not sent to the United States Senate or to the House of Representatives now from South Carolina, or from any of the Southern States, because of any special aptitude they have shown for affairs of large moment, but because they “can do things,” that is to say, because they can “get appropriations.”

With the possible exception of Senator Tillman, since the death of John T. Morgan, of Alabama, there are no students of politics from the South at Washington, I mean of politics as the science of government. The Southern representatives are good vote-getters—for themselves; they know exactly how to “stir the groundlings,” to set the passions of the ignorant and thoughtless on fire, how to turn to personal account the prejudices of an ebullient electorate. In South Carolina during the last Democratic campaign one of the principal charges made against the Governor, who was a candidate for re-election, was that he had appointed several negroes to the office of notary public. One of the accusations against Mayor Rhett, of Charleston, in his race for United States Senator was that he had not voted for Bryan when he ran for President in 1896. Another charge against him was that he had appointed negroes as members of the police force of Charleston, and still another damning accusation against him was that he had acted on a reception committee with the negro Collector of the Port upon Mr. Taft's last visit to this city. It turned out that none of these charges, except that he had not voted against Bryan in 1896—he did not vote at all—were true; but the fact that such charges were repeated from near-

ly every stump in the State shows upon what meat the Democratic voters are fed in their primary campaigns and how they are under the spell of the speaker who can most surely excite their prejudices.

Under the primary plan only members of the Democratic clubs are permitted to vote, and only in the city and county of Charleston are anything like safe restrictions placed upon the suffrage. Whether the club member is of the required voting age or not or is qualified to vote at the general election or not, he can cast his ballot at the primary election and counts for as much as if he had complied with all the provisions of the law regulating the suffrage at the general election. In the circumstances frauds might very readily be committed; but the main objection to the primary plan of selecting candidates is the exaltation of mediocre men, who do not hesitate to appeal to the most dangerous of prejudices—class distinctions—the steady food of all successful demagogues. In making his return of his campaign expenditures one of the candidates for a high and important State office reported that during the campaign he had taken fifteen baths as compared with only nine baths during the preceding campaign when he was a candidate for the same office.

A peculiar feature of the primary plan in this State is that while all candidates for office are voted for directly, delegates to the Democratic National Convention are chosen by the State Democratic Convention, composed of delegates who are not selected by primary. In the election of delegates to the last Democratic State Convention in South Carolina probably not more than ten thousand members of the Democratic clubs participated. At the primary election for United States Senator 110,000 votes were cast. The delegates to the National Convention which nominated the candidate of the party for President were elected by the convention plan; the United States Senator was nominated by the primary plan. In the larger affair of selecting a candidate for President the convention plan was adopted; in the nomination of a candidate for Senator the primary plan was followed. This difference between the two methods of selecting candidates describes in some measure at least the con-

ception our people have of their true relation to national politics, and also illustrates one of the vital defects in the primary plan of naming candidates for office. Either the primary plan ought to be abolished or it should be extended so as to include all the political activities of the people.

If there is anything good in the primary plan of selecting candidates for office, I do not know what it is. A part of the primary machinery is a long speaking tour, when the candidates travel around the State together, after the manner of a circus, making one-day stands, from county to county. Each candidate is expected to tell in ten or twenty minutes why he should be elected rather than his competitor and what he thinks

about the important issues before the people. There are at every meeting from eight to ten candidates or more, and if they really knew anything about the questions they ought to discuss it would be manifestly impossible for them to tell it within the limited time granted them. Under the old, or convention, plan better men were named by the party, and the people were more fully acquainted with the candidates and their fitness for the offices to which they aspired. The primary plan, in my opinion, ought not to be held in better favor than any other device of demagoguery. The best thing that can be said for it in our peculiar environment is that it has held the white people of the State together.

CHARLESTON, S. C.

Easter

BY JAMES TERRY WHITE

"ARISE!" went forth a mighty Voice, "all ye
That sleep." O earthborn Lily, who told thee
To come forth with the living from the dead?
The white-robed Lily answered, "The great Head
And Heart of Nature, God Himself, called me.

"He said, 'The Christ is risen!' and tenderly
My earthy cerements loosing, He bade me
Go—fellow in the way where Christ hath led—
Arise!"

Trust thou this promised Immortality,
O troubled, doubting heart! Fear not that He,
Who wakes the lowly lily from her bed,
Whose own hands loose the graveclothes from her head,
Will Easter Day forget to say to thee,
"Arise!"

The Seattle Exposition

BY J. E. CHILBERG

PRESIDENT OF THE ALASKA-YUKON-PACIFIC EXPOSITION

PROBABLY no world's fair has had to its advantage such a wealth of what may be termed "added attraction" as has the Alaska-Yukon-Pacific Exposition, which opens in Seattle on the 1st of June.

That Seattle's fair is to be "The most beautiful exposition ever held" has been so widely advertised that the expression has become a catch phrase, but that it is to be held in the heart of the most beautiful country on the map has not been given such wide publicity.

On a day when the American decides to "see America first," the country round about Seattle and within easy sailing of it will come to be to the Western hemisphere what the Alps have been to Europe, and the Himalayas to the East. But the beauties of the Alps are held in small compass and the Himalayas are

hidden by distance, save from the adventurer. The beauties of Washington, British Columbia and Alaska are the equal of either, and, in much, they excel, and they are flung for a thousand miles along the ramparted coast line. Best of all, they are at the doorway and to be had for as glorious a day's sailing as comes to few in a lifetime.

Seattle's exposition is set upon the banks of two gem-like lakes, girt with woods, and the buildings rise in a forest of fir. Back of the lakes rise the mountains, and sentinel over it all rises Mt.

Rainier, the highest peak in the United States, and by many declared the most beautiful. To the westward, from the heart of the saw-toothed Olympic Mountains, Mt. Constance looks down upon the Exposition city and upon the thousand islands of placid Puget Sound, and its

Formal gardens in the foreground.

season excellently equipt excursion boats leave Seattle for the now famous jaunt thru the "Inside Passage" along the coast of British Columbia to the southeastern coast of Alaska, with its wonder-world of glaciers and mountains and queer peoples that live nowhere else on earth. The tourist may climb the glaciers, fish the streams for trout, or, with the natives of the northland, beat down the woods for deer. He may see salmon brought in by the hundreds of thousands and put thru the canneries which line the Alaskan coast, and he may barter with the aborigines for the trinkets, curios and garments which their deft craftsmen make as they barter. The Inside Passage is a land of Titans and fairies, and it is possible to make the tour of it, from Seattle to far Sitka, and return, for as much as the cost of a one way ticket from Chicago to the Coast.

And there is almost as much to see on the way across the continent. If the Exposition-bound passenger comes by way of the Canadian Pacific he will have the coast of Lake Superior to whet his appetite in the tremendous glories

of years, has won away from Uncle Sam no less than 100,000 of his farmers.

If the route be by way of the Northern Pacific, the Great Northern, Burlington or Union Pacific there is always the Yellowstone Park to be visited, and he has not seen the Northwest who does not use his stop-over privilege to the time limit when he reaches that particular section of the Rocky Mountains, for between them Montana and Wyoming have a wonderland to offer.

By the Union Pacific, the Denver & Rio Grande and allied roads out from Denver, the Grand Canyon of the Colorado, the greatest and most picturesque rift in all the earth's surface, is to be seen, and so is Salt Lake, the old Mormon capital, and the big mining country around it. Incidentally the Union Pacific Railroad now sends its passenger trains directly across the weird body of water from which the city takes its name, on one of the longest trestle bridges in the world.

By the time the Exposition opens the Chicago, Milwaukee & St. Paul Railroad will have completed its extension to Seat-

tle and will offer still another picturesque transcontinental route. It passes thru the same general, mountainous country that the Great Northern and Northern Pacific pass thru and its route reveals every scene of grandeur in the Northern Rockies and the Cascades and leads thru the thousands of blooming acres of fruit lands which have made Eastern Washington famous.

A short side trip from Seattle over the Northern Pacific Railroad takes one to Portland, the most beautiful city in the West. It lies on the banks of the Willamette River fifteen miles from the majestic Columbia, the two rivers making it as much a seaport as any other of the coast cities. In Portland, from June 7th to 12th, the famous annual rose festival takes place. It is a carnival of blossoms that has become, of late years, almost a national institution.

Another side trip from the exposition city, by either water or rail, takes the tourist to California, with its wealth of

scenic beauty, its Yosemite Valley, Del Monte and Los Angeles, which was once the desert but is now the garden, and to Santa Cruz, called, because of its beauty and popularity and not its proclivities, the Monte Carlo of America. One hundred dollars, or very close to that amount, will cover the most of the round trip to California, or the tourist may make arrangements with the railroad company which will bring him to the fair by way of the north and return him by one of the southern routes.

The fact is not to be ignored that when in Seattle the traveler who is at all sporting in his tastes is in the heart of the greatest game and fish country remaining in the United States. It is possible to step upon the train in Seattle and two hours later kick a black bear out of a blackberry "patch" in the Cascades, or pull a two pound Rainbow trout out of a pool of the Skykomish. Within twelve miles of the city the deer have driven the orchardists out of business by their in-

A PORTION OF THE FLOWER BEDS CIRCLING GEYSER BASIN
In this bed 300,000 pansies are planted.

cursions against their budding trees, and the workmen still find grouse in the cover that remains on the Exposition grounds.

Neither is Seattle's "fifty cent circuit" to be overlooked when the traveler to be sets to figuring the aggregate of his travel values, for it means the Navy Yards at Bremerton, where the largest drydock on Pacific waters is building, Victoria and Vancouver, in British Columbia, historic Port Townsend and the Neah Bay Indian reservation, where the Siwash, or Chinook, Indian is to be seen in his highest development. It means the

This will include every stop-over privilege, and return may be made without additional cost over any direct line other than the selling line, or by the same line if desired. The rate from St. Paul and other so-called Missouri River points, will be \$50, with the same stop-over and other privileges of return. From Sioux City the route will be \$53.90; from Peoria, \$59.25; from St. Louis, \$57.50; from Memphis, \$66.50. From Texas points the round-trip rate will be \$60, and from Colorado points \$45.

By paying fare over connecting lines

THE MUSIC PAVILION

water trip to beautiful Tacoma and Hood Canal, a natural fissure along the base of the Olympics that, in scenic beauty, rivals the Inside Passage.

For the Alaska-Yukon-Pacific Exposition all of the Western railroads have announced rates lower than ever before. These schedules are made to include such other events as the Grand Lodge of Elks, in Los Angeles; the National Encampment of the Grand Army of the Republic, in Salt Lake City; the Portland Rose-Carnival, in Portland, Ore., and other conventions and events which take place in the West during the exposition period.

The rate from Chicago to Seattle and return, beginning May 20, will be \$62.

or divisions on proportionate scale, the traveler may have the privilege of coming to the Exposition over any of the northern routes and returning thru California over any of the southern or central routes, or vice versa. It is not to be omitted that the Canadian Pacific Railway is party to this general transportation agreement, which will make possible the going trip thru Canada and the return over the American lines or vice versa.

The Eastern lines have not yet announced their special rates, but it is safe to assume that the round trip from points East to connecting points with Western lines will be on the basis of one and one-half regular fares.

The Emerald Isle

An Uncollected Poem

BY JOHN GREENLEAF WHITTIER

[The poem given below was never included in any collection of Whittier's works. I find it in a scrap-book kept by his older sister, who thus preserved fifty other poems, few of which have ever been published, except in Garrison's "Free Press" and the "Haverhill Gazette," in which they first appeared. The first two poems to be printed were "The Exile's Departure" and "The Deity," both appearing in June, 1826, the date of composition being given as a year earlier. These may be found in any edition of his complete works. The poem here given was published in the "Free Press," August 3, 1826, and the date of its composition is not indicated. It will be noticed that two of the three poems have Irish themes, his interest in the cause of liberty first taking this direction. His earliest anti-slavery poems came several years later.—S. T. PICKARD.]

BRIGHTLY figure thy shores upon history's pages,
Where names dear to fame and to science long known,
Like unsetting stars thru the lapse of long ages
From the sea-girded isle of Hibernia have shone:
Fair Island! thy vales are embalmed in the story,
Which history telleth of ages gone by,
When Ossian's proud heroes strode onward to glory,
And ocean's wave answered their loud battle-cry.
The wild vine is creeping—the shamrock is closing
Its foliage o'er many a dimly-seen pile—
Where entombed on the fields of their fame are reposing
The proud peerless chiefs of the Emerald Isle.

And in far later years, with the purest devotion,
To the high cause of freedom full many a son
Of the green shores of Erin, the gem of the ocean,
Fair evergreen laurels of glory has won.
The martyred O'Neal and the gallant Fitzgerald,
On the bright list of glory forever shall stand,
And fame circle Emmet, the eloquent herald,
Who wakened the spirit and pride of his land.
They are gone! they are gone! but their memories that linger
On the shores where they perished no wretch shall revile,
No slave of a tyrant shall dare point the finger
Of scorn at those sons of the Emerald Isle.

Hibernia; tho tyrants may seek to degrade thee,
Yet proud sons of science acknowledge their birth
On thy sea-girded shores, whose high genius has made thee
The gem of the ocean, the wonder of earth.
Long, long, has the halo of glory surrounded
The memory of Bryan, the pride of thy shore;
And o'er thy dim lakes and wild valleys have sounded
The heart-touching strains of Carolan and Moore:
O, soon may the banners of freedom wave o'er thee,
Green island of Erin! may liberty's smile
To the lustre of primitive ages restore thee,
The gem of the ocean—the Emerald Isle!

Are Our Women Ruder than Our Men?

BY MARION HARLAND

A RULE, so wide of application that it may be termed universal, is that we are judged by the world at large by the valuation we set upon ourselves. For centuries past men have esteemed theirs the "ruder" sex. "Rude" is a word with fifty meanings, but they are offshoots from the same root. And not one conveys the suggestion of refinement, gentleness and finish. In accepting one or all of the descriptive epithets, our big brother implies that he looks to woman, his counterpart—the *alter ego*, designed by the Creator to make, with him, the perfect human thing—for mollifying and uplifting influences.

Millions of tomes and billions of poems have been written in proof and illustration of this dogma. The lesson is begun before twin brother and sister are out of the cradle. Little boys are made of

"Slugs and snails
And puppy dogs' tails."

Little girls of

"Sugar and spice
And everything nice."

Anacreon, Milton, Dante and Swinburne, in sonnet, epic and madrigal, have given to the ages variations of the theme. The nursery rhyme covers it in four lines.

Ours is a myth-destroying age. Is the belief I have indicated peculiarly tough of fiber, virtually indestructible in essence? Or do iconoclasts still respect the placard of "Hands off!" affixed by tradition to the ancient landmark? How much of the acquiescence in the dogma may be traced to the fact with which I began this paper? Men have talked so long and so loudly of their lack of polish, and women have assumed so complacently their superiority in the practice of the great and the "small courtesies of life," that nobody thinks of disputing either position.

Disarming figures of speech and coming down to the concrete—the foregoing meditations were set in train by a remark of an eighteen-year-old youth who is holding his course in a highly respectable co-educational preparatory school.

(The boy would say "A co-ed. prep.," and save time and breath.)

"I wish," he said, wistfully, over his dinner, "that the young ladies in our room were as hungry at noon as the fellows! It is a favorite trick with them to lock arms—four or five in a row—and go downstairs as slowly as they can lift one foot after another, stopping on every step. Sometimes they take five minutes on one flight, for they halt to talk to those below or just behind them. And as the girls, of course, have the precedence in going down to luncheon, we fellows get awfully impatient."

"Slide down the banisters!" put in a younger listener.

"Ask them to 'move on!'" from one younger still and more unconventional.

"Easy enough to say! If they were boys we would do both. But boys wouldn't dare to block the gangway. One can't do anything with girls when they choose to be rude."

"Right you are!" assented the juniors.

The proposition was self-evident. No one thought of gainsaying it.

The talk brought back to me a scene that past under my eyes not a month ago in a circle where one would have said discourtesy was impossible. Two women—cousins—were fellow guests of a hostess who was ignorant that a family feud had estranged them for a year and more. They were seated far apart at the luncheon table, and no one except my uncomfortable self noticed that not a word was exchanged between them. It so chanced that the younger of the two relatives had another engagement that obliged her to take her leave while we still lingered over our fruit and coffee. The guest in whose honor the function was given sat by the hostess, and the elder of the cousins at the guest's other hand. The retiring member of the party slipped along the line of chairs, answering protests and "good-byes" gracefully, and paused to shake hands with the hostess and the stranger next to her. The senior and better-bred kinswoman looked up with a civil smile and half-extended hand. The other

feigned to see neither, swept past her and dropt a pleasant word in the ear of the woman beyond.

The "cut" was unmistakable. I could not deny it when the slighted relative called on me next day to comment upon what she saw I had noted.

"I thought it but decorous that I should not 'cut' her in the house of a common friend," she said. "I owed it to my hostess and to my own ladyhood to ignore the feud while I was under Mrs. B——'s roof."

She was right. In telling her this I recounted how I was once sadly perturbed by the accidental meeting in my drawing-room of two men whom I knew to be sworn enemies. One stood talking to me as the other approached. They were thus brought face to face and retreat was impracticable. I hope neither suspected how great was my relief and how high my respect for each mounted when they shook hands and uttered a few words of greeting with no show of stiffness or chagrin at the *rencontre*. I was well enough acquainted with one of the pair to thank him afterward for sparing me embarrassment. He looked surprised:

"My dear madam! What else could a gentleman do in the circumstances?"

I could have told him what I had known more than one gentlewoman do when similarly confronted. If *esprit du corps* held me silent, it was not that I did not recall with contemptuous bitterness of spirit that three women had arisen and left my daughter's drawing-room not a week before, at the entrance of a visitor who, as one of the trio went out of her way subsequently to inform her hostess, "had been talked about, you know. All virtuous women should discountenance such creatures wherever they meet them."

"There are virtues and virtues!" was the significant rejoinder.

That part of our subject "is another story," with which we have not time to deal.

"All woes on earth a tear may claim
Except an erring sister's shame."

One form of rudeness in which the spiteful woman is an adept is "talking at" the person whom she would punish or anger. To subject oneself to the

stinging small hail of equivoque, innuendo and covert sarcasm which are at the call of feminine ingenuity is like walking knee-deep thru a field of nettles, or forcing one's way thru a hedge of prickly pears. The prickles are nothing compared with the burning smart they leave for days and months afterward.

Selecting at random from a big sheaf of memories illustrative of this accomplishment of my fellow women, the burn and sting I should be ashamed to bear so long return in describing an incident of a drive thru the Trossachs last summer. On the top of the coach, besides our own party, was a party of five women and one patient man. By adroit pre-engagement, the young men of our group had secured for themselves the box seat with the coachman, and for us two women that immediately behind. There remained upon the seat occupied in part by us room for three other passengers, had they chosen to exert their powers of compression, or had any of us been more sylphlike in figure. As it was, two girls settled themselves commodiously upon it and began forthwith to bewail the pre-occupation of the space to the exclusion of "poor dear popper." The lament was taken up by those behind, and changes rung upon the hardships of a mode of travel that forced the right people into the back seats and allotted the front to the wrong.

"It was impossible to enjoy the scenery, since certain bodies were not transparent." "Absolutely impenetrable!" was the remark of a flippant young woman who helped fill our seat. A pretense of craning her neck to look past us into the ravine beyond our shoulders pointed the plaint. The girl next to her and the chaperon from the seat behind were eloquent in compassion for "poor popper," the meek cipher of the crew, who had the grace to look heartily ashamed of the exhibition, but dared not peep a protest.

"If he had only said something, we could have answered him back!" lamented our escorts, in the indignation meeting succeeding our transfer to the loch steamer. "But a fellow is powerless when the insult comes from a woman."

So far as my experience and observation go, this amiable fashion of "talking

at" people is not practised by men. Perhaps because, for immemorial centuries, it has been a masculine prerogative to grasp the nettle. In other words, to face the sneerer with, "Do you mean *me*, sir?" Then the alternative of an humble disclaimer, or pistols for two and coffee for one.

Are women audacious because they have never been "called out"? The conclusion is not flattering to us. It is less ignominious than the practice itself.

The exercise of the divine right of rudeness in public places has all classes for its own. Last Sunday morning I counted forty-seven baby carriages on the mile of sidewalk we had to traverse in order to reach the church door. It is a fashionable thorofare and the day was fine. The babies should have been out, and nurses and go-carts were indispensable to the airing. I am told there is a city ordinance that forbids the obstruction of the sidewalks by wheeled vehicles of whatsoever kind. Sure am I that, if a solitary newsboy had trundled his barrow upon the footway, he would have been ordered off by the first man who witnessed the trespass. Yet the throng of churchgoers were pushed to wall or curbstone half a dozen times on every block by perambulators three and four abreast, halted in the middle of the walk by women who gossiped at their ease, each keeping an eye and a half upon the stream of well-drest men and women and half an eye upon her (alleged) charge. Not a policeman interposed with the "Move on!" that would have dispersed a knot of masculine loiterers in like places.

If you doubt the justice of my next stricture upon the manners of women as contrasted with those of men similarly employed, ask the gentlewomanly shopper if she would rather be waited upon by a salesman or a "saleslady." (In passing I remark that he scores a point in his favor by not insisting that he be called a "salesgentleman.")

Why do I not hundreds of other sufferers from the like cause submit without open protest to the superciliousness of one girl behind the counter that, to her notion, gives her superiority over customers to the singular multiplicity of another as she turns over the wares she is

paid to sell; to the open neglect of two others who discuss family affairs, beaux and vaudeville players in audible undertones while pretending to "wait" upon us, the real waiting being our province? Were the delinquents men we should enter complaints without waiting for a repetition of the ill usage. But—"it seems a mean thing to run the risk of losing a place to a girl who has her living to earn."

The phrase is absurdly familiar to every one of us. It is the stereotyped excuse for a degree of mean-spiritedness that is, in itself, responsible for the perpetuation of the nuisance. We have taken for granted the rudeness of women clerks in all departments until we express surprise when, in foreign travel, we find them "every bit as polite as men."

Pardon one more sketch from life:

"I wish to look at some Valenciennes lace," said my friend, Mrs. R——, a thorobred to her finger tips, to a saleslady in a fashionable department store.

The girl lifted her eyebrows lazily, extended a languid arm, pulled down a box and opened it listlessly.

"Pardon me!" said the customer. "I think you have made a mistake. I asked for Valenciennes!"

The arch of the brows was disdainful now. The saleslady opened her lips for the first time:

"This is Val."

"I think not. But you must have it."

The automatic clerk turned on her pivot and brought down a second box. The tried would-be buyer pointed mildly to the label.

"That is point. The first box was duchesse. Have you no Valenciennes? I wish some about four inches wide."

The next weary movement exhibited edgings less than an inch in width.

"Have you no Valenciennes lace wider than these?" By now the purse-bearing worm began to turn.

"I suppose so—somewhere!" closing the box, but making no show of a desire to prosecute the search.

Whereupon my friend, for the first time in her serene life, transgressed the traditions of her order:

"Have — you — no — politeness?" she asked, with telling deliberation, and before the interlocutor recovered from the

shock, departed to another "emporium," where a man clerk served at the lace counter.

I could not have done that! Nor, perhaps, could one of my readers. I doubt if it did any good. All the same, I am glad that one woman had the moral courage of her convictions.

A year or so ago a New York newspaper, always on the lookout for telling novelties, sent a woman correspondent on the weary round of trolleys and ferry boats during the rush hour, with instructions to report the number of men who arose to offer her a seat on car or boat. I forget the statistics in the case. It would have been a mere bagatelle by comparison had she been bidden to keep tally of the women who thanked tired men for resigning to them what were perhaps the first seats the men had had since business hours began. Nowhere are my sensibilities outraged more frequently and my pride of sex more humbled than upon the street cars and other public modes of transportation. I am confident that I speak within bounds in saying that not one in ten of the women who accept seats from men of all ages (for which sittings the men have paid as honestly as the women have paid for theirs) thanks the man for his courtesy. Giddy matinee girls drop into the places vacated by silver-haired men who might be their grandfathers with never so much as an upward glance of acknowledgment. Fine ladies, who have been passing away an hour in looking over the new styles, refreshing themselves afterward by a cup of afternoon tea at the Waldorf-Astoria, take, as their royal right, spaces offered by haggard toilers in the hardest portion of the world's vineyard. When one happens to bethink herself to return a gracious "Thank you; you are very kind!" the air of astonishment the man cannot wholly conceal is a striking commentary upon the rarity of the experience.

"It gave me an electric thrill when I heard you thank that man for giving up his seat to you!" said a young kinsman

who was my attendant in a street car. "I do not think I have heard another woman do it in a year."

Have we American women grown arrogant by reason of the deference we have always had from our big brother? Or is our growing disregard of the amenities of everyday life the outcome of the freedom of action, the independence of thought and speech accorded to the new woman's demand for permission to live her own life and make for herself a career that shall be irrespective of men in general and her kindred in particular? Our children are learning in dancing schools the deep sweep of the curtsy of our grandmothers' day. I can recollect the displeasure, approximating horror, with which they beheld the innovation of the bow that superseded the profound obeisance they made courtly:

"A bow, my dear; for all the world like a *man*!" gasped a fine old gentle-dame at first sight of the new fashion. "Excuse me! but it looks to me like a stride in the direction of what are called 'women's rights'! A highly objectionable doctrine, my child! Subversive of all that distinguishes us from the—ah, the ruder sex!"

Would the now sainted dowager still apply the title to our big brother?

Is there any hope that the revival of the curtsy may be the beginning of the true and blessed era of equal rights, in the which each shall recognize her neighbor's claim upon the best she can offer of kindly deed and word?

"Time is too short to be wasted in meaningless compliments!" growled a pessimistic so-called "Utilitarian."

Time is assuredly too brief for us to lose a single chance of healing or gladdening the hearts of these our brethren. One may not have an opportunity of doing one great, heroic deed in a lifetime. We err unto sin in failing to espy openings thru which the light that is in us may shine upon other and darker pathways than ours. It is as truly my duty to be "courteous" as to be "pitiful."

NEW YORK CITY.

Governor Hadley of Missouri

BY FRANK C. LOCKWOOD

FOUR years ago young Mr. Hadley rode into the political lists, like the redoubtable Ivanhoe, "a mysterious stranger." A Republican, he was elected Attorney-General of the Democratic State of Missouri by a political accident. Honest people of ordinary intelligence, even then, saw nothing mysterious in him; and now, since it has become known that he was born and educated in Kansas and that he received his political training there, the remark that he is a political accident loses point; for in Kansas political accidents are habitual. He is a mystery to those only whose ways have hitherto been supposed to be past finding out, and to such as count it strange that right should reign, and that brains should discredit money and arrogance and legal trickery. He chose his ancestors well, and when we read a bit of his genealogy we do not wonder that he has pushed and has been pushed forward to serve the people. His father and his grandfathers, in their day, no less than he in his day, made favorable impression of themselves when there was need that clear thoughts be given birth, that wise words be spoken, and that honest blows be struck for truth and right. His father, Major John Milton Hadley, still living, was a Federal soldier thruout the Civil War. His father's father was a Jeremiah Hadley, a Quaker from North Carolina, who moved to Indiana in 1830, and later, early in the fifties, pressed on to Kansas, as a missionary to the Indians. Mr. Hadley's mother was the daughter of another worthy pioneer, Isaac Beach, a native of Connecticut, a Presbyterian minister, who went to Kansas during its dark and bloody territorial days.

Young Hadley was educated in the public schools of Olathe, Kan., a little town a few miles from the Missouri State line, about an hour's ride, by rail, from Kansas City. At sixteen years of age he entered the State University of Kansas, an unwilling but very needy seeker after "sweetness and light." He came fresh and healthy from a summer's work on his father's

farm, with a passion for the soil warm in his veins, disconsolate that he must sacrifice the noble art of agriculture for the degenerate ways of books and cities. His rusticity was no more marked than the self-confident, somewhat pugnacious manner with which he bore himself, due, perhaps, as much to the fierce pompadour, which he supported in accordance with the prevailing style of that time, as to his natural self-assertiveness. Tho not very popular during the early part of his college course, from the first he was one to be taken account of; and during his later years at college he was popular, and one of the acknowledged leaders in all student enterprise. He was early deep in college politics; was an active fraternity man, an eager debater and a captivating public speaker. He lost no opportunity to make a speech; and as he had a good voice, read much from the great orators, and was always assured and unembarrassed, he made some reputation as a college orator. He was never a brilliant student, tho he was apt, and had a quick and resourceful mind. He lived life to the brim; entering with zest, sometimes as a mere participator—more frequently as the promoter of exuberant college pranks. He was fond of swimming, duck-hunting, and all athletic sports; tho, having always been somewhat frail in health, he was not physically fitted to excel in the more strenuous contests entered into by the regular college teams.

At twenty-two years of age, after the completion of his law course in Northwestern University, Mr. Hadley began the practice of law in Kansas City. He took an active part in politics, largely because he thought it politic to do so. And so it proved; for in less than four years after he settled in Kansas City he was appointed First Assistant City Counselor, a position that he filled with such conspicuous ability as to assure both his professional and political future. In 1900 he was nominated for the office of Prosecuting Attorney of Jackson County, on the Republican ticket, and was elected.

He was a vigorous, fearless, efficient prosecuting attorney, convicting during his incumbency of two years more than

defeat with his Republican associates on the ticket. He took up his private practice again, becoming the attorney for the

GOVERNOR HADLEY, OF MISSOURI.

two hundred and twenty persons of felonies. He failed of conviction in only six cases that he prosecuted. During his term as Prosecuting Attorney, moreover, he made war upon bribery in the civil courts; took up prosecutions against public gambling; convicted a number of lawless agents representing large corporate interests in Kansas City; so alarmed guilty public officials that they fled the State, forfeiting their bonds; and in various other ways did his duty to the discomfiture of lawbreakers. He stood for re-election, and went down to expected

street railway company of Kansas City, and for other large corporations.

It was in the Republican State Convention of 1904, when Mr. Hadley was thirty-two years of age, that the political accident befall which resulted in his election to the office of Attorney-General of Missouri; and, in consequence, to his election last November as Governor of the State. What further consequences to this Napoleonic young man may follow from that lucky accident who can say?

His assumption of the office of Attor-

ney-General of Missouri launched Mr. Hadley upon a national career. For the past four years his name and his achievements have been familiar to all students of current national events. Soon after taking up the duties of his new office he came into dramatic prominence by reason of his shrewd and vigorous attack upon certain great oil concerns that were violating the statutes of the State of Missouri. He found that there existed an illegal conspiracy and combination on the part of the Standard Oil Company, of Indiana, and the Waters-Pierce Oil Company, of Missouri, and the Republic Oil Company, of Ohio, to monopolize the oil trade of Missouri. As the sequel to this sensational struggle between Mr. Hadley as the legal representative of the people of Missouri and the great oil companies that were disobeying the laws of the State, the Supreme Court of Missouri issues a decree ousting all three of these concerns from the State, and fining each company \$50,000.

Briefly, the story of the legal conflict just alluded to is this: Mr. Hadley discovered by mere chance that the Standard Oil Company had no agency in St. Louis. This seemed to him very strange, and he was still more astonished when, a few days later, he found that the Waters-Pierce Oil Company, supposedly a strong independent concern, competing with the Standard Oil Company, did no business in Kansas City. It transpired, moreover, that the oil rate from Kansas City to St. Louis was 17 cents, while from St. Louis to Kansas City it was 22 cents. It now dawned upon the mind of the young lawyer that this difference in the oil rate from West to East might be accounted for by the fact that the Standard had a refinery in Kansas City from which oil was shipped to St. Louis, while in St. Louis the only refinery was the property of an independent company. He learned, further, that the Standard, of Indiana, and the Waters-Pierce Company, of Missouri, had entered into an agreement whereby the oil trade in Missouri was arbitrarily divided between them by geographical lines, without regard to the convenience of the public, the Standard selling in the northern, the Waters-Pierce in the southern half of the State. In addition to all this, evidence was secured showing that

the Republic Oil Company, of Ohio, was merely the creature of the Standard, having its main office at 75 New street, New York, the rear entrance to the headquarters of the Standard, at 26 Broadway, and that thru collusion with both of the other companies it was working injustice to the independent companies of the State. The culminating incident in the conflict between Mr. Hadley and the oil concerns was that in New York City in which the youthful Western attorney forced into court and then confronted Mr. H. H. Rogers, the oil magnate and director, steel-cased in age and arrogance and influence, and forced from him the reluctant testimony, in spite of his utmost efforts at evasion, that the Standard Oil Company, of Indiana, has an office at 26 Broadway, New York, and that "a majority of the shares of stock of the Standard Oil Company, of Indiana, and of the Republic Oil Company, is held for the Standard Oil Company, of New Jersey, and that all of the shares of stock of the Waters-Pierce Company standing on its books in the name of M. M. Van Beuren are held for the Standard Oil Company, of New Jersey." Mr. Hadley's victory has been complete. The result, too, has been of vast importance outside the borders of his own commonwealth. Never before had the Standard been compelled to divulge so much in the courts; the evidence brought to light during the investigation has been of great value to the Federal Government in its inquiry into the business methods of the Standard Oil Company; and it is not without interest that the policy of publicity suddenly adopted by the Standard dates from the hour that Standard representatives were forced to make the humiliating exposures related above.

Mr. Hadley shows magnificent daring in the antagonists he chooses. His next attack was upon the great railways that cross the State of Missouri. The politics of the State had for years been dominated by a railroad lobby maintained at the State capital. A Railway Commission elected by the people had failed to correct the prevailing injustices and abuses, so there were many complaints of excessive freight rates. The Legislature that met after the election of Mr. Folk to the Governorship passed a law attempt-

ing to regulate freight rates ; but the railroads were able by invoking the Federal court to stay the execution of the new law. In spite of all that Mr. Hadley could do, the statute still remained inoperative when the Legislature met again two years later. A new freight law, which he had framed after long study of the legal problems involved, was past, but again an injunction was issued, and again the people found themselves helpless. When, soon after this, the Legislature past a bill fixing the passenger rate in Missouri at 2 cents a mile, by Mr. Hadley's advice, a section was inserted in the bill making the violation of the law a misdemeanor ; it being the intention of the Attorney-General to have it adjudged a criminal statute when a case should be brought into court. The new law did not cause the railroads much uneasiness, as they did not doubt that it would prove ineffectual, as had the laws regarding freight rates. When the time came for the law to go into effect, the attorneys for the railroads met in Kansas City and applied to the United States Circuit Court to protect their clients against the confiscation of property. When, in spite of Mr. Hadley's clear and masterly arrayal of facts to show that the law would not prove confiscatory, it seemed certain that a temporary injunction would be granted, the Attorney-General startled both the court and the opposing lawyers by the announcement that, if the Federal court issued an injunction interfering with the enforcement of a criminal statute of the State of Missouri, he should take the case to the Supreme Court of the State upon *quo warranto* proceedings, and compel the railroads to show by what right they did business in Missouri while refusing to obey the criminal laws of the State. This threat threw the opposition into confusion ; for they felt confident that Mr. Hadley could and would carry it out. The result was a compromise, at the request of the attorneys for the railroads, whereby it was agreed that the railroads should be granted three months in which to give the law a fair trial.

Three things may confidently be predicted of the new Governor's administration : It will be non-partisan ; it will main-

tain the supremacy of the law, and it will be constructive.

In Missouri, to the glory of the State, non-partisanship has become an accepted principle. Mr. Hadley served his term as Attorney-General with Mr. Folk, the Democratic Governor, and did all in his power to carry out that executive's enlightened and righteous ideals of government. His own election, as he well understands, was largely a non-partisan victory in which the better element of the State interested itself without regard to party lines. The party that elected Mr. Hadley is the party that elected Mr. Folk—the party of common sense, the party of progress, the party of law and order and righteousness. Recognizing this, and highly sensitive to the fact that a Governor is not Governor merely of a political party, or of a faction, Mr. Hadley pledges himself to be the Governor of the whole people—to conduct the government on a non-partisan basis. Service rendered to the Republican party will not be sufficient ground for appointment or preferment. Honesty and efficiency are to be considered first of all and above all. Neither in the appointment of men to the police force nor in their removal from it will politics be allowed to enter as a test ; for an honest and efficient police force is a requisite to honest elections, and honest elections are a necessity to the perpetuity of government. The integrity of the ballot will be preserved at any cost ; the interests of the negroes will be safeguarded. He will do his utmost to see that they have justice, that they be given equality of opportunity—a chance to be sober, industrious, and at their best.

Mr. Hadley has a clear and serious understanding of the responsibility that he has assumed and will not be derelict in the first and most obvious duty that devolves upon a chief executive—the execution of the law. He will be alert to protect life and property ; jealous of the purity and sacredness of the ballot ; swift to punish crime, and prompt to right injustice ; strong and fearless in the enforcement of law, against whomsoever justly invoked. They judge him wrongly and deceive themselves who suppose that he will wink at the violation of

liquor laws, gambling laws, and laws pertaining to the proper observance of the Sabbath. He is not only a trained lawyer, familiar with the legal code of the State; not only the Governor of the State, sworn to execute the laws enacted by the will of the people; he is, besides all this, a patriotic, high-minded citizen who reverences the law and desires to see justice prevail. Moreover, his long and severe training as a city counselor, a county prosecuting attorney, an attorney-general of the commonwealth will stand him in good stead in his new position as executive. His constituents need have no fear that he will lack either wisdom, strength or honor in the administration of the law.

But his ideal far transcends the conception ordinarily held of the functions of a Governor. He aspires to be a true leader of his people in all worthy and elevating activities. He announces a policy of public service—conservative upon the one hand, aggressive and constructive upon the other hand. He purposes to develop to their utmost capacity all the material resources of the State by the application of the latest results of science and of expert knowledge to every line of industry. He will set about the improvement and development of the highways and waterways of the State; will seek to

secure a due share of the best immigrants who come to this country, and see that they are located advantageously; will make inquiry into the mining resources of the State; will take diligent and intelligent action concerning game laws and the preservation of forests, and will have soil, crops and crop conditions looked into by men specially qualified to give advice in these matters. Nor will his efforts be limited to material things. He is pledged to the policy of self-government for the cities; he has his heart set upon a more humane and helpful administration of all the penal, reformatory and charitable institutions of the State, and to the end that the criminal, deficient and unfortunate members of society under his jurisdiction may be cared for in accordance with the highest ideals of modern civilization, he will sternly demand intelligence, honesty and efficiency of those into whose hands the wards of the State are committed. No phase of public activity will receive more interested personal attention from him than the work of public education. He is alive to the most modern and approved methods of education, takes a great pride in the higher State institutions of learning, and will see to it that they are intelligently fostered, supported and elevated.

ALLEGHENY COLLEGE, MEADVILLE, PA.

The Heart of God

BY HENRY B. TIERNEY

I LOVE Thee, God, amid the city's sighing,
I love Thee in the solemn watch of night;
I love Thee, Lord, when weary day is dying
And Nature fades in silence from my sight.

Each vesper moment throbs with hope eternal,
Each soul vibrates with loving sympathy,
Each life becomes an ardent prayer supernal,
Which radiates, O Sacred Heart, from Thee.

Thou art, O Heart, the angels' supreme glory,
The dread of demons into Hell once hurled.
The humble saint contritely kneels before Thee;
Thou art, O Heart, my share of this bleak world.

TRENTON, MO.

A City-Minister's "Job"

BY ONE OF THEM

THE pastor of a certain city church was recently in conversation with one of the business men of his congregation, and the talk chanced to turn to the methods by which the business man "kept tab" on his employees and traveling men. He displayed a series of daily, weekly and monthly reports concerning the output of not only each department, but of each employee, of his factory. He showed similar blanks for reports on the travels, the points "made," the dealers seen, and the business secured by the firm's representatives "on the road." Comparing these figures with the pay of each factory-hand or with the salary paid each traveling man, it was an easy matter to see at a glance whether each was earning his pay, to determine which was the most industrious at his task and the most profitable to the firm, and to note which members of each class of employees, compared as man to man, were the most successful—from the point of view of the employer, at least.

The business man promptly forgot that interview, no doubt. Not so the minister. He went therefrom "with a flea in his ear"—decidedly. Questions—pungent, pointed and personal—rose before him and would not down. His soul rose up before him and demanded: "If *you* had to make a daily, weekly, or monthly report for *your* employers' study, what would that report look like? If *your* month's salary and your ability to retain your 'job' depended on the amount of work that *you* could show as done during that month—how big would *your* pay-check be? Would it not be an exceedingly good plan for you to find out about these things, and to know how the amount of work you do compares with the next man's, and with *his* energy and industry, as man to man?"

The minister answered his soul and said: "You're right, old man! True, I never before thought of such a thing as a full and detailed report of the day-in-and-day-out work of a pastorate. But

I'm not afraid—and by the end of the next calendar month I'll show you a report that will be worth looking at!"

The next month chanced to be that of January, 1909. The minister prepared for himself a series of typewritten report blanks, one for each day in the month, whereon he could make out at the close of each day's "business" an account of how he had spent the hours since sunrise. He presently found it not only a most interesting study but the keenest incentive to industry that he had ever encountered. When there arrived the inevitable temptation to make less than the possible number of pastoral visits per afternoon; or when the devil foregathered with him in his study and pointed to the Morris chair and suggested: "You've done enough studying for today, old chap; who'll ever know if you stop right now? Shut that desk and light a cigar and take it easy a bit!"—right then his faithful little soul that had originally started the idea prodded him and said: "But what about that report that you've got to make out before you go to bed to-night?" And when, at the end of the month, he was able to look his completed report in the face, he said to his soul: "Do you know, this thing has been so everlastingly good for me, and it so thoroughly demonstrates what kind of a 'job' a city-minister has if he is faithful to his post, that I believe I'll let some other people see what it looks like. It will do for what the athletes call a 'record,' and some of the other 'brethren' may break it if they can. If any of them set out to try, it will be a mighty good thing for the Church of Jesus Christ in this world—that's all. And if some fifty horse-power brother *does* break it, I'll set him a new one!"

It should perhaps be said that the church had some 750 members, in a Middle Western city of 400,000 people. The month covered by the report was in no way an unusual one, save that it chanced to have five Sundays with a correspond-

ing number of church services. The "Week of Prayer" contributed four extra services also. (In one or two details the demands of the work for the period covered were below the average. The number of miles traveled by train was but a fraction of that required at other seasons of the year, while the number of pieces of mail handled was an even three hundred less than for the month before.) The summarized report stood as follows:

Attendance at the church services	447
Attendance at the social and other services ..	444
Attendance at Y. P. S. C. E. services	444
Attendance at mid-week and "week of prayer" ..	1,050
Total	5,440

JANUARY, 1909. THIRTY-ONE DAYS.

Number of religious services of all kinds attended	43
Number of sermons, addresses, lectures, services addressed	32
Number of homes visited ("pastoral calls," etc.)	112
Number of callers at pastor's residence personally seen	72
Time given to general denominational affairs (committees, etc.)	15 hours
Time given to affairs of denominational college (as trustee)	3 hours
Time given to Y. P. S. C. E. matters (committees, etc.)	7 hours
Amount of mail handled in and out of pastor's study	434 pieces
Total number of telephone calls at study	620 calls
Time actually given to private study	132 hours
Number of social engagements of various kinds attended	16
Number of pages typewritten matter of all sorts turned out	107 pages
Number of words in typewritten matter (sermons, letters, etc.)	32,100 words
Absent from city on denominational engagement (service)	1 day
Distance traveled	
On foot	93 miles
Carriage	10 miles
Trolley	107 miles
Train	45 miles

(These distances relate wholly to pastoral calls, denominational affairs, services, etc.)

Total	255 miles
	10 hours

Time "off" from work, as leisure, recreation, etc.

One or two additional summaries might be added. The minister found that his working day began at his desk at 8:30 each morning and closed (with but two exceptions of one hour earlier) at 11:30 each night. Including the mentioned social engagements among his church people as part of the work of the pastorate, he found that he was thus actually at his varied tasks for a total of 453 out of the 744 hours in the month, or—for the sake of comparison—a total of 202 hours more than was required by the ten-hour working day of the members of the firm, the heads of departments, and the employees, of the factory with whose head the original conversation had occurred.

For the period covered by the report the attendance at the regular religious services of the church were carefully counted also. Excluding all entertainments, meetings of women's societies, and the like, the figures for that attendance were these:

terest and surprise. To them such a study was as apparently unheard of a thing on the part of a minister as the minister had to confess that it was to himself. Their questions were curious: "Where did you get the idea?" "How many ministers do this sort of thing?" "Is there any way in which a lot of other ministers could be induced to do the same thing?" "Wouldn't it produce pretty nearly a revolution in some parishes and on the part of some ministers if they were to be askt for such a report?" To which last question, at least, the minister replied emphatically that he thought it *would!*

And for himself, the keeping of so strict a "tab" on his work was so interesting, so satisfactory, and above all so stimulating, in both its processes and its results, that he has selected the more important details of his work and is making to himself and his soul a similar report for each thirty days that the Lord and his people allow him to remain in the strenuous and happy tasks of the Cure of Souls.

The Origin of the Earth

BY ROLLIN D. SALISBURY

[Professor Salisbury holds the chair of Geology and Geography in Chicago University, and is dean of the Ogden Graduate School of Science, and is associated with Professor Chamberlin as editor of the *Journal of Geology*.—EDITOR.]

THE *nebular hypothesis* of the origin of the solar system stood, almost without challenge, for many years. It assumes that the sun and all his family of planets and satellites were once a glowing, rotating, spheroidal, gaseous nebula, which occupied the space from the sun out to the orbit of Neptune or beyond. The nebula was assumed to be in process of cooling, and the cooling caused shrinkage. The shrinkage accelerated the rate of rotation, and this in turn increased the equatorial bulge which rotation developed. The progressive increase of cooling, rotating and bulging finally led to the separation of an equatorial ring, analogous to the rings of Saturn. As the central body continued to shrink it drew away farther and far-

ther, from the ring, which was finally broken up and its matter aggregated into a planet, rotating on an axis and revolving about the central body which at length became the sun.

A succession of rings was assumed to have been separated in this way, the first giving rise to the outermost planet, and later ones to the other planets in turn. The size of the orbit of any planet was supposed to give some indication of the space occupied by the central nebula at the birth of that planet.

At the time of their formation, the several planets were thought to be hot and gaseous. Their rotation caused a bulging of their equatorial zones, while progressive cooling and shrinkage increased the rate of rotation and so the

THEORETICAL RESTORATION OF THE PARENT NEBULA OF THE SOLAR SYSTEM. The nuclei of the several planets may be identified by their distances from the center. The dimensions of the inner parts are made disproportionately large.

amount of bulging, and some of the planets, following the example of their parent body, sloughed off rings which became satellites. According to the hypothesis, all the satellites should revolve about their planets in the direction in which the planets themselves rotate, and the period of revolution of the de-

A HELIX NEBULA IN DISCUM, MESSIER 76, with very symmetrical arms, pronounced nucleus and knots, and a relatively limited amount of nebulous gas. (Photo from Lick Observatory.)

rived body should not be less than the period of rotation of the parent body.

In support of this ingenious theory, which commonly bears the name of Laplace, many harmonies in the motions of the members of the solar system were cited—harmonies which are so striking and so manifold that they can hardly be accidental. Furthermore, the phenomena of existing nebulae were formerly thought to give the hypothesis much support.

Students of celestial mechanics have always recognized deficiencies and difficulties in the hypothesis, and have never given it their unqualified support; but to those who studied the theory less critically, and who did not follow the rigorous mathematical reasoning on which its truth or falsity must rest, the hypothesis has seemed to afford a convenient starting point for the history of the earth and the solar system, and it was accepted by them as if its foundations were firm.

Some years ago, in an attempt to find a satisfactory explanation of the glacial climates of the past, Prof. T. C. Chamberlin, of the University of Chicago, was led to a far-reaching study of the at-

mosphere. This study included a consideration of the origin of the atmosphere, and this led on to the larger problem of the origin of the earth and of the solar system. Prosecuted thru many years, this study has led far beyond the problems originally in mind.

The origin of the earth and of the solar system is perhaps an astronomic rather than a geologic problem, but the nebular theory had become so interwoven with geologic philosophy as to give that philosophy a distinct coloring, and this condition of things invited the attention of the geologist to the postulates on which the foundations of his science rest. Furthermore, Professor Chamberlin has had the constant co-operation of Prof. F. R. Moulton, astronomer and mathematician. The result of their study of the nebular theory has been to throw grave doubt upon its truth. We who are not mathematicians can hardly appreciate the full force of the arguments which seem to stand against it. We must therefore be content to accept the judgment of those qualified to pass upon them.

The consensus of opinion of the few whose opinions on this question are important, appears to be that the arguments against the nebular hypothesis as formulated by Laplace make it untenable. This is not to be interpreted as meaning that every element of the theory is wrong, and that it must be set aside root and branch; but rather as meaning that if it is to stand, it must be so essentially modified as to become, to all intents and purposes, a new theory.

Some of the considerations which bear against the Laplacian theory are noted below. Unfortunately, some of them are not easily stated in untechnical terms.

(1) In the evolution of a nebula, it is highly improbable that rings would be formed. It is much more likely that the equatorial matter would be separated from the parent nebula, particle by particle.

(2) Moulton has shown that there are grave difficulties in the contraction of a ring into a spheroid as simply and promptly as supposed by Laplace.

(3) It is probable that the substance of the earth, in the attenuated condition it must have had in the supposed earth-moon ring, would have cooled to solid

particles long before it collected into a spheroid.

(4) In the highly heated condition of matter assumed by the hypothesis, the lighter gases of the earth-moon ring could hardly have been held together by the attraction of the ring. Even now, the earth does not appear to be able to hold permanently very light gases, such as hydrogen, tho it does hold heavier ones, such as oxygen and nitrogen.

(5) Phobos, the inner satellite of Mars, revolves about that planet in less than one-third the time of the planet's rotation, and the particles of the inner edge of the inner ring of Saturn revolve about that planet in about half the time of the planet's rotation. The doubtful explanation of the anomaly of Phobos is not applicable to Saturn's ring.

(6) Moulton has shown that if the solar system were converted into a gaseous spheroid, and so expanded as to fill the space of the solar system out to Neptune's orbit, with its matter distributed according to the recognized laws of gases, and that if this nebula were endowed with the total moment of momentum now possessed by the solar system, it would not, at that stage, have had a rate of rotation rapid enough to detach matter from its equator. Furthermore, it would not have acquired such a rate of rotation, *until it had contracted well within the orbit of the innermost planet.*

(7) If the last mode of testing the hypothesis be reversed, and the expanded spheroid be given the rates of rotation necessary to develop the successive rings at the proper stages, the moment of momentum of the system at the time of each ring's birth should be equal to the existing moment of momentum of the bodies subsequently derived from it; for the total moment of momentum of any independent system remains constant. Computations show that at the stage which gave birth to Neptune, the moment of momentum of the restored nebula must have been more than 200 times as great as the present moment of momentum of the solar system; that at the stage of Jupiter's birth the moment of momentum of the nebula was 140 times too great; that at the Earth stage, the moment of momentum was 1,800 times too great, and so on. Here is not only an enormous

discrepancy, but one that varies greatly and irregularly from stage to stage.

(8) When the masses of the planets are compared with the moments of momenta they carried off from the parent nebula, remarkable discrepancies are disclosed. The mass of the ring supposed to have formed Jupiter and his moons was less than 1/1000 of the nebula at the time of separation; but Jupiter and his moons now have about 95 per cent. of the total moment of momentum which the whole nebula then had. In other words, the Laplacian hypothesis calls on us to believe that an equatorial ring less than 1/1000 of its parent body carried off 95 per cent. of the total moment of momentum when it separated! The separation of other rings involved similar unbelievable ratios.

(9) Under the Laplacian hypothesis, the satellites should all revolve about their planets in the direction in which the planets rotate on their axes; but the newly discovered ninth satellite of Saturn revolves in the opposite direction, and in a direction contrary to that of the other satellites of this planet. The seventh

A BRILLIANT SPIRAL NEBULA IN CANES VENATICI MESSIER 51. The exposure was long and has given relative exaggeration to the fainter parts. The nucleus is apparently dense and relatively massive; the coiling is pronounced and rather symmetrical in the inner parts, but departs from symmetry in the outer parts. A second nucleus is attached to the extremity of one arm. If this be interpreted as the representation of the disturbing star, it should perhaps be regarded as made of colder, heavier material, much less subject to expulsive elasticity, and hence less dispersed, and only slightly affected by rotating influences. A notable feature is the comet-like streamers of some of the knots and denser portions. If these are true streamers, curved by motion, they imply an active rotation and strengthen the similar inference drawn from the coiled condition. The system is perhaps to be interpreted as young, but as having advanced rapidly in its rotatory evolution because of its massive nucleus. (Photo. by Ritchey, Yerkes Observatory.)

moon of Jupiter also probably revolves in a direction opposed to that of Jupiter's rotation.

(10) Tho our knowledge of nebulae has been extended greatly in recent years, nebulae with rings, such as the Laplacian theory postulates, have not yet been found, and the dominant form of nebula lends no support to the Laplacian hypothesis.

The Planetesimal Hypothesis. When the shortcomings of the Laplacian hypothesis came to be so clear and cogent that they could not be escaped, a substitute better in accord with the facts were sought.

One of the achievements of recent years has been the discovery, thru photography, of a multitude of nebulae. In all this multitude, there is one dominant form, *the spiral nebula*. It consists of a central portion or nucleus, with two arms starting from opposite sides, and curved spirally about the center. The prevalence of this form of nebula implies that it is due to some process of common occurrence in the universe. A significant feature of the spiral nebula is the presence of numerous nebulous knots on the arms, and sometimes more or less outside them. These knots are no doubt the denser portions of the nebulous matter.

Recent advances in spectroscopy have afforded additional knowledge of the constitution of nebulae. If their spectra have been correctly interpreted, many of them are composed not of gaseous particles, as once supposed, but of innumerable solid or liquid particles. These tiny bodies are believed to revolve about the center of the nebula, like little planets. Individually, they are *planetesimals*.

Chamberlin's hypothesis of the origin of the earth and the solar system starts with a spiral nebula (Fig. 1), the arms of which were so disposed as to give the whole a disk-like form.

The form of the spiral nebula is held to be the result of outward projections of matter from opposite points of a sun, combined with rotation. The sun now ejects out matter at velocities ranging up to 300 miles or more per second. Tho this projected matter is thin out many thousands of miles, it falls back to the sun. To develop a spiral nebula from a sun, it is necessary to find some agency

which shall give the projections from it special force and mass on opposite sides, and which shall give them, at the same time, a revolutionary motion about their center. This agency is supposed to be another sun passing in the neighborhood of the one which is to become the spiral nebula.

The mutual attraction of these suns would partly overcome the self-gravity of each along the line of their common attraction, on the principle of the tides, and this should give special force to the projections from opposite sides of the suns along this line. We need consider here only the sun from which the spiral nebula is conjectured to have sprung. As the passing sun is moving forward constantly, it pulls forward the matter projected toward itself, and pulls the other sun forward relative to the matter projected in the opposite direction. In this way it gives to the projections on both sides a revolutionary movement.

Omitting intricate and difficult details, the origin of the spiral nebulae may be reduced to very simple terms. One sun passes another in space. The passing sun increases the habitual projections from the other, both in size and force, on the sides toward and opposite itself. This gives the two arm-like projections on opposite sides. At the same time, the ejected portions are given a movement which causes them to revolve around the sun from which they were projected. This gives the arms their spiral form. The ejected material is made up of innumerable little planets (or planetesimals) revolving about the sun-center in orbits of their own. These planetesimals need only be gathered together to form planets. The knots of the arms are supposed to represent exceptionally massive expulsions.

It is to be observed that this particular mode of origin of the spiral nebula is no necessary part of the planetesimal hypothesis, which really begins with the spiral nebula itself. If the nebula originates in some other way, the needs of the planetesimal hypothesis are equally well met.

The aggregation of the planetesimals into planets, with the knots of the arms serving as nuclei, is regarded as a result of the coming together of the revolving

bodies as they moved thru their slightly different orbits, rather than the result of falling together under the direct control of gravitation. It is assumed that the planetesimals had elliptical orbits, and such orbits, it can readily be shown, would be favorable for the conjunction of the bodies following them.

It can also be shown mathematically that the aggregation of planetesimals under such conditions would give the nucleus to which they joined themselves a more and more circular orbit, and it is significant that the asteroids, which presumably have grown little, have the most eccentric orbits; that Mercury and Mars, the smallest of the planets, have the next most eccentric ones; while the orbits of the larger planets, which probably have grown most, approach circularity most closely.

The photographs of spiral nebulae show knots of irregular form susceptible of evolution into planetary systems of various degrees of complexity along the lines indicated. The system of the sun falls within the range of systems to which, it would seem, these nebulae might give rise. The earth-moon couple is assumed to have been derived from two companion nuclei of unequal sizes.

The knots might have had a rotary motion from inequalities of projection at the beginning; but according to the favored view, the rotations of the planets and satellites were dependent largely on the manner in which the planetesimals came together to form a larger solid body. There is no such fixed relation between the rotation of a planet and the revolution of its satellites as under the Laplacian hypothesis. The period of revolution of a satellite may be longer or shorter than the period of rotation of its planet. Furthermore, if the revolution-period of the satellite was originally the same as the rotation-period of the planetary nucleus, the growth of the planet would draw the satellite nearer to itself, and so shorten the time of its revolution. Thus the difficulty of Phobos, which revolves about Mars in one-third the time of the planet's rotation, and that of the inner part of the inner ring of Saturn, which revolves about that planet in half the time that planet itself rotates, are obviated.

The accretion of the planetesimals, into planets and satellites, under the conditions which seem applicable to the case, admits of the development of *forward* rotation, the common case, or of *retrograde* rotation, as in the case of the satellites of Uranus and Neptune. By the new hypothesis, too, forward rotation should be the rule, as it is, and retrograde motion the exception.

Other peculiarities of the solar system seem to find a more rational explanation in the new hypothesis than in its predecessor. Most of these must be past without mention; but in a spiral nebula, originating in the way outlined, the outer parts of the arms should be of lighter materials than the inner, since the former were probably of materials from the outside of the sun. Since the planets were, according to the hypothesis, developed from the arms, this distribution of matter affords a satisfactory explanation of the relative specific gravities of the several members of the solar system—a fact of no small significance.

The development of the earth from a knot of an arm of a spiral nebula by the slow ingathering of planetesimals, would result in the compression of the interior, and this would result in the production of heat. Computation shows that this is an entirely adequate source of internal heat, without the necessity of supposing that the outer part of the earth was ever very hot.

According to this conception of the origin of the earth, its early history may be subdivided into several stages. These are as follows:

(1) *The nuclear stage*, which starts with the nebular knot. The mass of this nuclear knot is quite unknown. It is supposed to have been composed of planetesimals held together by their mutual attraction, and to have been gathered into a solid nucleus by the conjunction of the separate small bodies, and to have grown by the capture of outside planetesimals.

(2) *A probable atmosphereless stage*, while the earth was still small. Until the earth had attained a mass greater than that of the moon ($1/81$ of the earth), its gravity was probably insufficient to enable it to hold the gases of an atmosphere.

(3) *Initial atmospheric stage*. When

the earth had attained 1/20 of its present mass, it is probable that such atmosphere as it had would have been of slight importance, geologically; when it reached one-tenth its present mass (about the size of Mars), its atmosphere, tho slight, would have been appreciable.

As the earth increast in mass, its increase of atmosphere is assumed to have been derived from two sources, the one external and the other internal. By the terms of the hypothesis, gaseous molecules may have been among the original planetesimals. In its revolution, the growing earth should have acquired these gases as it acquired other planetesimals. Under this conception the heavier gases should have been retained first and the lighter ones later. It is probable that gases were held in the original solid planetesimals as they are in meteorites today, and that, as the planetesimals were aggregated and heated by internal compression or otherwise, some of the gases escaped. These gases should have escaped into space so long as the earth was too small to hold them; but after it attained sufficient size, they should have been held the same as gases acquired from other sources. It is considered probable that much of the gaseous matter now issuing from volcanoes is matter which was occluded in the original planetesimal matter out of which the earth was made.

(4) *Initiation of vulcanism.* Heat from compression and perhaps from other sources, such as internal molecular changes, presently gave rise to internal temperatures high enough to liquefy rock

so that the chronological order of this stage and (3) is uncertain.

(5) *The initiation of the hydrosphere.* When the earth had reached such size that water vapor was held in the atmosphere in quantity sufficient to reach the point of saturation, the water took the liquid form, and so initiated the hydrosphere. The increase in the amount of water came, according to the hypothesis, in the same way as the increase in the amount of the atmospheric gases and vapors which were less readily condensed, and which still remain in the atmosphere.

(6) *The initial life stage.* The conditions permitting the existence of life upon the earth could not have existed until after the development of a considerable atmosphere, and the initiation of the hydrosphere. Since this was long before the earth attained its present size, it seems possible that life may have existed much before the earth had reached its full growth, tho conditions would not have been favorable for it so long as there was rapid growth by the ingathering of planetesimals. By this hypothesis, therefore, the length of time during which life may have existed upon the earth would appear to be very much longer than has been assumed under the nebular hypothesis. This addition of time is most welcome for the development of life.

Expressed in tabular form, the successive stages of the earth, according to the planetesimal theory, are as follows, the oldest being at the bottom and the most recent at the top:

III. The Quaternary Eon (relative maturity).	{	11. The Cenozoic era.	{	C. The reasonably well-known eras.
		10. The Mesozoic era.		
		9. The Paleozoic era.		
		8. The Proterozoic era.		
II. The Extrusive Eon (transitional).	{	7. The Archeozoic era.	{	B. The partially known era.
		6. The initial life-stage.		
I. The Formative Eon (birth and adolescence).	{	5. The initial hydrospheric stage.	{	A. The hypothetical eras.
		4. The initial atmospheric stage.		
		3. The initial volcanic stage.		
		2. The atmosphereless stage.		
		1. The nuclear or nebular stage.		

in the interior of the earth, under favoring conditions. Such heat should have been adequate, theoretically, to develop active vulcanism by the time the earth had attained one-tenth of its present size, and perhaps much earlier. This stage may have been reached before the atmosphere had attained much development,

The hypothesis affords the most rational explanation which has been suggested of ocean basins, as distinct from continental protuberances. By the method of growth, the surface of the earth should never have been perfectly spheroidal, and when the time for the accumulation of water came it must have gath-

ered in the depressions. The planetesimal material of the earth under the water, being protected in large measure from weathering, was protected also from the great expansion incident to weathering. The material of the more protuberant areas, on the other hand, being exposed to freer weathering, was subject to greater expansion. Thus the elevated areas tended to become more elevated, while the deprest areas remained deprest. By this hypothesis, the differentiation of oceanic basins and continental protuberances started when the ocean began its existence and probably long before the earth reached its present size, has continued until the present time. It may

be added that the planetesimal theory modifies profoundly our philosophy of early geological history at many points, and that it affects no less fundamentally the philosophy of many phases of geological history, even to the present. If further study of the cosmic aspects of the hypothesis and of its geologic applications shall warrant its final acceptance, it is hardly too much to say that it will form the basis of *a new geology*, departing from the old at many points, and in many radical ways.¹

¹A fuller statement of the hypothesis and of its consequences may be found in Vol. II of Chamberlin & Salisbury's *Geology*, from which these cuts are taken.

THE UNIVERSITY OF CHICAGO.

THERE is at the time I am writing and has been for some days rather a slackening in the eagerness of the discussion going on in political circles with regard to the work of the present session. A week or two ago there was continuous and very animated argument here and there and everywhere as to what the immediate policy of the Government was to be with regard to the main purpose of the session. Are Mr. Asquith and his colleagues, everybody kept asking, determined to bring on the great crisis at once by dissolving Parliament at the close of the session and appealing to the country at a general election for a decision between the claims of the House of Lords and the rights of the House of Commons?

Somehow the attention of the public has been for the time withdrawn from that great constitutional question by events having indeed a political as well as a personal interest, but not associated with the struggles of parties or the fate of the hereditary chamber. The recent action brought by Mr. Lloyd-George, the Chancellor of the Exchequer, against a

London newspaper, was one of these events. A day or two before this case came on we had all been eager in conjectures and speculations as to what Mr. Lloyd-George was about to do with the national revenue. But for a time we became much more deeply interested in the course he had taken to vindicate himself from a disgraceful charge made against him by one of the Sunday newspapers in London. I need not tell my American readers the story of this action and the result. It will have been read in its full detail in New York before now as well as in London. A like charge had been made before against him by another Sunday newspaper, and he had in that former instance, too, brought his action and obtained a complete apology and an amount of pecuniary damages which he at once handed over to a public charity. In the second case the proprietors of the newspaper explained in public court that they had never known of the accusation until they saw it in the columns of their own paper and they at once tendered a full and ample apology and £1,000 sterling as damages, which sum Mr. Lloyd

George also handed over at once to certain public charities. We hear a good deal in this country now and then about the shocking calumnies which American newspapers are in the habit of printing and publishing concerning public men, but I do not think that the worst and lowest order of American journalism has ever outdone these recent calumnies in London against Mr. Lloyd-George.

More lately public attention thruout England was engrossed by another subject, the death of Mr. Arnold-Forster, who had at one time been the War Minister to a Conservative Government. Arnold-Forster had made for himself a high reputation and even something like celebrity in more than one field of action. His family name was actually Arnold, but on the death of his father he was adopted by his uncle, the Right Hon. W. E. Forster, whose family name he afterward joined with his own. Before he entered into political life Arnold - Forster had been manager of the educational departments of the

Cassells publishing firm and had made many most valuable contributions to the work of national education. Then he entered Parliament and there soon won much distinction. He felt a great interest in military organization and he became Minister for War, as I have said already, in a Conservative Government. Of late years his health had much broken down, owing probably in great measure to the over-pressure of work, and he had made up his mind to retire from Parliament. He spoke, however, in the House of Commons replying to a speech delivered by Mr. Haldane, the Minister for War, in the present session, and spoke

with much effect, and the speech was only delivered a few days before his death. Arnold-Forster was only fifty-three years of age when his career of varied success came to an end. His death was regretted by all political parties in these islands.

Lovers of literature in London and indeed all thruout these islands are much interested just now about a publication which is expected early in April. This work is to contain the collected love-letters of Thomas Carlyle and his wife, Jane Welsh Carlyle, and is to be brought

out by John Lane, the popular publisher, of Vigo street, London. Mr. Lane, as many of my American readers will remember, has already brought out the letters interchanged between Carlyle and his wife during their married years, and now he goes back to the days of their love-making and is to give to the world a collection of the letters which past between them from the opening of their acquaintanceship until their marriage. I have

ARNOLD FORSTER

had a happy opportunity of knowing something about these letters, and it is no breach of confidence on my part to say that I think they deserve a most welcome reception from the reading public in the United States as well as in Europe, and indeed all over the world wherever the works of the great author have readers and admirers. It may be remembered that the publication of these Carlyle letters was due in the first instance to the manner in which James Anthony Froude, the historian, had in his writings about Carlyle, dealt with the letters that past between the great author and his wife and his relatives.

Froude appears to have omitted frequent passages in many of these letters, more especially in the letters passing between Carlyle and his wife. He made, let us hope, unconscious alterations in others and attached to others still a meaning which the relatives of Carlyle could not admit to be an accurate interpretation. He thus filled those relatives with the conviction that the complete publication of Carlyle's letters to his wife was essential to a just understanding of the terms on which the pair had lived and loved. Now most of us who have made themselves well acquainted with Froude's works will know that among his many gifts as an author strict accuracy of statement and thoro impartiality were not to be reckoned. Froude appears to have made up his mind that Carlyle and his wife lived during the greater part of their lives on very unloving and unhappy terms and lived as much as possible away from each other. The full publication of the Carlyle letters was therefore intended to correct once for all this, as the family believe, utterly erroneous impression. The volumes publisht up to this date have certainly done much to bring about this result, and I think the approaching issue of the Carlyle love-letters will do far more yet to establish the truth. Carlyle and his wife were both brilliant letter-writers—each had indeed a positive and peculiar skill in the art of letter-writing and both naturally delighted in the exercise of the craft. They both alike loved to indulge in all manner of fancies, humors, paradoxes and conceits in writing to each other, in expressing to the full every odd idea which might have come up into the mind of the writer. Each naturally took it for granted that the other would understand thoro-ly the real meaning of these outpourings and would never mistake a grotesque fantasy for a deliberate exposition of actual fact or faith or purpose. Carlyle himself suffered much from occasional, and indeed rather frequent fits of ill health, brought on very often by over-study and overwork. Mrs. Carlyle was from her youth onward a weak and fragile creature, subject to nervous and other ailments of which sleeplessness was a common result, but she had a courage and a temperament which sustained her thru the worst of her physical trials. The

husband and wife delighted to pour out to each other their full feelings and fancies during all these trials, neither concealing from the other any mood or humor, the common desire evidently being to maintain a thoro companionship of heart with heart. Thus at least I interpret the Carlyle correspondence and thus I fully believe the reading world in general will interpret it. I may add that I am not one of the devotees of Thomas Carlyle. I hope and believe that I admire to the full his genius as an author, but I could not possibly accept him as my guide and teacher in history or in politics, or in faith. Perhaps, therefore, I can make the better claim to be considered an impartial critic when I say that, according to my judgment, the reading of these letters compels me to regard Thomas Carlyle as the affectionate and devoted husband of a woman whom he had taken for his wife and who loved him and strove to make herself worthy of him to the last.

Writing about a book which I believe destined soon to make a great sensation here and there and everywhere I am reminded of another book which has lately been making a distinct sensation here in England, and perhaps even already among readers in the United States. I mean a novel called "Tono-Bungay," by Mr. H. G. Wells, which Messrs. Macmillan & Co., London, have lately publisht, and which very soon found its way into a second edition. Mr. Wells is one of the most rising and successful of our modern English novelists, and indeed he might almost be said to have founded a school of fiction not hitherto known among the modern novelists of Great Britain. "Tono-Bungay" is the name of a drug invented, or, at all events, adopted, by the uncle of the hero, the hero being himself the narrator of the whole story. The charm, the magic, of the novel consists chiefly in the art, the genius, of the story-teller. For Mr. Wells is, I venture to think, a man of genius, and is endowed with a style peculiarly his own. The closing chapters of the novel have a fascination alike in thought and in style which belong to the highest order of the intellectual story-teller and promise for Mr. Wells, who is still quite a young man, a memorable place in the literature of modern Eng-

THOMAS CARLYLE

land. "Tono-Bungay" has for me a fascination distinctly more enthralling than that of "Kipps," Mr. Wells's previous novel, altho that story also has made its distinct mark on the English literature of our time. It is a fact worthy of mention that the story of "Kipps" has its scene in the picturesque town and surroundings of Folkestone, where Mr. Wells has his home. Folkestone is what I may describe as one of the port towns of England, and divides

with Dover the reception and the welcoming of visitors from all parts of the European continent. In Folkestone Mr. Wells and his wife lead a quiet and somewhat secluded life of continuous literary work and much healthful outdoor exercise, a life of domestic happiness and the society of companionable friends.

I have lately been reading a novel by a writer new to me

JANE WELSH CARLYLE

which has awakened in me a very genuine interest. This novel bears as its name "A Question of Means," and its author is Margaret B. Cross, and it has just been published by Messrs. Chatto & Windus, St. Martin's Lane, London. The story is one of life in a manufacturing town in the busy north of England. My own earliest years of residency in England were past in those northern regions, and I can perhaps all the better appreciate the very clever character studies of which this novel is full. All the characters, even those of the minor figures, are distinct and living, and, what is very unusual in novels, the

best drawn of all in my opinion is also the best from the moralist's point of view. It seems very difficult to make the pictures of very good personages living pictures and also interesting figures in fiction, but the author of this novel has certainly accomplished a distinct success in this feat. We see her Charles Olivant as if he were a living figure. Another very well-presented type of character is that of Cuthbert Anderson, who plays an important part in the story. I shall certainly look forward with much interest and expectation to the future work of this new and very promising novelist.

LONDON, ENGLAND.

A Love Charm

BY J. SELDEN STRONG

ONE day chatting with sweet Sally,
As in challenge, said she gaily,
"If you look the fields all over,
Somewhere find a four-leafed clover,
Fold it, place it in your shoe.
The first maiden that you meet then,
The first maiden that you greet then,
Surely will be wed to you."

Said I, smiling half malicious,
"I'm afraid you're superstitious
And believe in divinations,
Charms, and spells, and incantations.
I would be a constant lover,
I would make my own advances,
Nor leave anything to chances,
Would not even trust a clover."

Then she laughed, bewitching, taunting,
Rose, and left me to my vaunting.
At the door she, backward glancing,
Flung these saucy words a-dancing
Thru my thoughts, "O wondrous man!
Independent, fate-controlling,
Events transpire by his cajoling,
Loves and hates by rule and plan!"

Sweet and bitter thus commingling
Set my nerves and wits a-tingling.
Quick I rose and left the arbor
Where delight had found a harbor,
Went and looked the meadows over,
All the afternoon a-wandering,
Meanwhile on my love a-pondering,
Till I found a four-leafed clover.

Face with deeper color showing
And with pure emotion glowing,
Lifted she her eyes a-gleaming,
As to read my spirit's dreaming.
Looked and looked me thru and thru.
Then, a smile her sweet lips parting,
In her eyes the love light darting,
Said, "I'm superstitious too!"

SIMINGTON, ME.

In my shoe 'twas soon reposing,
And I, 'neath a shade tree dozing,
Waited till the saucy Sally
Sauntered forth adown the valley,
Gathering flowerlets by the way.
Then I ventured out to meet her,
Careful measured words to greet her,
Words of loving guile to say.

"I have looked the meadows over
And have found a four-leafed clover;
In my shoe it's safe reposing
And the fates are now disclosing
What's appointed me to do.
I have risked the fatal meeting
And the maiden first I'm greeting,
Fairest, dearest one, 'tis you!"

Then she answered sweet, malicious:
"Sir, I fear you're superstitious,
And believe in divinations,
Charms, and spells, and incantations!
A true-hearted, manly lover
Would not leave his fate to chances,
But would make his own advances,
Heeding not an odd-shaped clover."

But I answered, no whit daunted,
For a flush her cheeks had mounted:
"If to trust that hearts are fated,
Prone to love each other, mated
By a force to them unknown,
Is to yield to superstition,
Tho it threaten me perdition,
Guilt and charm I'll gladly own."

Literature

Katrine and Phyllis

SINCE the recent death of Elinor Macartney Lane something that made goodness radiant has gone out of the heart and life of our time. She was not a prolific author, but "The Mills of God," "Nancy Stair" and this last one, *Katrine*,¹ are like little candles set in the murky darkness of modern fiction.

The scene of the story of *Katrine* is laid first in the hills of North Carolina on the Ravenel estate. And it shows a quaint fallacy in the author's art. For she has laid an English scene among the hills of North Carolina and peopled it with men and women who speak, and think, and pass their time like English gentle folk and English peasants. It is as if she had attempted vaguely to trans-

his right mind would employ an Irishman in such a capacity. But all this is merely the background for *Katrine*, who is the kind of woman that is true to life anywhere. She is young, beautiful, poor, having the gift of song and a rarer gift of truthfulness—that charming personal candor which sanctifies some women and renders them as startling to the secret-hearted world as if they were children walking into fiery furnaces. The times when *Katrine* tells the truth where another woman would have remained silent, the times when she sings, the times when she steps unprotected into the dangerous hearts of the men who came her way, make the incidents of the story. Of the two heroes the reader may take his choice. One is an Irishman who is a Tammany boss, a dynamo on the "street," one an ideal, trusted, whimsical, Irish lover to *Katrine*. Mrs. Lane has evidently written into this character an eloquent, witty defense of the whole Irish nation. They are, she claims, the most veracious in the world, being the only ones capable of telling the truth about their own lies, and their lies indeed being but a laudable effort to enhance the truth. The other hero, and the man *Katrine* finally marries, is Francis Ravenel, the handsome hull of a young, decaying roué, who is reclaimed by his love for her. But he never becomes really worthy. "There are two kinds of men," says old Nora, "the man who wants a woman to put her head on his shoulder, and the man who wants to put his head on her shoulder." Francis Ravenel belonged to the latter class.

After three years training under the great Master Josef, in Paris, *Katrine* is about to become an international figure in the musical world. She is "epic, grand and homocidal." And the story continues to swing around her with that tender, winging motion peculiar to Mrs. Lane where she is god-mothering her heroine. But when it is finisht, and we read of *Katrine's* great sacrifice for love, we are not convinced of her. There is a failure somewhere, and it is one of the

ELINOR MACARTNEY LANE
Author of *Katrine*

late a bit of American topography into English annuals. *Katrine's* heroine is the daughter of the Irish overseer on the Ravenel plantation, itself an unheard of proposition in the South—that anyone in

¹ *Katrine*, by Elinor Macartney Lane, New York: Harper Bros., 1900.

strangest failures to be found in fiction. The spirit is present, but the woman, Katrine, never is. It is a light shining with sweet effulgence thru the obvious cracks in a lay figure. Still the book is to be cherished as something wonderful. The goodness in it is so winsome, the thought it contains upon art and ideality needs to be stressed now. And one lays it aside with the feeling of having met an adorable woman-spirit, not Katrine's, but the author's own, of having listened to great music and of having walked at evening in an old-fashioned garden.

The contrast between Katrine and Phyllis Ladd, the heroine of Mr. Lloyd Osbourne's new novel² is worth a woman's while to study for the profit she may get out of it, and a man's, for the pleasure. Women are sadly lacking in charm. Only for the brief sweetheart period do the greater part of them cultivate it. After that if they continue upon the scene at all, it is according to fashion. The fewest number of wives understand their obligations to cultivate the genius of love. And to all such we recommend Mr. Osbourne's novel as a very important textbook. The story is not remarkable. It is what the story means that is worth while. Phyllis Ladd is the beautiful, adored daughter of a railroad president and millionaire. During her first season in Washington she becomes engaged to an elegant gentleman, an aristocrat, a man in whom convictions have taken the place of emotions, one of those ossified products so common to sterilized fine society everywhere. Naturally the engagement is broken by Phyllis, who feels that she cannot bear

an enameled wish-bone of masculinity for a husband. The next man, a German Count, attaché of the Embassy, meets a similar fate for a similar reason. We

have no difficulty in understanding Phyllis's revulsion for both, but we do not understand why a woman of her charming, pure and fastidious nature becomes infatuated with a second-class actor, named Cyril Adair, and marries him. Neither has Mr. Osbourne himself given, or implied the explanation. We must simply accept this arbitrary group in the story as we do in life when some exquisite woman casts herself to the dogs in a similar manner. It is infatuation, a state that is easily explained, but no one has yet charted the route by which it may be reached or avoided.

LOUIS JOSEPH VANCE.

The point of the book is that being married to Mr. Cyril Adair, Phyllis sets about creating him out of the refuse of a begrimed and besotted nature, and she does create him, not by the exasperating conscientious good example which some good women set like thorns in the patches of their wayward husbands, but by the genius of love. Love becomes the wit of Phyllis. She practised new parts in it as a woman sometimes practises fashions. She made herself adorable as well as good; irresistible, as well as honorable. In this connection the author writes:

"Of all human gifts, surely that of loving has received the least general recognition. A genius for music, a genius for mathematics, or natural history, or sculpture, or mechanics, is at once admitted and acclaimed. But what of a genius for loving, which of all is infinitely the rarest? The trouble is that every one is conceited enough to think that he (or she) is a wonder at it. But frankly, do we really see so many love geniuses about us? Are we not

²INFATUATION. By Lloyd Osbourne. Indianapolis: Bobbs, Merrill & Co. \$1.50.

struck instead with the almost universal love-poverty? If the husband stays drearily at home every night of his life, and if the wife is entirely absorbed in the baby, are we not asked enthusiastically to applaud the happy home. This is the national ideal, and tens of thousands are yawning heroically over it."

These sentences contain the motive of the story. And undoubtedly Mr. Osbourne is right in his contention. In all probability he has hit upon the real explanation of why more bad men are not reclaimed in marriage and why so many good ones turn bad in it. Women do not know how to love. Many of them consider it an indignity. The great evolution of life for them will not be suffrage, which, of course, they will have in time, but it will be a more intensive forming of their own natures, a developing of the love-genius.

We may call attention in conclusion to the fact that the early life and adventures of Cyril Adair in this story are exactly similar to those described some years ago by Owen Kildare in his story, "My Mamie Rose," and which were generally recognized at the time as being the story of Kildare's own life during his primitive Bowery period.

A Bundle of Light Spring Novels

WE are not taking our fiction quite so seriously as we took it a few years ago: the influence of those grimly earnest Russians and Frenchmen and Germans and Scandinavians is on the wane. Fiction as a criticism of life has its uses still, but they may be disregarded with safety, since nowadays we have so many other ways of discussing the problems that confront us. Of course, the next pronounced "tendency" in our novels, as on our stage, will be toward the New Thought, which one of its devotees recently declared to be not new, but very old. "Call it the Higher Thought," she said, rapturously. "Why not call it *Lower Thinking*?" asked her unfeeling husband.

The notion that fiction merely to amuse continues to flourish, the fiction that does not seek to make us remember the daily grind and its vexations, but to make us forget it. As the tale of printed books increases from year to year, and

the memory of the professional reader stretches farther back into the past, a problem presents itself ever more insistently, even in this irresponsible department of imaginative literature, the problem, that is, of the growing difficulty of constructing new plots, new situations, new characters. Perhaps such fiction can be justly appraised only by the generation whose contemporaries its authors are; perhaps it is unfair, as well as unprofitable, to establish standards which suggest comparisons of present efforts with past successes, because here, as nowhere else, it is the book of the season that counts, not that of fifteen, of twenty years ago. The life of even the most successful of best-sellers is short, for nowadays, whenever we hear of an old novel, we read a new one.

Why treat light reading matter as if it were literature, as if it ought to be literature? If it serves its passing moment, that is all that can and should be expected of it.

And now for some of this reading matter put forward this spring for our entertainment only, with no afterthought of provoking reflection or discussion, dissension or assent. There are here adventure and mystery, and crime and its detection, brave deeds and gentle wooing, all the ingredients that have served since light fiction began, and that will have to suffice until light fiction ends. Detective novel merges into tale of crime, and both are allied to stories of adventure. You pay your money and you take your choice.

In this matter of paying your money, you cannot make a better choice than Louis Joseph Vance's *The Bronze Bell*. Here is a tale of adventure that is good enough to stand on its own merits, without suggesting comparative reminiscences, or analysis of its ingredients and their convenience. Mr. Vance gives you your money's worth in an evening pleasantly spent in a strange world, among strange people away, far away from the prosaic daily grind upon which you close your door after the day's work is done. An American mistaken for a rajah in hiding who is to lead the new rebellion in India, which England, according to

The Bronze Bell, by Louis Joseph Vance. D. Appleton, New York. D. Appleton & Co. \$1.50.

the despatches, apprehends, the ant-heap of crowded Indian life, the Anglo-Indian secret service, native trickery, the mysterious East—adventure, danger, treachery, mystery, love, bravery, all the old materials, which are the only ones we know, are used with satisfying success. Mr. Vance has been a best-seller ere now; he deserves to be a best-seller once more with this book. It is not great art, it does not pretend to be, but it is a rattling good story.

Determined as we are not to cast a look backward, not to remember what has gone before, we yet cannot fail to observe that Frederick Orin Bartlett's *Web of the Golden Spider*² lacks somewhat in even comparative originality. It has many merits, it is written with a certain laudable measure of literary skill, it

has "go" in parts, but—and herein lies perhaps the difference—whereas we do not care one bit that Mr. Vance's India is unmistakably Kipling's, we do care that Mr. Bartlett's story resembles in plot several minor novels of recent date dealing with treasure and adventure and romantic, mysterious women in South America.

Now for the detective and the story of crime. May Roberts Rinehart sets before her readers the puzzle of *The Man in Lower Ten*³ of a sleeping-car, who is found murdered in the morning. Suspicion fastens upon a lawyer who, having retired to number nine in the evening, and having risen for a smoke during the night, wakes up in number seven, with the stiletto with which the crime was committed buried in the pillow un-

der his head. A well-constructed mystery this, and carried to a solution with considerable ingenuity.

It has long been a custom of the French *feuilletonistes* to write their stories frankly as sequels. It is a polite way of coercing the public into buying their earlier books, and, we suppose, an effective method of what is known in the business offices of our newspapers as "circulation breeding." M. Gaston Leroux's new tale of the detective cleverness of Rouletabille, *The Perfume of the Lady in Black*,⁴ presupposes familiarity with his earlier "Mystery of the Yellow Room." Same heroine, same villain, same hero, same detective, same admiring commentator. The new story begins where the old one left off, but the scene is shifted, and the criminal is more infernally clever than ever. The *dénouement* taxes our credulity somewhat, but that does not matter, as we have the full benefit of the mystery and its intricacies nearly all the way. Those who read the original story will find the sequel fully as good of its kind.

The lady who writes under the name of E. Nesbit presents to us a murder mystery, but only toward the end of her story. Consequently the unraveling of the crime and the detection of the criminal do not furnish the plot, only the climax. *The House with no Address*⁵ is all about a Salome dancer, a girl who, while she is the rage on the London stage, succeeds in screening herself completely from the public gaze in her simple private life. She has reason to hide from one man, wherefore another finds the course of his true love far from smooth. It is the head used in the dance that has suggested a gruesome turn in the plot. "Salome" sensationalism cannot possibly go farther.

A distressingly primitive theory of life is the basis of another story of crime, Ellery H. Clark's *Loaded Dice*.⁶ "Everything on earth is a gamble, and life, death and immortality are the greatest gambles of all. If you believe in a hereafter, keep straight, in the hope of a reward. If you do not, go ahead, and play the game as

you please, without restraint." This is the philosophy of the criminal in this book, who, having decided that he can only be certain of this life, proceeds to plot and plan and murder for wealth, and with his wealth for political power. But the dice are loaded, and in the end he loses. The author seemingly imagines that he teaches a lesson, or at least asks a solemn question, "Who loaded the dice?" As a matter of fact, however, it is the criminal himself who does this: he mingles the companions of his vicious pleasures with his crime, he is clever in neither the choice nor the employment of his accomplices. A poor and unpleasant book.

The American cowboy and the American miner are receding into the past of the facts of our life. All the more reason, then, to keep them alive in our fiction. The cattle king and the farmer are at war in Francis Lynde's *King of Arcadia*,⁷ or at least, the most modern, as he has been the most ancient, advance agent of the farmer, the irrigation engineer. A Virginian owner of a vast tract of grazing land, his Mexican cowboys, who fight his battle not wisely but with ferocious loyalty, a Kentucky engineer in charge of the irrigation works, and his construction gangs, are the warring factions in this story, which, of course, could not amble along so well without a love interest, wherefore the cattle king has an only daughter, and the engineer is quite a young man. The sentiment does not go very deep, the characterization is on the surface, but the incidents are many, and the story has a wholesome atmosphere of activity, determination, courage and manliness.

The bad men of the Far West come into existence again in Frederick Niven's *The Lost Cabin Mine*,⁸ whose title sufficiently indicates its contents. And it is good material of its kind, quite familiar, to be sure, but welcome none the less after a respite of several years. The stock characters are cleverly differentiated, and the author gets his atmosphere with telling effect. This is not second-hand, but first-hand, knowledge, if perhaps controlled and tested by much

reading of the abundant fiction of this class.

Mr. Robert W. Chambers's *Special Messenger*⁹ bears no less than four copyright notices, spread over a period of five years. This is not one of his tales of New York society, so dear to the heart

of those who dwell not within its pale, so cleverly loaded with gossip details of glittering customs and expensive habits, but a novelet of the Civil War, the special messenger being a woman who rendered great service to the Union armies in the field as a gatherer and conveyor of intelligence. The book reads as if it were based upon facts, but Mr. Chambers expressly denies this in a very brief preface.

But for the accusation of attempted robbery of his mistress's jewel safe, *The Butler's Story*,¹⁰ as told by Arthur Train, would not come within the scope of this survey. Still, every emigrant is an adventurer, according to the late Lawrence E. Godkin. The butler is an Englishman employed in one of the most elaborate of New York establishments, the interest of the tale lying or being supposed to lie, in his comments upon our social life and institutions. His powers of observation are not very profound, his sarcasm is not very telling, but his diary is mildly amusing. What has interested us most is his table of the proper tips to be given by the guests of the rich to their servants.

The Blue Bird. By Maurice Maeterlinck. New York: Dodd, Mead & Co. \$1.20.

The somber symbolism of Maeterlinck's first "plays for puppets" has been transformed into something much more wholesome tho not less beautiful. Evidently the years he has spent with the bees and the flowers, studying them like

a scientist and then writing about them like a poet, have developed his insight without impairing his imagination. This fairy play, ostensibly written for children, obviously like many another of the kind intended for grown-ups, is pure joy and optimism. The ghosts who haunted Maeterlinck's earlier dreams are here enclosed in one of the granite caves of Night, and when the two children, Tyltyl and Mytyl, open the door they proved quite tame and harmless. "They have felt bored in there ever since Man ceased to take them seriously." The Cave of the Sicknesses has also been robbed of its terrors. "They are almost all poorly and discouraged," explains Night. "Especially since the discovery of microbes." The only one of the Sicknesses which has life enough to come out

MAURICE MAETERLINCK

and run about in dressing gown and slippers when the door is opened is little Cold-in-the-Head who "is one of those which are least persecuted and which enjoy the best health."

THE CAT—"He will have it soon, unless we perform some miracle. . . . This is how the matter stands: Light, who is guiding him and betraying us all, for she has placed herself entirely on Man's side, Light has learned that the Blue Bird, the real one, the only one that can live in the light of day, is hidden here, among the blue birds of the dreams that live on the rays of the moon and die as soon as they set eyes on the sun. . . . She knows

⁹SPECIAL MESSENGER. By Robert W. Chambers. New York: D. Appleton & Co. \$1.50.

¹⁰THE BUTLER'S STORY. By Arthur Train. Illus. New York: Charles Scribner's Sons. \$1.25.

that she is forbidden to cross the threshold of your palace, but she is sending the children; and, as you cannot prevent Man from opening the doors of your palace, all this will end. . . . In any case, if, unfortunately, they should lay their hands on the real Blue Bird, there would be nothing for us but to disappear. . . ."

NIGHT—"Oh dear, oh dear! . . . What times we live in! . . . I never have a moment's peace. . . . I cannot understand Man, these last few years. . . . What is he aiming at? . . . Birds of the World. A Popular Account. By Frank H. Knowlton. Edited by Robert Ridgway. American Nature Series. 874 pp., 16 colored plates, 236 illustrations. New York: Henry Holt & Co. \$7.00.

Of all living creatures birds are the most fascinating, the most graceful and the most beautiful. The peacock, the lyre-bird, the trogon, the parrots, the pheasants and the humming-birds show the gorgeousness of color and grace. To make the knowledge of the birds of the world known to the public is the purpose of this admirable book. It is a large and weighty volume, illustrated with colored plates and numerous engravings, and there is no better single source from which to begin one's study of the general avifauna. Dr. Knowlton, the author, is fully competent from special study of the subject, and the anatomical introduction by Frederic A. Lucas opens the way to the scientific classification. But this book is not burdened with over-much scientific niceties. It is meant not for the specialist but for the public. It does not give every bird known even in the United States, but those of the most importance or interest in each class or order. Take, for example, the grouse, pheasant, partridge, quail, francolin and bustard family of game birds, and the description of so many of them calls attention to the great desirability of domesticating, or at least securing many of them in preserves. In Great Britain the various pheasants are raised for shooting and for beauty, but very little in this country. Why should not some of the birds of our agricultural stations take up the bird industry, bringing the choicest of the game fowls from other parts of the world and thus adding to the wealth of

the country in other ways than by mere food production? Such a volume as this, which is one of the "American Nature Series," ought to be accessible to every boy that lives in the country and is intelligently instructed in rural affairs. Such a boy or young man would pore over it until he learned the love of nature, and got a sense of the beauty of the bird world. After that, or with it, will come the special study of the birds of one's own section, till one knows them all, each sort, as one knows the people in his own town. Every town ought to have its natural history society, the members of which should each take a special branch of study, and make collections. To those who would pursue such studies, or who would excite an interest in them in their families, we would recommend this volume, with its excellent descriptions, its numerous illustrations, and its brilliantly colored plates.

Some of the New Books

MANY books a reader knows he wants or must have as soon as he hears of them. He may desire any new book by a favorite author or he may need all the literature appearing on a special subject, and he therefore does not need to wait for the slow process of critical appraisement. For this reason we are accustomed at the opening of the spring and fall book seasons to mention some of the recent and forthcoming publications in which we think our readers will be interested.

The Story of Thyrsz, by Alice Fiction Brown (Houghton); *Kingsmead*, by Bettina von Hutten (Dodd, Mead); *The Three Brothers*, by Eden Phillpotts (Macmillan); *David Bran*, by Morley Roberts (Page); *The Lady of the Dynamite*, by Adele Marie Shaw and Carmelita Beckwith (Holt); *Mr. Opp*, by Alice Hegan Rice (Century); *The White Mice*, by Richard Harding Davis (Scribner); *Fraternity*, by John Galsworthy (Putnam); *The Romance of a Plain Man*, by Ellen Glasgow (Macmillan); *The Chippendales*, by Robert Grant (Scribner); *Partners Three*, by Victor Mapes (Stokes); *The Hand on the Latch*, by May Cholmondeley (Dodd, Mead); *The Woman in Question*, by John Reed Scott (Lippincott); *The Missioner*, by E. Phillips Oppenheim (Little, Brown); *Dromina*, by John Ayscough (Putnam); *The Delafield Affair*, by Florence Finch Kelly (McClurg); *The Straw*, by Rina Ramsay (Macmillan); *The Rule of Three*, by Alma Martin Estabrook (Small, Maynard); *Red Horse Hill*, by Sidney McCall (Little, Brown); *The Girl and the Bill*, by Bannister Merwin (Dodd, Mead); *The Gun Runner*, by Arthur Stringer (Dodge); *Love's Privilege*, by Stella M. Doring (Lippincott); *The Little Gods*, by Rowland Thomas (Little, Brown);

Wild Pastures, by Winthrop Packard (Small, Maynard); *The Glory of the Conquered*, by Susan Glaspell (Stokes); *The Chrysalis*, by H. M. Kramer (Lothrop); *In a Mysterious Way*, by Anne Warner (Little, Brown); *Little People*, by Richard Whiteing (Cassell); *Lady Dean's Daughter*, by J. Noot (Cochrane); *The Amethyst Cross*, by Fergus Hume (Cassell).

RELIGION AND PHILOSOPHY *The Christian Doctrine of God*, by W. N. Clarke (Scribner); *Epochs in the Life of Paul*, by A. T. Robertson (Scribner); *The Laws of Friendship*, by Henry Churchill King (Macmillan); *Modern Thought and the Crisis in Belief*, by Robert M. Wenley (Macmillan); *Studies in Christianity*, by Borden Parker Bowne (Houghton, Mifflin); *Christ and the Eastern Soul*, by the late Charles Cuthbert Hall (Univ. of Chicago); *The Beginnings of Gospel Story*, by Benjamin W. Bacon (Yale Univ.); *The Teaching of Jesus about the Future* (Univ. of Chicago); *The Problem of Human Life*, as Viewed by the Great Thinkers from Plato to Our Own Day, by Rudolf Eucken (Scribner); *The Life of the Spirit*, by Rudolf Eucken (Putnam); *A Pluralistic Universe*, by William James (Longmans, Green); *What Is Pragmatism?* by James Bissett Pratt (Macmillan); *The Emmanuel Movement*, by Lyman P. Powell (Putnam); *The Emmanuel Movement*, by Elwood Worcester and Samuel McComb (Moffat, Yard); *Psychotherapy*, by Hugo Münsterberg (Moffat, Yard); *Christian Science in the Light of Holy Scripture*, by I. M. Halde-ⁿman (Revell); *New Ideals in Healing*, by Ray Stannard Baker (Stokes); *Christian Science Theory and Practice*, by R. Starcross (Arakelyan Press); *Philosophy of Life Series*, by R. Herman Randall (Caldwell).

POETRY, ESSAYS AND BIOGRAPHY *Artemis to Actæon*, by Edith Wharton (Scribner); *Artemision*, by Maurice Hewlett (Scribner); *Towards the Light*, by Princess Karadja (Dodd, Mead); *The Faith Healer*, a prose play, by William Vaughn Moody (Houghton); *American Verse, 1625-1807*, by William Bradley Otis (Moffat, Yard); *The Springs of Helicon: a Study of the Progress of English Poetry from Chaucer to Milton*, by J. W. Mackail (Longman, Green); *A Manual of American Literature*, by Theodore Stanton (Putnam); *The Cambridge History of English Literature*, Vol. III, Renaissance and Reformation (Putnam); *History of German Literature*, by Calvin Thomas (Appleton); *George Borrow*, by R. A. J. Walling (Cassell); *Life of Edgar Allan Poe*, by George E. Woodberry (Houghton, Mifflin); *The Autobiography of N. S. Shaler* (Houghton, Mifflin); *Walt Whitman*, by George Rice Carpenter (Macmillan); *The Making of Carlyle*, by R. S. Craig (Lane); *Memories of My Life*, by Francis Galton (Dutton); *Beethoven's Letters*, edited by J. S. Shedlock (Dutton); *Charles Augustus Sainte-Beuve*, by George McLean Harper (Lippincott); *Nietzsche: His Life and Work*, by M. A. Mücke, Ph.D. (Brentano); *Egoists: A Book of Supermen*, by James Huneker (Scribner).

SCIENCE AND ENGINEERING *Fifty Years of Darwinism*, by Finch (Holt); *Darwin and Modern Science*, by A. C. Seward (Putnam); *The Interpretation of Radium*, by Frederick Soddy (Putnam); *Essays, Biographical and Chemical*, by Sir William Ramsay (Dutton); *The Conquest of the Air*, by A. Lawrence Rotch (Moffat, Yard); *Cyclopedia of American Agriculture*, Fourth and concluding volume (Macmillan); *The Human Species*, by Ludwig Hopf (Longman, Green); *The Panama Canal and Its Makers*, by Vaughan Cornish (Little, Brown); *The Conquest of the Isthmus*, by Hugh C. Weir (Putnam); *When Railroads Were New*, by Carter (Holt); *Remaking the Mississippi*, by John L. Mathews (Houghton, Mifflin).

HISTORY, GEOGRAPHY AND INTERNATIONAL POLITICS *Characters and Events of Roman History*, by Guglielmo Ferrero (Putnam); *Social Life at Rome in the Age of Cicero*, by W. Warde Fowler (Macmillan); *The Cambridge Modern History*, Vol. XI, The Growth of Nationalities (Macmillan); *Romances of the French Revolution*, by G. Lenotre (Brentano); *What Have the Greeks Done for Civilization?* by John P. Mahaffy (Putnam); *General Kuro-patkin's Military Memoirs*, by A. B. Lindsay (Dutton); *The Russo-Japanese War*, by Capt. F. R. Sedgwick (Macmillan); *America and the Far Eastern Question*, by Thomas F. Millard (Moffat, Yard); *Every-Day Japan*, by Count Tadasu Hayashi (Cassell); *Statistical and Chronological History of the American Navy*, by R. W. Neeser (Macmillan); *American Supremacy*, by G. W. Crichfield (Brentano); *The Romance of American Expansion*, by H. Addington Bruce (Moffat, Yard); *History of the United States*, Vol. V, by Elroy M. Avery (Burrows); *Spain of Today from Within*, by Manuel Andujar (Revell); *Madrid*, by A. F. Calvert (Lane); *The Story of New Netherland*, by William Elliot Griffis (Houghton, Mifflin); *The Andean Land*, by Chase S. Osborn (McClurg); *Letters from China*, by Sarah Pike Conger (McClurg); *My African Journey*, by Winston Spencer Churchill (Doran); *From Cairo to the Cataract*, by Blanche M. Carson (Page); *The Story of the Great Lakes*, by Edward Channing and Marion F. Lansing (Macmillan).

Education in the Far East, MISCELLANEOUS by Charles F. Thwing (Houghton, Mifflin); *The Reorganization of Our Colleges*, by Clarence F. Birdseye (Baker, Taylor); *A History of Education Before the Middle Ages*, by Frank Pierrepont Graves (Macmillan); *Social Organization*, by C. H. Cooley (Scribner); *Plain Economic Facts*, by Ambrose M. Thomas (Cochrane); *The Passing of the Tariff*, by Raymond L. Bridgman (Macmillan); *The Government of European Cities*, by W. B. Munro (Macmillan); *The Shores of the Atlantic. The Austrian Side*, by Hamilton Jackson (Dutton); *Medieval Architecture*, by Arthur Kingsley Porter (Baker, Taylor); *Pottery and Porcelain of the United States*, by Edwin A. Barber (Putnam); *Art in Great Britain and Ireland*, by Sir Walter Armstrong (Scribner).

The Independent

ESTABLISHED IN NEW YORK, 1841, BY REV. THOMAS M. MORTON.
PUBLISHED WEEKLY, BY GEORGE W. LORAN.
100 NASSAU STREET, NEW YORK.

A WEEKLY MAGAZINE, FOUNDED IN 1848.
Subscription price, \$3.00 per annum, in advance.

Single copies, 10 cents. Postage paid by the publisher. The publisher, George W. Loran, is not responsible for the contents of the paper, but he will be responsible for the correctness of the printing and the delivery of the paper to the subscribers.

Changes of address should be received two weeks before change is to take effect. The publisher will not be responsible for the delivery of the paper to the subscribers after the change of address.

Advertisements, by the week, at the rate of \$1.00 per line. Advertisements, by the month, at the rate of \$3.00 per line. Advertisements, by the quarter, at the rate of \$8.00 per line. Advertisements, by the year, at the rate of \$24.00 per line.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for \$1.00.

If the publisher receives any substantial evidence of the truth of the statements made in the paper, we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should send their names.

Advertising rates will be furnished on application.

The Church of the Cross and the Resurrection

That Christ did not organize his Church may be true, but it is nevertheless his Church, based on his teachings, his spirit, his life and death and resurrection. It had to be. Christ's disciples and followers were unlike other people of their times. They were a peculiar people, and the very necessity of things made them come together and organize to accomplish their work.

Is it generally understood how peculiar, how revolutionary, the Christian Church was and still is? There are religions of fear, whose main purpose is to escape the malignant spirits that rule nature. There are higher religions, which seek to secure an equable calm of mind, a stoic patience and peace. That is something. There is the religion out of whose bosom Christianity came, which teaches the noble doctrine of the unity of God and the social duties of equal justice to all—the prohibition of cruelty and wrong to another—"Thou shalt not kill; thou shalt not commit adultery; thou shalt not steal; thou shalt not bear false witness; thou shalt not covet." That is the highest religion men knew before Jesus. But Christianity took a step in

advance. It added what was omitted in the Ten Commandments. It made supreme what was secondary in the Jewish religion. It put love before all; it made righteousness only a subordinate thing, a department of love.

And this love was something outgoing. "Thou shalt love thy neighbor *as thyself*." One suffers and works for one's self, and equally should for one's neighbor. It is no silent love, but an energetic, serviceable love. Its aim is not to help or develop or in some way cultivate one's self, but to serve and uplift other people. That is the very essence of Christianity as taught by Christ. Its prayer is "Our Father." If "our Father," Father of all men in all the world, then all men in all the world are our brothers, and we are under obligation to treat them with all the love of a brother, no matter where or what they are. And that obligation is a religious obligation, resting on the Fatherhood of God.

Accordingly, Christianity is a missionary religion. If it has a truth and a blessing it must spread the knowledge of them. Its first officials were apostles, which is the Greek word for missionary. "Go ye into all the world" said Christ, and "they went everywhere preaching the word," and still they go. Notice here the superiority of Christianity to Judaism. The Old Testament has not one command to make proselytes, not one; but it is the cardinal obligation of Christianity, because it has something worth giving. To this day the Jewish religion avoids seeking converts. It takes a pride in the separateness of a people chosen for special privilege. Christianity wants to give all it has to the world.

And it has given it freely. The Church is by far the most powerful influence the world has ever seen for all purity and goodness and love. That is its business. That is what it is set to preach and to do. There is nothing personal or selfish about it. In hundreds of thousands of cities and hamlets it preaches goodness and love to hundreds of millions of men, women and children. It does it every week, yes, every day. It pledges its members to follow that law, to spread that gospel.

There are other benevolent organizations patterned more or less on its examples or rules, but with a narrower, limited scope. They teach help to their own

sort, to their constituency. They are brothers after a sort, giving help, that they may be helped in turn. They are good, but they come infinitely below the ideal of the Church. They can grow some good Christian fruit, for the Church has given them the seed.

The fruit of the Christian Church is seen in Christian lands. We properly call ours a Christian civilization, for such it is, based on Christianity. The non-Christian nations are getting it after we have taught them what Christianity can give them. Christendom is not all Christian, for the Church has to make its constant fights within Christendom, against Christianity's foes; but the Church is all the time lifting the aims and ideals of the whole community. Who are the people who are raising the standard of public morals? It is the members of the Church and those who sympathize with it. Who are those who are lowering the public conscience and injuring the people? They are those who hate and fight the Church.

The Church is imperfect—of course it is. Perfection is rare in this world. But it is no sign of a right or an independent mind to abuse the Church. Think what the world would have been without it. If you want the world better and sweeter you have got to walk with the Church or behind it—it is best to be in it and of it.

The central figure in the Church is Jesus Christ. He is its teacher and its example. He went about doing good. He said that love is all. His cross is the eternal lesson of self-sacrifice for truth and love; and his resurrection is the promise not merely of our personal future life, but of the resurrection of the whole world out of ignorance, evil and wrong into the perfected Kingdom of Heaven.

Great Corporations and the Public

THOSE who control some of our great corporations and who complain that the people are unjustly hostile to such companies do not give sufficient weight to certain offenses of their own which affect public opinion. For example, the Sugar Trust has been found guilty, by a jury, of cheating the Government by using dishonest weighing scales. It was required by law to pay duty on imported

raw sugar. In the upright post of each weighing machine was cunningly hidden a spring which reduced the actual weight of each package by $1\frac{1}{2}$ or 2 per cent. In this test suit the Government recovered \$134,116, and it will now sue to recover about \$2,250,000 more, undertaking to show that this fraudulent device in the weighing machines has been used for many years at the Trust's wharves and warehouses in Brooklyn and Jersey City.

Now, this must be regarded by all honest persons as a mean and contemptible fraud. The people remember that this Sugar Trust, now capitalized at \$90,000,000, was one of the first combinations to attempt a suppression of competition and take advantage of a high protective tariff duty; that its success in procuring such a duty or in preventing a reduction of it has been a cause of scandal, and that its profits have been great. The jury in a Federal court says that this Trust, not content with the profits derived from a tariff which was virtually its own private tax upon consumers, has withheld great sums from the people's treasury by weighing with false scales.

It was the plain duty of the responsible officers of the Sugar Trust, of course, if they were innocent, to seek out and punish publicly those subordinates who were guilty, and also to express to the American people their profound regret that such a fraud should have been practised in their dealings with the Government. They have not done this.

Our greatest railway corporation is the Union Pacific, with its controlled lines. It was sued by the Government not long ago for taking large tracts of coal land from the public domain by fraud. By surrendering these lands, valued at \$1,500,000, and paying for the coal mined, it has now virtually admitted that the charge was well founded. Some one holding a responsible position in the company was guilty. The controlling officers and capitalists of the Union Pacific should expose and punish the guilty man or men, and should assure the public that the company would be ashamed to profit by such theft. Up to the present time, however, such action has not been taken and such disavowal has not been given to the people.

The same great corporation, its subsidiary coal company, and one of its controlled railroads, with two officers, were found guilty last week of breaking the law by discriminating against a coal merchant in Utah. This gives the company another opportunity to commend itself to the public by punishing those who were convicted and others who committed the offense. It should not protect them.

On the same day the Denver & Rio Grande Railroad Company's subsidiary coal corporation (the Utah Fuel Company) pleaded guilty to a charge of fraud in a suit brought by the Government, and surrendered 14,000 acres of coal land dishonestly acquired, also paying a fine of \$8,000 and \$192,000 for coal already mined. Here the Government explains that the frauds were perpetrated by the predecessors of the Fuel Company. It appears, therefore, that the persons indicted in this case may not deserve to be punished. But the company must know who the guilty men are. If it desires to clear itself before the public it should expose them and bring them to justice.

In another suit the Government sought to recover from the Northern Pacific Railroad Company \$3,000,000 worth of coal land in Montana. On the 3d inst. Judge Hunt, of the Federal court, declared the company's title null and void, on the ground that the land had been acquired improperly. It is not made clear by the dispatches whether the offense was committed by land officers, or by the company, or by both. If this great corporation is innocent, and if it knows who are guilty, it should expose the guilty, in the interests of justice and in defense of its own good name.

In all such cases the course to be taken by an innocent corporation or by innocent controlling officers is plainly indicated. If they fail to follow this course, they should not be surprised if the people believe that they were engaged in perpetrating the frauds, or that the work was done with their knowledge and approval. Failure so to act in their own defense excites public hostility. The average man regards with heavy contempt a corporation capitalized at \$90,000,000 or several hundred millions

that cheats the national treasury by using false scales, or that takes coal land from the public domain by fraud. His contempt may be exprest in legislation.

A Strange Preference

WE are glad to publish an article this week by the able editor of the *Charleston (S. C.) News and Courier*; and yet we hope it will be regarded as no discourtesy if in this same issue we call attention to the most radical and intractable utterance we have yet come across on the subject of negro office-holding in the South.

It is well known that on the accession of President Taft to office the perfectly competent Collector of the Port resigned to give the President the opportunity to appoint a man of the chromatic tint which the white people, voiced by *The News and Courier*, demanded. We are by no means clear that the President did right in yielding, for the majority of the people of the State are tinted like Dr. Crum. Having secured his resignation there follows the attempt to drive all other colored men out of office, and the Florence postmaster is the first victim.

It was reported that a Northern white man, for some time a resident and a Republican, was to be made postmaster at Florence, and the *Columbia State* declared that the people would rather have a competent negro in office than a white man who should recall the days of reconstruction. This does not please *The News and Courier*. Under no circumstances would it take a negro. It thus lays down the law to white and black, and to President Taft:

The State's sentence. "An honest, capable and respectable negro of the vicinage would be less objectionable than a white Republican who would recall the trying period of Carpet-bag government" means, if it mean anything, that now, at this time, some kinds of negroes would be preferable to some kinds of white men in public office in the South, and that is the proposition that we flatly dispute. We lay down the proposition that Florence or any Southern town does not want a negro postmaster and will accept any kind of white man, regardless of his qualifications and his record, in preference to a negro.

"That is the only safe ground that a Southern community can stand on. We can't breathe freely until we know that the negro is out of politics in the South; we can't hope for de-

cent white government until the condition is accepted in Washington and thruout this Republic that the Government is going to be white."

We cannot argue against such an absurd proposition. It refutes itself. To say that any white ignoramus or thief would be preferable to the most reputable colored officeholder is too preposterous for discussion. And yet it is to this extreme of absurdity that these ardent sectionalists are driven. No negro should vote, no negro should hold office, for a negro is not a full man, not even if his blood is seven-eighths white. White men must have everything; white men must rule the black, or blackish, men. Negroes must not be allowed to rise to the level of white men, even if seven-eighths of their blood appeals for it. Is that right? Is it safe? Remember that the white people are in a minority in South Carolina, and this minority demands, because they have had it in the past, the perpetual right of rule over the majority, and that majority is rising in intelligence and wealth; how long will it be safe?

To be sure the white rulers of South Carolina claim to be the true friends of the colored people, and boast of what they have done to educate them. Here is another editorial in the same *News and Courier*, which tells of an "Educational Triumph." It tells how Colonel Shaw died at the head of his negro soldiers in a battle in the siege of Charleston in 1863. The negro soldiers, it says, after the war started the Shaw School in Charleston, with the aid of Northern money, and it was turned over to the city as a public school thirty-five years ago.

"Since they took over the affairs of this school the commissioners have expended on account of this memorial to the white colonel of the colored Massachusetts regiment more than \$350,000, the larger part of this very large sum having been paid by the white taxpayers of this town. In this Shaw School more than fifty thousand colored children have been educated in the rudiments at least since it past into control of the white people of this community. There are now and have been every year for some years two thousand colored children attending this school and receiving from a competent and very earnest corps of white teachers the best possible instruction. . . . During this period not one dollar has been contributed from any of the benefactions of Northern promoters of negro education to aid in this work."

That is an interesting statement. It is to the credit of the white rulers that they did not change the name of the Shaw School. It is to their credit that they did not suppress the public school system, for both whites and blacks organized by the Carpetbag government. It is to their credit that they did support this and one other primary school for negroes, even tho sadly crowded, and far less generously supported than the schools for white children. But we do object to the implication that meanwhile the Northern promoters of negro education have contributed not a dollar to aid in this work.

Does not our intelligent contemporary know that Charleston supplies only primary education to its colored children, and that if they want anything more they must get it from the charity of Northern people? Why should not so rich a city as Charleston be ashamed to have its people depend for education on outside charity? Why should it supply free schooling to its white youth in the high school and require its poorer colored youth to pay tuition to private schools? Have our Charleston friends never heard of the Avery Normal School, where colored youths have to go after they have learnt their letters at the Shaw School, owned by the American Missionary Association, the property valued at \$30,000, where the pupils have to pay tuition to support it, which has been aided by the American Missionary Association to the extent of \$125,000? That is, if a colored child wants to learn something more than just how to read and write, the city of Charleston refuses to give him the opportunity, and compels him to pay term bills at a missionary normal school whose slender income is eked out by the annual appropriation of some thousands of dollars from New York. "Not a dollar"? No, not a dollar from Northern promoters of education for the Shaw primary school, but a constant stream of money, and a noble succession of self-sacrificing teachers for the next higher grades. And out of the hundreds of its graduates have come the larger part of the superior class of negroes in Charleston.

Nevertheless, we hold that, apart from his terror of negro domination, Colonel

Hemphill is one of the most influential forces for peace and good order in South Carolina. He hates all lawlessness, fights the pistol habit, and wishes the negroes to be benevolently governed.

The School Question in France

THE Ferry Law of 1882 gave France a public school system, commonly known as the lay school. Two years later the religious orders were removed from the schools after the Waldeck-Rousseau investigations. Not only were they deprived of the schools, but a proviso was enacted and is now law, which forbids them to teach. Any one, priest or layman or laywoman, may open a school in France with one exception: no member of a religious order, man or woman, can teach in any French school, public or private. This law the orders brought upon themselves; for while receiving State support they were teaching treason in the schools, denouncing the Republic and upholding a Monarchy. And this charge was proven to the hilt.

With the separation of Church and State a new phase arose. Under direction from Rome the Episcopate are making a broadside attack on the public school by articles in the press, legal complaints, sermons, threats of deprivation of the sacraments, efforts to deprive men of their livelihoods and crowning all—the League of Fathers. Frenchmen at large are divided as to the best way of meeting the attacks. Many wish to leave the whole matter to the Government, by fresh laws and heavy-handed execution. Others recalling their country's history prefer to ignore the attacks. The Church, so they argue, is always armed and ready for a row. Nothing said today is new and has not been said before. The ever-protesting Church need only be met with a shrug of the shoulders. Still another group, under the lead of M. Ferd. Buisson, a Radical Deputy and professor at the Sorbonne, propose to wrestle with the Church and use her own weapons. The Church now uses the laws of the Republic in order to attack the Republic; lay institutions to attack matters affecting the laity. Why all this? Because she aims to bring on a reaction. At the present moment, education is up; the neutral-

ity of the school is the butt. The Church has anathematized the schools—but in vain. Now she will strive for a strict neutrality and will proceed by process of law against such teachers as break it, as also against any officials who may connive at such transgressions. Under the pretext of its maintenance, the bishops surround the schools of the land with a system of spying and a trail of denunciations; as a result the whole country is upset. One unfortunate teacher has already been innocently convicted and imprisoned. Recently M. Briand gave out from the tribune the number of offenses committed in prosecuting this fresh attack. They number 524—no small figure. Lastly, the clergy lay siege to the Law of Association of 1901. Under this law they organized “The League of Fathers”; a harmless body on its face, aye, a useful body, for fathers should do everything for their offspring. But under its cover most shocking means are resorted to in order to throttle the schools and harass the teachers. *Le Terreur Noir*—The Black Terror—is how this league is popularly called. To meet the clericals on these grounds and use their weapons is the object of Buisson's appeal. Greek meets Greek.

Meanwhile the French Hierarchy raise as ever the cry of persecution. But from the tribune on the day when he gave the above quoted figures, M. Briand pointed out that Pius X ordered the revolt of Catholics against the law of separation, overriding the favorable vote of the Hierarchy; that he rejected the Law of Association for Public Worship, altho it made the Hierarchy supreme; that he banned the *Mutualités Ecclesiastiques*, thus depriving the Church of France of 20,000,000 francs and condemning a mutual benefit society of the clergy which had existed for several years; that he urged the Catholics of France to resist the legal inventories of churches and their possessions. The attack on the public school is sure to provoke a serious defense. “The French League of Teaching” is now in the breach and calls for leagues of republican fathers and mothers. It has named a band of lawyers to look after the legal aspects of the question, and among them are some sixteen members of Parliament.

There need be little doubt as to the outcome. Every nation has its public school system, and they that attack it, in France or in England, will be beaten.

An Elementary Lesson in Balkan Politics

THE continued story entitled "The Balkan Crisis," which has been running in all the papers for a year, has come to an end this week, altho it has been such a success that there will doubtless be a sequel. Those who have read each chapter as it came out have found it as interesting as tho it had been written by Doyle, Vance or Oppenheim, but some people cannot bear to read a continued story, or, having missed a few chapters, have lost track of the plot and feel a vague irritation at the sight of the word "Balkan" as reminding them of something they ought to know about, but do not. Some amusing verses going the rounds voice this vexation:

"Who or which or what is or are
The Sanjak of Novibazar?"

Why did the announcement last February of a proposal to build a hundred and twenty miles of railroad thru the Sanjak of Novibazar, where it was undeniably needed, set two provinces free, bring two others into permanent subjection, give Turkey a constitution, and keep all Europe shivering for fear of a war ever since?

If the primary class in international politics will come forward and take the front seats while the older pupils study their own lessons and do not listen to us, we will explain the whole subject in ten minutes and in words of one syllable, except where such a limitation of vocabulary is incompatible with perspicacity.

Thirty years ago Russia set out to divide up and dispose of the estate of Turkey, whom she had long before dubbed "the Sick Man of the East." Having had something to do with making him sick, nobody had a better right to be his executor. There had been insurrections in the provinces of Bosnia and Herzegovina from 1875 onward. The Servians took up arms the following year. Bulgaria, showing signs of uneasiness, was ravaged by the Bashi-

bazouks, massacring men, women and children by the thousand. Russia listened to the cry of her fellow Slavs and took up arms in their defense and her own interest. The invading army had hard work fighting its way down thru Bulgaria, altho it outnumbered the Turkish two to one, but finally it reached Adrianople and the capital lay defenseless before it. At San Stefano, almost in Constantinople itself, the conqueror dictated his terms, which were these: Bulgaria to be made an autonomous tho tributary principality extending from the Black Sea to the Ægean, including practically all the European territory conquered by Russia; Montenegro, Servia and Rumania to be independent. That is, the Turkish Empire was to have pieces trimmed off all along the edge and be cut in two by Bulgaria, leaving to the Turk in Europe a little bit around Constantinople and the detached provinces of the Macedonian and Albanian regions. Russia was to get back Bessarabia, lost by the Crimean War, and would ultimately get access to the Mediterranean by the Bulgarian pathway.

England went wild at the news. The Houses of Parliament were besieged by a mob howling for war. The crowds in the music halls sang the chorus which gave us a new word:

"We don't want to fight, but, by Jingo, if we do,
We've got the men, we've got the ships, we've
got the money, too."

Beaconsfield was the idol of the Jingoists. He sent the British fleet to Constantinople and ordered the Sepoys to embark for Europe. When Bismarck called the Congress of Berlin in 1878 to revise the Treaty of San Stefano, he went in person with Lord Salisbury and came back triumphant, bringing "peace with honor." You remember that big picture of the Congress. Never such an array of notables on one canvas. Never such a solemn farce. For, as we now know, the affair was settled beforehand, or privately. The secret treaties of Great Britain with Russia and with Turkey came to light by accident and treachery soon after. The secret treaty between Austria and Turkey in regard to Bosnia and Herzegovina was disclosed only a few months ago. England got the island of Cyprus as payment in

advance for her intervention. France got from England the promise of a free hand in Africa, whence her Saharan empire and Morocco.

In the session of June 29th, Count Andrassy arose and complained of the trouble and expense that the insurrection in Bosnia and Herzegovina had caused Austria-Hungary, whereupon the Marquis of Salisbury, as tho struck by a bright idea, proposed that these two provinces should be "occupied and administered by Austria-Hungary," which the Congress approved. Bulgaria was cut down to a strip between the Danube and the Balkans. Eastern Rumelia became a semi-detached province, with the Prince of Bulgaria as Governor-General. The way the diplomatists sitting around Prince Bismarck's table put together the dissected map of the Ottoman Empire may be seen by reference to the last page of our "Survey of the World." Turkey was arched over by a series of practically independent states—Eastern Rumelia, Bulgaria, Serbia and Montenegro, reading the names from right to left, in the Oriental way. The keystone of the arch was the Sanjak of Novibazar—or, let us translate, the County of Newmarket. This was driven in by the Congress of Berlin as a sort of wedge to keep Serbia and Montenegro apart. The Treaty of San Stefano had brought them close together, and by giving Montenegro ports on the Adriatic, had practically given Serbia a passage to the sea. Novibazar, which has about the area and population of Delaware, was left under Turkish administration, but Austria was given the right to garrison the territory, and—hereby hangs this tale—to maintain military and commercial roads there.

When Austria, a year ago, announced her intention to take advantage of this right by putting thru a railroad from her Bosnian frontier to connect with the railroad from Salonika, thus giving a direct route to the Bosphorus, she touched the keystone of the arch and shook the whole edifice set up by the Congress of Berlin. A new factor in the Turkish problem made its appearance—the Turkish people. The Committee of Union and Progress (with some stress on the word "Union") took alarm and the revolution broke out prematurely but

not unsuccessfully. The patriotic Young Turks took control of the Government. Austria announced her intention of making the annexation of Bosnia and Herzegovina formal and permanent, and offered to relinquish her claim on Novibazar in compensation. Serbia and Montenegro declared their intention of making war rather than allow the permanent alienation of these provinces. Nothing would have pleased Austria better, but the Powers compelled Serbia and Montenegro to quiet down and submit to the inevitable. Russia, who was naturally the most inclined to interfere in their behalf, as she did thirty years before, was checked by a threat from Germany. Turkey having no interest in the creation of a strong federation of Serb states to the west, accepted \$11,000,000 and Novibazar as compensation for the loss of her title to Bosnia and Herzegovina. Prince Ferdinand of Bulgaria, joining in the grab game, seized the Orient Railroad in Eastern Rumelia, belonging to the Turkish Government, and crowned himself at Tirnova Czar of Bulgaria and Eastern Rumelia. Turkey condoned this insult also, in consideration of some \$24,000,000, which Russia will pay her and collect from Bulgaria. So ends the story, briefly, baldly told. Turkey is free and enfranchised, and has some money in the treasury from the sale of empty titles. The Balkan states are no puppets, as planned at Berlin, but independent and prosperous. France is placated by the abandonment of German's interference with her schemes in Morocco. The Kaiser has shaken "the mailed fist" in the face of Europe. Russia is incensed and helpless. And England? Well, England is laying down "Dreadnoughts" to match Germany's.

An Inhibition Resisted

A notable case has just occurred in England of a clergyman refusing to obey a narrow rule of his Church, which recalls a famous similar case in this country about forty years ago. Canon Henson, in charge of St. Margaret's, in London, is the offender. Canon Henson is one of the most distinguished clergymen in England, and St. Margaret's, close to the Westminster Abbey, is one of the famous churches of London. He is one

of the liberal clergymen of the Anglican Church, and he accepted an invitation to preach in a Nonconformist church—they call them *chapels* in England—in Birmingham, without asking permission of the local clergy. Indeed, one of them, within whose local parish the “chapel” was, wrote to him protesting against the invasion, as if parishes in a big city have anything more than nominal boundaries, and told him that in preaching to a Dissenting congregation he would “degrade his orders and his position in the Church.” Canon Henson evidently regarded this as impudence and preached all the same. But in it he disobeyed a rule of the Anglican Church, and the offended vicar made complaint to the Bishop of Birmingham. The latter is a liberal man, and has himself preached in Nonconformist meetings; but the rule, he says, is clear that no clergyman can preach anywhere in another clergyman’s parish without his consent; and while it is disagreeable to him he must vindicate the incumbent’s rights, and the Canon must submit to an ecclesiastical trial, which may be postponed until his return from a visit to America. The similar case here was that of Stephen H. Tyng, Jr., who preached in New Brunswick, N. J., without permission from the two Episcopal rectors of that town, Dr. Stubbs and Dr. Boggs. They brought charges against Mr. Tyng, and he was convicted, and the Bishop of New York gave him a sound rebuke. This case of Boggs and Stubbs *vs.* Tyng gave great amusement to the press, and some scandal, for it seemed as if the application of the rule was a confession of schism from the Church Universal.

Children and Vacation

Where are the children? Has the tendency toward race suicide affected the homes of INDEPENDENT readers? When in our issue of February 18th we asked for photographs of children of all ages and kinds to publish in our next Vacation Number we expected to be swamped with them, because all children take good pictures, whether they are ugly or pretty, and nothing is more fun than taking them. But so far the pictures have been slow coming in and we want many times as many as we have so that we can get more freedom of

choice. We proposed to put on a big annex to that issue on purpose to hold the children of THE INDEPENDENT. For the best photograph of children or other picture suitable for the Vacation Number we will pay \$10, for the second best \$5, and for all the others we use \$2 apiece. Send as many as you like and be quick about it, so that they will get to us by May 1st. We have not received enough vacation stories, either. Don’t you know any? If you called on us during office hours you would very likely tell us of your vacation adventures for an hour at a time if we asked about them; instead of that put it down on paper, 250—500 words of it and send it to us right away. We also asked for personal testimony on the actual workings of woman suffrage in the United States and foreign countries (see editorial of March 11th), but we have not received as many of these as we want. Several States where the women have full or partial suffrage have not so far been heard from. If you live or have lived in any such State give us the benefit of your observations and experiences. Whether favorable or unfavorable it will be equally welcome, provided it is fact and not theory.

The French Peril

It is a most serious condition that arises in France from the proposed revolt of the 800,000 officials of the Government, aided by the Confederation of Labor, against the Government itself. It is the question of the right of the state’s employees to strike against the state; but if we allow that it is not treason for employees of the Post Office to refuse to obey orders, and that their position differs from that of soldiers, it may amount to actual civil war, to revolt and revolution, if the state’s servants and the members of the Confederation of Labor join in a strike to compel the submission of the Government. That might make the servants the masters, the rulers instead of the Deputies and Premier Clemenceau. Indeed, at the meeting last Sunday, where 15,000 workmen were in attendance, speakers were cheered wildly who threatened revolution. We may have to admit that a generation of republican government in France has not assured such government as permanent. It does not seem to us quite the thing

that government by the people should be replaced by government by the paid servants of the people, paid to distribute the mail, or to attend to gas and electric lights, and not to make the laws. It is only two or three weeks since Paris was in darkness, and the telegraph and telephone system of the country interrupted for days, because the men would not do the work they were paid to do. There has not a more dangerous crisis arisen in France since 1870.

The Archbishop of Paris the other day sprinkled some aeroplanes with holy water and blest them. He said:

"Man by his original fall lost sovereignty of the air, but these inventions permit the hope that he may be allowed by divine grace to regain some small fragment of his original dominion. The Church is therefore happy to bless these machines, destined to soar in space and conquer realms hitherto beyond man's dominion."

Exactly how man lost sovereignty of the air by the fall is not clear to us. We doubt not that the flying machines need special blessing, for we have always understood that Satan is prince of the powers of the air.

April 1st was a glorious day in Georgia, for on that date the terrible convict lease system of forty years' duration came to an end. Out of the camps marched the prisoners, singing the doxology, "Praise God from whom all blessings flow." Think of the tortures of a system as felt by those who could thank God that they would suffer only the ordinary deprivation and tasks of common imprisonment. And think of the great fortunes made by all this cruelty—fortunes that have enabled the possessor to aspire to the Governor's chair. It is a better day for Georgia, for conscience solely, and not profit, dictated the reform.

Governor Hughes, of New York, in a memorial address from the pulpit formerly occupied by the late Dr. Theodore L. Cuyler, referred in the following words to the part taken by *The Independent* in extending his influence:

"I cannot talk to you as one at the instance of Dr. Cuyler, for I know him only slightly in a personal way; but I can claim to have been one of that large congregation seated in the church which he so nobly served. When I was a young man I used to attend every Sun-

day afternoons to reading *THE INDEPENDENT*, and I cannot adequately express my appreciation of the quiet counsel and wholesome help that I drew from him thru that source."

Canada is discussing the question whether it must build a "Dreadnought" or two, and the jingoes are noisy. If their people and our people had the large outlook they would be planning the conditions of continental union. Certainly English-speaking North America ought to be one nation, as Goldwin Smith has often told Canadians. In case of war Great Britain could not protect Canada. Canada and the United States forego their mutual advantage out of sentiment or indifference, and build tariff walls against each other to their mutual injury.

According to statistics published by the Census Bureau, in 1790 families consisting of no more than three persons composed but one-fourth of the entire number; in 1900 they were 40 per cent. In 1900 families composed of six persons comprised nearly half of the whole; now they are scarcely more than a fourth. If the families now were as large as then our population would be 20,000,000 larger, and we presume better in quality. Small families indicate the growth of cowardice and selfishness among the people.

One of the curious phenomena of the present tariff conflict is the emergence of such a multitude of Southern protective tariff Democrats. They have flocked to Washington, the iron men and the coal men, the cotton men and the sugar men, the rice men and the peanut men—never forget the peanut politicians. And these are Democrats, tariff for revenue only, men who stick to the Democratic party for fear of being overwhelmed by an ignorant negro ballot. How they must wink at each other when they meet. They are equal to Roman augurs.

It is becoming increasingly difficult for Kipling, Wells or any other futurist to keep ahead of the progress of invention. The *London Times* has a full page of advertisements of aeroplanes and accessories very much like the advertising pages which just have been published in "With the Night Mail."

Novel Life Insurance Plan

A NEW idea in life insurance was brought out last week at a meeting of the Association of Life Insurance Presidents, held in the Assembly Hall of the Metropolitan Life Insurance Company Building, No. 1 Madison avenue, New York. It was advocated by Burnside Foster, M. D., editor of the *St. Paul Medical Journal*, of St. Paul, Minn., chief medical examiner of the New England Mutual Life Insurance Company for Minnesota. Dr. Foster's suggestion was to the effect that life insurance companies should keep themselves informed as to the physical condition of their policy-holders by offering them medical re-examination at five-yearly or other regular intervals, without expense to them. The theory of Dr. Foster is that by such means the average longevity of policy-holders will be extended from five to ten years, and that the insuring companies will thus be reimbursed for the attending expense of re-examination. He pointed out, in his advocacy of the reform, that fire insurance companies have found the support of salvage corps as adjuncts to the regularly organized fire departments to be an exceedingly profitable investment. The new idea seemed to him to have similar desirable features. By means of the proposed re-examination it would be possible to find out if the policy-holders, so re-examined, had or had not acquired any of the preventable diseases since the time of their last previous examination. If they were found subject to preventable disease, scientific sanitation could be applied and cures effected. If the scheme should be adopted and found workable it would confer a double benefit, first on the policy-holders, and second but incidentally upon the insuring companies thru the extension of the life of the risks involved. This last would tend toward the increasing of the number of premiums paid by the risks in question, who might otherwise have died, and thus not only cease to be assets, but would have past into an actual liability had the disease driven them to death and the consequent maturing of their policies.

Comments by the insurance officials present were for the most part based on the non-practicability of the scheme, because of its expense. Dr. Thomas H. Willard, medical examiner of the Metropolitan Life, stated that in his company there were, in the industrial department alone, upward of five million policies now in force for over five years. To re-examine these risks would cost approximately \$2,500,000. The ordinary policyholder would be "scared to death" at any attempt to re-examine him, and the man who consented to such re-examination and received a clean bill of health would be inclined to let his policy lapse if it became the least bit irksome. Dr. F. C. Wells, medical examiner of the Equitable Life, and Dr. Oscar H. Rogers, of the New York Life, were also among those who dissented.

IN view of the interest in Africa aroused because of Mr. Roosevelt's visit there, the following percentage table of mortality in Central Africa, as compiled by the African Traveling Association of London, becomes interesting:

Age.	Death.	Life.
Twenty-three to thirty years.....	50	50
Thirty to thirty-five years.....	60	40
Thirty-five to forty years.....	65	35
Forty to fifty years.....	70	30
Fifty to sixty years.....	85	15
Under twenty and over sixty.....	95	5

JUDGE LYNCH, of Butte, Mont., recently handed down a notable decision in an action brought against the Casualty Company of America. Payment of insurance of \$1,500 on the life of Battista Pinnazza was refused by the defendant company on the ground that the insured took unnecessary risk. Judge Lynch held that

"to risk one's own life, or even to lose it, in an attempt to save the life of another, is not carelessness nor even foolhardiness nor assuming unnecessary risk, but the plain duty of every man."

Pinnazza came to his death thru entering a mine filled with gas, after a call for volunteers had been made, in attempting to save the life of John Lubik, a miner. Pinnazza succeeded in carrying Lubik to safety, but subsequently dropped dead himself.

Business and the Stock Market

THE stock market broadened last week, transactions rising from 3,155,800 to 5,260,600 shares, with many advances of prices. On Friday, the upward movement was checked, but the reaction of that day was followed by recovery on Saturday, when closing quotations were about one point below the highest figures of the week. Net gains ranged, for the most active railway and industrial shares, between 1½, for Reading, and 4½, for Steel Common. Nearly one-half of the week's trading was done in Union Pacific, Southern Pacific, Reading and Steel.

It is admitted that there was no sudden fever for buying on the part of the outside public, and the prevailing belief is that the sharp increase of speculation for an advance was due to the activity and the manipulation of powerful forces heretofore associated with the movement of those securities which are most prominent in the list. A favorable influence was exerted by the Balkan settlement, increase of immigration and imports, notable activity in building, and a general growth of confidence, altho business still halts for the completion of tariff revision. In the steel industry low prices have caused large purchases of structural shapes, but conditions on the whole do not warrant the rise in Steel Common shares, which must be regarded as speculative, altho it may have been suggested by reports or trustworthy information as to the Senate's intended action concerning the steel and iron duties.

While this movement on the Stock Exchange may have had but little logical or actual relation to events and conditions in the business world, it may have been warranted in some measure as a discounting of foreseen improvement and as being in accord with the reasonable expectation of the public that very substantial progress will follow a settlement of the tariff question. This expectation is reasonable because the condition of our agriculturists is excellent, banking institutions are on a firm basis, money

for business purposes is plentiful at easy rates, and stocks of goods are low. At present there is nothing in sight to prevent a satisfactory revival of general business activity after the enactment of a new tariff.

New Railroads

THE last rail on the St. Paul's extension to the Pacific Coast was laid on the 1st inst. This line, from the Missouri River to Seattle and Tacoma, is a little more than 1,400 miles long. Work was begun in April, 1906, and the cost has been \$85,000,000.

On the 2d inst., the Virginian Railway, a new road 446 miles long, extending from Deepwater, on the Kanawha River, in West Virginia, to Norfolk, Va., was formally opened for traffic. It was constructed by Henry H. Rogers, of the Standard Oil Company, at a cost of about \$40,000,000, and it makes accessible more than 1,000,000 acres of coal land. At the opening ceremonies several hundred business men were the guests of Mr. Rogers, who was accompanied by his friend, Mark Twain.

....A prominent officer of the New York, New Haven & Hartford Railroad Company says that within two years all passenger trains on the company's road between New York and New Haven will be moved by electric power, and that such power will soon afterward be used on the shore line from New Haven to Boston.

....The Brooklyn Trust Company, of which Theodore F. Miller is president, with Samuel W. Boocock and Alexander M. White vice-presidents, and David H. Lanman treasurer, shows in its statement undivided profits of \$2,182,088, deposits of \$19,176,975, and total resources of \$22,702,626. The capital is \$1,000,000. This company was chartered in 1866 and has its main office in Montague street, Brooklyn, with a branch at Bedford avenue and Fulton street, Brooklyn. Its Manhattan office is at 90 Broadway, corner of Wall street.

Survey of the World

Passage of Tariff Bill in the House

The Payne tariff bill was past in the House, on the evening of the 9th, by a vote of 217 to 161. One Republican (Mr. Austin, of Tennessee) opposed it in the final count, and four Democrats (all from Louisiana) voted for it. The voting upon amendments began at 3 p. m. By common consent tea and coffee were placed on the free list. Action upon proposed amendments affecting the lumber schedule consumed three hours. By a vote of 184 to 198 the House refused to remove the duties on unfinished lumber, 57 Republicans voting for such removal, and 39 Democrats (from the South, with one exception) voting against it. Therefore the lumber schedule of the original bill was not changed, except by the elimination of the countervailing duty, which would have practically nullified, so far as imports from Canada are concerned, the proposed reductions. By a vote of 193 to 186, the proposed duty on barley was increased from 15 to 24 cents, and the duty on barley malt from 25 to 40 cents. These rates, however, are lower than those of the present tariff. A motion to take hides from the free list and make them dutiable at 10 per cent. was lost, 147 to 225, party lines having been broken. A record having been demanded upon the removal of all duties on petroleum and products of the same, the vote was 323 to 46, and Speaker Cannon was in this minority. Just before the final vote, the Democratic leader moved to recommit the bill, with instructions that it be reported with many amendments. Among these were reductions of all prohibitive rates; an income tax; a stamp tax on transactions in stock and grain exchanges; leather and shoes on the free list; admission to American

registry of ships bought abroad by Americans; a maximum consisting of the ordinary rates, with a minimum below them to be used in negotiation; free cotton bagging and cotton ties; reduction of the duty on refined sugar to one-tenth of a cent a pound; no duties on imported goods competing with products controlled by Trusts. This motion was lost, 162 to 218. Among the changes made since the bill was introduced (in addition to those indicated above) are increases on charcoal iron, wire, barytes, pocket knives and filler tobacco, the duty on the last having been doubled. The proposed rate on cocoa was reduced, and a duty imposed on rice from the Philippines. No change was made in the increases of duty on hosiery and gloves, and scarcely any attention was paid to a protest against these increases, signed by 250,000 women, and brought from Chicago by a committee. —At the beginning of last week efforts were made by the leaders of the Republican majority to appease those insurgents who objected to parts of the bill, in order that votes enough to close debate might be obtained. Some were conciliated by providing for separate votes upon certain rates; others, it is said, by promises as to the Senate's action. On the 5th, the rule providing for a final vote on the 9th was reported, and it was adopted, 194 to 178. Four Louisiana Democrats supported it, and 20 Republicans (six from Iowa, five from Wisconsin and two from Nebraska) voted in the negative. Several of the twenty had in vain demanded separate votes on hosiery and gloves. It was provided in the rule that there should be a vote upon the committee's recommendation for a duty of 25 per cent. on petroleum, in place of the countervailing duty, which, as against Russian oil, is

much higher. But the House was unwilling to approve any duty that seemed to protect the Oil Trust. It rejected the 25 per cent. and substituted 1 per cent. for it. This was on the 7th. Even the 1 per cent. was swept away two days later. Among those who argued for the higher duty was Speaker Cannon, who asserted that it was needed by the independent producers.—Reports concerning the changes to be proposed by the Senate Committee have been published, but they are not authoritative. It is asserted that the committee's bill will cut off the increases on hosiery and gloves, make hides dutiable at 10 per cent., impose a duty of 20 cents on iron ore, increase the House rate on steel rails, make art imports wholly free, and propose a duty on bituminous coal. The limit of 300,000 tons of free sugar from the Philippines has been approved. It is said that there will be no provision for inheritance, income or stamp taxes; that the establishment of a permanent tariff bureau will be recommended, and that a plan for maximum rates will be set forth in a separate bill.

The Anthracite Coal Miners

At the conferences last week between representatives of the coal miners' union and the owners of the anthracite mines no agreement was reached. The owners (or operators, as they are commonly called) firmly supported their original proposition, that the agreement which expired at the end of March should be renewed for three years. They made a slight concession in regard to prices for new work. Altho they declined to recognize the union, there were indications that their attitude toward this question would be changed if they could deal with a union composed only of anthracite coal miners. After the conferences Mr. Lewis, the president of the union, said he was opposed to a strike, and that the miners would continue to work under the terms of the old agreement, unless the operators should lock them out. "The United Mine Workers," he added, "will not take any action that will interfere with the industrial prosperity which all American citizens desire to see restored." In a published statement, the operators assert that under the

agreement the conditions in the anthracite fields have been better for the employees than ever before:

"High wages and steady employment have prevailed, and still prevail in spite of the panic and the resulting depression which has worked serious injury to nearly all other industries in the country. The present basis of wages was established in a time of the greatest prosperity the country has ever known. In offering a continuance of the same wages, thru years of depression, the operators are assuming a responsibility beyond which they cannot venture to go." One of the operators says that if the miners do not accept a renewal of the agreement "they will be to blame for what may happen, whether a lockout, a shutdown, or a reduction of wages." Some think that a reduction of wages will be ordered if the miners do not accept the operators' proposition within a short time.

Railroad Cases

The railroad companies whose lines are in Missouri have been restrained by a temporary injunction from putting into effect their proposed 3-cent passenger rate. This action has been taken in response to the application of the State Government. The 2-cent law enacted in Missouri was recently annulled by the Federal courts.—In Alabama, the injunction granted by Judge Jones, of the Federal District Court, restraining the State's Railroad Commission from enforcing a 2½-cent passenger rate and reduced freight rates has been dissolved by the Circuit Court of Appeals.—The Supreme Court has decided in favor of the roads in Kentucky the suit in which they asked that the State's Commission be restrained from enforcing an order fixing rates on intra-State business.—In a suit of the Government against the Northern Pacific Railroad Company, patents held by the company for coal lands said to be worth \$100,000,000 have been canceled. These lands were selected in lieu of other lands surrendered for forest reserves, and when selected they were erroneously classified as non mineral.

Castro Expelled from Martinique

Cipriano Castro, formerly President of Venezuela, landed at Fort de France, Martinique, on the 7th, and was expelled from the island three

days later by the French Government. The local authorities placed him on board the steamship "Versailles," which is carrying him back to France. It appears that by agreement of European Powers, and at the suggestion of the United States, all other ports in the vicinity of Venezuela had been barred against him. It became known on the 6th that the British Government had decided (at "the urgent request of the United States," it was said) to exclude him from Port of Spain, Trinidad, because he might use that place as a base of operations against the peace of Venezuela. This news excited Castro's anger. The steamship's officers refused to carry him to Colon, and he landed at the Martinique port, his wife proceeding to La Guayra, Venezuela. The steamship was followed into the Martinique port by the United States warship "Montana." Looking at her, Castro said: "I am not yet ready to sail for St. Helena." Four other United States warships were in neighboring waters. Expulsion from Martinique was ordered on the 8th, one reason given being that Castro had placed orders in France for arms to be used against the present Venezuelan Government. There was some delay, however, as Castro asserted that he was ill and suffering much pain. He was protesting, on the 10th, against removal, and the authorities caused an examination to be made by a physician, who reported that he could travel with safety. Later, as he still asserted that he was very ill, a second examination was made by three physicians, who said he was able to make the voyage. He refused to put on his clothes, and was borne from the hotel to the steamship on a stretcher. He was virtually deported by force. There had been persistent reports from Caracas that President Gomez was ready to retire in favor of Castro if the latter should return to Venezuela. But his course had warranted the rejection of such rumors. Some hold that Venezuela's Constitution requires him to give up the office to Castro whenever the latter returns to Venezuela and claims it. There were reports that lack of confidence in Gomez's power to resist Castro had led the United States and the European Powers to plan for his

exclusion and for his removal to France. —There is evidence that the cipher dispatches sent to Washington from Nicaragua by our diplomatic representative there a few weeks ago were mutilated before transmission and in the interest of President Zelaya. It is said that the latter has at last accepted the terms proposed by our Government for the arbitration of the Emery claim. —Porfirio Diaz, whose seventh term as President of Mexico will end next year, has consented, in response to requests from committees from all the Mexican States, to accept a nomination for another term, altho he is in his seventy-ninth year. Vice-President Corral will also be re-nominated. President Diaz's reconsideration of his determination to retire gives much satisfaction to business and financial interests.

Porto Rico and Cuba The controversy in Porto Rico was discussed at a Cabinet meeting last week, and it is said that the President, in a special message to Congress, will recommend legislation providing that when the island's Executive Council and House fail to agree upon the annual appropriations, the appropriations of the preceding year shall be continued for twelve months. Two delegations from the island are in Washington, one representing the Government and the other the House. The controversy is due in part to the demand of the native political leaders that an elective Senate be substituted for the Executive Council, which now acts as a Senate; and the quarrel over the appropriations followed the Council's disapproval of House bills designed to reduce the Government's power with respect to prominent offices. It is asserted in press dispatches that, owing to the unpopularity of Governor Regis H. Post, the office he holds was recently offered to James E. Watson, defeated Republican candidate for Governor of Indiana, who declined it, and that it may be given to C. B. Landis, formerly a member of Congress from that State. —The Cuban Congress assembled on the 5th, when President Gomez's message was read. While this was mainly hopeful and encouraging.

the following words of warning excited comment:

"The political problem of our country as of some others of similar origin and education, contains one evil element, which manifests itself in a tendency to create and maintain a third party, and even other factions, arising from vice and social disintegration, which unfortunately seems characteristic of the southern races. The same evil manifests itself in a tendency toward rebellion against everything wearing the badge of discipline, order, method and subordination to the will and welfare of social collectivity. In this we have one fact which, small as it may be, is not encouraging or promising."

President Gomez made an urgent plea for a new commercial treaty with the United States, involving a reduction of the duties on necessities of life and on agricultural machinery. He opposed the bond issue of \$16,500,000 authorized by Governor Magoon to meet the cost of sewers and pavements in Havana and of water works in Cienfuegos. The customs receipts, he said, would be sufficient for these obligations.

Various Topics In the New York Assembly, last week, a bill providing for direct nominations which has been earnestly supported by Governor Hughes was rejected by the decisive vote of 112 to 28. The Governor's campaign for this measure has resembled the one made by him for the bill against race-track gambling, and it is not yet closed. On the same day his bill placing the telegraph and telephone companies of the State under the jurisdiction of the Public Service Commission was virtually rejected by a vote of 98 to 37 against taking it from a committee which opposes it.—In Oklahoma, on the 10th, the indictments recently found against Governor Charles N. Haskell and six other prominent residents of the State, alleging that they conspired to defraud the Government by the acquisition of town lots in Muskogee, were quashed by Judge Marshall, of the United States Circuit Court, upon the ground that they were returned by a grand jury composed of twenty-three men, instead of a jury of sixteen men as provided by the Arkansas law which was in force in Indian Territory when the alleged frauds were committed. It is said that the re-

turn of new indictments will be prevented by the statute of limitations.—Some gossip having been published recently about fees paid to counsel employed in negotiating the agreement or settlement between the city of Chicago and the street railway companies there, Attorney-General Wickersham says: "I received a fee of \$200,000 for my work, and I think I earned it. There has never been any secret about my compensation in that case."—General B. F. Tracy, formerly Secretary of the Navy, who was appointed referee in certain pending suits relating to the debt limit of New York City, has made a report to the Supreme Court of New York which indicates that the city's borrowing capacity is about \$160,000,000. Other authorities have made the capacity very much less. This estimate, if confirmed, will permit expenditure for new subways and other important improvements which have been delayed.

The Kaiser's Triumphs The action of Germany in publicly forcing Russia to retract her protest against the annexation of Bosnia and Herzegovina by Austria-Hungary has decidedly changed the balance of power in European politics. According to the Russian papers this action was taken in a very peremptory and discourteous way; according to the German papers all the politeness of diplomacy was used. But in either case the fact remains the same, that a large part of the German army had already been mobilized on the Polish frontier when Foreign Minister Isvolsky was notified of Germany's desire and Russia required to take the action which she had for six months refused to do without even time for consultation with her allies on the change of policy. Isvolsky cannot be blamed for recognizing the undeniable fact that the Russian army and finances were not in a state to oppose a sudden invasion of the combined forces of Germany and Austria-Hungary, and in consenting to the annexation of Bosnia and Herzegovina he has not sacrificed any material Russian interest. Still, his forced concession has given the national pride such a blow that it is expected to lead to his downfall and perhaps also that of the Stoly-

pin ministry. His successor as Foreign Minister is more likely to make friends with Germany than to continue Isvol'sky's policy of alliance with Great Britain and France. The service which Germany has done Austria-Hungary has brought these two countries more closely together than before, and the alarm in England over the threatened superiority of the German navy has increased by the fact that to it must be added the efficient and growing fleet of Austria-Hungary. That country has begun the construction of four new "Dreadnoughts," which may be completed before the close of 1911. Unless Great Britain can put an equivalent fleet in the Mediterranean, Malta, Egypt, Cyprus and the route to India will be at the mercy of the fleet of Germany and Austria. It is an indication of the completeness of the disarrangement of the political balance by recent events that there are rumors of the incorporation of Turkey in the Triple Alliance, and even that Japan may withdraw from her alliance with Great Britain in order to join with Germany. Doubtless many of these alarming rumors owe their origin or currency to the movement in England for a greater navy. Some consolation is derived in that country from the hint conveyed by the words of Sir Edward Grey that the four extra vessels which the Government is empowered to construct if deemed advisable will not be "Dreadnoughts," but battleships of far higher fighting capacity. New cause, however, for alarm is found in the fact that England is not only in danger of losing the supremacy of the sea, but has already lost the supremacy of the air. The "Nulli Secundus," the only airship constructed by the British War Department, has proved to be a failure. In the use of aeroplanes, which in America, France and Germany has assumed the proportions of a sport, Great Britain has been left far behind. Lord Northcliffe, of the *Daily Mail*, has offered a prize of \$5,000 for the first aeroplane flight of one mile by a machine entirely of British invention and construction, the offer to hold good for one year; this at a time when flights of twenty-five miles in other countries attract little attention. The French Government has established five stations for

dirigible balloons, and in Germany the Friedrichshafen factory has built six airships of the Zeppelin rigid type, and can turn out as many more on short order. Airship "Zeppelin I" was on April 7th placed in charge of a military crew for the practice of night maneuvers. After a flight of thirteen hours it returned safely to Friedrichshafen. Uneasiness along the French border has been caused recently by the number of German balloons that have crossed the frontier. Six have landed during the past week in the eastern departments, and on April 9th a balloon descended at the village of Santeny, about twenty miles southeast of Paris, containing three Germans who were supposed to be military officers. They were placed under arrest and their maps, photographs and balloon confiscated.—"An Englishman's Home," the play by Guy du Maurier, which created such a sensation in London because it presented a picture of the helplessness of England against foreign invasion, was produced in Berlin, but was hissed and hooted off the stage.

South African Union

The constitution drafted by the Natal convention, of which we published a full abstract in our issue of February 25th, is now under discussion in the legislative assemblies and public meetings of the colonies which propose to unite under it. The adoption of it will not be such a quick and smooth process as was at first anticipated, for the opposition in each of the colonies is becoming stronger, or at least more apparent, as it formulates its positions and organizes its forces. The delegates to the constitutional convention came back to their people full of enthusiasm for the result of the labors, having achieved a compact union instead of the loose federation that had been barely hoped for in the beginning. They determined to put the measure through promptly without change, for they realized that if the process of amending were started there would be no stopping it and it would become increasingly difficult to come to an agreement. In the Cape Colony Dr. Jameson, who led the notorious raid into the Transvaal, paid a noble tribute to Mr. Steyn, saying that after

hearing his explanation of the deep-rooted Dutch feeling that inferiority of language was a sign of inferiority of race, he realized the "enormous meaning of this language question to a proud people like the Dutch," and felt that the proposed arrangement, granting absolute equality to the two languages, was best. Dr. Jameson frankly admitted that he objected to 50 per cent. of the details of the scheme, but nevertheless he urged its adoption in its entirety because he did not think any better one could be obtained, and such blemishes as were found in it could be later amended. The Premier, Mr. Merriam, in introducing the Act of Union into the Cape Assembly, said that many could make a better constitution on paper, but not one that would unite diverging communities. He was willing to consider amendments, provided they were not wrecking amendments. As regards the clauses restricting the colored vote, it was a choice between the provisions of the draft Act and no union at all. This is one of the points on which the opposition, led by Mr. Schreiner and Mr. Hofmeyr, lay most stress. They also prefer a federation to a union on account of the vast size and diversity of the country.—In the Transvaal the labor party has declared its intention of opposing the Constitution unless provision is made for a referendum or dissolution of parliament. In the Transvaal Assembly the motion to adopt the report of the National Convention was made by the Premier, General Botha, speaking in Dutch, and seconded by his political opponent, Mr. George Venter, in English. In addressing a mass meeting at Pretoria General Botha warned his hearers of the danger of rejecting the Constitution, declaring that the only alternative was disunion, which might involve bloodshed or the intervention of the Imperial Government. They who had suffered in the past did not want to revert to such a condition of strife. He appealed to the people to be not "Little Transvaalers" but "Great South Africans," to grasp the hand of brotherhood over the graves of the fallen, and to make one happy, united country. General Botha warmly testified to the broadmindedness of the English delegates regarding the language question. Nothing had passed into so

much as the way in which that question had been met. He appealed to the Dutch to show a similar spirit.—In the Orange River Colony there was some opposition, but the Draft Act passed both houses of the Legislature with three amendments.—Natal is the most recalcitrant of the colonies. Mass meetings have been held at which the proposed union was denounced as "the surrender of Natal's independence." The country constituencies are inclined to favor it, but Pietermaritzburg and Durban demand a federation.

The Transvaal Mines

In anticipation of the union of the South African colonies, the Government of the Transvaal has concluded a convention with Portuguese Mozambique, which is also submitted to the other colonial parliaments for approval. The opposition of the Imperial Government to the employment of Chinese labor in the Transvaal mines has made it necessary to fall back upon the natives, and these are mostly recruited from Portuguese territory. According to the convention the Portuguese Government undertakes to facilitate recruiting operations in Mozambique, while the Transvaal provides for the repatriation of the laborers at the expiration of their contracts. In accordance with the wishes of the Portuguese Government male natives will be prevented from settling permanently in the Transvaal or leaving their wives and families in Mozambique. Laborers will be allowed on returning to their native land to take back a reasonable quantity of purchases without interference from the Portuguese customs. Provision is made for increasing the trade facilities of Delagoa Bay by placing the management of the port and railway under a joint board of control. The Portuguese route is guaranteed a definite share of 50 to 55 per cent. of the traffic of the "competitive area" surrounding Johannesburg and Pretoria. Hitherto the delay and damage to goods due to the inefficient management of the Portuguese at Delagoa Bay have prevented that port from securing the traffic to which its natural advantages entitle it. There will be free trade in the local products of the two countries.—The min-

ing industry of the Transvaal continues to develop at an astonishing rate. The total output of gold in the Transvaal since 1884 is \$1,135,000,000, of which 95 per cent. was produced on the Witwatersrand. The number of tons crushed in 1908 exceeded those of 1907 by 2,670,000. Dividends have increased by more than \$8,000,000. The profits earned by the producing companies equal a distribution of 8.79 per cent. on the market value of the shares.

Disorders in Persia The siege of Tabriz is being prosecuted with as much vigor as the Persian Government is capable of, for the cause of the Shah seems to be dependent upon the issue of this conflict with the Nationalists in the city which they have longest held. If the Shah's troops succeed in capturing Tabriz, the tribes which are wavering in their loyalty which have gone over to the Nationalists will mostly reassume their allegiance, and the Shah will be enabled to raise money for the payment of his troops, which is badly in arrears. Satar Khan refused to surrender the city on the approach of the Royalist troops, but put it in a state of defense, and appropriated such food as could be found within the walls for his own men. The American Government notified Persia that that Government will be held responsible for any injury to missionaries, teachers and other American citizens in Tabriz and elsewhere. The latest report from Persia by way of St. Petersburg states that the Shah's troops were defeated with great bloodshed at Tabriz, and have gone over to the Royalist forces by thousands, and that Ain-ed-Dowleh has been slain by a bomb. The city of Resht, on the Caspian, between Tabriz and Teheran, remains in the hands of the revolutionists, who are reported to be keeping order and carrying on the administration satisfactorily. The Russian Government has, however, sent to that city a troop of soldiers, with two machine guns, for the protection of the foreign population and property. In the south of Persia the revolt against the Shah is no less menacing, for the campaign of the priests

against the sovereign because he has abolished the Constitution has shaken the loyalty of the Arab tribesmen, which at best is none too firm. Bushire, on the Persian Gulf, is terrorized by them, and a British cruiser is likely to land marines for the protection of the city. The Turkish Government has sent a warship to the Persian Gulf for a similar purpose.

Death of Marion Crawford

Francis Marion Crawford died at Sant' Agnello di Sorrento on the evening of April 9th. His funeral was attended by his intimate friends, the American consuls at Naples and Castellamare, and a large number of villagers, peasants and fishermen. Mr. Crawford was the son of Thomas C. Crawford, the American sculptor, and he was born in Bagni di Lucca, August 2d, 1854. He was educated at Concord, N. H.; Cambridge, England; Heidelberg, Karlsruhe and Rome, going to India and to Harvard to carry on his studies in Sanskrit. He began his literary work, like Kipling, on an Allahabad paper, and on coming to the United States in 1880 and engaging in journalistic work he made use of his Oriental material in the successful novel, "Mr. Isaacs." The mystical motive was employed several times later, as in "Zoroaster" and "The Witch of Prague." His knowledge of modern Italian life gave him a field in which he had practically no competitors and which he utilized in his "Saracinesca" novels. His later work is a trilogy of romances dealing with the lives of an opera singer and her admirers, "Fair Margaret," "The Prima Donna" and "The Diva's Ruby," and they are as readable and popular as any of the long list that preceded them. His cosmopolitan education and experiences gave him an unusual range, and he was able to lay the scenes of his novels in half a dozen countries, and in modern or ancient times, with equal certainty of success. In descriptive and historical writing he was also at home, as "Ave Roma Immortalis" and "The Rulers of the South" proved. He was engaged at the time of his death on a more comprehensive archeological study of his beloved Italy.

The New Campaigning

BY VICTOR ROSEWATER

[The writer of this article knows what he is talking about. He was a member of the Executive Committee of the National Republican Committee in the last campaign and was chairman of the Literary Bureau for the Western Division and is editor of the *Omaha Bee*. —EDITOR.]

FEW people may fully realize it, but it is none the less true that an almost complete revolution is in progress in the methods of conducting our national campaigns. The old has not yet been wholly discarded nor is the new entirely installed, but the transition is on and already much headway has been made. The new campaigning, if it can be characterized in a word, is simply the application of business methods to the work of political organization and political education. The revolution has proceeded further on the Republican side than on the Democratic side, but it is by no means confined to any one political party. It does not belong wholly to the last campaign, altho more radical departures from previous practice were then taken than ever before.

In the first place the qualifications demanded of the national chairman in these days go beyond being merely "a good fellow." He must have a business head upon his shoulders. He must have a personal acquaintance that he can utilize to get into close communication with the representatives of important factors whose help is needed. His task is to improvise in a few weeks a nation-wide piece of administrative machinery that in ordinary "big" business would be built up gradually year by year, and to put it in good running order for a sixty-day, high-pressure spurt that would throw out of gear the best constructed industrial mechanism ever put together. Early in the present campaign I heard Mr. Bryan say, with reference to the difficulty he encountered in getting the right man for national chairman:

"If you could find that one were capable to lead the ideal chairman for if we had a man in that party able to meet all the requirements of the ideal chairman, he would have been nominated for President instead of me."

The chairman, of course, cannot do the

whole job alone. He has to have aids and lieutenants and the test of demonstrated ability has come to be applied to the choice of them also.

So it has come about in the evolution of things political that the national headquarters is no longer simply a loafing place for idlers who by some sort of a pull have managed to connect with the payroll. Quite the contrary, the visitor to headquarters discovers at the door that he has entered a business establishment—a great suite of offices very similar to those occupied by the management of some large industrial concern doing business all over the country or around the world. The work of the campaign headquarters is departmentized and the visitor is quickly permitted to relieve himself of the object of his mission. If requiring further attention he is shifted to the particular place where his business may fit in. It has been hard for many of the old-timers to wake up to the new conditions confronting them, but a few days devoted to the obsolete practice of "chair warming" usually accomplishes the result, and the answer "nothing doing" is at last accepted as final.

What I mean to say is that the really notable reform of the new campaigning has been the amputation of a deep encrusted gangrene of graft. The political on-hanger who has an idea that he should be taken care of simply because he was taken care of once has had his day. The individual with a hair-brained scheme to sell that is to turn hundreds of thousands of voters has bumped into an unsympathetic market. The blackmailer who threatens to do all sorts of dire things if his demands are not met forthwith has discovered that his political capital has been wiped out. To eradicate these abuses and run the risk of consequences takes courage. Refusal to accede to polite and impolite requests invites resent-

ment and reprisals. The man who has merely mercenary ends to subserve and does not get what he wants at the national headquarters of one political party is quite apt to look for it at the other party headquarters. The shortness of campaign funds on the Republican side has helped much along this line, and the prospect of a public accounting of the campaign expenditures has helped even more.

Likewise in the contracts for legitimate services or supplies. It is not mere favoritism that rules. It is a reasonable assumption that the Democratic management will give preference to Democrats and the Republican management to Republicans. The bids, however, are bona fide, the goods are ordered by requisition, their receipt checked by a purchasing agent and the bills are audited the same as bills rendered to any good business house. This feature of the reformed methods was first to be installed and has been an established feature of all parties for several campaigns.

The real business of the national campaign management in a presidential election, as already indicated, is that of political organization and political education. The work of political organization, which culminates in "getting out the vote," must necessarily be executed by the State and local committees, and the national committee officers can exercise only a supervisory oversight. This supervision is coming to be more and more efficient and effective with a regular system of inspection, reports, polls, checking and counter checking. Only in particular cases, or with reference to particular classes, does the national organization do anything except to work thru the State and local organizations. With something like 14,000,000 voters scattered thru forty-six States, it is manifestly impossible for any one or two central offices to reach out to individuals. In fact, so huge has the electorate become and so immense is the expanse of our country that a dual organization of the national campaign management has become imperative and the continent has been cut in two by an arbitrary line on the map to constitute an Eastern and a Western division to facilitate the transaction of business.

The work of political education falls

naturally into two groups—the dissemination of literature and the distribution of oratory. Political instruction may be imparted by word of mouth or by printed argument or appeal. "Spellbinding" seems to have reached its perfection in the special train tour. The political "big guns" are put in the field and routed the same as a theatrical troupe. An advance man marks the itinerary and looks after local details. The special train is equipt with a full complement of speakers, stenographers, press correspondents, literature distributors, etc. It is well advertised ahead of time and is met at the station by an expectant audience. The presidential candidates of four political parties went special-training this year. It will be surprising if this does not set a precedent for all national campaigns of the immediate future. It is worth noting that the candidate of the Socialist party is the only one so far who has succeeded in meeting expenses by getting people to pay to hear him ask them for their votes. Special-training is such a luxury that it can be indulged only for the political headliners, but there is a growing disposition abroad to demand headliners or none at all. In a word, the lesser oratorical luminaries are threatened with eclipse because the people want to see and hear the men of first magnitude rather than the small fry, and the expense of circulating one or the other is almost the same.

The literary output in a political contest for national supremacy figures up to the colossal. Editions of speeches and pamphlets are turned out by millions and they are printed in nearly every spoken language. The party newspapers are enlisted, and organized for a co-operative onslaught on the political enemy. They are freely supplied with editorial sheets, political news, cartoons, campaign poetry, ready-to-print plates and ready-to-circulate supplements. The billboard posters, the window lithographs, the buttons, the songs, and the various campaign novelties are all elements of campaign publicity. The question of political advertising presents a big problem immediately in front of the campaign managers. Four years ago the Republicans used space in popular magazines and similar class publications, and a limited amount

of such space was used again this year by both the great political parties. The Republicans confined their announcements to proclaiming the records of the candidates, while the Democrats undertook to solicit campaign contributions in this way. The Democrats injected some real humor into the political arena by the wording of their advertisements—in large type the reader was told that for twelve years under Republican rule his cost of living had been increasing faster than his wages, and then, after being thus imprest with his poverty, he was invited to cut off the coupon on the lower right hand corner and mail it together with \$5 to the treasurer of the Democratic National Committee. It is doubtful, therefore, if this plan of advertising met the expectation that it could be made to pay its own way. Involving as it necessarily would a very large outlay, I consider the matter of political advertising one of the serious problems of the new campaigning yet to be solved.

Last, but not least, the financing of our presidential campaigns is being completely metamorphosed. No law governing campaign contributions requiring publicity or limiting their amount has yet been enacted so far as national campaign funds are concerned, but the court of public opinion has registered several verdicts, which are proving just as effective as law in curtailing the abuses toward which former methods were heading. The time has past when great sums of money subscribed by the officers of a few big corporations may be depended on to supply the sinews of political warfare. Practically all the funds employed in national campaigns used to be collected in New York, Chicago, Philadelphia and Boston, and it was an almost unheard of thing for contributions to come in from any part of the country outside of these money centers, unless sent by some one already in official life or hoping to be.

This year the Democratic campaign fund was collected in large part in direct appeal to individuals thru newspaper subscription lists. It was announced that not over \$10,000 would be accepted from any one contributor, and while this limit was evaded in at least one notable instance, there was no general rush to over-

ride it and the subscriptions in excess of \$1,000 were few indeed. On the Republican side, while there were no stipulated dead-lines, the large subscriptions which have exceeded the Democratic limit could be counted on the fingers, and the total number of contributors not only went well into the thousands for the first time but were distributed geographically over all the States and Territories.

The grand total doubtless looks large, but it must be remembered that, in the nature of things, large sums of money are needed for entirely legitimate purposes of a campaign covering so large a country. For the first time in our history, forty-six States participated in the election of a President of the United States and, with the possible exception of 1896, more States were classed as fighting ground than in any other campaign. For such a long line of battle an extensive and expensive equipment is required to sustain the army of combatants and push the fight. While a great deal of illegitimate outlay in the nature of graft and extravagance has been cut off, other legitimate drafts on the campaign treasury have been acquired. The railroads are no longer permitted to furnish free passes to political emissaries and political spellbinders, nor are special trains to be had for the asking. The item of expense for railway fare and train service for candidates and orators alone foots up into hundreds of thousands of dollars for each committee. The railroads have been decidedly the gainers by the laws that have stopped free transportation and the sentiment that has at the same time frowned down corporation contributions to party treasuries.

That all these changes are in the direction of improvement in campaign methods seems beyond question. They are plainly making for political honesty and for a higher level of political morality. The campaign of the future may, and doubtless will, show still further improvement. It is a safe assertion that there will be no retrograde movement, and that never again will we go back in this country to the wide-open, go-as-you-please, help-yourself, hit-or-miss system of handling a presidential campaign in the name of any great political party.

The Northern Republics of South America

Ecuador, Colombia and Venezuela

BY JOHN BARRETT

[This is the fourth of a series of six monthly articles by the Director of the International Bureau of American Republics on "Opportunities in Latin America." The first was devoted to Brazil; the second to Argentina, Uruguay and Paraguay; the third to Chile, Bolivia and Peru. The articles to follow will be on Central America and the West Indies. The purpose of these articles is to bring us into closer sympathy and association with these republics.—EDITOR.]

THE Panama Canal will unlock the doors to the wonderful west coast of South America. Wealth, commerce and opportunity are there and the Canal will give easier access to them. Take Valparaíso, for instance, the ambitious port of Chile. This busy *entrepot* will be only 4,640 miles from New

be far reaching, altho that republic has already developed into a forceful and productive nation. Callao, the port of Lima, Peru, will be proportionally much nearer American and even European markets when vessels can pass directly from the Caribbean Sea to the Pacific. Intercourse with Peru will be immensely

The building to the right having a clock is the Commercial and Agricultural Bank, and the building with the small dome is the American Consulate.

York through the Panama Canal, while thru the Straits of Magellan the distance is 9,000 miles. It is plain, therefore, that the influence of the Canal on Chile will

stimulated, yet it also is going ahead remarkably, and will, therefore, be eager to take advantage of the shorter water way. The further north from these sea-

ports one travels on the west coast of South America, the closer will all the adjacent region be brought to the United States, and the greater will be the opportunity presented for more intimate commercial exchange between these republics and the United States, and a true vision into the future will show how wise it will be to take advantage of this opportunity, now.

Nevertheless there is a danger of assuming that when the Canal is completed commerce and the rewards in friendship and understanding will irresistibly tend toward the United States. This will be a fatal mistake. It would be a fine example of altruism to open this highway for others to enjoy, but nations do not grow on this principle, for enlightened selfishness is the true watchword of civilized progress. It is the patriotic duty of the United States, therefore, to prepare to use the Canal for her own benefit. Another error may be made with quite as

them, when the Canal is finished, how to join the ranks of productive, industrial nations. And here a splendid contrast is presented. Three republics of South America, the closest of all to the United States, bear different relations to the Canal. I refer, of course, to Ecuador, Colombia and Venezuela. The first, altogether on the Pacific, is completely within the sphere of the Canal, in that it will then be reached quicker than ever before; the second has a coast line of equal extent on both the Atlantic and Pacific sides of the Isthmus; the third is altogether on the Atlantic (Caribbean) side, and while it may be influenced by the stream of traffic flowing with greater force by its shores, its relative position will not be changed, and its future depends upon its own energy, irrespective of the Canal.

These three republics have, however, a distinctive history and environment, and their civilization has developed in the in-

COURTESY OF SENOR MANUEL JIJON LARREA, ECUADOR

much folly, also, by supposing that the republics to the south of the United States have not progressed, or have been waiting for the United States to show

terior instead of along the coast, as was so generally the case in the other republics. The capitals, too, lie inland; Quito in Ecuador, and Bogotá in Colombia, are

at a very high altitude and separated by many miles of mountain pass from the sea, while even Caracas is situated behind a lofty mountain range, and has been approachable by rail only within a few years. Another feature which must be noticed is that these three republics have a native population much less touched by the influences of European civilization than is the case with the similar class in

the interior plateaus the area of the country suitable for cultivation is restricted or unproductive. The very contrary is true. There are fertile valleys and mountain sides of vast extent and productivity only waiting for the energy of a more abundant population to astonish the world with the amount and variety of crops and products.

Ecuador has an area of 116,000 square

ASTRONOMICAL OBSERVATORY, QUITO, ECUADOR.

all the other countries of South America excepting perhaps Bolivia.

Ecuador is the Switzerland of America. Its snow clad peaks have been the envy of those who have already scaled the Alps, but a few of their lofty summits yet remain unconquered. But it must be remembered that the valleys of Ecuador lie directly under the equator and that, therefore, an altitude which in Europe means but a scant period of time in which to plant and to reap crops, permits in this South American republic the growth and gathering of all the products of the temperate zone thruout the entire year. Moreover, no one can pretend to know Ecuador who assumes that because of the mountains or the altitude of

miles, more than twice the size of Illinois. The population is only 1,400,000, an average of 12 per square mile. Along the coast, with a narrow fringe of truly tropical vegetation, the production of cacao has become so great as to place Ecuador among the chief sources of the world's supply. Rubber is grown with profit, sugar also, coffee and ivory nuts, from which a vast quantity of buttons are manufactured. But it is on the high land of the interior that one may look for the greatest future development. Here all products of a mid-temperate zone grow spontaneously; all the cereals and fruits thrive here. In fact, the first Spaniards were amazed at the prolific crops of wheat and corn gathered by the

natives. This is in addition to the mineral wealth of the republic. Ecuador is an auriferous country, and its mines promise fortunes to those able to work them.

It is not a question, therefore, whether Ecuador has a foundation for industrial prosperity; there is no doubt of it. The demonstration is open to any one willing to look. An object lesson will be given by the National Ecuadorean Exposition which the government will hold in Quito during August, 1909. All products of the country, and even products—natural and manufactured—from abroad which will help the country's advance, are to be exhibited in commemoration of the republic's centennial birthday. The traveler can now reach Quito by an uninterrupted railway journey of 290 miles from Guayaquil, for the line is completed and the interior of the country thereby opened to travel and traffic. He who doubts the wonderful progress the country is making can be convinced in no simpler way than to visit Ecuador to see at first hand the magnificent possibilities for the future. On the day the exposition opens, it will be possible to travel from New York to Quito within 12 days, no more than was spent a generation ago in reaching Europe!

Colombia is a wonderland of opportunity. Measured by the standard of other countries of the world, it can be said without exaggeration that the Republic of Colombia, in proportion to area and population, is the richest of all in variety and extent of undeveloped resources, fullest in promise for future growth and reward to mankind. Colombia is at our very doors; it is nearer to the principal ports of the United States than any other South American country, and yet we have hitherto done little to study her internal wealth or to take part in her foreign commerce.

A few geographical facts not generally realized must be brought home to the people of the United States, and it is impossible to make them too emphatic. For instance, the least distance between Colombia and the United States is only 950 miles, and from Cartagena to Tampa, Florida, is less by sea than from New York to St. Louis by land. From Barranquilla, a port at the mouth of the mighty Magdalena River, the highway of

the republic, almost due south from New York, it is less than 1,900 miles. Colombia is the only South American country having a coast line on both the Atlantic and Pacific Oceans, and while that country will benefit enormously in every direction by the Canal, we must understand her advantageous position, helping her and thereby ourselves to reap the harvest. Colombia has an area of 504,773 square miles, as large as all the States of our Union between the Alleghenies and the Mississippi north of the Ohio River. The population is 4,000,000, but the productive capacity can easily be estimated as great enough for 40,000,000, reckoned only in units of the white race which lives and thrives best within the temperate zone. The explanation of this seeming contradiction is to be found in the marvelous variety of the climate of Colombia. This is no more like the jungles of Kipling's tales than is that of the beautiful Berkshire hills of New England. The central regions of the country are as cool and refreshing the year round as are the valleys of Vermont in September, and here will grow all the products of the temperate zone as well as they do in Maine and Minnesota. In these plateaus between the branches of the Cordilleras Nature seems to have tried to show to how perfect a degree she could combine altitude, soil and atmosphere for the benefit of man.

Venezuela is the remaining republic of the trio, and within recent years she has had scant justice paid her. The republic has an area of 593,940 square miles, larger than Colombia by the whole State of Oregon. Some of this territory is tropical forest, along the interior stretches of the Orinoco, some of it is a vast cattle prairie about which little is known, but that portion along the shores of the Caribbean Sea, settled and cultivated since the first Spaniards, has been and undoubtedly will be the home of an energetic population. The climate here is healthful, the whole country very accessible to modern travel, and when the influences of industrial and productive life have fully prevailed a metamorphosis will be effected reflecting credit not only on the people themselves but on those who have brought it about.

Attention must be given to the dis-

tinctive character of the cities in all three republics. Each has one or more coast towns, and each has numerous interior cities in which civilization has advanced

watered harbor, comparable to Panama.

The capitals of these republics are entitled to be recognized as cities of municipal rank. Quito has a population of

FACADE OF THE PRESIDENT'S PALACE, BOGOTA, REPUBLIC OF COLOMBIA.

and where the centers of social and industrial life will always be located. Guayaquil in Ecuador, Buenaventura and Cartagena in Colombia, Maracaibo, Puerto Cabello and La Guayra in Venezuela, represent the former. Quito and Cuenca in Ecuador, Bogotá and Medellín in Colombia, Valencia and Caracas in Venezuela, represent the latter. These seaports are becoming busy, active places. Guayaquil, for instance, is at present engaged in extensive harbor modifications, along with which go municipal improvements in water supply, scientific drainage, street pavement and cleaning, and the introduction of electric light and street car service. Within a few months Guayaquil will be completely altered from the sluggish, feverish port of the last century, into a modern, well drained and

80,000, and however isolated it has been from our point of view the people are nevertheless ambitious and progressive. Architecturally there is much to be admired in this city in the clouds; the public buildings are solid and attractive, while modern improvements, such as electric lights and telephones, have been in use for a long time. A trolley system is a scheme of the immediate future, to make travel about the hilly streets both comfortable and rapid. In fact, life here can be past happily, with a charming society. Bogotá is equally noteworthy. Here is a city of 120,000 people, only 250 miles from the equator, which glories in a climate never so cold as that of Atlanta, Georgia, never so hot as that of Montreal, in Canada, and bracing but never chilly the entire year; a veritable

health resort from the torrid heat and moisture of the lower tropics. It is beautifully located 8,500 feet above the sea, on a level plain that winds in and out thru the surrounding mountains for nearly 100 miles in length, varying in width from forty to five miles. The soil of this valley is rich, and the innumerable farms scattered through it furnish everything needed for the inhabitants of one of the most delightful cities in Latin-America. Comforts and luxuries can be obtained here at no greater price than is asked in New York, and social life has an attraction that leaves a never to be forgotten memory of brilliant men and lovely women. Caracas, too, is worthy of far more praise than that usually given it by the undignified and flippant stories of the daily newspapers. The climate here is warmer, life is passed with the *dolce far niente* of Italy, but every element of material well being is at hand. Electric lights, trolleys, theaters, clubs, baseball and popular concerts are here part of the life of the city. Valencia is another delightful city in Venezuela, with a genial foreign colony, building homes for permanent settlement.

Here is the proper place to attack the argument so often brought against this part of the world, as a place for American industry and activity. Commerce and settlement have been tried, it is observed, and in most instances failed. This cannot be denied, but that fact has little bearing on the present, and still less on the future. This was over fifty years ago, when the shores of the Caribbean Sea were further away than 10,000 miles today; when commerce as we understand it now was an impossibility, and when the rapid and truly international trade of this twentieth century was not even a dream of fancy. At that time the trip to the shores of Colombia or Venezuela was made in slow and irregular steamers; the passenger said goodby to home and friends with a finality incomprehensible to our ears. He was going into the unknown. How different conditions are now! Every port of Latin-America is in direct communication with one or more of the cities of the United States and Europe; the remotest part of the southern continent is scarcely more than a month's passage in fine, well equipped

steamers; the mails between all countries are transmitted regularly, and, so far as these closer neighbors are concerned, the cost, in time and money, to visit them is less than it was to go to Europe forty years ago. Guayaquil, in Ecuador, is within ten days of New Orleans; Cartagena, in Colombia, is reached within the week; La Guayra, in Venezuela, should be only a pleasant sail of five days from the harbors on the Gulf of Mexico or the lower Atlantic. Moreover, every town of the inhabited areas of these republics is connected with the world by telegraph, so that news from abroad, information concerning the important affairs of the world, market conditions, are or can be reported with as rapid dispatch here as in the newer settlements of our own Great West. The conclusion to be logically derived from such remarkable changes of the last fifty years is that these friendly republics are today our neighbors in reality, and that, quite contrary from being isolated, they are now close to us, approachable and accessible, the journey being as easy and as pleasant as that made without a second thought between New York and San Francisco.

The opportunity offered by these three republics is fascinating. They are not, however, countries where the mere wage earner can find work for the asking. On the contrary, here, as in other parts of Latin-America, the day labor is done by the natives, the sweat and toil of building the new land out of the old falling upon the Indian, who for ages has lived on the soil, and who for generations to come will be closest to it. No American looking for a job should be tempted to go to South America to obtain it. This does not, however, exclude the immigrant who desires to find for himself a different climate and different surroundings. The laws of each country are liberal in granting to the genuine settler all the land required for his needs, and in aiding him materially to enter into the country and to make his home there. A better way probably for such immigration would be to adopt the colony system so successful in Argentina and Mexico. If fifty or more families would show an earnest desire to start a plantation in some region promising reward in future growth, ar-

rangements could readily be made for its establishment on a practical basis. To take up a homestead is possible, in much the same manner as is done in the United States, but this is not the best way, nor should it be encouraged. All these countries need and desire immigration; one of the most progressive presidents lately asserted in his inauguration address that they all needed and desired the energy and friction of the North American to add to the productive capacity of their lands: Liberal offers are made to colonists who will come to reside here, and no fear should be entertained of ultimate reward. Nevertheless, any movement toward colonization should be undertaken carefully and systematically. This presupposes the possession of some capital, either by the individual who promotes a scheme of

seizing the opportunities presented in Latin-America. Nothing has been said in detail concerning the seemingly inexhaustible mining possibilities of these three republics; the mining laws are generous, the region extensive, and the minerals diversified. But mining such as was the vogue in California or more recently in Alaska must not be considered. The mining that pays must have capital at the beginning, for land, machinery and labor. In the lesser degree capital is necessary for the person who accepts a position of employment with any company or corporation in South America. A reserve fund is valuable in case such an employee wishes to return to the United States; it is also of decided importance if he sees a chance for a good investment which must be utilized at the

STREET OF SAN JUAN, CARACAS, VENEZUELA.

this nature, or by the association formed among agriculturalists to buy and cultivate land in any chosen locality.

Capital, therefore, is a necessity for

instant without waiting to hear from home. Such positions are becoming more and more obtainable in South America, but the advice always given

any one seeking them is that they should be secured before leaving home, or if the spirit of adventure drives him into these regions, he must provide himself with sufficient funds for the passage back, if he is not fortunate enough in finding what he was after.

Another opportunity of which Americans seem to take such little advantage is that for increasing the trade between the United States and these republics within the Canal Zone. It is really a pity that more persistent effort is not made to establish commercial relations on a permanent basis. All consular reports—and these are becoming very practical and full of suggestion—emphasize the opportunity to sell American goods in the markets of South America; every commercial agent making a personal trip to these countries expresses his regret that he has not covered the ground before, and his delight at the success attending sincere effort to sell on business terms the articles in his lines, yet a genuine intercourse of trade cannot be said to have really begun. Much of the growing commerce is ignored or overlooked by the large manufacturers in the United States, and they ought to be encouraged, by every justifiable means, to begin now, with

personal solicitation, to sell to Ecuador, Colombia and Venezuela whatever they, with their increasing purchasing power, are willing and able to buy.

Capital, however, has a still larger scope in these countries. Industrial life here is only beginning; they need railways, machinery, power plants, civic improvements, water and drainage systems. The towns are changing into cities, and all newer methods of construction are gladly accepted and practised. Harbors must be deepened, motor transportation must be introduced, farms must be cultivated by machinery and all the factors of industrial life must be represented to them within the next few years. This entire beautiful area is eager to be reclaimed and made to take its due share in the advances of the twentieth century. Capital is necessary for the move. In every sense the opportunity is there. South America is the continent of the day. Financially speaking, no better investment can be imagined than that presented in this portion of it. The reward is certain, but with a larger view the reward is even more splendid when coupled with the thought that as a result of investments now the future will show these newer fields made useful for mankind.

WASHINGTON, D. C.

Magdalene

BY AUGUSTUS WIGHT BOMBERGER

*Up to the highest gates of Heaven,
Alone and lost with pain;*

One Magdalene came at last:

About her (like as tears)

The darksome dews of evening fell:

Inside the gate stood Gabriel.

"Woman, what claim hast thou to these
Celestial courts?" he said.

And Magdalene, pierced with shame,

Shrank back and bowed her head;

For, toiling thitherward, ah, me,

'Twas not this face she hoped to see!

*Not from a love of living blame,
(Without passion, yearning)*

The very will of Heaven (soft)

Revealed a shining way:

"Oh Gabriel, forget her sin

And let her in!"

He waited; then again he spake:

"Woman, why art thou mute?"

And lo—and nearer—sang the bird,

Like some sweet silver flute,

"Oh, Gabriel, forget her sin.

She is so sorry, let her in!"

But the great Angel turned away

With no relenting word;

And the deep silence gave no sign,

Save that the gentle bird—

As one that weepeth—warbled low,

"Ah, Gabriel, how could'st thou go!"

Yet, as she stood disconsolate,

Down to the wicket came

One that she knew (oh, love divine!)

And called her by her name,

And loosed the gate and threw it wide,

And Magdalene went inside!

NEWARK, N. J.

What the Agricultural Colleges Are Doing

BY E. P. POWELL

THE agricultural college by good rights should be called the State Industrial University. It has assumed a relation to the people that no other institution of learning has ever taken or thought of taking. The age became industrial by force of scientific discoveries. Every industry had become revolutionized, farming especially. The organized school system was found to be facing erudition and literary culture. Its deepest and most definite end was to create leaders in the professions. The agricultural college, not definitely thought out for this purpose, did nevertheless find itself in a position to face with the age; and it has done it. While other educational endowments are engaged with learning, the agricultural colleges are discussing timothy grass and sugar beets, improved swine and poultry, and therewith an improved human power to produce. This revolution cannot be overestimated. It does not alienate us from poetry and ethics, but now we have the poetry of the orchard and ethics of the market.

I propose to tell you a few things that our agricultural colleges are just now busy about, and what they are doing for the industrial and educational development of our folk. I want you to see how every-day practical these things are, and yet how amazingly they elevate farming to the level of the sciences—making the land cultivator a creator with his Heavenly Father. I shall then hope that you will send your boys and girls to the agricultural college, and let them join in the effort to make the world more beautiful, and the world's acres more capable of speeding our material prosperity.

In Georgia Professor Soule and his agricultural special car goes early on a lecture tour thru the rural districts. This is a case of carrying the college to the boys, where the boys cannot be got to the college. The car with its teachers stops at all stations where they can gather the people, explaining plant life and growth, production and reproduction, diseases and insect enemies, soil chemistry, and the science of farming. Not only corn, but cotton is discussed—including fertilizers, seed, soils and methods for preventing the spread of disease. Dairying has its barrel churns, separators, milk coolers, ripeners, and illustrations of all improved methods in making butter and cheese. A similar train starts out of Lancaster, O., equipped with classrooms and manned by professors of the Ohio College of Agriculture. It gives forty-minute lectures at every town of any size along the road. Its experiments with corn are discussed, including the size of the ears relative to the cob, the vitality and the hereditary tendencies of different strains, and the proportionate production, both in bushels and in feeding value. At least ten States are working at this corn problem, and it is getting to be a very complex problem indeed, for it must hereafter consider the quantity of stalk as well as the quantity of corn, provided the cornstalk is to take the place of wood pulp in paper manufacturing, as now seems probable. The Illinois Association, which was the first organized for persistent corn study, insists upon a full stand of healthy plants. The Wisconsin Experiment Station reports the development of a variety that gave one hundred bushels to the acre. Virginia has done

nearly as well, reporting between ninety and one hundred bushels to the acre; but Connecticut goes ahead of all the rest, reporting one hundred and thirty-three bushels of yellow dent corn from a single acre, under ordinary fertilization.

The railroads are co-operating enthusiastically and liberally in a movement which they know will largely increase their own business. In other words, we are developing an educational system which correlates itself with active industries. The meetings that are held are everywhere attended by crowds of farmers, including women and the young people. If no other possible good accrued, it would be enough that the people be taught scientific methods of investigation. The Illinois train illustrates a series of very careful seed selections, and the farmers are learning that it is not simply the number of bushels raised, or the size of the ears, that they are to work for. Some corn is particularly fat in its oils, while other sorts are more valuable in protein. The corn crop of the country for 1908 was over two and a half billions of bushels. If these enthusiasts can increase the corn product to the extent of one kernel for each ear, they will add four hundred millions of dollars to the annual value of the crop.

The Agricultural College of New York, at Cornell University, reports that it is specifically busy with the improvement of timothy grass. It has many thousand individual plants under observation and is studying individual variations and means of pollination. This work is based on the fact that some plants will produce an ounce of hay and others a pound. How much of this is due to heredity and how much to environment? At two years of age one hundred and fifty plants, from vigorous growing parents, yielded forty pounds of hay, while one hundred and fifty plants, from weak growing parents, yielded thirty pounds of hay. Some plants are very leafy and others are very narrow in leaves and stemmy. It has been discovered also that there is a tendency of some plants toward developing underground root stocks; while other plants, without this hold on the soil, heave out easily. Another special effort of this college is the manufacture of cheese from whey. It has been shown

that a high quality of butter can be made from the fat that has been wasted. The process consists in running the whey thru the separator promptly, securing a rich cream, and of course a less valuable buttermilk. It is estimated that the butter which might be saved from whey in New York State alone, at twenty-five cents a pound, will be about eight hundred thousand dollars.

The Missouri College of Agriculture has turned its attention recently to an effort at awakening interest in agriculture on the part of the country schools. It has sustained short courses in agriculture at each of the three State normal schools. Missouri is laboring under the same difficulty that is seriously felt by its neighbors, that the normal school graduates are unfit to take up industrial education. The intention is to pay very much less attention hereafter to the ordinary farmers' institute work, and very much more to influencing the normal schools. The Missouri College has also undertaken a soil survey of the State, experimenting in crops, in drainage and in fertilizers, for the people, and in other ways going to the farmer who cannot come to the college.

An interesting investigation is being carried on by the Virginia Experiment Station at Blacksburg. In these mountainous sections of the South fruit growing is greatly hindered because, during the warm weather of February and March, the trees are forced into bloom only to be killed by later frosts. It is proposed to develop a race of commercial varieties that will blossom several weeks later than those now cultivated, crosses possibly of such late blossoming kinds as Mother, Spy and Jeniton. The director, Dr. Fletcher, is very enthusiastic over this matter, but we believe none too much so. We have been testing apples in Florida, and find there are several sorts which very calmly resist any temptation on the part of the weather to develop before the proper time; while other sorts shoot out their leaves at the slightest provocation. Very heavy mulching assists in holding back growth, and indeed is an absolute essential. I have no doubt that we already have some sorts, and can produce others, that will do well not only in the mountainous sections of Virginia

and the Carolinas, but even in Florida. The usual method of growing fruit at the North has to be reversed at the South. Cover crops are needed for the summer against heat rather than in the winter against cold, and growth must be governed by keeping the temperature at an equilibrium in the soil.

Iowa State College, at Ames, has been known heretofore for the pertinacity with which Professor Budd and Professor Hansen have collected hardy plants from all over the globe. They have introduced fruits and vegetables that push the belt of production for such things as melons and apples a good ways to the north of the old line. But at present investigation at this college bears on the effect of tubercular infection in swine by means of skim milk. The agricultural engineering section is studying the sewage problem, and how to make the town and farm co-operate in the use of waste. The economy of using alcohol, as compared with gasoline, for farm engines, is also on trial. The horticultural section is studying the cold storage problem, while the farm crop section is carrying on the investigation of corn and small grains—in conjunction with neighboring States.

Delaware is a small State, but it has been heard from very frequently in its agricultural investigations. At present it is concentrating its efforts to determine the most economical system of rotation for building up farm lands; to determine the effect of nitrogen, phosphoric acid and potash upon peach and apple trees; to find out the function of tannin in plants; and if possible to discover a single vaccine which will be effective in immunizing animals against anthrax, and to determine the effect of various toxines as curative agents.

When we turn to the more southern States we naturally find the successful growing of cotton and the improvement of the crop to be of permanent interest. The Experiment Station at Athens, Ga., a department of the College of Agriculture, is studying the fertilization of the Smyrna fig. It is expected that fig growing will greatly increase in the South; and if the Smyrna fig can be successfully grown, it will be of vast importance. Our readers understand that this is accomplished in California by the

introduction of a special insect. Special soil bacteria and a very exhaustive investigation of the proteids of cotton are also topics of importance at the Athens station at the present time.

The Florida Agricultural College is identical with the university of the State. It has recently been paying special attention to the pineapple industry. In this direction it has been very largely instrumental in leading people to be willing to pay as high as two hundred dollars an acre for "pineapple land." Special attention is being given to the destruction of the enemies of the citrus industries—oranges and grapefruit. This consists in fighting insect with insect—making use of natural enemies to control scale insects and white fly. Very little attention is given to insecticides, and much more to the use of parasites. Florida has legumes that no other State can use to any extent, such as velvet bean. The Agricultural College is giving special attention to these legumes, especially their value in increasing the humus of the State. Like other Southern States, Florida is burned over once a year, mainly in the interest of stock breeders. The result is that the soil is almost entirely lacking in humus, and the farmer is beguiled into the enormous expense of relying upon commercial fertilizers. Whatever the college can do in correcting this state of affairs will be its greatest achievement.

The Alabama station reports its principal lines of work to be improving the existing varieties of corn, cotton and oats thru scientific selection or breeding, and a study of the laws of heredity as affecting these plants. It also desires to determine the most economic method of improving the soil—involving a comparison of the value of many of the leguminous plants. Northern farmers can scarcely comprehend the value of these plants without being told that the velvet bean will grow from fifty to seventy feet in a season, can be mowed three or four times for hay, then used as a fodder plant and finally plowed under with its large storage of nitrogen. Its addition to the humus of the soil is of equal importance. Some of the cow peas yield ten or twelve feet of growth besides the crop of peas. The vetches are of equal importance as nitrogen gatherers, while the beggar

weed makes the best of hay. The Alabama station reports a three years' test of the comparative value of food stuff for beef cattle. It has also just sent out a bulletin reporting the result of several years' tests of sixteen varieties of corn. The importance of these tests is shown by the fact that some varieties prove to be four times as valuable as others that are commonly grown.

The bulletins from the University of Tennessee are devoted largely to the control of the San José scale and other injurious insects and fungi. This terrible pest, the San José scale, is now found in every State of the Union. It reached New Jersey from California, and from there was recklessly sent out in every direction. The Tennessee bulletins are as valuable as can be found, not only in describing the scale, but in careful formulas for preparing the remedies. I do not know where we can find better conceived and more easily comprehended bulletins than those that come from Prof. Bently.

The Illinois Agricultural College adds to its study of corn special investigations of wheat. It looks now as if we should, as a consequence of this sort of work, be able to bring our wheat yield up to an average of forty or even fifty bushels to the acre. The effect of selecting corn for chemical content has also altered the physical characters of the different strains. A low protein strain and high oil is being developed, and on the other hand a low oil and high protein.

I have the annual report of the station connected with the University of Minnesota. It covers a wide range of investigation concerning storage crops, of high value throughout the Northern States. Its work done in the entomological direction is marvelously complete, and by no means confined for value to Minnesota. Its discussion of farming as a business constitutes an essay that can hardly be surpassed in general value. It shows that a majority of farms of medium size suffer from bad management as compared with larger farms, and do not yield as good profit with the least expense of capital and labor. What is to become of our present farming system—will co-operative effort considerably increase, and will tenant farming grow as it has grown during the last twenty years? What we want is a

race of farmers thoroly educated on all questions of economics and farm management. Hard work does not always win.

The problems of the Southwest are peculiar and unique. The New Mexico College of Agriculture is busy with the possible value of cacti as animal food, as well as its possible source as a food for man. The bulletins on this subject are extremely interesting. No. 64 discusses the tuna as food for man. There seems to be just about the same chance for the development of this fruit as there is for making something valuable of the paw-paw and persimmon. Some varieties are already largely cultivated and highly prized by the Mexican people, and one or two sorts are of decided value either eaten fresh or cooked. When dried some kinds show over 50 per cent. of sugar. As food for stock the use of cacti has also been carefully studied. Mr. Burbank's investigations along this line have become more notorious, but they are not more valuable.

Several of the colleges have been experimenting on the best methods of cooking for digestible results, and in all ways the tendency is to establish a code of pure food, and to eliminate from our diet those articles which are indigestible, or rather the spoiling of digestible articles by erroneous preparation. Corn has been a much abused product, and it is now well understood that pork, if properly placed upon the table, is by no means a bad food even for weak stomachs. The value of nuts as food has been a special study in California, and there is a large increase in the production of peanuts owing to the development of a popular taste for peanut butter. Two of the colleges are studying this modest little product of the South. We must learn how not to exhaust the soil for its production.

The Storrs Experiment Station connected with the Connecticut Agricultural College is specially busy with all forms of the dairy question. It is studying the bacteria of dairy products, the efficiency of the dairy cow, and the manufacture of soft cheeses. We hope it may co-operate with the Cornell determinative effort to reconstruct a native American breed of cow. It has been officially announced that our importation of foreign breeds has led

to the suppression or obliteration of one or more exceedingly valuable native strains—one of these is sometimes referred to as the "Mohawk Valley cow," a noble creature, and probably the best all round cow ever known in the United States.

President Butterfield, of Massachusetts, is particularly interested in the introduction of agriculture in our public schools. The Massachusetts College is also taking leadership in the federation of rural social forces. This was superbly illustrated by the "Conference on Rural Progress," held at the college one year ago. It certainly was one of the most notable efforts in the way of organizing a whole State under the leadership of an agricultural college. The idea of "culture" seems to be more closely associated with the work at Amherst than at some other institutions. In other words, it is getting to be understood and felt that industrial education is the central thought of a right sort of society. The Agricultural College stands at the center, and is making the home and the State, not merely teaching boys how to grow potatoes and beets. As President Butterfield says, "The agricultural college is to lead in the work of federating the various efforts for rural betterment." I am glad to note in this connection what Commissioner Draper, of New York State, has to say:

"While the schools are providing every conceivable kind of instruction for the head workers, the hand workers leave instruction altogether when they leave the elementary schools. To be consistent we must do less for the head workers and more for the hand workers. From the bottom to the top of our school system the eye is on the school above, and the school above leads to a professional or a managing employment, rather than to a trade vocation."

President Roosevelt took very similar ground when, last summer, he addressed the Michigan Agricultural College. He came very near bridging the breach between classical and technical schools, when he endorsed James J. Hill's suggestion that there should be "a model farm created in every agricultural county of the United States"; a suggestion quite similar to that of Professor Whitman, at Woods Hole, who calls for "farm laboratories," or farm colleges.

In this study of what the agricultural

colleges are at, we must note that the topics and problems are largely sectional, and may be placed in half a dozen groups. The Northwest discusses grains and hardier fruits. The Midwest considers corn, wheat and markets. The Southwest discusses cacti and forage plants, together with irrigation. The Southern States are interested in citrus fruits, improved corn and leguminous plants. California is largely interested in improved fruits and nuts, while the problems of help and markets constitute strong side issues everywhere. In New England and New York we find the social correlation of agricultural education has come to the front. Everywhere are prominent the problems of breeding new plants and animals, seed selection; soil analysis; insect pests and fungus diseases; development of better machinery; the construction of better roads; the gathering of nitrogen from the air, and making poor lands rich; keeping cattle healthy, and combating plant diseases; and in all ways, and at all times, making these efforts contributory to happier homes and assured prosperity. Agriculture is the basis of our natural life, and the other industries are and always must be contributory and supplementary. The agricultural colleges are simply taking every known science and applying it directly to production.

It will not do to overlook the fact that our agricultural colleges constitute parts of a national scheme. While each college belongs to its own State, and is investigating local problems, it is nationalized by the fact that it was founded by the Government at Washington, from proceeds of national land. If now the Government will bring together all the departments that are working along parallel lines, will correlate them into a vast National Industrial University, we shall have a completed system—co-operating better than at present, and more directly reaching the whole people. We have also at Washington that superintending power which should be recognized as the National Industrial University, rather than as a branch of the Executive Department. Secretary Wilson might or might not hold his place in the Cabinet; it is far more important for agriculture that he be

considered the chancellor of a great industrial educational system, that touches every State, and influences the work of the most obscure farmer. If any one wishes to understand the American Republic from the industrial standpoint, there is nothing else that will give him such a complete vision as the little volume which comes out annually under the modest title of "Report of the Secretary of Agriculture." It is difficult to express in dollars the value of this work to farmers, and therefore to the nation, but a committee of the House of Representatives once fixt it at "two hundred and thirty-two millions" annually. If you will multiply this by five or six you will come nearer the truth. It covers everything in the way of increase of crops; weather forecasts; meat inspection; new plants and animals; improved corn, cotton and fruit; forestry and irrigation; destruction of insects and other pests; including the stamping out of diseases that affect ourselves as well as our property; protection of birds and game; the development of farmers' institutes; irrigation and drainage; methods of road construction and maintenance; and I know not what else of both national and international importance.

The American people is rapidly taking this whole subject to heart, and there are signs that it will make its demands known. The petty appropriations at Washington for agriculture, as compared with the Army and Navy, have been jolted during recent sessions, in a way that indicates a reversal of this method of doing things. A billion is required in ten years for the Navy, and during the same time a petty two hundred thousand dollars for all the interests wrapt up in agriculture. Our industrial colleges should not become the recipients of the charity of oil kings; they should be directly cared for by the State, as State institutions, and at the same time by the National Government as parts of a great national system. I wish the money that

has been spent on a naval display around the world could have been merged in our industrialism. Will the American people never wake up to realize that our strength and our glory are alike in wisdom and knowledge, and that our safety depends upon the elevation of manlier ideals. Our danger today does not rise from Japan's guns, but from the breeding of anarchy in our own social system. Our security is not in weapons but in industry.

This is our hope and security that there is an increasing demand for industrial education. Such classical institutions as Chicago University are opening agricultural courses—ten wealthy men, owning farms near Chicago, offering the use of their property for advanced and practical courses in land tillage. Cornell University recently admitted the son of the Maharajah of Cooch Beha, India, who did not enter the classical schools but the agricultural college. He proposes to aid in developing the agriculture of his native land. We are steadily approaching the time when every farm in America will be a laboratory and a test school; will constitute, in fact, a branch of the agricultural college. Labor will be applied science, and educated to that end. The emphasis will be taken from theory and knowledge, and placed on achievement.

My review, after all, is compelled to omit some of the most valuable work of our industrial colleges. I have no room for it. We need annually a great American convocation of Agricultural Colleges, for the comparison of notes, and for the mapping out of co-operative effort. At present the most valuable results are not laid systematically before the whole people, while the same subject is frequently under investigation in several institutions, needlessly. We have a vast American university; why not recognize the fact by an annual convocation or congress at Washington?

CLINTON, N. Y.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Fred Warner Carpenter

Secretary to the President.

TO be Secretary to the President means much more, today, than it meant a few years ago. Ex-Secretary of the Treasury Cortelyou, when he occupied the office, put into effective operation his rare ability to systematize.

Loeb carried on the development with a master hand, and Fred Warner Carpenter, the present incumbent, is an ideal successor to those two ideal secretaries. Two men could hardly be less alike than Loeb and Carpenter, but the world will do well to keep the same weather eye for Administration straws upon Carpenter which it kept on Loeb. He will not disappoint. He has it in him, and when he leaves his present office for something higher up—as he is sure

to if he does not kill himself with overwork—it will be found that he has given it another lift in importance and influence.

The time has long past when the secretary sits at his Chief's elbow, a stenographer and utility catch-all. He sits supreme, in his own sumptuous office, with a secretary of his own, with a large force of clerks in rooms opening upon one side, and in constant communication with his Chief, whose rooms and offices open upon the other side. He must be a cyclopedia of details upon every subject which can come up. He is essentially the Presi-

dent's *alter ego*, receiving his unrestricted confidence, frequently called upon for suggestion—for in many matters he must be better posted than his Chief—and upon his judgments and conclusions the President must often rely as tho they were his own. Hundreds of letters every day pass thru his hands in the White House mail, and most of them are answered, tho

few can by any possibility be called to the President's personal attention, and the number is smaller still to which he can even suggest the reply. The secretary to the President must possess an inherent genius for doing and saying the right thing at the right time, with few seconds for consideration.

The secretary's office is assailed from morning till night by seekers after everything. Like the mail, most of them must be finally disposed of there—tho it requires both skill

and patience to convince them of the fact—while many of the wise ones know that the safest way to approach the throne successfully is thru the office of the secretary; while more and more the White House has become the purveyor of all Administration news to the press, and the secretary's office literally swarms with newspaper men. The secretary is the safety vault for all secrets that must not escape, the mouthpiece for all that is to be given out, and responsible for all shades of diction and contradiction.

The office requires the delicacy of a

Copyright, 1908, by Harris & Ewing.

FRED W. CARPENTER.

diplomat, the strategy of a statesman, the facility of a politician, the courage, keenness and common sense of all successful men, and the patience of Job. There is no small compliment in the general comments of the press that Carpenter is the right man for the place. He was well tested as secretary to the Secretary of War. Indeed, he has been with President Taft ever since he graduated at the bar in Minneapolis and returned to his home in California intending to practice, when, thru the suggestion of a friend, he received an offer to become stenographer for Judge Taft, who was then President of the Philippine Commission.

Carpenter is a bachelor, boyish looking in spite of solemnity of feature and dignity of demeanor. He is slender and not over tall, with a smooth-shaven face that is narrow and long, topped by thick brown hair and heavy brows over unusually large, dark eyes that have a way of looking directly into the heart of things and seeing all that is worth seeing instantly. He has a "dominant nose on the order of intellect," and a mouth that can close in a manner indicative of the end. His voice is low. His words are deliberately spoken. There is never the appearance of haste about him, but in his quiet way he is a marvel of execution. Few men turn off the amount of work which Carpenter performs. His mildness is sometimes misleading, but it saves time to take his gentle assurances as final and sufficient. Every one likes Carpenter, and will like him better with time.

Brig. Gen. Wm. W. Wotherspoon
President of the Army War College

To Secretary Root, while Secretary of War, the country is indebted for the first successful steps toward establishing a General Staff and an Army War College—in other words, a means of collecting, preserving and disseminating the best efforts of the best brains in the army. It was thirty years behind Germany and ten years behind even Japan. But the Army War College has grown and developed with astounding strides, and for what it is today, and promises to be in the near future, we are indebted to Brig. Gen. William W. Wotherspoon, the president

of the college. He is so reserved and unobtrusive that one must hunt to find it out, but he is one of the best equipped, best respected, and most influential officers in the United States army.

When one considers the jealousies, antagonisms and prejudices in official circles which handicap a man not to the manner born thru West Point graduation, it is all the more satisfactory to find a man in this high position who did not receive his education at the expense of the Government. The War College, too, should be better known—and better appreciated as the result—among civilians; as it would be but for the peculiar anxiety with which the officials of the War Department guard every item pertaining to the army, as tho it were a profound and sacred secret which it must not be given to those who pay the bills to know.

General Wotherspoon has not the secretive instincts characteristic of the fraternity, but it is the set policy of the department, and subordination is Heaven's first law in the army. He received his appointment from President Grant, being made second lieutenant of the Twelfth Infantry in 1873, so that, tho he

BRIG. GENERAL WILLIAM W. WOTHERSPOON

did not begin on the bottle at West Point, he has been a long time in the atmosphere. But it has not been able to overcome in him a friendly compatriotism with the world outside of uniforms. He is cordial and democratic, meeting one half way and leaving the conviction that he is a vital part of the world at large as well as of the army—no matter how big the "A."

General Wotherspoon is a small man, admirably put together; athletic, energetic; nervously quick in every motion—especially in the motion of his keen, clear eyes; with a stern face, sandy hair—what there is left of it—heavy brows, and a fierce, sandy mustache. He is an ideal soldier—every inch of it—but wait till the quick smile, which is always ready for action, lights up his face; feel the warm clasp of his hand; catch the cordial greeting in his deep voice, and you realize a man as ideal as the soldier. Possibly for the retention of civil sympathies the general is somewhat indebted to his wife, who is among the most charming and admired of Washington's social battalion.

He is close upon fifty-nine years old, but he does not show it, either on foot or in the saddle—not even in the test rides and walks of recent date. He was born in Washington—born with military proclivities, for his father was surgeon in the Mexican army. He entered the navy when he was twenty, in the civilian rank of master's mate—an obsolete order of the days when a master had to be on board to show the captain how to navigate. When he was twenty-three he left the sea to begin his career in the army, under the commission from President Grant. For a long time he was fighting Indians, moving westward as civilization crept up to the posts, and later in the Philippines, where he served for four years.

His varied experiences, aided by inherent human sympathies, render him a signally appropriate selection for the presidency of the War College, in which office and as member of the General Staff he will play an important part in the gigantic task of reorganizing the army, which for some time has occupied the attention of the department.

S. N. D. North

Director of the Bureau of the Census.

"Foxy Grandpa" they call him in the building up near the Capitol, where the Bureau of the Census has temporary headquarters, while waiting for the mansion which Congress has decreed it. Director North is his other name, but it fits him no better. He is director of the Bureau of the Census, but he certainly has many kind and grandpaish ways. His thick, snow-white hair, his big gold glasses, thru which most benevolent win-

S. N. D. NORTH.

dows of the soul open, his smooth-shaven face, his soft, low voice—manipulated by lips which do marvelously articulate—his quiet, gentle demeanor, all suggest the paternal once removed. Then there's the "foxy" part—not unkindly meant—which is there whether you see it or not.

Director North knows all about the world, for he has been there. Many, many years ago he was editor and engineer of the *Utica Herald*, when its influence was mighty to save—or to do the other thing. Then he was secretary of the Wool Manufacturers' Association

in New England. That was about the time the Dingley tariff bill was under consideration in Congress. He came to Washington to represent those interests, but he was a friend of Senator Aldrich and was let into all the secret meetings of the Finance Committee, which then, as now, managed the Senate end of tariff revision. He was let in as an unpaid clerk—unpaid so far as the Senate was concerned—and had a great deal to do with the protection of the woolen interests of New England in that bill.

Senator Aldrich liked North—as every one who knows him likes him—and when it was proposed to do away with haphazard census taking and establish a perpetual machine for the purpose, North got the position of director. Till now the

bureau has been an unobtrusive incident of government, comprising some seventeen executive heads and six or seven hundred clerical workers, doing things, of course, and in the main preparing for the coming Federal census—the first since it became a permanent institution.

Director North will be commander of an army of some sixty thousand during the rush months, and the estimated cost of taking the census will be about \$13,000,000. His management of the work will be watched with interest all over the country. A really wonderful card system, "done by machinery," has been arranged, and promises great results in accuracy, speed and easy reference as the result of the past years of work under Director North's administration.

A Triolet of Spring

BY OLIVE MONTAGU KINDERSLEY

THERE'S a tangle of song in the air,
And a tumult of love in my breast,
Is it spring they are welcoming there?
There's a tangle of song in the air,
And a perfume that's fragrant and fair,
That blows from her land in the West.
There's a tangle of song in the air,
And a tumult of love in my breast.

There's a note that is plaintive and sweet,
For the wild dove is wooing his mate,
And I hear the light tread of her feet,
There's a note that is plaintive and sweet,
As she comes to the vale where I wait,
There's a note that is plaintive and sweet,

Did you hear what we said in the wood,
On that wonderful morning in spring?
For you listened as long as you could—
Did you hear what we said in the wood,
When she came to the spot where I stood,
And I gave her the little gold ring?
Did you hear what we said in the wood,
On that wonderful morning in spring?

LONDON, ENGLAND.

The Closer Union of South Africa

BY H. D. GOODENOUGH

[Mr. Goodenough has been a missionary in Natal and the Transvaal for many years, and has a special interest in the welfare of the natives and in all the political interests involved.—EDITOR.]

DURING the past week a meeting of considerable importance as regards the union of the South African colonies has been held here in Johannesburg. In fact it has been a week of important meetings thruout South Africa. The strong Dutch political association of the Free State called the "Unie," or the Union, met in Bloemfontein and unanimously voted in favor of the Constitution. The opposition party who call themselves the Constitutionalists have done the same. The Dutch association in the Cape Colony, the Bond, is now in session, and it is expected that they will support the movement. One of the most remarkable things about this movement to secure the union of the colonies of South Africa is that no party lines have been drawn. The leaders of all parties have favored the movement, and any opposition that there is comes from free lances in any and all parties.

The meeting to which I refer above as held in Johannesburg, was a meeting of delegates of "Closer Union" Societies. These societies have been formed thruout South Africa during the past year for the purpose of studying and promoting a closer union of the South African colonies. This broad term "closer union" was adopted by the politicians and Governments in the first place as a convenient phrase to describe what all believed in, without too closely indicating just how close that union was to be.

These "Closer Union" Societies have done an important and influential work in preparing the public for union. They

have prepared and published two works bearing on the questions involved. The first of these entitled, "The Government of South Africa," in two volumes of about 900 pages, deals with the history and present Governments, and the problems arising from their separation. The second work in one volume is called "The Framework of Union," contains the Constitutions of the United States, Canada, Australia, Switzerland and Germany in full and a comparison of them. Thus we have in the first of these two works a statement of the problems to be solved, and in the second a thoughtful study of the methods adopted in solving somewhat similar problems in the countries named. This thoughtful study is a hopeful sign for the future. In the Public Library of this town certain books have been placed one side, filling two long shelves, over which is the following notice: "These books are recommended to those who are interested in the question of closer union." American readers will be interested to know that nearly three-fourths of these books are American. The writings of Madison and of Hamilton, both edited by H. C. Lodge, the "American Statesman" series, Histories of the United States by Woodrow Wilson, McMaster, Rhodes; Nicolay and Hay's History of Abraham Lincoln; Bryce's American Commonwealth; Moore's American Congress, are among the works on these shelves.

When the name of "Closer Union" was adopted by the Societies the question whether the union should take the

form of a confederation after that of Canada or Australia, or whether the union should be a unification of the colonies, was an open one; but long ago the decision was reached by an overwhelming majority in favor of unification. Beginning with the present year, a magazine called the "State," the organ of the Closer Union Societies, has been published, and has ably advocated unification.

Delegates ninety in number from about 50 Closer Union Societies gathered here last week and for three days discussed the Constitution. Many amendments were offered, discussed, and then voted down. Delegates from the Cape wanted the native franchise more firmly entrenched by providing that Parliament might not change the franchise for natives in Cape Colony unless a majority of members from the Cape voted in favor of the change. The provision now is that the franchise may not be taken away from the natives unless two-thirds of the members of both Houses of Parliament so vote. The Cape delegates wished to further safeguard the rights of the natives by the proviso that this two-thirds vote must contain a majority of the Cape members. On the other hand other delegates wished to doubly lock the door against admitting the natives to the franchise in the other colonies. But these and all other amendments were voted down, and on the third day a unanimous vote for the Constitution as it is was carried. This of course does not show that all are perfectly satisfied. It only indicates that the feeling in favor of union is so strong that they are not willing to run the risk of failure by insisting on any amendments.

It is generally admitted on all sides that union under the Constitution dooms racialism as between British and Boer. There has been nothing finer than the spirit shown by the leaders of both races. It was an English delegate at the Convention that proposed that the Dutch and English languages should be made absolutely equal thruout the Union, both being official languages. It was also an English delegate that proposed that the old name of the Orange Free State should be restored. All the speeches since the Constitution was published, so far as regards the leading men thruout

South Africa, have been conciliatory as between the two white races. The only discordant note has come from Natal—the one preponderatingly English Colony. And even there it is the smaller politicians that have appealed to racialism and the fear of Dutch dominance in South Africa. But under proportional representation it will be impossible for either race to dominate.

The past week has been noteworthy as witnessing the completion of the trial of Dinizulu, the son and heir of Cetewayo, the former king of Zululand. Dinizulu was arrested fifteen months ago. Zululand was put under martial law and remained so for the greater part of a year. It was charged and of course "officially" denied that there were many cases of illegal whipping of natives under martial law in Zululand. These charges were made by sworn affidavits, but the Attorney General refused to investigate. A preliminary examination extending over months gave much color to the charge that it was a dragnet to get evidence against Dinizulu. However, he has had a fair trial which has lasted over three months, and has cost the Natal Government £11,000. Out of 23 counts in the indictment he has been acquitted on 20. On the other three counts he has been sentenced to pay a fine of £100 and to be imprisoned four years, the time to count from his arrest 15 months ago. He was found guilty of harboring rebels. It may seem pretty severe punishment for taking in men of his own race, sheltering and feeding them. It is a more severe punishment than was meted out to any of the Dutch in the Cape Colony who were guilty of armed rebellion. But it must be remembered that Dinizulu was a Government officer in a position of great responsibility. I do not think he has been too severely punished. A difficult question will arise at the expiration of his sentence. Of course it will be impossible for the Government to restore him to his place as a Chief, neither will it be expedient to allow him to return to Zululand.

One more noteworthy event of the past week I will mention. It is the publication of a notable address by Lord Selborne, the High Commissioner on the Native Question. The occasion was Degree Day at the Cape University, where

the degree of Doctor of Laws was conferred upon him. The address occupies nearly nine columns in the local press, and is by far the ablest and fairest of anything which has appeared in many a long year. It surpasses anything I have seen in a residence of a quarter of a century in South Africa.

This native question is the great problem confronting South Africa. And yet outside of Cape Colony there is nothing to show that many responsible politicians have any other solution but keeping the native down. There are some able men who see the impossibility of doing this, and Sir George Farrar, the leader of the Opposition in the Transvaal Parliament, said the other day in a public speech that we could not always sit on the safety valve. But the color prejudice is so intense that probably not one member who would publicly favor the franchise for the natives, however limited and guarded it might be, could get a seat in Parliament. One candidate for Parliament at the last election, in a constituency almost wholly English, publicly stated that the only way to civilize the natives was with a rifle, and he went in by a considerable majority.

Lord Selborne begins his address by disclaiming anything official in his utterance. He starts with six searching questions which he said he had asked about two and a half years ago but to which he had received no reply from his many correspondents on the native question. He proceeded to answer the questions himself. Briefly summarized his replies, which will also indicate the questions, were as follows:

1. The native as a human being is capable of indefinite development, and the white man may not say at any point in that development, "Thus far and no farther."

2. To the question what means does the white man propose to use to stop development, his answer is that there are no means, that tho the white man might go far in his efforts to repress, such efforts are doomed to failure.

3. The effort to repress the development of the native, when stript of all embroidery, means slavery.

4. Granting that the native is bound to develop, it will be a short sighted policy to leave him to himself.

5. Such a policy is fraught with danger to both races.

6. Admitting responsibility, in what manner shall the white man assist in the development of the native? and the answer to this question really forms the larger part of his address. The paragraph with which he introduces his answer deserves to be quoted in full:

"How is he to perform his task? In the first place, as a wise man, he will take precautions not to make the task harder for himself than need be by making the native regard him with dislike and his efforts with suspicion. I will leave out of account altogether the unwise and hard things said by reckless and unthinking white men about natives; I will only ask white men if they have ever calculated the cumulative effect on the natives of what I may call the policy of pin pricks? In some places a native, however personally clean or however he may have striven to civilize himself, is not allowed to walk on the pavement of the public streets; in others he is not allowed to go into a public park or to pay for the privilege of watching a game of cricket; in others he is not allowed to ride on top of a tramcar in specified seats set apart for him; in others he is not allowed to ride in a railway carriage except in a sort of dog kennel; in others he is unfeelingly and ungraciously treated by white officials; in others he may not stir without a pass, and if, for instance, he comes, as thousands of natives do, from the farm on which he resides to work in a labor district, he does not meet with facilities but with elaborate impediments. In the course of his absence from home he may have to take out at least eight different passes, for several of which he has the additional pleasure of paying, tho he would be much happier without them; and it is possible in an extreme case that he may have to conform to twenty different pass regulations. Now let a white man put himself in the position of a black man and see how he would like it, and let him ask himself whether such regulations and laws really make his task easier?"

I wish I had space to quote more from this address, which will have considerable influence even in this land of race prejudice. Lord Selborne has been very popular with all classes.

MAYFAIR, JOHANNESBURG.

The View of a Graduate Student

BY FREDERICK E. SHAPLEIGH

FOR nearly five years, as undergraduate and graduate student, I have lived among the men and women of Wesleyan University, and, a firm believer in the higher education of both men and women, I have watched with peculiar interest the problems of co-education in this institution. That these problems have been perplexing, is evident to all who understand the situation; but I do not believe they have been unavoidable or insoluble.

The reports circulated concerning conditions at Wesleyan have, very largely, been presentations of only one side of the truth. The recent letter appearing in your columns, mentioned by you as "an authoritative statement from the President of the Undergraduate Body," is so misleading that I cannot refrain from explaining the real situation.* Of course, the writer of that letter has the privilege of using his official title, but from its use it should not be inferred that his article is the authoritative expression of the entire student body.

Your correspondent says, truthfully, that the undergraduates have never attempted to keep their sentiments "hidden under a bushel." But he oversteps when he states, "Our attitude has been throughout one of passive ignoring." On the contrary, altho the policy of "passive ignoring" has been the avowed policy of the undergraduate body, the real attitude has been rather a sporadic series of bold and flagrant insults connected by more frequent slight insults and the daily ignoring of many of those slight courtesies which are inborn in the true gentleman. To be sure, the more flagrant insults are not of daily nor of weekly occurrence; but in their results upon the charac-

ter of the men who practice them the more frequent discourtesies and lack of courtesy have a far more deleterious effect. There is a great deal of truth in the recent statement of one of the Wesleyan undergraduate women, "No man can long remain a student of Wesleyan without undergoing a deterioration of character," that is, the attitude of the men reacts upon them and tends to deaden the finer, chivalrous nature. The specific instances of discourteous and insulting conduct are often known only to the parties immediately concerned; other instances are and have been the common talk in the college community. THE INDEPENDENT may or may not have received exaggerated reports of affairs; but the facts of the past ten years abundantly justify the conclusions drawn by it. It must be admitted by impartial and well-qualified observers that the attitude of the men toward the women is *not* a negative, but a positive attitude—an attitude that passes not infrequently from mere lack of courtesy over into bold insult toward the women students.

While "the policy adopted by the students has always been to have no social relations with the girls," strangely enough some few of those same college girls presumably of the minority mentioned by your correspondent, have been regularly attending fraternity social affairs! The attitude of these men is inconsistent. They say that no Wesleyan woman shall be invited to a college function, yet they constantly make certain exceptions—but not frequently (as it happens) to fiancées—I call the man a moral coward whose foot crosses the threshold forbidden to his fiancée! And yet this is an everyday occurrence.

Moreover, the statement that "the majority of the women in college are not those that would be invited

*The "The View of Wesleyan" will appear in The Independent, March 4th, 1903, p. 10. It is the President of the Undergraduate Body, March 2nd.

to college social affairs under any circumstances," is a baseless slander upon the character and social standing of the girls, as it is also a reflection upon the institution which admits them. Wesleyan is known as a college for students of limited means—as is shown by the number of scholarships granted—and it is not probable that the average social standing of the men is as high as the average social standing of the women students. So far as social standing, character and also scholarship are concerned, the women are at least on a par with the men.

This no impartial observer can deny.

From the reports circulated, the impression is gained that the Wesleyan men are unanimous in their ill-treatment ("passive ignoring," so called) of the women students. This is not true. There are four classes of men here. First, the active opponents of coeducation, and especially of coeducation at Wesleyan—men who have little or no respect for womankind and who do not hesitate to let their attitude be known. Second, those who for popularity or for college political reasons deem it expedient to oppose coeducation. These two classes form a minority, yet from them emanates the spirit that dominates the entire student body, and from them arise practically all the real insults offered to the women. The third class is the largest; it is made up of those who drift with the current, those who let others do their thinking for them. Their motto is, "Let us do as the others do," and their attitude toward the women rarely passes beyond a neglect of the common civilities and courtesies of

life. The fourth class, a minority, recognize the injustice and anti-Christian nature of the policy advocated and practised, and yet, for lack of numbers, can openly in no way check the tendency. It is a significant fact that the most of these men are above the average in scholarship, industry, and character, and are largely men who are not living on the monthly instalments of indulgent fathers! In other words, the men, who, while perhaps not favoring coeducation at Wesleyan, are consistently and persistently treating the women students as women and not as inferiors, are the men who

have tasted of real life and who know that there are more serious problems to be met and higher ideals to be sought than the maintenance of a policy which lowers the estimate of womankind and thereby degrades the moral nature by constantly fostering a feeling of superiority.

That such an attitude could have been allowed to develop and thrive in a Christian college of such high ideals and with such a cultured and broad-minded faculty as Wesleyan possesses, is almost incomprehensible. However, the evil exists, and has existed unchecked, save by the comparatively ineffectual efforts of a small body of students.

Let it not be said, tho, that there are *no* "gentlemanly men" at Wesleyan, for there are those, not large in numbers, but large in heart and in faith in the equality of humankind, who have lived, in so far as they were able, as *gentlemen*, in the truest sense of the term.

WESLEYAN UNIVERSITY, MIDDLETOWN, CONN.

April

BY SARAH JEANNETTE BURKE

The first spring violet, trembling, bloomed
Beside a crystal pool;
A tardy, snowflake, falling, cried
"You little April fool!"

But a child's dimpled fingers found
The violet in its bed;
The snowflake's short life ended with
The cruel word it said.
NEW YORK CITY.

Literature

The Story of Thyrza.*

Alice Brown belongs to the literary family of Mary Wilkins Freeman and Sarah Orne Jewett. She seems to be the second cousin of the one and the grand niece of the other—and naturally inclined to stretch a trifle further than their New England in her imagination. But in this last story she has held as close to the soil as a hoar frost. She has maintained the same winter relation between it and the people who live upon it in her story that is always to be observed in your faithfully written New England story. The scene opens upon Thyrza, the heroine, in her childhood. And the author is to be congratulated upon the nearness of the child to the world about her. She knows that secret which few authors ever discover, that only children are really near and kin to life. As they grow older, they withdraw from the passion and poignancy of it as Thyrza withdrew. But we come upon her when she is still enjoying her earth-intimacies with the little things in the grass, still suffering with a child's exaggerated emotions from wounded pride, still without protection against anger or duplicity, playing in her playhouse on Leafy Road with other children of the Leafy Road neighborhood. And now the Puritan nature of her asserts itself in inspirations that lead to sacrifice as inevitably as life leads to death.

She is the little thin brown spirit of the prayers of her Pilgrim forefathers come back in an ugly child with tormented eyes. The incidents by which her progress to womanhood are indicated are all purely romantic, but of the granitic romanticism of New England. Some women are by instinct the destroyers of their own lives, either for good or evil as happens. So Thyrza went forward in the years by laying hers upon first one altar and then another till the day came when it went up in a well-burnt offering to love and left her in that state of noble disgrace, so common in fiction—and in life—

without any author's noble interpretation of it. She becomes the mother of a son a few weeks after the father of her child marries her sister. The situation is monstrous and almost peculiar to tragic New England fiction. But if the reader infers that this is the author's method of dramatizing the desecration and destruction of a woman, he has missed his cue. She is putting Thyrza together to stay by the greater law of pain and giving her a chance at all the self-sacrificing a human soul is capable of achieving. First, Thyrza refuses the love and protection of an honorable man. Then she enters upon her self-imposed sentence of hard labor for the sake of her son. There is one point upon which the "rescue workers" and the novelists agree, and only one—that the fallen woman must cling to her child and all the evidences of her disgrace. The rescue worker demands it on the theory of redemption thru great tribulations, the novelist because if art can produce a great pang out of a situation it is justified. In this way Thyrza is rescued.

As the years pass she seems to tread the measure of a fine old Puritan hymn. Her silence becomes golden, her face a litany of prayers. At last in her middle age she feels the "approach of happiness." This was first a certain wearing of the soul into peace, then the success and fortunate marriage of her son, and finally the return of her lover. But even a second-cousin New England novelist cannot resist the temptation to end her story with a final shattering blow at happiness. Pan gets into the garden with Thyrza and her lover in the last chapter. Thyrza feels the mischievous presence as she bids him adieu for the night. The next day she is summoned to his deathbed, and they talk, like two actors waiting in the wings behind the stage, of another life. This dialog marks the point where Alice Brown crosses the New England line in literary relationships, and confesses a sort of light bond to the trip-

ping order of things. Mrs. Freeman would have let the tragedy stand without dashing the effect with a biological explanation of sin. And Sarah Orne Jewett (who, if she could have gone on with her writing, might have surpassed either one of them) would have sent Thyrsa to her grave in a black sun-bonnet and a contrite spirit, instead of leaving her mincing out of the last chapter as a fine, rich, happy lady with a sort of sky blue aura. Such an ending is fortunate, but somehow it thins the tragedy to an obvious fiction.

Chandler's "Trial of Jesus"*

AMONG the special subjects in the gospels inviting extended treatment in order to bring out their full significance, the trial of Jesus is conspicuous. And we are fortunate in having had within the last ten years three careful estimates of it, which are interesting not only because of their individual handling of the theme, but also because of the way over which the writers have approached it and the legal training back of each author. It is a theme naturally attractive to lawyers. In 1899 Mr. Innes, an English advocate, gave us his monograph; in 1904 Mr. Rosadi, an Italian jurist, published his able work, and now we have the same subject presented to us in two good-sized volumes by Mr. Walter M. Chandler, a member of the New York Bar. The size of the work is at first staggering, for one wonders how so much can be made out of the relatively few verses of the gospels. Especially is this the case when one compares the volume of Mr. Innes, containing one hundred and twenty-three pages, with the seven hundred and forty-seven pages of Mr. Chandler. If one wishes simply an estimate of the trial itself, then there is much in both Rosadi's work and Mr. Chandler's which is superfluous. We need neither an account of Jesus's teachings all the way along thru His ministry, as Rosadi gives us, nor the long dissertation on Hebrew Criminal Law, which Mr. Chandler offers us in his first volume, and his chapters on Græco-Roman Paganism, the character of the

Sanhedrists and the acts of Pilate in the second volume. Rosadi justifies himself, however, by "noting every act of the life of Jesus which might come within the fixt domain of contemporary penal justice," while Mr. Chandler's aim is not simply to discuss the trial in itself, but to place it against the background of Jewish criminal law and procedure and also to "give coloring and atmosphere to the painting of the great tragedy." In seeking so to do he has given us the completest study of the whole matter yet presented to English readers. His interest from first to last is that of the legal mind. The facts of the gospels are not considered with reference to a literary criticism of the gospels. They are treated as the testimony of any witness would be. The pith of the book as far as the trial is concerned is found in Part III of Vol. I, which the author terms "The Brief," and in Part I of Vol. II, where the Roman trial is considered. The serious question as to how far the Mishna may be used in determining the illegality of the action of the Jews on the night of the arrest of Jesus Mr. Chandler has not overlooked; indeed he has, before considering its regulations, made sure of an answer affirming its authoritativeness in those days. In this he is sustained by weighty authority, as he also is in maintaining that the Sanhedrin in Christ's time was in existence and active. In a pamphlet on the trial of Jesus from Jewish sources (1907) by Rabbi A. P. Drucker, the assertion is made that the Sanhedrin was not in existence at the time of Jesus. In presenting the points at which the Jews violated the law, the author has followed a method which is singularly clear and helpful. The style of the whole book is also clear and forceful. Mr. Chandler shows a judicial temperament where nice points need weighing, and he has prepared himself for his task by wide reading. Aside from the treatment of the trial itself, the book contains a great amount of illuminating material regarding Jewish law, Roman law and the various personalities related to the trial. The work deserves wide recognition as a reverent, painstaking, comprehensive study of a so-called trial, which is of perpetual interest because of its critical importance.

*THE TRIAL OF JESUS, from a Lawyer's Standpoint. By Walter M. Chandler. 2 Vols. New York: The Empire Publishing Co. \$5.00.

In all that pertains to the bookmakers' art, these volumes are certainly praiseworthy. Clear, good-sized type and appropriate illustrations make the whole very attractive to the eye.

With the Night Mail. By Rudyard Kipling. New York: Doubleday, Page & Co. \$1.00.

Considered merely as a *tour de force* Kipling's latest short story, *With the Night Mail*, is unequalled in its line, either by himself or any one else. It is a theme that has often been attempted; a trip on an airship in the year 2000, but Verne, Bellamy and the host of others who have dealt with the mechanics of the

future have been unable to manage their many inventions. Wells alone has been tolerably successful in keeping the human interest from being swamped, and he does it by a discreet reticence, about mechanical details. But Kipling makes his story out of this refractory material; invents a new technological vocabulary, and teaches it by his old trick of assuming that the reader already has the knowledge that he is casually imparting to him. How Kipling could handle railroad traffic was shown by that wonderful transcontinental trip in "Captains Courageous," as well as by the machine fairy story of ".004." But we all know something of the language of the railroad

some of us feel the romance of it, so his undertaking in this new field is more difficult because he has to do it all without help from the reader. He has to create his own atmosphere, both verbal and emotional. What will the critics who found fault with "McAndrew's Hymn" and "Their Lawful Occasions" because they did not know all the technical terms used have to say to this story? Here all the terms are unknown not merely to literary men but to everybody of this generation, yet the story is readable and comprehensible enough. Kipling does not rely upon the knowledge of his readers, but on their intelligence.

The Pilgrims' March. By H. H. Bushfield. New York: Henry Holt & Co. \$1.50.

Puritan and Bohemian have never loved each other; and the struggle between the camp whose watchword is self-denial and the opposing one, where self-expression, if not self-exploitation, is the ideal, is an endless conflict of unreconcilable forces. *The Pilgrims' March* attempts the story of the conflict of Puritan prejudice and artistic license in the life of a young English sculptor. The little group of pilgrims into which

the boy is thrown by a cast of fate is drawn in cold, hard lines; these evangelical people are unnecessarily unlovely and devoid of imagination, but they have a sort of grim reality. The esthetic circle is more nebulous, nor is it, in spite of its freedom, much more attractive. The heroine is healthily and speechlessly English, always going down to the river to bathe, with a towel about her tanned neck. This perpetual insistence upon the bath in English novels is a little wearing. Why not take it for granted that the leading characters are properly rubbed and toweled every morning, and leave the subject? And we cannot feel in full sympathy with the author as to the superiority of the cult of Beauty over the worship of Duty; there is little comprehension of the passion of service to the submerged; again, we cannot see that a man is more nobly employed in making marble statues of Psyche than in molding the shapeless lumps of human clay in London slums into something more like men and women, with a hint of the divine image.

The Book of Wheat. An Economic History and Practical Manual of the Wheat Industry. By Peter Tracy Dondlinger, Ph. D. New York: The Orange Judd Company. Pp. xi, 369. \$2.00.

While Dr. Dondlinger, in his *Book of Wheat*, has aimed chiefly at comprehensiveness and reliability, he has not neglected to make his manual readable and interesting. The range covered in his 350 pages is encyclopedic. It extends from the evolution of the wheat ear to the operations of the bucket shop, from the plow described by Homer to the elevators and steamships on the Great Lakes. The friends and foes of the wheat crop are also fully treated—irrigation and fertilizers, wheat diseases and insect pests, speculators and engineers of corners in wheat are described clearly and concisely, with a seriousness, weight and judicial calmness which tend to inspire confidence. At the end of the volume Dr. Dondlinger has appended a bibliography of twenty-eight closely filled pages, which is almost exhaustive of the subject. This bibliography includes a large volume of official literature, including reports of the Agricultural Department, of the Department of Commerce

and Labor and of the United States Census. The Canada Department of Agriculture has also been drawn upon; but not so fully as might have been done with advantage. There is no mention anywhere of the well-known report made by Professor Mayor, of Toronto, for the British Government on the extent of land in the Northwest available for wheat raising—a report which aroused much controversy in Canada in 1904 and 1905. The historical sketches in Dr. Dondlinger's book are especially valuable. The developments in all branches of the wheat and flour industries are given briefly and in a form which enables a reader almost at a glance to comprehend the nature and date of the great changes which have come over these industries. The *Book of Wheat* fills a place for which there are no rivals, and it fills that place well and satisfactorily.

Florida Enchantments. By A. W. and Julian A. Dimock. With numerous illustrations from photographs. New York: The Outing Publishing Company. \$3.

A most interesting volume and one suggestive of old days in the Florida waters, when tarpon came on call, and crocodiles slipped out from under one's pillow in the everglades, and the venturesome hunter trod the dismal solitudes on corduroy roads—"fust log, then alligator"—is this of the two Dimocks whose excursions filled the summer months of many years. In somewhat over three hundred pictures of varying merit one finds here illustrated the jocund ways of the tarpon, the manatee, the alligator and crocodile, who, after little persuasion, consented to sit, sprawl, float, leap, fly, or otherwise disport themselves before the camera.

Literary Notes

... *Charities and the Commons*, the cumbersome name of the magazine which has come to be the leading organ of philanthropy and social reform is now changed to *The Survey*. It is published by the Charity Organization Society of New York, \$2 a year. The first issue under the new title has a description of the making of the steel town, Gary, and an account of the work of the Russell Sage Foundation.

... To the new Harper edition of Crassý's *Fifteen Decisive Battles of the World, from Marathon to Waterloo*, eight more battles have been added: Quebec, Yorktown, Vicks-

burg, Gettysburg, Sedan, Manila Bay, Santiago, Tsushima. Most of the added eight battles seem to be of rather minor importance except Gettysburg, Sedan and Tsushima—and perhaps Vicksburg—which were not only decisive battles, but great ones, of which the whole world is compelled to take notice. The writer of the supplement has suppressed his name. Brevity has been conspicuous in the additions. Sedan stands forth as a colossal battle which placed Germany at the head of Europe. In 1870 an army of 1,124,000 Germans crushed 300,000 French after their terrible struggle, in which they lost supremacy in Europe. Up to that time "the French had regarded the victory of German arms over the 'grand nation' in the light of an insult." But neither by valor nor tactics could the French stem the tide hurled upon them. The defeat was all the more keen since they had held their own so well at Gravelotte just before. Their losses at Sedan were the heaviest and most terrible of modern times. It has generally past current that Marathon, to go back to old times, was one of the fifteen decisive battles of the world. But really the battle of Marathon was but a skirmish compared with Plataea. We may say that had there been no Marathon there would never have been a Plataea. But the proper statement of the case is that the Greeks were encouraged by their resistance, while the great and glorious victory ten years later at Plataea settled the status of Greece for half a century or so.

Pebbles

THE Town Council of a small German community met to inspect a new site for a hall. They assembled at a chapel, and as it was a warm day a member suggested that they should leave their coats there.

"Some one can stay behind and watch them," suggested another.

"What for?" demanded a third; "if we are all going out together, what need is there for any one to watch the clothes?"—*Tit-Bits*.

SOME of our contemporaries, taking compassion on the literary aspirant in his difficulties, are prepared to furnish him, by way of help, with a candid criticism of his efforts. So good an example is worthy of imitation, and today we offer the following comments on MSS. that have been submitted to us:

John Milton—You seem to have a certain facility in turning out blank verse, but your poem "Paradise Lost" is awfully long, and full of wearisome classical allusions. We feel sure that no editor would accept it. And yet there are ideas in the poem. You might, we think, have made a good poem of about a hundred lines, with some of the plot, too, would be greatly improved by the use of suitable similes, etc.

Wm. L. G. at East End.

Interesting Story of How the First Man Met the First Woman.

Wm. L. G. at East End.

(N. B.—This last headline, tho irrelevant to the poem, would be sure to prick the public attention in these troublous days, and we cannot too strongly insist that the only test of a work is its selling capacity. This is a point too often overlooked by beginners like yourself.) No, we do not think you have enough ability to win a limerick prize.

William Shakespeare—Your play "Hamlet" is not without merit. There are indeed passages in it of which no practised hand would be ashamed, and we have little doubt that if you persevere you will in time write stuff good enough for the provincial stage. What we especially like about this little effort is that there is plenty of blood in it. We suggest that you cut out all the soliloquies, and tone the language up more.

Robert Burns—There is no demand for the Scotch dialect poem; even the Scotch dialect story has gone out of fashion. Your only chance of success would be to have a few of your efforts set to music, and then forward them to your countryman, Harry Lauder, in the hope of his bringing them out at the halls. You seem to have a leaning toward sentimental verse. You might develop this vein, taking as a model "In the Twi-Twi-Twilight."

Francis Bacon—The public does not read essays. If you aspire to be a leading-article writer, you must acquire a snappier style. No, we do not allow that any one can be the author of another man's plays. To be the author of a work, one must have written it one's self.

Oliver Goldsmith—Your story, "The Vicar of Wakefield," is exceedingly tame, and we do not think any editor would take it. The public is more interested in burglars and detectives than in vicars. But you are capable of improvement, both in style and plot. Study the works of the late Guy Boothby, and "The Mystery of a Hansom Cab."

Percy B. Shelley—Your lines are very fair, but you are by no means happy in your choice of subjects. You must study the popular taste more. The public does not want laments. You should give them something in the style of "Put Me Among the Girls." You would perhaps do better in prose. Why not try your hand at a football story for the magazines?

William Wordsworth—Do not be discouraged tho your efforts have so far met with rejection. Have you read the verses, "Will You Love Me in December as You Do in May?" Take these as a model. We think you are quite capable of rising to this level. Yes, a really good coster song, witty and up-to-date, would be sure of acceptance.

Samuel Johnson—We have glanced thru your "Rasselas." You appear to have set out with a very hazy idea as to whether you would write in English or Latin, and the result is a grotesque mixture. Before beginning a work, it is always well to decide what language you will write it in.

Robert Browning—We should not advise you to write songs for the music halls. Your style is not direct enough to get home on the public's heart.—*London Punch*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Spring

THE bluebird on the wing, clipping the crisp morning, is the spirit of spring. The sharp note of the robin just at sunset, full of anticipation of coming domestic cares, responded to by his mate in the apple tree, that also is spring. The low of the cow, just set loose in the thin pasturage, to find the green spots by the watercourses, and the cackle and crow of the fowls, all this is spring. It is all tonic. Nobody is tired, and everybody is anxious to be out and abroad. This is the advantage of our Northern winters. They make a big break between the months of work. They do kill off the weaker, and terribly hasten the death of the least resistant, but they make spring a possibility; the one only time of the year when we enjoy life to the absolute level full. The joy cry of the bluebird finds its echo in the heart of every hearer.

April water songs, where the brooks are taking the snows and the showers, to tumble and to toss them valleyward, here also is the full spirit of spring. The bees fill the air with honeyed buzzing, and even tho they can gather no nectar, and for once are taking an idle flight, they

are full of joy. You note the difference in their wing-song as they pass by. The lifefulness and joyfulness everywhere is that of youth. All the forces of Nature are rallying for the year's work. There is something to be done, and it is going to be done with singing and shouting, and without a whine. Nature has no taste for an eight-hour day; she turns her wheels all day, and it is by night that the new buds and the first flowers make their most rapid development.

Even under the soil, and while the snow banks linger in the hollows, the roots are starting the fires of life. The engine muffles its sound, but it turns the wheels nevertheless. The hyacinth is ready as soon as the ice melts, and laughingly sends up its blue-raimented blossom, and blesses God and man with the perfume of its massive trusses. The children are in the woods, brushing aside the still half-frozen leaves to find anemones and spring beauties. Trilliums spike their way thru old dry leaves and then spread out their white banners.

The cherry and the plum are twins, and they are the first of the fruits to blossom. They are hardy children of Nature, and they do not dislike a bit of the northwest wind. They laugh at the frost and go on opening their eyes to the morning, and forming the fruits that will glorify June. The peach opens its flowers of pink, but it shivers before the frost, and the grapevine judiciously waits for days that are secure. Without the cherry and the plum there could be no spring.

We have seen these springs, one after another, these many years; but they are never the same thing; how Nature manages it we cannot tell—or is the change in us alone? Nothing seems to be quite reiterant. The brooks have a big repertoire, which is never exhausted, bounding over the pebbles and stones, jumping down the declivities, and wearing out little pools for new songs. As for the birds, where are the pigeons that used to fill the sky; and wherefrom came the grosbeaks and the new sparrows to take their place? Civilization kills out a lot of beautiful weeds before we have time to find out their hidden value. Even the sap-bush has yielded to advance, and

where we boiled down the syrup in huge iron kettles, they now evaporate it in wide-winged pans.

We welcome spring because it is in our own mood. It is in our blood to be up and abroad. We believe in the years. We endure winter because it ends in April. It faces toward life and growth and achievement. Our work is a part of Nature's work. It is not exceptional; but in winter it is. In autumn we have to labor on after Nature has put her tools aside, and in winter our sleep may be longer, and our workday shortened, but still the toil is there. In spring we are all hitched in together; bees, birds, brooks, violets, and human folks. Life, life; crops, crops; harvests for all of us ahead. The robin thinks of his nestlings, and we think of our barns full.

The chances! But what would be life and work without there were chances, and withal a chance for wit and wisdom to select methods and seize opportunities? There would be no zest in marching to the year's end on a dead certainty—with our soup-ladles just level-full each time. There is nothing so grand as hope; there is nothing so strong as faith; and that is exactly how we start out of April, with faith in the laws of Nature, and hope that each one of us will succeed in the struggle that ends in another autumn.

Another Epoch-Marker

IN the midst of all the navy-scare in England—a panic which leaves the observer at this distance in doubt whether the British are really weak or only silly—the Asquith Government keeps right on with its drastic measures of social reform. It seems to be good politics, not only because it creates a diversion from the "eight-Dreadnought" question for the moment, but also because any of these startling social innovations is sure to find supporters beyond the party boundary. The same Conservatives who backed the Old-Age Pension are now found as a general thing in favor of anti-sweating legislation. Lord Milner, one of the tall towers of the Unionist party, a year ago declared in favor of establishing the minimum wage—a stride toward Socialism which even the most radical members of the radical cabinet had been

unwilling to consider the year before on first taking office. Now the Government appears with the bill presented a few days ago by Mr. Winston Churchill (as president of the Board of Trade)—the first serious attempt which has ever been ventured on in England to deal effectually with the admitted evil of sweated industries. It is significant of the political strength and popular interest in such legislation that the Government measure was followed up the next day by a bill of still more extreme proposals, in some respects, introduced by a Unionist member of the House of Commons.

This is recognized on all hands in England as a new departure, an epoch-marking innovation, a venturesome extension of the sphere of government, the introduction of a new principle in the fixing of a minimum wage by law—a policy which a generation ago would have been an inconceivable raid on industry. But while radical in principle this particular measure is very cautious and limited in scope—virtually an experimental and tentative beginning only. This minimum wage is to be fixt for both home-workers and factory workers. The bill not only makes a certain wage the legal one; it goes further and requires the State to take the initiative in seeing that it is enforced. Either the Board of Trade or the Home Office, it has not yet been determined which, will be armed with the powers of inspection and entry upon the premises of all industries for the purposes of investigation. The boards which will be created to receive and act upon the reports of inspectors will also be charged with the duty of "fostering a healthy state in the trades in which they operate."

The trades placed under their special observation will be ready-made tailoring, machine-made lace and net finishing, cardboard-box making and ready-made blouse making. For the first six months of the operation of the law, if the bill becomes law, the wages fixt under it will be compulsory only on Government work, either national or municipal. There will be published by official authority a "white list" of employers who have voluntarily adopted the board rates of wages: after six months employers not already on the "white list" can be brought up before the Board of Trade as

conducting their business in contempt of law. But before any minimum wage is made operative the Government bill provides that three bodies must concur in determining it; the private member's bill from the Opposition above alluded to is more drastic, providing that the majority of a board acting on a trade may settle what is the lowest proper wage and that that settlement shall at once have the force of law. Free Traders and Protectionists, the two great parties now dividing England, are both favoring the principle—tho the Protectionists are taking advantage of the chance to say that they cannot be sure they have protected British work-people until they have protected them from the competition of sweated industries abroad. There is, as a matter of fact, a union already co-operating between the anti-sweating "consumers' leagues" of Switzerland and France.

The class to whose salvation this legislation is directed principally includes the wretchedly overworked and underpaid women and children of the tenement houses and slums—widows and orphans, unprovided single women, and deserted wives. Having no trades unions, and trades unions being in the nature of things impossible among them, they must work long hours day and night, and, according to the official report to the Government, their utmost possible earnings are "insufficient to sustain life in the most meager manner." The Government holds that if society does not exist to reform such horrible conditions, it might as well not exist at all. Miss Macarthur, secretary of the Women's Trade Union League, calls Mr. Churchill's bill a "splendid beginning," but wishes it had included more of the trades in which the lowest classes of women in London are enslaved, and says that it will give no satisfaction unless it is made compulsory at once on becoming law instead of trying "white-list" persuasion for six months first.

Sir Charles Dilke has taken the lead in the fight for the bill in the House of Commons, regarding it the most important measure of social reform which the Government has introduced, next to Old Age Pensions. It is practically the same bill which was introduced last year and sent to a committee headed by Sir

Thomas Whittaker, which made a report well known to students of the subject. But the genesis of the movement is traced by Sir Charles Dilke to a suggestion made by John Stuart Mill in 1848. It has taken two generations for the thought broached by that great economic reformer to get expression in practical politics and legislation in his own country.

Simplified Spelling

WE have said not much about simplified spelling of late; we have simply done it. We have let our readers see how they liked it, and they do like it. We knew they would, for we have the conceit to believe that they are an unusually intelligent body of readers. They know that the philologists, the orthoepists, the scholars of the English language, are with us in this matter, and we have readily believed that our readers understand the principles and the reason of it, and therefore like it. If some of them don't like it we believe they ought to like it and will learn to. We have been greatly pleased that so few object to it. The practise of it is growing. More people are taking it up, and more will year by year. They will see that *program* looks better than *programme*, *tho* than *though*, *labor* than *labour*, *next* than *nexed*.

The English are more conservative than the Americans, and they cling more stubbornly to the old long forms. They have not caught up yet even to Webster's spelling in *labor* and *traveler*. But they are coming to it, and are likely in the end to take the lead in the matter. Already there has been organized in England a Simplified Spelling Society, like our Simplified Spelling Board, and equally financed by Mr. Carnegie. Its leaders are the philologists and makers of dictionaries, such men as Professor Skeat, the president; Dr. Furnivall; Henry Bradley, editor of the "Oxford Dictionary"; Sir James A. H. Murray, and Prof. Gilbert Murray, Ambassador Bryce and Sir William Ramsay. These are names that carry weight, that represent the best British scholarship. They assure the republic of letters that improvement in spelling is not to be laughed at. Mr. William Archer, the secretary, has come to

this country to represent the new Society at the anniversary the past week of the Simplified Spelling Board in this city.

The reform which this Board urges is not at all a radical one, and it counts as its friends a great many who do not go the full length of its recommendations. If the reader wants to know all that it asks let him write to the Simplified Spelling Board, No. 1 Madison avenue, New York City, and he will receive a copy of the changes recommended and the rules under which they come. If he believes in the principle of reform, let him in his own correspondence use all the simplifications he dares. That is what we do in THE INDEPENDENT. There is not another one of them that will be as obtrusive as the removal of the intrusive letters which disfigure *though* and *through*. And yet we do not use all the simplifications, just because we fear we may disturb some weaker brethren. We know perfectly well that wherever *ed*, in a preterit, has the sound of *t*, it should be written with *t*, but out of mere tenderness to these weaker brethren we have not *pusht* the rule to the extreme. We agree with the various Funk & Wagnalls publications and *The Christian Work and Ecangelist* that the people may gradually get used to the better way, while the educational publications, address chiefly to teachers, and certain technical journals, can take all the simplifications. Silent final *e* ought to be dropt always, but we are not yet ready to do it. Of course, it will come in the end.

But when will the end come? It is approaching faster than could have been expected. It took years to secure the Webster spellings, and our readers remember the fight between the Webster and Worcester dictionaries. At last Webster won, and already we go beyond Webster. The Simplified Spelling Board has now published its recommended list, and we presume that for a year or two it will now rest from this labor and devote itself to persuading the people to catch up with it. Believing as we do in all wise reform, we have been of the first to move forward, and we expect to move forward further in time, but we must wait, and the Simplified Spelling Board must wait, until more of the daily journals and of the trade pub-

lishers, always the most conservative of people, have made the improvements so common that they are not noticed. To this object the Board must now devote itself. It has laid down certain rules, and can go no further just now.

But we advertise the people that this is not the end; it is the beginning. The end is absolute phonetic spelling. But absolute phonetic spelling must wait till the phoneticians have agreed on an alphabet which will give one sole letter for one sole sound, and that means more than twenty-six letters. Ten years from now the Simplified Spelling Board, assisted by the Simplified Spelling Society of Great Britain, and similar societies in France and Germany and Spain and Italy and Russia, all of which countries are far ahead of us in normal spelling, will have to agree on an international alphabet, and then we can begin the task of final reform. Then our children can learn to read when three years old, and in a few weeks, like the Hawaian children, and think it nothing but play, mere kindergarten sport. How happy the children of that day will be, and how they will look back with surprise and pity on their fathers' school books! Then no longer will the children have to learn to read by pronouncing words in the way they are *not* written, after the fashion of the man who knew that when his clock struck seven and pointed to half past three it was a quarter of ten. That is the way we learn to read now, by dead Chinese memory for every single word, not one fixt and settled rule; and instead of being ashamed of our scoliography—we cannot call it orthography—not a few "cultivated" people love to kiss and pet its warts and bunions. All we are now trying to do is to pare off some of the worst excrescences. By and by we will attack the radical cure.

Decrease of Theological Students Abroad

THE lack of candidates for the ministry in the various Protestant state Churches of Germany is becoming alarming, and while formerly the theological graduates of the universities were compelled to wait as long as a dozen years before receiving a fixed ap-

pointment, they now find these waiting for them at once. According to the latest statistics the decrease in the number of theological students at the different universities is the following, the first being the average in the years 1886 to 1891, the second the average from 1903 to 1908, viz.: Berlin, 732 (305); Bonn, 130 (78); Breslau, 169 (66); Erlangen, 325 (150); Giessen, 99 (70); Goettingen, 235 (106); Greifswald, 305 (89); Halle, 660 (320); Heidelberg, 88 (61); Jena, 126 (49); Kiel, 86 (34); Koenigsberg, 201 (71); Leipsic, 640 (279); Marburg, 194 (134); Rostock, 61 (47); Strassburg, 113 (67); Tübingen, 408 (280). The decrease accordingly has been from 4,572 to 2,106, or fully 54 per cent. According to faculties this decrease runs from 23 per cent. in Rostock to 70 per cent. in Greifswald.

The advanced men deny most vigorously that this has been caused by the spread of radical theological teaching at the universities. The *Chronik der Christlichen Welt*, on the basis of the above data, undertakes to demonstrate that proportionally the orthodox faculties have lost more students than the liberal, taking as evidence that the three orthodox universities of Erlangen, Greifswald and Rostock have gone back from a total of 691 theological students to 286; while the typically advanced group of Giessen, Heidelberg, Jena, Marburg and Strassburg from 620 to 381, or a loss of 58 per cent. in the first group and of only 38.5 in the second critical group.

It is rather noteworthy that the strongest complaints come from the orthodox sections of the Church, being heard chiefly from Mecklenburg, Saxony and Hanover, all three of which officially recognize the Lutheran creed. Mecklenburg can count only on twelve new men for the next three years, and Hanover, which annually needs an increase of about forty to forty-five men, will have only twenty-five candidates to fill its vacancies. The present winter semester again shows a decrease of more than one hundred Protestant theological students, and the Catholic faculties report the same phenomenon, namely an enrollment of only 1,670 theological men as compared with 1,780 six months ago.

Similar reports, however, come from other quarters, too, making this an international church problem. In the Lutheran theological seminary in Paris there is but a single student, and in that of the Reformed Church less than half a dozen. In Geneva and other French-Swiss churches the same conditions prevail.

The signs, however, are increasing to show that more conservative tendencies are beginning to prevail in university circles, especially on Biblical problems. Professor Harnack, of Berlin, has in three different works defended the Lukean authorship and historical character of the Third Gospel and the Acts; recently Professor Lietzmann, of Jena, has shown that gnosticism is a pre-Christian type of philosophical thought and that the Fourth Gospel will on account of its relation to gnosticism not be denied to the Apostle John; and last but certainly not least, Professor Gregory, the American member of the theological faculty in the University of Leipsic, has just published an "Introduction to the New Testament," in which, to the surprise of friend and foe, he makes a vigorous defence of the Johannine origin and the reliability of this much debated Gospel. Other evidences of the growth of conservative thought is the determined attack being made all along the line, especially by the Keppler Bund, on the Monism of Professor Haeckel, who only a year ago declared that he would supplant Christianity. Professor Haeckel's scientific attainment has been bitterly attacked by his fellow scientists, and especially has the zoologist, Dr. A. Brass, in a recent work, demonstrated that Haeckel has actually falsified the pictures which he employed to show man's descent. Monism is decidedly on the defensive in Germany at present.

Panama Report Next Week

IN March, 1906, two members of THE INDEPENDENT's staff, Dr. E. E. Slosson, our literary editor, and Mr. Gardner Richardson, our assistant publisher, were sent to Panama to report to our readers the progress that was being made in constructing the Canal. After an interval of three years, two representatives have again been sent to the Canal Zone, and the first of their articles will appear next

week, telling of the general changes and progress since the last visit. A second article will shortly appear on the labor conditions, and a third on the engineering problems and the actual work of construction. The representatives this year, who sailed on March 15th and have just returned, after a two weeks' stay on the Isthmus, are Mr. Gardner Richardson, who accompanied Dr. Slosson before, and Mr. W. J. Ghent. Mr. Richardson is a graduate of Yale University and has been connected with THE INDEPENDENT four years. He has spent a large part of his life in foreign countries and is well fitted to report on the conditions in Panama.

Mr. Ghent has been a frequent contributor to THE INDEPENDENT for many years, and is a well known authority on labor and economic questions. His book entitled "Mass and Class" is a standard work. Our readers can rely on the accuracy and impartiality of these representatives' report.

A Wizard of Words

ALGERNON CHARLES SWINBURNE is dead at the age of seventy-two, by general consent one of the great poets of the Victorian era, yet not a poet of a rank or type like Tennyson, or the later Kipling, for he had a very narrow gamut and played on scarce more than one string. The most and best that can be said of him is, that he was a wizard of words.

So far as his works will live they will be his poems of the early period before he joined the Catholic Church; and it may be counted to the credit of that Church that after joining it he ceased to write the sort of verse which had given him fame. His tragedies, such as "Erechtheus," "Marie Stuart," "Marino Faliero" and "Laertes," are hardly read, and his prose works, such as "A Study of Shakespeare" and "A Study of Victor Hugo," are hardly readable, for his wizardry of words in verse, where it can substitute for sense, fails in prose, where clear thought is essential.

Swinburne possessed the mystery of musical, meaningless, elusive expression that suggested but did not express the

thought which wraithlike escaped behind it. There is a vocal mastery of the melody of sound, the succession of vowel and liquid and mute, which deceives us into belief that it carries a certain sense; but the meaning loses all definiteness, so that, after all the rhythmic cadences, Swinburne is hard reading, and only here and there a passionate line clings to the memory. Quite different is the utter clarity of Tennyson, who could command all the stops of the tuneful lute quite as well as Swinburne, but who filled his words with lucid as well as sweet thought. Very different also is he from Browning, who is called obscure, but whose meaning can be worked out and is worth the working. But very often not Swinburne's. Take such a verse as this from "To Victor Hugo":

"But thine imperial soul,
As years and ruins roll
To the same end, and all things and all dreams
With the same wreck and roar
Drift on the dim same shore,
Still in the bitter foam and brackish streams
Tracks the fresh water-springs to be
And sudden sweeter fountains in the sea."

What does it all mean?

But it is not this for which we most condemn Swinburne, and count ourselves with those that fail to praise him in his death. It is because more than any other man he introduced into the sweet stream of English verse the poison of lewd love. There had been lawlessly amorous verse before, but hardly riotously, languorously lewd like his. Chaucer told the tales of his day, but he made penance in his "Legend of Good Women." We will give Swinburne credit for the fire of liberty which the elder Walter Savage Landor kindled in his soul, and which led him even to praise the Russian regicide; but it is license, not liberty, that invited his sweetest notes. Wordsworth in his youth equally kindled with the flame of freedom, but allowed the fires to die; Longfellow and Lowell caught too, in their young days, the healthy hatred of tyranny; but only Milton fed on freedom as his daily strong meat. Swinburne's choice food was lust. His brilliant disciple was Oscar Wilde, and Oscar Wilde had to learn the taste of prison food.

There are two kinds of love, Plato tells us—one earthly, the other Uranian. It was the earthly love that Swinburne

chose to sing, bare, base, physical love, and with it the satiety, the weariness and death that follow. Indeed his lyre has but two notes, love and death, Mors and Eros, the Eros of Libitina. He sings of no pure love, only the love of Lilith. It is of no use to mince words about it; and if one can repeat, but hardly print, the coarse characterization Carlyle made of him, we can yet say that he treated Poesy as Circe transformed the seamen of Ulysses, and bade her root in the muck-swamps of fetid toad-blooms and deadly nightshade. That was a foul shame to the pure muse. For poetry is too sacred a thing to be profaned by singing the jaded extasies of boughten love. The harlotry of the muse is an unforgivable offense, not to be pardoned even in the scant three days of grace between the breath and the bier.

For Swinburne knew and owned the wrong of it even in the delight of it. He chose the Syrian Adonis, the shamelessly, nakedly, physical passion that had in it no shred of beauty of soul. He knew what it meant for

"love makes all that love him wise,
As wise as heaven and crueler than hell."

It was he that wrote:

"To say of shame, What is it?
Of virtue, We can miss it,
Of sin, We can but kiss it,
And it's no longer sin."

With this spurn of the uncleft ass's hoof at everything pure and holy he could well tell the end of it all:

"Princes, and ye whom pleasure quickeneth,
Heed well this rhyme before your pleasure
tire;

For life is sweet, but after life is death:

This is the end of every man's desire."

Swinburne is called the last of the great company of Victorian poets. Of them he might have been one of the greatest, for the genius was his. But it was misapplied. Of his own coterie of poets, Rossetti has left two or three noble lyrics that must live. He, too, had the deft wizardry of words, and with it a haunting tender thought that did not miss expression. Morris wrote much of fluent easy tales in prose and rime, facile to read and worth the keeping. But we fear that after a while scarce anything will be held of Swinburne's worth the remembering. His verse will be studied for its technique, and certain poems put

away to be kept in the dark closet with "curious" books; for such is the verdict of the Rhadamanthine Time on those that prostitute the muse. His own age could not make him Laureate.

Tariff Revision

By the changes made in the House the Payne tariff bill has been improved, but it is not now a revision downward, nor are its rates in accord with the Republican platform's definition of a just measure of protection. Tea and coffee on the free list, removal of the obscure provision which would have nullified the proposed reduction of the duties on rough lumber, and the elimination of all retaliatory duties on petroleum—these are the leading changes for the better. The real value of these last named duties to the Oil Trust was overestimated, and the noise made in removing them served to divert attention from protective rates that have yielded large profits to other combinations. On the other hand, the unwarranted increases of the already high duties on hosiery and gloves were not touched, and the provisions for maximum rates that would for a considerable time increase by 20 per cent. the duties on four-fifths of our imports were retained.

The Senate is now to take up the task of revision, and it has an opportunity to compel additional reforms. If current reports are well founded, however, the Republican majority of the Senate Committee intends to undo a part of the commendable work of the House by imposing taxes on iron ore, hides and soft coal, and by increasing the duties on steel rails and structural shapes. But the assertion is made that the Payne bill's increases on hosiery and gloves, against which 250,000 women protested in a petition which the House declined to consider, will be crossed out. Many changes will be made by the Senate Committee, and afterward by the Senate. Then the bill will be completed in conference.

President Taft has repeatedly expressed his desire for a revision downward, that would reduce the cost of living. This is what a great majority of the people want. It is not given by the bill in its present form. The most convincing proof of this

is seen in the House Committee's admission that under the provisions of the bill the average ad valorem rate of duty upon all goods actually imported would be increased to 45.72 per cent. from the present tariff's 44.16 per cent. That is to say, after certain products have been placed on the free list, and after the duties on some others (which are now practically prohibitory) have been reduced, there are increases enough to make the general average higher than it is under the present tariff, which, its authors admitted, was placed at an unwarrantably high level to allow for extensive reductions by treaties of reciprocity—those treaties which were afterward negotiated and which the Senate would not accept.

As a whole, therefore, the Payne bill is not a downward revision. Some of its reductions are merely spectacular, such as the reduction of the duty on steel rails. We recently pointed out that within three weeks our rail manufacturers have undersold European manufacturers in Argentina in an order for 10,000 tons. Can they not as easily undersell them here at home, without protection? Two weeks ago, an Ohio steel company sold rails in Glasgow by underbidding English manufacturers there, its price being \$29.60, while the lowest English bid was \$41.20. Does this Ohio company need a protective duty to defend it against the competition of English or other foreign manufacturers in the United States? But it is said that the Payne bill's duty on rails will be increased by the Senate Committee.

The Democrats of the House asked for a reduction of duties on products competing with those which are controlled here by combinations. In the present tariff there are such duties, under the shelter of which competition in the home market has been suppressed and prices rising nearly to the importing point have been exacted. These rates should be revised, with the purpose of reducing the cost of living. Here is a field for Senate action, for it has been neglected by the House.

The Senate, it is expected, will so modify the Payne bill's provisions for the imposition of maximum rates that they will not invite commercial wars.

This will be a decided gain. Probably it

will also insist upon a permanent advisory bureau of tariff experts. If there had been such a bureau at work during the last twelve months, many objectionable features of the pending bill would have been excluded before it was laid before the House, and its rates would have been more nearly in accord with the declarations of the Republican platform.

✱

The Decline of Reading Aloud

THE number of volumes of fresh poetry published is increasing year by year, and the old poets are sold in greater quantity, yet there is a general impression that there is less poetry read than there used to be, that the younger generation does not have the love for it that their elders had. This impression we believe to be correct, and we account for it largely by the decline in the habit of reading aloud. For poetry is based on sound, and when no sound is heard poetry is merely a vexatiously awkward way of saying things. There are persons with such strong auditory imaginations that they can read a page of music and get the same enjoyment out of it as by hearing it played, and there are persons of the same type who can read poetry silently with as much satisfaction as aloud, but such gifted individuals are rare, and they are getting rarer as the auditory faculties are nowadays less developed.

Some one has said that it is a crime to read poetry to oneself and that it should be prohibited by law. We agree with the first clause, but not with the second. Legal measures are unnecessary, for where poetry is not read aloud it is usually not read at all. There is no reason why it should be.

Poetry is not intended to be read as prose. Poets reading their own verses accent the rhythm strongly. We are told that Wordsworth, Tennyson and Poe mouthed the lines in a manner almost offensive. It is said that Kipling, in the days when he was writing barrack-room ballads from day to day to fill out the columns of the *Allahabad Pioneer*, was once given a subject for one by his colleagues in the office. He retired to meditate and then came back triumphant. "I have it. How will this

do?" he cried, humming something of this kind:

"m—m! m—m!
m m m m—m—m—m.
de—day de—de—de—day,
de—de—day de—de—de—day,
m—m—m m m m—m—m—m."

"But what are the words to it?" asked his friends.

"Oh, I haven't written the words yet. I will go and do it now."

Some of the poetry and much of the prose published nowadays do not seem to have been read aloud even by their authors. They apparently never thought it a necessary part of the task of composition. Many of the popular novels, adventure and mystery stories particularly, are vocally unreadable. They are intended to be hurried thru. "You can read it in no time," is a common recommendation for a new novel. This naturally raises the question whether it is worth reading in any time. Even first-class novelists of the day have the same fault. For example, to read aloud a chapter of one of Mrs. Humphry Ward's stories is a strain upon the voice. Mrs. Wharton is almost as hard. On the other hand, William de Morgan's novels are delightful to both reader and listener. They are like Dickens in this respect, and we are told by Dickens' daughter that he recited his dialogs as he paced the floor in composing them. One reason why James and Meredith are reputed obscure is because people try to read them visually. Read orally they are much easier to follow and comprehend.

The sense for rhythm in prose disappears with the love of poetry. Those who depend upon the eye alone become incapable of appreciating delicate differences of style. In our system of education the ear receives little training so students tend to become exclusively eye-minded and philology goes over to an alien and secondary sense. A considerable body of literature is being produced which is never voiced unless by the proofreader. The editor of one of our great dictionaries says in order to get the correct pronunciation of a recent scientific word in general use he wrote to the man who had invented it. The distinguished scientist replied that he did not know how the word was pronounced as he had never used it

in speech. He was willing, he said, that the dictionary-makers should decide that if they thought it worth while.

The discussion of simplified spelling has brought out many amusing instances of this perversion of the verbal sense. "You are spoiling the word!" we hear when no change whatever is made in the word, but only a change in its symbol in order to preserve the word from unconscious phonetic decay. To such people destroying a photograph would be the same as murder. The poets who go by sound rather than sight are much more inclined to be phonetic in their spelling than prose writers. If the opponents of spelling reforms were tested in the psychological laboratory they would probably be found to belong mostly to the visual or graphomotor classes, while those more tolerant to orthographical innovations would be found using auditory or vocal-motor imagery.

The decay of the habit of reading aloud comes from the multiplicity of books and of lights. The fireplace was once literally the focus of the family. This was the age of story telling, of the saga. Old and young listened to the monolog, their eyes on the flickering flames. Next came the time when the lamp was made the center of the circle, usually only a single reading light and but one new book or magazine, therefore one reader to several listeners. It was the age of the leisurely novel, of the continued story. Some books are to be chewed, some are to be Fletcherized to bring out the full flavor. This practise of reading together for weeks and months the same book gave the family a unity that it has since lost, for now the family has no focus. Every member to the smallest reader has his individual reading matter as he has his individual butter and salt holders. Magazines are cheap and books can be had for nothing. Every room is heated and lighted, and everybody in the family is independent. If they all eat together once a day it is by a special effort, and to read together is still rarer. Consequently there is no community of interest, no common theme of conversation. They read different things, think in different ways and speak in different dialects. This reduces the uniting bond of the family to mutual affection

alone and that this is not sufficient to stand the strain of the centrifugal forces of the individualism of today is becoming increasingly manifest. The family needs a new focus.

The Big Brother There is occasion for some serious concern over the news that at the request of the United States the British Government announced that it would not allow President Castro to land at Trinidad, a British island near Venezuela. The neighboring French, Dutch and Danish territories also forbade his landing on their territory, all, we gather, at the request of the United States, and the French authorities put him on a steamer and forcibly returned him to France. The reason given for this action is to prevent disorder in Venezuela, and support the acting government by Vice-President Gomez. This is, we say, serious. Castro is the elected President of Venezuela, and is as able a man as the country has ever had, and has tried, with more or less wisdom, to protect the interests of his country as against various greedy foreign exploiters. He had to go abroad to undergo a serious surgical operation, and left the government in charge of Vice-President Gomez till after his return. We do not know with what encouragement Gomez then brought charges against Castro of conspiracy for murder, and assumed the right to be Castro's successor. But Castro has never been impeached or condemned. It is not for the interest of important parties that he should return to power, for the Asphalt Trust, which refused arbitration of its claims, and which was proved to have aided a rebellion and was condemned, under Castro, to lose its rights to the Bermudez asphalt lake and to pay a heavy fine, has now purchased back all its rights: but were Castro to return it would find this settlement disallowed. We doubt very much whether the United States will find its interest in attempting to control the republics to the south of us. This attitude does not encourage either their affection or their trade. It is not our business to settle their quarrels. The big brother with a big stick gets no love.

The Waking of the Wets The past week proves that the whisky men, the beer men and the saloon men have seen the danger threatening them from the moral awakening and have themselves awakened. Prohibition may conquer the rural sections of the country, but they are resolved that it shall not get the mastery of the cities. The past week has proved their activity and success in Long Island and in other parts of this State, and in important counties in Indiana, Wisconsin, etc. They will not lose the fight from any indolence or parsimony. They have begun by fighting with all their might, matching meeting with meeting, church bells with brass bands, and prayer with free lunch and drinks and autos to take the voters to the polls. The waking of the wets means a long fight and a careful study of what liberty means. The excitement recalls the old Washingtonian days when J. Pierpont Morgan's grandfather, the Rev. John Pierpont, was the laureate of the cause, and the children were made to recite the poems in teetotal meetings, such as the alcoholic medical prescription:

"Take a little rum
The less you take the better,
And pour it in the lakes
Of Wener and of Wetter.

Take a spoonful out
(Mind it is not groggy),
And put it in the lake
Of Winnepisseogee."

After a few more dilutions which we forget the thing concludes:

"Now take a drop or two
Mixt in a quart of water;
And you will get well,
Or at least you oughter."

The Sage Foundation In *Survey*, the new name of the monthly organ of the Charity Organization of this city, Mr. Robert W. De Forest, who is president of the Charity Organization and vice-president of the Russell Sage Foundation, gives a very interesting account of the aims and work of this new Foundation, which Mrs. Russell Sage has endowed with \$10,000,000. It is a pleasant thing to think of Russell Sage, who claimed no expert knowledge of charitable work, but who had the knack of making a fortune, as taking satisfaction in the thought that after his death

his great wealth would be devoted by his widow to the very best service of the world. She took expert advice, and decided to establish an organization which should seek out the best ways to remove the causes of social evil and secure social betterment. A few weeks ago we reported the important investigation made by the Sage Foundation in Pittsburgh, but that is but one of a large number of studies it is engaged in. Such is its support of efforts to reduce the ravages of tuberculosis, its work for playground extension, for children's school gardens, for the prevention of blindness, and for other activities in which it is peculiar that it does not seek to advertise itself, but is glad to work silently thru other societies. It is particularly interested in the extension of charity organization in the various cities of the country, so that charity may be wisely administered without pauperizing the recipients. The unification of charities is of great importance, and that gives occasion for surprise that the offer of a million dollars to the Hebrew charities of this city on condition that they federate is opposed by one or two of the strongest of them, which seem to fear that they will lose their special appeal.

A Retraction Distasteful as it is for an editor to admit that he may have made a mistake, when he is rebuked by some one who knows more about the subject than he does, as in the following letter, he is obliged to do something about it. The statement to which our anonymous correspondent takes exception was not, we confess, original, altho we neglected to put it in quotation marks. On looking it up in the handy volume of literary pems on the shelf behind us we find no author's name is given. We must, therefore, apologize to our readers for having printed a statement which may be altogether incorrect, and which, at any rate, we had made no attempt to verify:

EAST SPRINGFIELD, Pa., March 29th, 1909.
Editor Independent:

You say on page 650 of the 25th March issue, that: "Even the devil is not so bad as he is painted." If you were not blinded by him, and possessed by him, you would know that he is unspeakably worse than he is or ever can be painted.

The Bible and Literature

We have once or twice called attention in past years to the supremacy of the Bible over any and all other sources of literary allusion in the addresses of public men. It makes no difference what a man's profession may be, a literary man, a lawyer or a teacher, just as much as a clergyman, Bible words will unconsciously drop off his tongue. We happen to notice it in reading the tribute to the late President Gilman by Professor Gildersleeve in a number just issued of the *Johns Hopkins Circular*. Now Professor Gildersleeve is not known as a Bible scholar; he is past master of all our Grecians, and master also of a most delightful style, for which some read the *Journal of Classical Literature*, edited by him, who will never read the books he writes about in it. His eulogy of President Gilman is less than six pages long, and in it we count fourteen verbal expressions or quotations taken from the Bible: "Every good word and work," "fountain sealed," "discernment of spirits," "hid treasure," "sinned with their lips," "faith in his high calling," "seeing him who is invisible," "time would fail me," "slept or slumbered," "Egyptian taskmaster," "bloweth where it listeth," "make a plain path," "recompense of reward," and one direct quotation, "This is the way; walk ye in it." Against these fourteen cases there is only one use of classical phrases and one allusion each to Milton and Wordsworth. And this from our most profound and revered Grecian, who could have spattered his address over with Greek and Latin references and expressions without winking, so easy would it have been to him, but they could not have fitted into the serious purpose of plain and tender address as do the words of the two Testaments.

President Gomez, of Cuba, in his inaugural message calls attention to the one imminent danger which threatens the island. He says:

"The political problem of our country as of some others of similar origin and education, contains one evil element, which manifests itself in a tendency to create and maintain a third party, and even other factions, arising from vice and social disintegration, which unfortunately seems characteristic of the southern

ances. The same evil manifests itself in a tendency toward rebellion against everything wearing the badge of discipline, order and method and against subordination to the will and welfare of social collectivity. In this we have one fact which, small as it may be, is not encouraging or promising."

We trust President Gomez will speedily suppress all insurrections. If he does not it will mean the end of Cuba as a separate republic.

It is not an easy question to answer, just how violations of the Jim Crow laws in the South should be treated. Of course, negroes do not go into the cars, or seats, reserved for whites; that would be resented. But if the white seats are full the white people will crowd over into the negro seats, and it makes trouble. Should it be resented and resisted, to make the law odious, or allowed, to make it ridiculous? The Colored Teachers' Association of Texas voted to ask that so long as the law is retained it should be enforced impartially, and there went abroad the report that the association had approved the Jim Crow law, which it had not.

All who know will greatly regret that our Minister to China is to be replaced by ex-Senator Fulton, of Oregon, or some other politician. We can hardly expect from Mr. Fulton the sympathy with China or the knowledge of that country which Mr. Rockhill possesses. Mr. Rockhill talks Chinese, and we believe Tibetan, and is unsurpassed as an authority on Chinese history, geography and literature. It has been greatly to the honor of this country that he has been our representative, and we were not aware that he desired to withdraw from diplomatic service.

More Dreadnoughts, and still more. Now Austria is to build three, evidently not because she needs them, but to back up Germany, her close ally, in case of war with Great Britain. That will give a new shiver to the English people, and will mean more than eight Dreadnoughts, and more taxes, and we shall hear the same old story, that four new Dreadnoughts are not enough for our protection. What a pity that Great Britain started the new rivalry of waste!

And there is a new call for defense in the air, not an army, not a navy, but a fleet of airships—what shall we call it?

Excommunication has lost its terrors. On April 24th Loisy will commence his lectures as professor at the College of France. The Camelots du Roi, who have every Wednesday since October last interrupted the lectures of Professor Thal-amas at the Sorbonne, promise to take a hand in upsetting Loisy's. At the recent elections in Italy, Murri, an excommunicate *vitandus*, was chosen by the voters of Monte Georgio, a formal papal possession, to represent them in the Italian Parliament. In a rostrum of Paris stands the cast-out Loisy and on Monte Citorio, Rome, is another, Murri.

It is enough to "jar" one to read a negro paper, supposed to be devoted to the interests of the race, give columns of pride to a black prize-fighter, whose eminence is no credit to his people, and then turn the page and read advertisements not only of "pure whisky," but of nostrums to whiten the complexion and to straighten kinky hair. The publishers know they are frauds, but they have not the conscience to stop cheating their readers.

A gift of \$200,000 by Andrew Carnegie to Hamilton College, to be called the Elihu Root Peace Fund, in recognition of Senator Root's services to peace while Secretary of State, is suitably given to the college from which Mr. Root graduated, and where his father was professor.

By an edict promulgated at Peking all Chinese are forbidden to become naturalized as citizens of another country. This law is opposed to the comity of nations, as much so as our law forbidding Chinese to become citizens with us. Very likely our law provoked it.

It is a bit absurd to hear of "destroyers" being "christened." But even the "christening" with a smashed bottle of wine is a mockery of the rite and the word. It sounds like a devil's christening.

The Limitation of Life Insurance in New York

THE extravagance that is characteristic of modern life has resulted in the imposition of taxes that grow more and more burdensome with the passing of time. Those who are charged with the power of taxation are frequently confronted with a mighty task in making the state's income equal to its expenditure. The crying and constantly increasing needs of the state for an adequate income finally led to the taxing of insurance premiums. What the logic was that led legislators to such a method of taxation it is not easy for those of us outside of the legislative fold to understand. It is easy to understand a tax on the liquor traffic that takes the form of a substantial license fee, because the liquor business is admittedly bad and by means of it our prisons are crowded and our jails are too often found inadequate as to accommodations. But the average man would scarcely think of putting life insurance and the liquor traffic on the same basis as a reason for taxation. Life insurance is beneficent from start to finish. It is one of the most admirable forms of thrift. It is based on self-denial for the benefit of wife and children and others, who but for it or something analogous, might become public charges. There is no excuse for taxing premiums on life insurance, which are generally paid vicariously. The several States, finding it possible to mulct the insurance companies by taxation, have increased the penalty placed by ignorance on thrift until the revenue has reached more than \$12,000,000 per annum. A stranger from Mars, or indeed any one not familiar with the modern trend in the taxation of insurance, would very naturally suppose that the State would foster and encourage a business yielding such easy money in taxation. On the contrary, and particularly during recent years, there has been developed a tendency toward hampering the business of the insurance companies. In Texas, for example, a law was passed demand-

ing that the insurance companies should make Texas investments as the price of doing business in that State. In Wisconsin it was required that a specific apportionment of dividends be made, with which requirement a number of the first-class companies were unable to comply, and in consequence withdrew from doing business in that State. New York has recently limited her insurance companies to the writing of not more than \$150,000,000 of new business a year. This has led to the dropping of 1,000 field agents by the New York Life alone, lest that company might exceed the maximum and become an outlaw. That such a limitation of business is hurting the New York companies goes without saying. The Association of Life Insurance Presidents has taken up the matter and called attention to the injustice of this law. The Chamber of Commerce asked some time ago that the Governor appoint a commission to consider the subject with the object of suggesting needed reformation. That the Legislature is beginning to have certain doubts regarding the wisdom of its action in 1906 is manifested in its search after a concise statement of the gains or losses in insurance in force in 1906, 1907 and 1908 for the three big companies of this State and seven big companies of other States. THE INDEPENDENT hopes that the members of the Legislature will come to a better understanding of the subject of life insurance as they study it, and when they have passed the academic stage they will repeal the laws limiting the amount of business that New York State companies may write.

THE *Standard* mentions the case of a clerk in one of the important departments of the City of Baltimore who was recently arrested charged with stealing over \$100,000. The young man's salary was \$1,400. Nevertheless he kept fast horses and was otherwise extravagant. He was bonded for \$3,000. Perhaps the bonding company was napping. The young man certainly was not.

Wheat Prices

THE price of wheat, which for some time had been advancing, rose sharply last week, and wheat for May delivery was sold in Chicago at \$1.26 $\frac{3}{8}$ per bushel. While the speculative operations of the Patten group in that city have in some measure affected the price, the controlling influences have been natural market and agricultural conditions, which these speculators studied with care, and of which they have taken advantage. Our own growing crop of winter wheat, as shown by last week's Government report, is in such condition that the quantity harvested will probably be less than last year's by at least 40,000,000 bushels. Supplies in farmers' hands are low, both here and abroad. Argentina's crop has been reduced by frost. Consumption here steadily gains upon production. Last year's crop in Europe was deficient. On the whole, the price appears to have been determined by the law of supply and demand. Chicago's speculators have made large purchases, it is true, but they have also sold freely. The condition of our winter wheat may improve, and as to our spring wheat we know little or nothing. With the price of wheat higher than it has been for twenty years, except at the time of the Leiter speculation, the cost of living rises. A considerable advance in breadstuffs and provisions is noted in the average tables. Tariff revisers at Washington have shown no consuming desire to reduce the cost of living by their treatment of the tariff rates now in force.

....Condensed milk worth \$2,455,000 was exported from this country last year, and the exports in the last ten years have amounted to \$16,000,000.

....The discovery of a large field of placer gold deposits in the Sierra Blanca district of Oaxaca, Mexico, is announced. The area of the field exceeds 20,000 acres.

..Pig iron output in March was 1,832,104 tons, against 1,707,340 in February, and 1,747,000 in January. Since the beginning of April, the rate of production has been slightly reduced.

....After two years of labor and an expenditure of \$1,000,000, the dam across the Connecticut River, six miles south of Brattleboro, Vt., is now practically completed. It is to be used for the development of electric power.

....In March, twenty-two new national banks were organized, with a total capital of \$2,285,000. There are now 6,906 national banks, with an authorized capital of \$942,996,775 and a bond-secured circulation of \$646,142,390.

....The New York Chamber of Commerce has appointed a committee of seven members to consider, "from the standpoint of the requirements of the world's shipping," the problems involved in the construction of the Panama Canal, and to submit a report.

....The advance of 45 points in the price of Delaware, Lackawanna & Western Railroad stock, last week, to a new high record of \$600 per share, was due to rumors that a part of the accumulated surplus was soon to be distributed by increasing the annual dividend from 20 to 40 per cent. The company's capital stock outstanding is only \$26,000,000.

....Comparisons of average commodity prices made by *Bradstreet's* to obtain an index number show a steady increase each month from 7.9051 on September 1st, 1908, to 8.3157 on April 1st, 1909. The corresponding index number for July 1st, 1896, was 5.7019, the increase since that date having been nearly 46 per cent.

....In response to inquiries the following statement was made last week by John Claflin, of the H. B. Claflin Company, the largest wholesale dry goods dealers in this country:

"The dry goods business is not booming, but it is in a healthier condition than has been seen for some months. Orders are coming in now for fall delivery, and the size and quality of these orders indicate that the season will be a very good one—certainly much better than last year's. The spring business is practically finished, except for filling-in orders. Merchants thruout the country feel well satisfied, and the trend is now upward. The attitude of the country is a waiting one. No decided change from present conditions may be looked for as long as the tariff question is unsettled."

The Independent

VOL. LXVI NEW YORK, THURSDAY, APRIL 22, 1909

No. 3151

Survey of the World

Tariff Revision in the Senate

Mr. Aldrich, chairman of the Senate's Committee on Finance, laid before the Senate, last week, the tariff bill prepared by the Republican majority of his committee, and proposed as a substitute for the bill past by the House. No recommendations were made concerning hides, wood pulp and bituminous coal, which the House had placed on the free list. There was no reference to the maximum rates or to the inheritance tax. Iron ore (free in the House bill) was made dutiable at 25 cents a ton. The duties of the present law upon hosiery and gloves were retained, and the increases proposed by the House rejected. Tea and coffee remained on the free list, and the House duty on cocoa was disapproved. The method of estimating the value of cotton cloth (withdrawn in the House, where the assertion was made that it would greatly increase duties) was restored. Duties upon agricultural products generally, many of which had been reduced by the House, were restored to the rates of the present law. Among these are the duties on barley and barley malt, which were the subject of controversy in the House. The House's reduction of the rate on carpet wool was canceled. A duty of 35 per cent. on yachts built abroad was imposed, altho the House committee holds that the importation of such yachts is forbidden by law. Very little or no change was made in the House bill's chemical, pottery, lumber, and sugar schedules. The art paragraph was slightly broadened. Increases of about 15 per cent. of the duties on wine, spirits, ale, cordials, and similar products were proposed. Petroleum was left on the free list, where the House put it. The House rate on steel

rails was retained. In many instances specific duties were substituted for the ad valorem rates of the present law and of the House bill. The effect of these changes cannot now be seen, altho with respect to some of them the assertion was made that they would not cause an increase. As to this there is a difference of opinion. Specific duties were sought by those who desired more protection. Critics remarked that while the bill might be an improvement upon the House bill in certain schedules (not taking into consideration the products as to which no recommendation was made), it differed but little, on the whole, from the present tariff. The omitted rates are to be considered hereafter in the Senate. It is predicted that duties will be imposed upon hides and coal. Changes made in the House had cut from the Payne bill, it was estimated, \$20,000,000 of revenue. Some think the Senate committee's bill cuts off \$30,000,000 more. Independent producers of crude petroleum assert that the removal of the duty upon such oil is to their disadvantage and is beneficial to the Oil Trust, which controls only one-tenth of the domestic output of crude and would be able to import oil from Mexico free of duty. They say they ought to be protected by a duty of 50 per cent. The committee's plan for obtaining the needed revenue is unknown. It is said that Mr. Aldrich will oppose an inheritance tax, an income tax, a stamp tax or a tax on corporation dividends. Several Republicans, however, do not agree with him. The Democratic Senators in conference agreed to support amendments for an income tax and a stamp tax on transfers of shares of stock. It is reported that they could not reach an agreement as to the protective features

of the bill. At least a dozen Republicans, it is asserted, will stand with them for an income tax. Mr. Bailey has introduced an income tax amendment, making the tax 3 per cent. on \$5,000 or more, and exempting all income from Federal, State, county or municipal securities, and from salaries of State offices. He appears to be confident that such a tax would not now be annulled by the Supreme Court. The revenue from such a tax, he thinks, would be from \$60,000,000 to \$80,000,000. Mr. Cummins (Republican) is preparing an amendment for a graduated income tax, beginning with 2 per cent. on \$2,000 and rising by degrees to 5 per cent. for incomes exceeding \$50,000. A majority of the Democrats are opposed to a national inheritance tax. Mr. Beveridge and Mr. La Follette have introduced bills for a Tariff Commission. It is understood that the President desires that provision for sufficient revenue shall be made when the new tariff rates are enacted, and that action upon the special revenue features shall not be deferred until next winter. It is reported that he has said: "Why not take the lowest tariff rates to be found in the two bills [House and Senate committee] and add an inheritance tax?"

Labor Disputes

No progress was made last week toward an agreement of the anthracite coal miners with their employers. The latter still proposed a renewal of the agreement that has expired, provided that it should be signed on the other side by "representatives of the anthracite mine workers." They declined to make a contract, as they said, "with an organization controlled by men engaged in bituminous coal mining, a competitive industry, which benefits directly from every misfortune suffered by the anthracite industry." They also said:

"It should not be understood from this that the operating union organization among their employees. The attitude of the operating union is the same as that in which they were regarded by the strike commission of 1902, as related in the official reports of the commission. The mine workers were asked by the commission to make in their organization certain changes which might benefit the operators in dealing with it. These recommendations have not been adopted and there

exist now exactly the same reasons against 'recognition' which seemed good and sufficient to the commission appointed by the President of the United States."

President Baer, of the Reading Railroad Company, a leading representative of the mine owners, recently remarked that in his judgment the award of the commission was "in its general results the wisest solution of the labor problem that the world has ever seen." The operators have appointed a committee of eleven to decide upon a policy. It is said that a majority of this committee favor a reduction of wages, while a minority would suspend work at the mines for a time, because of the large quantity of coal on hand.—It is thought that a general strike in the carrying trade on the great lakes cannot be avoided. The Carriers' Association insists upon the open shop, and the unions have instructed their members to refuse to work with non-union men.

Railroad and Trust Cases

The controversy between the State authorities of Missouri and the railroad companies concerning passenger rates will probably be ended by a general adoption of a 2½-cent rate. The Burlington road recently decided to enforce this rate on May 1st, the Rock Island then took similar action, and the St. Louis & San Francisco gave notice that this would be its rate in Arkansas. It is thought that all the companies affected will soon make their rates 2½ cents a mile, not only in Missouri, but also in Arkansas, Kansas, Iowa and Nebraska. At Kansas City, Judge McPherson, of the Federal Court, has in a decree reserved for the Federal courts exclusive jurisdiction in the Missouri rate cases, and has dissolved the injunction recently procured by the State authorities to restrain the companies from making a 3-cent rate. The 2½-cent rate was suggested in the decision against the State law, which required a 2-cent rate, and it is expected that the acceptance of it by the roads will prevent further litigation.—The Supreme Court has denied a motion for a rehearing in the case of its decision affirming the judgment of the Texas courts against the Waters-Pierce Oil Company, and the company

will pay the fine, which amounts to about \$1,600,000. It will then be permitted to do business in Texas under the conditions imposed by the State's laws. A fee of \$330,000 was claimed by the prosecuting attorney, but the courts decide that he is entitled to only \$80,000.—In the Federal court at Topeka, Kan., on the 16th, the Cudahy Packing Company of that city (a branch of the company of the same name in Chicago) was indicted on 737 counts for defrauding the Government of \$80,000 by violations of the internal revenue laws. It is alleged that the company used for oleomargarine colored in imitation of butter the stamps intended for oleomargarine not so colored, thus paying a tax of only $\frac{1}{4}$ of a cent a pound instead of the tax of 10 cents a pound which the law requires. The penalty may be both fine and imprisonment.—A Federal grand jury at Chicago recently consumed much time in an inquiry concerning methods by which, it was alleged, the packing companies (or Beef Trust) were obtaining rebates from the railroads. There were no indictments, but Attorney-General Wickersham has sent to Morris & Co., one of the companies, a long letter in which he directs that the methods in question must be used no longer. It appears that the railroad companies paid for dressed beef injured in transit upon the basis of an excessive valuation, and that rebates, or concessions in rates, were thus granted indirectly. Mr. Wickersham says this method has been used by other packing companies; that the practice was probably adopted long ago with no intent to violate the law; and that no public service would be rendered now by making a test case in the courts. But the Government insists, he adds, that the practice "must be abandoned at once."

Castro and Venezuela It is expected that Castro, the deposed President of Venezuela, now on his way back to Europe, will land at Santander, Spain. At the time of his expulsion from Martinique he sent to the authorities there a written protest, saying that deportation imperiled his life, that he had committed no offense against the French

Government, and that the action of which he complained was "a breach of international law and a denial of the rights of individuals." In conclusion, he remarked:

"That such a thing should have come to pass in the land which saw the birth of Josephine and from which came the inspiration and presage of liberty, and at the hands of a people who shed their blood by torrents hardly a century ago to maintain unimpaired the rights and prerogative of man, is inconceivable."

If he decides to remain in France, he will not be molested by the French authorities, but will be under surveillance. After his expulsion from Martinique, the Danish Government gave orders that he should be excluded from the Danish West Indies. In Caracas, the judge of the criminal court in which is pending the indictment of Castro for the murder of Antonio Paredes has ordered the issue of requisition papers. Attorneys in New York, representing the Venezuelan Government, have published an opinion that Gomez is President in accord with the Constitution, Castro having been indicted, impeached and suspended from office at the instance of the Attorney-General. Mrs. Castro was not permitted to land at the Venezuelan port of La Guayra, nor was she allowed to communicate with any person on shore. She proceeded to Costa Rica, and will return to France. At La Guayra she said to Government officers on the dock: "You had better make hay while the sun shines." She denies that her husband has bought war supplies, and asserts that his purpose was to avoid politics and live quietly on his estates. Reports from Panama speak of articles in the press of neighboring cities south of the Isthmus favorable to Castro and expressing apprehension that the policy of the United States and Europe in this case menaces the independence of the States of South and Central America.

Other Countries South of Us It is now asserted that Mr. Gregory, Chargé d'Affaires of the United States in Nicaragua, was treated with great discourtesy before he left his post. He was continually watched by spies, it is said; he was shadowed whenever he left his office, his dispatches to

the Government at Washington were intercepted and mutilated, and he was frequently insulted by President Zelaya's officers. There are rumors of a revolutionary movement in Nicaragua, in the interest of José Madriz. Reports from Mexico say that Zelaya and his troops continue to menace Salvador. The Mexican gunboats stationed near the camp of his army have been instructed to assist the United States warships there in preserving peace.—About thirty members of the House at Washington have sailed for the Panama Isthmus, to inspect the Canal work. They will remain in the Canal Zone for six days. In his approaching visit to the Isthmus, Secretary Dickinson will be accompanied by Major-General Bell.—At Velardena, a Mexican mining town forty miles from Torreon, on the 10th, the Mayor intercepted a religious procession in which about a thousand persons were going to witness the annual burning of images of Judas. Such processions, it is said, are forbidden by law. There was a riot, in which six policemen were killed. The mob then burned the Mayor's house, and the Mayor and his wife narrowly escaped death. Troops came and peace was restored, after thirty-two persons had been killed. Fourteen rioters who had been taken into custody were shot, after conviction by drum-head court martial.

French Labor Troubles

The employees of the postal department are determined to take advantage of the power which they have obtained thru the recent strike, but there is a divergence of opinion among them as to the best method of procedure, one party holding that their best policy is to come into closer co-operation with the Government and the other faction believing that they can gain more by fighting it. The former group is represented by the Comité d'Etudes, which includes not merely employees of the post office and railroads, but also the Association of Law Clerks and a large number of teachers in the primary and secondary schools, that is, the upper class of civil servants in general. In their recent manifesto their position is expressed in the following words:

"We do not want the right to strike, because we hold that a public service which has been established in the superior interest of the nation ought not to be interrupted. . . . A certain number of civil servants want merely to earn their wages from the nation. We, on the other hand, regard ourselves as its partners."

They propose to get rid of the evils of the service, particularly the spoils system, by "democratizing the administration." They would have the administrative bureaus include not merely the departmental officials, but also delegates of the state employees of all grades and representatives of the public, in whose interest the service is maintained. The other party openly declares its indifference to the efficiency and continuity of the service and would use the organization for advancing the interests of the working class as a whole. Their attitude is becoming more and more revolutionary, as is shown by the speech of M. Yvetot, of the General Federation of Labor, in the Hippodrome meeting of 10,000 working men and Government employees. He ridiculed the argument that the strike of the postal and telegraph department had left the country in danger of war.

"We want to leave war out of account altogether, and that is why we made merry over the alarm of the *bourgeoisie*. We workmen will have none of these little fatherlands. Our country is the international world, and let me tell the post office employees that their English comrades were prepared, if necessary, to destroy (*saboter*) the incoming French mails. Capitalism now finds itself attacked by us on every side, and when once we have the army on our side every single *bourgeois* institution will cease to exist. It is the army which we must work upon and win over to our cause. As soon as the army understands, we shall make it cross over to the other side of the barricade. Then we shall be armed with the weapons of the *bourgeoisie* and revolution will be possible. We are only waiting for you officials in order to make a start."

Secretary Pataud, of the Electricians' Union, has succeeded in winning over a considerable number of the Government employees, and last week several hundred of them voted that the General Postal Association be transformed into a trade union and affiliated with the General Federation. He has also gained the Union of Bank Clerks, which was offended by the dismissal of two of its members because they had collected subscriptions for the striking postal employ-

ees. Domestic servants have hitherto taken little part in the organized labor movement, but now a Domestics' Syndicate has been formed, including over two thousand valets, footmen, coachmen, grooms and butlers, which will join the General Federation of Labor.

A Mutiny in Constantinople

An uprising of a very singular character took place in the capital of Turkey on the night of April 12th. A large body of soldiers of the First Army Corps, mostly infantry, revolted against their officers and demanded the overthrow of the Committee of Union and Progress, which since the revolution has virtually governed the country. The mutiny was chiefly due to religious and racial feeling, but does not seem to have been directed against the constitutional *régime* in itself. The Young Turks forming the Committee of Union and Progress were dissatisfied with the first Grand Vizier Kiamil Pasha, because he was not radical enough to suit them. On February 14th, Parliament, at their instigation, passed a vote of lack of confidence, and Kiamil Pasha, with scrupulous regard for the newly established constitution, resigned his office. The new Grand Vizier, Hilmi Pasha, and his cabinet offended the soldiers by several of their policies. One of the reforms which the Young Turks wished to introduce was the admission of all Ottoman subjects to the army, which has hitherto been composed exclusively of Mohammedans. The Greeks showed no desire to take advantage of this change, but the Armenians clamored for admission to the army to avoid the tax which had been imposed upon them in lieu of military service. The soldiers, however, resented the idea of having Christians put into the barracks with them. The Government, two weeks ago, succeeded in obtaining the Sultan's consent to the disbandment of the famous Pretorian Guard of the Yildiz Kiosk. The soldiers composing it were to be dispersed to the distant provinces from which they have been drawn. The imposition of a strictly military discipline, the curtailment of their customary license and the requirements of severe drilling in order to make the army more

efficient increased their dissatisfaction. Anticipating some mutinous demonstration, orders had been issued emphasizing the duty of the soldiers to obey their officers, even tho they might be ordered to fire upon their co-religionists. This brought the disaffection to open revolt. The soldiers gathered near the Mosque of St. Sophia, seized the Parliament House and telegraph office, and opened the bridges to prevent the passage of troops from Pera. They were joined by more until the mutineers numbered about 20,000. The ministry concluded that they could not rely upon the few loyal troops, and tendered their resignation to the Sultan, who thereupon called Tewfik Pasha, former Minister of Foreign Affairs, as Grand Vizier, and Marshal Edhem Pasha was made Minister of War. When the new Grand Vizier went to the Square of St. Sophia to announce the establishment of the new Government, he was enthusiastically received by the soldiers, who expended some million cartridges during the night in celebrating their victory. The most remarkable thing about the affair is, perhaps, the conduct of the soldiers, who for two days had the capital entirely under their control, and were under the orders of no commissioned officer, yet there was very little violence and the gunpowder was mostly expended in rejoicing. No anti-foreign feeling was manifested. Their animosity was entirely directed to the members of the Committee of Union and Progress. Nazim Pasha, Minister of Justice, was killed before the Parliament House, and Riza Pasha, Minister of Marine, was wounded by a bayonet thrust. The editor of the Young Turk organ, *Tamim*, escaped harm, but another man who was mistaken for him was killed. Arif Bey, commander of the cruiser "Assari Tewfik," was lynched because he ordered the guns of the ship trained on the Yildiz Kiosk for the purpose of putting down the mutiny. The Young Turk newspaper offices and the clubhouse of Turkish women were devastated. It is reported that seventeen civilians and soldiers were killed and 415 wounded, but mostly, it appears, by accident. Ahmed Riza, president of the lower chamber of Parliament and leader of the Young Turk party, against whom special animosity

was manifested, took refuge in the French Embassy. The Sultan appointed Ismail Kemal Pasha to act as president of the Chamber, but on the formal ballot he did not receive a third of the votes. The Chamber, depleted of most of its Young Turk members, could not muster a quorum, but, nevertheless, past resolutions promising amnesty and redress of grievances to the mutineers, and declaring their intention to maintain the constitution and restore order.

The Young Turks at Salonika

The mutineers at Constantinople were men from the First Army Corps, who had been worked upon by the Mohammedan priests, probably at the instigation of the Sultan. The First Army Corps, with headquarters at Adrianople, not subjected to these influences, are inclined rather to sympathize with the Young Turks. The chief dependence of the Young Turks, however, is the Third Army Corps, located at Salonika, where the revolution of nine months ago broke out. The soldiers here at once declared their refusal to submit to the overthrow of the Government at Constantinople and made preparations for an advance in force upon the capital. The Albanians, as far as Novibazar, have declared their intention of aiding the Salonika faction. Two of the leaders in the late revolution, Enver Bey and Hakki Bey, had been appointed military attachés at Berlin and Vienna respectively, probably for the purpose of getting them safely away from the country, but at the hint of trouble they returned to Salonika by the first train, and are now assisting in the preparation for the march on Constantinople. With remarkable celerity and decision the troops were entrained at Salonika and dispatched toward the capital. Within three days a body of troops estimated at about 30,000 were concentrated at Tchatalje, within fifty miles of Constantinople, with the advance guard less than twenty miles from the capital. They are well provided with field guns, machine guns, ammunition, etc. More they have been expected by deputations from Parliament, hoping to conciliate them and prevent civil war, but the Young Turks

were firm in their demands, which are the punishment of the ringleaders in the rising, the safe conduct and protection for the Salonika deputies and the restoration of the former Government. They expect to seize Constantinople, establish military dictatorship, protect the foreign quarter of Pera, and establish order throughout the country. Probably this program will involve the deposition of the Sultan. As an indication of the uncertainty of the army may be cited the action of the artillery at Hademkoi. Stationed between Tchatalje and Constantinople, and being agitated and confused by the conflicting reports of what had taken place in Constantinople, they determined to find out for themselves by taking train for Constantinople, so they imprisoned some of their officers, put others in the uniforms of privates and took them with them. When the 1,200 soldiers arrived they were met by one of the privates who are now in command, marched to the War Office, where they were refreshed with tea, then taken to Parliament, where they listened to reassuring speeches by the acting president of the Chamber and prominent Deputies. Then in the square facing the House of Parliament prayers were offered and the Sultan was cheered. Satisfied then that neither the Sultan nor the constitution was in danger, the artillerymen returned to their barracks at Hademkoi. The chief reliance of the Government at Constantinople is on Nazim Pasha, who has been placed in charge of the army. He is a liberal and constitutionalist, popular with the army, and the Mohammedan priests, who instigated the mutiny, are now busy visiting the barracks and preaching obedience to superior officers as the duty of all good Mohammedans. The soldiers, however, have found out by their two days' recess that they do not have to obey unless they want to, and it is questionable how much dependence can be placed upon them in case they are called upon to fight their brothers from Salonika. On the other hand, it is equally questionable if the soldiers from Salonika could be induced to attack a general for whom they have so much respect and confidence as Nazim Pasha.

Massacre of Armenians

Almost simultaneously with the mutiny at Constantinople, but apparently not connected with it, a rising took place against the Christians in the vicinity of the Gulf of Alexandretta. The towns most seriously involved are the seaports of Alexandretta and Mersina, and two inland towns reached by railroad from the latter, Tarsus, 17 miles, and Adana, 41 miles from the coast. Adana, the key to the Taurus Mountains, is twice as large as any of the other three, containing about 35,000 inhabitants. Tarsus is best known as the birthplace of Paul. It appears that street fighting between the Turks and the Christians of Adana continued for three days, and a large part of the town was destroyed by fire. Over a thousand persons are said to have been killed here and as many more in the other towns. Among the victims are two American missionaries, Mr. Maurer and Mr. Rogers. The latter was a graduate of Princeton University and of Hartford Theological Seminary, and he and his wife were sent out last August from the South Congregational Church of New Britain, Conn. They were shot on Thursday afternoon while attempting to extinguish a fire in the house of an aged Turkish woman. The other missionaries seem to be safe, altho they are confined to the mission premises, where several thousand fugitives have taken refuge, and are suffering for lack of food and medicine. The Rev. William M. Chambers, of the American Board, who is in charge of the Adana district, cabled to the United States for help as soon as telegraphic communication was established after the riots. There are no American warships in the vicinity, but French and British warships have gone to Alexandretta and Mersina, with orders to take such action as seems advisable in the emergency. The Sheik-ul-Islam, of Constantinople, is using his authority to stop the massacre of Armenian Christians, and has telegraphed to the priests of Adana warning them that such action is contrary to Mohammedan law. The Chamber, on motion of the deputies from Aleppo and Adana, past a resolution calling for the suppression of the riots and the punishment of their leaders.

Foreign Notes

The Independent Labor Party of England is suffering from a factional fight between the moderate and radical wings. A Socialist member of Parliament, Victor Albert Grayson, has been violent in his attack upon Keir Hardie and other labor members, denouncing them as traitors to the cause on account of their co-operation with the Liberals. The National Administrative Council dismiss him from the party and cut off the payment of his salary from the party funds. The general labor conference refused to concur in this action, whereupon four members of the National Council, Keir Hardie, Philip Snowden, Ramsay Macdonald and Bruce Glasier, handed in their resignations. All except the last are members of Parliament.—A report comes by way of St. Petersburg that the Turkomans have defeated the revolutionists of Astrabad, Persia, and massacred 2,000 persons. This occurrence, whatever its seriousness, will give the Russians another excuse for occupying Persian territory, as, according to the agreement with Great Britain, Russia is responsible for the maintenance of order in Northern Persia. In pursuance of this policy several towns along the Caspian have been garrisoned by Russian troops and most recently a force of Tekke-Turkoman cavalry under Russian officers have occupied Meshed in Northeastern Persia.—The Constitution for the Union of the South African colonies which has been under consideration by the four parliaments seems now to have a good chance of being approved by all of them. In the Transvaal Parliament three days were given to the discussion which called out a good deal of criticism on certain points, but none of the amendments suggested received any considerable number of votes. At the end of the discussion General Botha's motion for the adoption of the constitution past the Assembly without dissenting voice. In Cape Colony more opposition is manifested, but so far all amendments have been defeated by a vote of about three to one. The Dutch element objects to the system of proportional representation, which they think will curtail their political power, and the friends of the natives are opposed to the discrimination on account of color.

Progress in Panama

BY GARDNER RICHARDSON

[This is the first of a series of articles by Mr. Gardner Richardson and Mr. W. J. Ghent, who were sent to Panama by THE INDEPENDENT as its special representatives. The second article, by Mr. Ghent, will discuss the commissary and labor questions.—EDITOR.]

THREE years ago two representatives of THE INDEPENDENT were sent to Panama* to report to our readers the conditions under which the Americans were working, and the progress that was being made in constructing the canal. They found chaos and confusion. The commission had pitched in after the characteristic American fashion and hurried a heterogeneous lot of men and material to the Isthmus. Without

adequate wharfing facilities at either the Atlantic or Pacific ends, without proper quarters for the men or storage for supplies, with only the single track Panama Railroad to handle the tremendous traffic, the great task was undertaken. Yet the report of our editors was on the whole an optimistic one. The blame for the confusion was laid to the fact that the American public, impatient at any delay, wanted to see the dirt fly, and, rather than draw criticism from platform and press, the commission started the work

*Six articles by Dr. E. E. Slosson and Mr. Gardner Richardson appeared in THE INDEPENDENT for March 15th, 22d, 29th, April 5th, 12th and 19th, 1906.

REMAINS OF THE CANAL PROJECTED BY THE FRENCH

The remains of the canal project of the French, as they appeared in 1906. The work was abandoned after the French government had spent \$40,000,000.

with such facilities as it could command. The advance made in three years is astounding. The streets of Colon and Panama are paved with fire-brick; hydrants, unheard of in the tropics, have been installed, and swamps in the outskirts of the city filled in with earth taken from the canal prism. Yellow fever is an exterminated disease, and mosquitoes are almost as rare as snowflakes. The men are far better quartered, fed and cared for. The change in the conditions on the Isthmus was first forcibly brought home to us on the steamer. Three years ago the boat was crowded to overflowing with adventurers, soldiers of fortune and ne'er-do-weels. The absence of women was painfully apparent. The ship's company was a typical segment of a mining camp or frontier community. This year the steamer had a smaller passenger list, consisting of a noticeably large proportion of married women and their children. The men were mostly returning from their vacations, and were a quiet, unassuming, but determined class of men, the type of American that has pushed undertakings to completion in many lands. The Isthmus is no place for grafters and seekers for sinecures, and such men were the first to find it out. Despite the great progress that has been made in caring for the men, the work is hard, the heat makes all labor arduous, and the means of amusement are restricted. So the men that came in search for easy work at high wages and the chronic kickers have been automatically weeded out.

The domestication of the Zone was still further emphasized on landing at Cristobal. Light-haired American children were playing games under the palm trees. Baby carriages were being wheeled along the water front. We were witnesses of the Americanization of a land steeped in Spanish influence for four centuries. Along the main streets of Colon and Panama all American products from Omega oil to Sorosis shoes were prominently advertised by billboards and even electric signs. The penny moving picture arcade has also followed the flag. On Sunday afternoons and holidays baseball teams from the various departments meet in contests that delight the American colony and astound the natives. A spectator might easily forget

RELIEF MAP OF THE CANAL ZONE,
Showing the artificial lake to be created and the
line of the canal from the Atlantic to the Pacific.

that he was in Panama, for all the customs in the States are loyally followed, even to the selling of peanuts and pink lemonade.

The most startling evidence of Americanization is a fully equipped fire department at Cristobal, which turns out in record time to all alarms, and has already saved considerable property that the local Panamanian fire department would have been utterly incapable of

cross the street from their engine house to the wharf immediately opposite. In the excitement the native firemen, in accordance with a hereditary custom, completely lost their heads and proceeded to uncouple the hose as fast as the Americans laid it down, and swarmed over the

CANAL ZONE FIRE DEPARTMENT.
Located at Cristobal and fully equipped according to the latest American standards.

protecting. The native firemen wear red shirts, brass covered helmets and khaki trousers, and are known among themselves and the Panamanians under the high-sounding name of "bomberos." The Americans employ the universal derogatory adjective for anything native and allude to them as the "spigotty" firemen. The derivation of "spigotty" is uncertain, but it is an importation from Cuba and is supposed to be a contraction of a portion of the sentence, "*No spigo de Englis.*" While we were in Cristobal a German liner caught on fire, and at the first alarm the American department turned out promptly and covered almost a mile to the dock in the same time that the "spigotty" firemen took to

ship with their battle axes, shouting orders which nobody obeyed nor understood. The German captain finally cleared them off the ship and directed his crew to prevent their returning. With this assistance the Americans put the fire out, but only after six sailors had been suffocated. A member of the American fire department said they had been delayed about thirty minutes by the "bomberos." The next morning a namesake of ours, the *Colon Independent*, came out with an indignant editorial on the discourtesy shown to the "bomberos." The action in driving their men from the decks was denounced as an insult to the Panamanian Republic.

A feature which impressed us most fa-

vorably was the splendid and efficient work done by the four commission club-houses, which are operated under the auspices of the Y. M. C. A., at Cristobal, Empire, Gorgona and Culebra. These institutions furnish, with the exception of baseball, practically the only form of amusements for the men, and are extensively patronized. Their equipment consists of a large reading room, gymnasium, bowling alley and billiard room, in addition to smaller rooms for cards, chess and checkers. President Taft, on his recent visit to the Isthmus, promised he would try to have four more club-houses installed, and no better measure could be advocated, both for the pleasure

Zone. The possibilities of adapting northern fruits and vegetables to the luxuriant tropical climate have been but slightly investigated.

Experimentation in this form is all the more desirable, as conditions indicate that we are building up a permanent community at Panama. The operation of the locks, dredging of the channel, pilotage of vessels and administration of the canal will always keep a force of Americans in Panama. We have, in addition, incurable patients in our hospitals, and life convicts in our prisons. When the canal is finished, we hope the Government will open the Zone to settlers, and give one of its houses and a certain amount of

THE RAILROAD STATION AT COLON

This building was the center of the revolution in 1903, and was protected by a handful of Americans.

and good of the men. The new buildings would probably be located at Gatun, Ancon, Tabernilla and Pedro Miguel. Another matter somewhat aside from the actual canal construction that deserves Government attention is the extension of agricultural experiment stations on the

land to each person. The houses will be of no further use to the Government, and to have an American community inhabiting the Zone would strengthen our position in that part of the world.

The Americans have done very little to beautify the land permanently. The

French imported royal and cocoa palms from Jamaica, and have made Cristobal and Ancon garden spots in the world. The Americans might well follow their example and beautify localities, such as Gatun, which is now a hot, unprotected hillside, and which, on account of the big locks to be located there, will be a permanent town.

The planting of these palms is one of the many little things the French did to help the Americans. Sufficient credit has never been given to this nation for the manner in which the rank and file attacked the great problem at Panama. In the face of constant yellow fever, of which they were pathetically ignorant, living under unbearable conditions, and with entirely inadequate machinery, they took out 81,000,000 cubic yards of earth from the canal prism. If the French had known that yellow fever was carried by the mosquito, and if they had been equipt with our steam shovels, they might have finished the canal. This state-

ment might not bear attack, but, stating a part of it conversely, a denial will be less likely to follow. If the Americans were visited by a yellow fever epidemic that carried off only one-tenth the number that it did among the French and their employes, there would probably be a stampede from the Isthmus, that would leave not a wheel turning nor an inkwell cover lifted. No person can wander over the Isthmus and see the footprints of the French without conceiving a deep admiration for their dogged perseverance and determination. Our payment of \$40,000,000 for their rights was one of the best bargains our much-swindled Government ever made. In addition to the 81,000,000 cubic yards of earth removed, which would at this price be paid for at the rate of 50 cents a yard, a lower price than we could remove it for, we secured thousands of tons of machinery and iron, some of which we have continuously used, and two thousand houses in a fair state of repair.

THE NEW CITY OF PANAMA

The streets of Panama are without exception, have been paved and are kept clean, an unusual procedure in this country.

Since our last visit the civilian administration of John F. Stevens has gone out and the military administration of Col. George W. Goethals has come in. Stevens was a railroad man and his organization of the Panama Railroad and the different departments was an efficient piece of work. When the locks and dams were projected, a field was opened in which he was not so experienced. The men now in charge have built locks and dams all their lives, and the man immediately in charge of this work, Col. H. F. Hodges, is a recognized expert. Another

lifetime to accept. They are as safe from the Sirens' call as was the bound Ulysses among his deafened sailors.

The opportunities among the men for saving are great. A single man drawing \$1,800 a year can without privation save \$1,000, and some by stinting save even more. In a typical month over \$400,000 in money orders are sent home from the Zone. For married men the conditions in contrast to those in the States are even better. Three considerable expenses at home are avoided entirely on the Zone—rent, coal and taxes. Married couples

THE AMERICAN RESIDENCE SECTION AT CRISTOBAL

This is the pleasantest locality on the Canal Zone, cooled by the ocean breezes. It was here that De Lesseps stayed while in Panama.

advantage of the military over the civilian administration is that orders are obeyed without discussion, and the men in charge have not one hand to their ear listening for high-priced offers from the States that have already drawn three chief engineers away from the Isthmus. Such offers have little interest to army men, for they would have to give up their chosen careers and the work of a

are given their houses without charge by the Government, and supplies are furnished them at a minimum cost. There is a noticeable difference in the attitude among the civilian employees toward their work. Some consider that they are serving a sentence in exile, and await only the time when they have saved the required sum. Others praise Panama without reserve, and hope to stay until

THE SITE OF THE GATUN DAM

The north toe of the dam is seen over the top of the nearest telegraph pole. The lake will be to the left and the dam to the right.

the canal is completed, some even laying their plans to secure a pilot's license or a permanent position with the canal maintenance force. It is an indication of the attitude of the employes that some have never availed themselves of their vacation, and one man, who left on a forty-two days' leave, after sitting near the stove for a week, returned with the larger part of his vacation unused. All who work for the Canal Commission receive the usual thirty days' vacation of Government employes, and twelve days additional for the round trip to New York. Formerly the men could choose where they wished to go, but fabulous stories of gold mines in Peru and Colombia drew so many into the wilds of South America, to return with fevers of all descriptions, that a rule was passed requiring employes to go to the United States, as vacations were given them for rest and relaxation. They have since been allowed to go to Jamaica and Costa Rica, the lat-

ter place taking only twenty-four hours to reach. It is impossible for all employes to take their vacations in the summer, and, rather than plunge into our rigorous winter, they go to Costa Rica, and have forty days in a delightful climate and amid pleasant surroundings.

A feature which calls for special mention is the Panamanian lottery, located on the ground floor of the Bishop's palace. This is a national concern, with prizes ranging from fifty cents to \$7,500. Tickets can be bought in sections, so that twenty-five cents will enable a person to stand his chance of sharing in the prize money. Recently a Chinese lottery has been started, which is said to pay the Panamanian lottery \$40,000 a year for its concession, and is also said to clear \$25,000 a month. In this lottery you stake on one of thirty-six numbers, and if you win you get twenty-seven times your money. The odds are, therefore, four to three in favor of the lottery. As much

money can be placed as is desired, and there are three drawings a day. The influence on the American community is unimportant, as only a little spare change is risked for amusement, but the effect on the ignorant laborers is demoralizing. Their last cent often goes for lottery tickets, and an occasional prize makes their ultimate downfall only more certain. The evil is increasing to such an extent that among the townspeople laborers are evicted for not paying their rent, and the goods of merchants remain unbought. The Panamanian merchants complain bitterly against the American Government commissary store for hurting their trade, but the lotteries are responsible, to a considerable extent, for the business depression. The Panama-

nian Government should awaken to the injury these lotteries are working and repeal their charters.

The Panamanian standing army consists of a police force of 1,200 men, most of whom are stationed in Colon and Panama. They are a fairly efficient force, altho it usually takes half a dozen of them to arrest a good-sized American. A story is told of a burly Texan who presented himself before the United States consulate with his hands on the collars of two struggling "spigotty cops." When the consul appeared the Texan said apologetically that he had been arrested and wanted to know his best course of action. In a recent turmoil in Panama an American boiler-maker laid almost a dozen of the little fellows

THE GREAT CULEBRA CUT.

This was formerly considered the greatest problem of the canal construction, but it will probably be entirely excavated in three years.

low before they swarmed over him like bees and brought him down. It speaks well for the native authorities that in spite of the physical superiority of the Americans, revolvers are not issued to the policemen. So the native policemen go on the principle of strength in unity, and a whistle brings the necessary force to make an arrest.

The question of canal construction will be more fully discussed in subsequent articles and full figures will be given. It is sufficient to say here that the French removed 81,000,000 cubic yards of earth, and that the Americans had removed 59,000,000 cubic yards up to January 1st, 1909. Allowing 3,000,000 cubic yards a month, which is about the present rate of excavation, the Americans will surpass the French record by September 1st. The change at Culebra in three years is instantly apparent. The cut is widened and deepened, the old French banks covered with vegetation have been torn away, leaving the yellow dirt exposed; the tangle of old machinery and twisted iron has been removed, and the all-powerful American steam shovel is rapidly eating its way to the required level. The excavation of the Culebra Cut is merely a matter of mathematical calculation, barring accidents, and three years is given as a generous time allowance. The determining feature in opening the canal is the construction of the locks and the dam at Gatun. Three years ago the site held a railroad station and a few native huts; today it is the most important place on the line, bustling with activity and echoing with the noise of whistles and the rattle of steam shovels. Already the excavation for the locks is completed and the foundation for the huge dam laid. Undue importance has been given by the press to slides in the Culebra Cut, and to the sinking of a section of the Gatun Dam. The slides in the Culebra Cut were not unexpected and were not different in character from those that occur in any railroad work. The sinking at the Gatun Dam was due to a fault in the masonry which was squeezed aside, with no further sinking thereafter. It is an axiom in dam construction that the larger and heavier the

dam, the safer it is. The work is not being done in a haphazard way, but after the most careful investigation with borings and test dams. The army engineers, on assuming control, took nothing on faith or previous report, but went over the whole ground again. It is probably true that no section of the world's surface has been more accurately examined and surveyed than the Canal Zone. From the time of the arrival of the French painstaking records have been kept of rainfall, climatic conditions and the discharge of the Chagres. The dam is not being constructed to see what will happen, but after the most accurate calculation of the desired result. It would be a remarkable event if the canal were constructed like clock-work, without a single accident or untoward event. Complications and mistakes will doubtless occur, and must be solved and corrected with as much ability and ingenuity as possible. To beat the big drum and predict a failure when setbacks occur shows a lack of perception and understanding of the situation.

It is not difficult for a person with an active imagination to picture a huge ship in future years approaching the low-lying Atlantic coast of Panama, which gradually resolves itself into a beach of coral and hills of palm trees beyond. The ship enters a protected bay and at the head proceeds into a narrow canal, the trees so close on either hand that the ship seems to be in the heart of a tropical forest. After continuing for a few miles the boat reaches a gigantic staircase of three locks, which lift it eighty-five feet upward out of the forest, until the Atlantic Ocean is seen far below. The locks are opened, and the ship enters a large lake dotted with islands. After crossing the lake the ship passes thru the narrow cañon at Culebra, the sides rising several hundred feet above the deck on either side, then out again into a smaller lake, down two sets of locks, and into a four-mile sea-level canal. The locks and lakes, so apparently simple, seem to the passenger to have been the subject of much unnecessary discussion and controversy, as the ship drops the thin black coast line below the horizon and sails out upon the broad Pacific.

Religious Leadership in College

BY HENRY S. PRITCHETT, LL.D.

[Dr. Pritchett, previously known as an astronomer, and as Superintendent of the United States Coast Survey, was President of the Massachusetts Institute of Technology and is now President of the Carnegie Foundation for the Advancement of Teaching. This has given him large knowledge of conditions in colleges.—EDITOR.]

COLLEGES in the United States and Canada can scarcely be strictly classified so far as their attitude to formal religious instruction is concerned, and here I refer to the instruction of undergraduate groups of students, not to the students of the professional schools, for whose religious education little or no effort has been made. We may, however, distinguish roughly three groups: (1) Large colleges with little or no formal religious training; (2) colleges, generally in small towns, with smaller student groups; without formal denominational connection, but generally with some systematic attention to religious exercises and religious instruction; (3) distinctively denominational colleges in which religious exercises and certain religious instruction form a definite part of the college life, in many cases an obligatory part.

The estimate as to the genuineness and virility of the religious life in these groups of colleges will vary greatly, according to what one has in mind when he defines religion. In fact, at the bottom of any effort toward religious education lies first some clear conception of what religion is.

I believe that men are fairly well agreed today that religion is not a creed, but a life springing up in the human soul, and that Christianity as represented by Jesus Christ is the supreme exemplar of that life. Under this conception Christianity and religion are synonymous. They are no longer so when we impose either upon the one or upon the other the dogmas of a sect or of a party.

Furthermore, we must clearly recognize today as never before that, as the ages grow, our knowledge is approximating closer and closer to absolute truth; and that from decade to decade, from century to century, our conceptions of Christianity must stand face to face with this growing knowledge of truth,

and that they will be modified thereby. They will grow as truth grows. The conception of Christianity in the first century is not the conception of Christianity of the twentieth century. The Christian of today is an agnostic in many things in which the Christian of the first century assumed complete knowledge. He does not deny that we may some day know the order of the universe, but he does not claim today to know it. The supreme facts to him are no longer the story of supernatural control over nature, but the sayings and the life of Jesus Christ. The sermon on the mount means more to us than the story of the miraculous birth; the ideal of service there revealed is more significant to men of today than the suggestion of heaven hereafter. Christianity is translated today in terms of love and of service in this life rather than in terms of the rewards of a future life. And this change in the point of view is due mainly to the growing nearness to truth and to a better knowledge of the ways by which truth is to be sought. For altho we, no more than the early Christians, know just where truth is, we do see more clearly the ways in which it must be sought.

Considering religion from this standpoint, the teaching of it in our various colleges and the practical outcome of that teaching cannot be differentiated in any such way as their formal teaching may be differentiated. There are colleges with scarcely any formal religious teaching in which are high ideals of service, of ethics and of morality; there are colleges in which the formal exercises go hand in hand with ideals of service and of life; there are other colleges in which these exercises are equally insisted upon in which the morals are low and the ideals far from inspiring. The results are in proportion to the quality of the religious leadership.

(On the whole, I believe that the morals

in American colleges are as good, in certain ways better than they were a generation ago. Influences which make for decency and right living are present in every college, and the men who teach in colleges are as a class men of high character. On the other hand, the influences which make toward the religious ideals of life have been somewhat weakened, partly owing to the enormous change which has taken place in the thinking of men with respect to their theology, partly to the great current which sweeps the college, as it does the rest of the world, toward material ideals and interests, partly to a decadence of the more formal and distinctive religious life of the family among American Protestants. Today the boy who comes to college rarely has the knowledge of the Bible which his father had, nor are there in the college life so many things to suggest to him day by day religious rather than material ideals. The college is a part of our national life. It reflects the tendencies and the influences which pervade the nation. These tendencies have, on the whole, during the past two decades, had more in them to draw the student's ambitions and thoughts toward material successes than to bring to his attention the underlying fundamental truths of religion.

Furthermore, the college boy, like many others, has been somewhat confused in the discussion as to creeds and as to the distinction between theology and religion. He is not yet adjusted to the changes which have taken place. Not infrequently he has got the impression that religion was becoming old-fashioned, when, as a matter of fact, only some theological conception was losing its grip. Over and above all this, the college of the last twenty years has shared the common American tendency to superficiality. It has sought to do more things than it could do well. In this process its ideals have suffered, in scholarship as well as in religion.

The remedy for this state of affairs seems to me to be, in religion as it is in scholarship, a return to the ideals of sincerity, simplicity and thoroughness; and this return is not to be had by bringing in the old theological conceptions of religion, but by setting forth effectively the conception of Christianity side by side with our

growing knowledge of truth. That conception can be set forth only by effective leadership in the colleges themselves. The whole problem, therefore, of religious education in the colleges seems to me to reduce itself to the problem of effective religious leadership—a leadership which shall touch not only the mind, but the heart; which shall deal not only with the intellectual aspirations of students, but shall kindle their enthusiasms and touch their imaginations; which shall carry with it not only the power of high thinking, but also the warmth of true fellowship. In this respect the college differs in no whit from the rest of the world, unless it be that in the colleges intellectual freedom is a part of the very air which the student breathes. Here more than anywhere else the day of authority over men's minds and spiritual aspirations is fast passing. The day of leadership is coming in. Only a religious democracy is possible, not a kingdom. In the colleges we need a leadership adapted to the conditions and the needs of the college life, if we are to have in the colleges a true, living religious education.

How are such leaders to be had?

That is the question of our age. I do not pretend to have the wisdom to answer it. That answer is to be wrought out in the next generation by the common efforts of religious men everywhere, whether they belong to one organization or to another, or to no formal organization whatever.

Naturally the colleges have looked for this leadership to Christian organizations. In their efforts to furnish it one sees both the advantages and the limitations of organizations. An organization always moves behind public opinion, not in advance of it. The form of Christianity of an organization is always behind the Christianity of the most advanced thinkers of the organization and of the time. Organization tends to crystallize upon technicalities at the expense of the original spiritual and intellectual movement which formed it. It is out of these tendencies that the great religious leaders have broken away from the religious organizations of their own time.

Notwithstanding this fact, it seems likely that men of distinct religious as-

piration will nevertheless continue, in the main, to remain in the present religious organizations; and from these we must expect in the future to draw religious leadership. There is no evidence that men are going to drop the old organizations and come together in a creedless religious group, ideal as this appears in theory. The reason for this lies deep in our human nature. Religion is something more than an intellectual conviction. It affects the whole spiritual nature, the emotions as well as the mind. Men are human beings before they are either philosophers or religious leaders.

I remember a club room in a small city which grew up about a railroad junction. It was dark, ill ventilated, in some ways unsanitary, but had a cheerful fire in one corner. There was something inviting and homelike in the old cushions and chairs, and there was a place to put your pipe. A good woman learned in sanitary science came along, remarked upon the unsatisfactory surroundings, and prepared a new and bright club room in which the paint was very white, the light admirable, and the ventilation perfect; but somehow the boys never accepted it. They tried it at the beginning, but inevitably drifted back to the old fireplace and the worn cushions and the comradeship of the old room. So today we find hundreds of thousands of men who are practically creedless, but who still keep their places on Methodist benches or Baptist seats or in Episcopalian pews, because there is something about the warmth and fellowship of the old faith and the old organization which they are not willing to give up. No leadership is going to be effective and no organization is going to survive permanently which does not bring to human beings some realization of human need and human fellowship. No organization can attract the great body even of thinking men unless it responds to this universal human demand.

The problem of securing effective religious leadership is analogous to that of securing effective political leadership. Now and then a leader will arise outside of the parties, but in the long run the betterment of political ideals rests on the education of the parties them-

selves, on the growing qualities of their leadership. I believe we shall draw our religious leadership from the Christian denominations, and that the first work to be done is the conversion of the churches themselves to a new estimation of the relative importance of the life and teachings of Jesus Christ, obscured now by many centuries of discussion and of tradition, and to make clear to religious organizations the absolute necessity of adopting in their selection of preachers standards which look rather to leadership than to doctrinal or denominational expertness.

We have witnessed in the last generation a great diminution of the doctrinal differences which divide Protestant bodies. In our own country the feeling between Protestantism and Catholicism has grown steadily more friendly. All this is encouraging.

This does not, however, always mean more effective co-operation or greater efficiency in religious work. Devotion to an organization is as potent in drawing lines between groups of men as devotion to doctrine. The coming of a united Christianity is hindered today more by the divided loyalty to organizations than to creeds. We see this illustrated constantly in political organizations which survive long after the causes which gave them birth have disappeared. All organizations of men are political in this larger sense.

While I am ready to believe that we shall obtain our religious leaders in the future mainly through the religious organizations quickened to a new sense of the meaning of the simple Christianity of Christ, I am not willing to pass this matter without emphasizing two things: first, the difference between promotion and leadership; secondly, the opportunity and the duty of the religious man outside of organization.

Our age and our nation are under the spell of the promoter. In politics, in education, in religion, there is a constant tendency to the substitution of promotion for leadership. There is a vast difference. Mark Hanna was a successful political promoter; Charles E. Hughes has shown successful political leadership. No human being is more quick

than the college student to differentiate between the religious promoter and the religious leader.

Secondly, I am unwilling to leave this subject without voicing a protest against the use of church membership as a test of religious life or without calling attention to the great harm which the practice of this criterion has wrought. Church membership is no test as to whether a man is a religious man or not; nor is it any criterion by which religious men may be chosen. The constant use of this criterion has served to impose upon young men, both in and out of college, the idea that the obligations of the religious life are binding only on those who have assumed membership in religious organizations. No more unhappy impression could have been created. The obligations of the religious life are the same upon every human being. The idea that he can escape the working out of the great laws which the Maker of the Universe has set up by declining to belong to a human organization is a grotesque one, and yet this is an idea common among young men. I believe, therefore, that the man of sincere religious life, outside any formal organization, has a notable opportunity today for religious leadership in college, and that he escapes some of the limitations which lie in the way of his brother who is part of a definite religious organization. No man has the right to evade the duties of leadership or of service by reason of his belonging to, or of his not belonging to, a religious organization. To advance such a claim is like insisting that a man is not an American, unless he belongs to the Republican or the Democratic party.

It was partly out of the limitations of the churches that the Young Men's Christian Association was instituted, and this has had, in many cases, enormous advantages over any single organization. The very fact of a common effort on the part of the community was itself a source of strength. Men who had tried to do with the colleges went withal from the Young Men's Christian Association - a tribute of gratitude for the work which it has done in the colleges. This work has been in the main, however, along the lines of social and community work, such as the training of leaders, the looking up of

new students, and the suggestions which it has brought for common helpfulness among students. Here, as in the churches, there has seldom appeared the leader who was able to deal with the larger problems of the college religious life. The formal religious exercises conducted by the Y. M. C. A. in the college have, as a rule, appealed to a small group of students. The process has been a little like preaching to the converted. Seldom has the leadership been equal to the task of bringing into the Association the men who were the real leaders of the college. No religious leadership is efficient which fails to do that. By the same token no scholarly leadership is effective which fails to take hold of the imaginations and intellectual strivings of youth.

I venture one or two suggestions as to the means of religious education.

I have alluded to the fact that the boy who comes to college today has no such knowledge of the English Bible as his father had. To men brought up as the most of us were a generation ago, the ignorance of the text, of the literature, and of the traditions of the Bible on the part of many college boys is a somewhat startling situation. The attempt is being made, particularly in denominational colleges, to deal with this lack of home training by Bible courses in the Old and New Testaments. I question whether this method of dealing with the subject is likely to produce the desired result. It fails to take account of the enormous change which has taken place in the attitude of men with respect to the claims of verbal inspiration, or the actual differences in the value of the books themselves. The day has gone by when the student of our colleges will accept the Bible as a literally inspired book. He is too close to the scholarship of the world to be satisfied with that assumption. Furthermore, his civilization revolts at the crude conception of God which parts of the Old Testament voice. It is perfectly clear to him that much of what is here told reflects the superstitions and strivings of a primitive people, and belongs to a stage of civilization long past. Nevertheless, these old books contain glimpses of God which are priceless. Christ himself has never better summarized the duty of man than it is done in Micah's phrase, "What

doth the Lord require of thee, but to do justly and to love mercy and to walk humbly with thy God?"

Similarly, the controversial and theological parts of the New Testament, which are put before him with practically the same authority as the words of Jesus Christ himself, in some ways efface the Master's own message. Paul was a great preacher and missionary, but what he said was strongly tintured with his theological prejudices, and at the best his words have small value compared to those of the Great Teacher.

I believe we are losing a great opportunity with the youth of our land by continuing to treat the Bible as a whole in our teaching. Thomas Jefferson and others who have attempted the same thing had a fruitful idea when they undertook to disentangle the words of Jesus Christ from the great mass of writings. I believe it would be possible to prepare a volume containing the choicer chapters of the Old Testament and the words of Jesus Christ himself, prefaced with a perfectly truthful and honest statement of the origin and development of these books, which, placed in the hands of the student, could become for him a far more fruitful thing than the Bible as it is laid before him today.

Over and above all this, we must uncover for the young men of our colleges the true image of Jesus Christ, obscured as this has been by many centuries of dogma and of tradition. Christ has been taken away from young men in large measure by the effacement of his human life and of his humanity, a humanity which appeals to youth, if only he has the chance to know it. Christ was himself the type of undenominational leader. He was not a priest; he had but slender relations with the Church of his day; he represented no organization. He was preeminently the religious leader, first of all living a helpful, sympathetic, human life,

insisting always on the simple and the sincere and the true in place of the complicated and the artificial, and holding up always to men the ideal of religion as life and service.

Finally, I believe we cannot too much emphasize the fact that, however the leadership be determined, it must come thru fellowship, not thru belief. Whether a man believe in the miracles of Jesus Christ or not is of comparatively small moment, if he take Christ as his exemplar in human service. He who seeks to enter into the college as a religious leader must come as Christ came, with love and friendship, one who sat down and ate and drank with those whom he sought to lead. Fellowship is the one path to college leadership of the highest type.

Finally, I wish to express a hearty optimism concerning college boys. There was never a time when they were more ready to respond to true leadership, or to think seriously over the great questions of our life and our destiny. In the superficiality which affects their lives, in the current of material interests in which they stand, formal religious preaching and formal religious teaching will have little influence on them, but they will turn gladly to him who faces the truth fearlessly and who stands in his own person as an exemplar of service and of fellowship.

Outside the Greek Church at Jerusalem on an Easter morning stands a great company of worshippers with unlit torches, awaiting the lighting of that altar fire whose flames shall be communicated from one to another until the cloud of worshippers becomes a constellation.

Around every college altar stands a group of youthful spirits ready to turn into joyful worshippers, if only the unlit torch in each human breast catch but a spark from the flame of a leadership brave, truthful, religious.

NEW YORK CITY.

Alfred Austin

Shakespeare's Birthday

April 23, 1564

BY ALFRED AUSTIN

POET LAUREATE

Gravest and yet most cheerful among men,
'Twas fitting that his life should dawn in spring,
When merle and mavis carol in the glen,
Even as today they sing.

His boyhood fled among Arden's woods,
Or by slow otter-haunted Avon's stream,
Flowering toward youth, as flower the aspen buds,
Waking from wintry dream.

Slowly into another dream he past,
The dream of Love, the sweetest dream of all,
Whose warm glow retrospectively is cast
When evening shadows fall.

Thence, on to other scenes for which he pined,
Where mortal passions, mortal woes, abound;
And there his vast and universal mind
Their tragic theater found.

When grew his wise imagination ripe,
In Hamlet's dual soul and wavering will
He drew the masterful magnetic type
That lures Ophelia still.

Last to "loved life removed,"* from crowd and stage
Homeward he turned, where rustic belfries chime,
Bequeathing his rich self, not of an age,
But for all space and time.

* Mentioned by Mr. Austin, A.M. U.S. 3

SWINER'S OLD MANOR, ASHFORD, KENT, ENGLAND

Roosevelt—A Suggestion

BY HENRY G. GRANGER

ALL the countries of Europe, and even Japan, are increasing their military forces. China is undertaking to drill the greatest army of history. A few decades more and it seems that every man at work will carry on his back a soldier.

We, England, Germany, France and Japan are tremendously increasing our navies. As one adds a "Dreadnought" another adds two, and the others out—"Dreadnought" the "Dreadnoughts" with floating fortresses still more huge and consuming still more labor and cash. Spain and Russia, struggling in poverty, squeeze and build battleships. Italy, too, with woful internal problems, lets her people starve and launches cruisers. The more each does the more the others feel they must do—we, too, tho our revenues are down, must spend on navy alone \$118,000,000 per year with specific increases.

What for? To organize expeditions to relieve congestion and conquer the wilderness, and replace the tracks of lions and rhinos with the footprints of happy, civilized children? Or to attack the problems presented by the laws of nature that ever beckon with hints of new and greater discoveries? No, none of this; just to be ready on an instant's notice to kill people, to destroy the principal element whose constant increase under well-ordered conditions is the main factor of progress and prosperity.

With the ever-increasing expenditure that produces nothing useful, what is the answer? What is the inevitable, inescapable conclusion?

They'll all "go broke," every country of them.

Colombia is one of the greatest sections of the globe in natural resources. It is a country whose men are brave, brilliant and industrious, whose women are beautiful, bewitching and true.

Less than a decade ago Colombia had, in proportion to its revenues, the greatest standing army on earth. No public employee could count on his salary, the interest was not paid on its debt save such parts as had specific revenues pledged. Schools were closed for lack

of funds. Want and desperation were everywhere. The country was "broke."

Now things there have changed. Every one is paid on time and in full. Colombia's credit is soaring. Three times as many schools as ever are open. Many night schools are educating the workers. Every mail brings word of a new railroad or other industry finished or begun. The national telegraph service is superior to ours. Peace and progress are showing their effects throughout the land.

Why?

Because in the crisis ensuing on the rape of the Isthmus, Rafael Reyes was given the reins of government. Himself a diplomat of the first order, and regarded even by his political opponents as, next to Diaz, Spanish-America's greatest, keenest statesman, he surrounded himself by such an economist as Calderon, such a thinker as Garcés, such a man of iron as De Castro.

Reyes discharged half of the army, and put the other half with mattock, pick and shovel, to building roads, repairing the telegraph, improving sanitation. He raised the pay of the soldiers; but he got results, and supported no parasites. Everything was permitted only as it added or promised to add to the country's prosperity—and the results are showing in the devotion of a people to whom his severest threat is that of resignation, used only to carry difficult points—and always effective.

Theodore Roosevelt can see a point as quickly as any man. He is game to the core. If I did not know it before I knew it on receipt of his instantaneous reply, that hangs before me as I write, to the letter I wrote him on February 16th questioning some features of his last canal message.

A big dose of salts under certain conditions is very good for the system, tho unpleasant while in action. Many of us who were compelled to mark time while financial conditions readjusted themselves are glad that Roosevelt is succeeded by a man no less able, but whose energy is curbed by judicial habit and diplomatic experience. But we recog-

nize that the strenuous shaking that Roosevelt gave the country was for its great and everlasting good, and uprooted evils that, undisturbed, would have led to destruction. We know that because of Roosevelt neither capital nor labor will ever rule the country. Silently accumulating dividends can never control its destinies. Fair methods *must* prevail.

Hunting excursions, authorship, lectures will soon pall on a man of his stupendous energy and ability. He has run too big a game ever to sit quietly for long and play hearts or old maid. It would kill him. Theodore Roosevelt left office the country's idol—unquestionably the most popular man in the world today. With proper channels to work in no man in history ever had the chance to do the great good that it is now in Roosevelt's power to do.

For a score of wild horses hitched to a log to get anywhere it is necessary for them to stop, look and listen, and all pull in the same direction. They're all willing if shown how. It takes the guiding hand to get the result. It takes the strong trained driver. The man who, as occasion demands, can gently pat a shoulder and say "good old hoss," or, if circumstances require, use his whip.

The nations of the world all want enduring guarantee of peace, respect for their boundaries, a fair hearing and just decision on their claims. Every country wants to tear down its accursed military and naval expenditure, but doesn't dare because the others won't.

If we could grease and tie up nine-tenths of our fleet, put nine-tenths of our sailors to work at harbor and river improvement at proper pay, the sight of the flying dirt and the feeling of "doing something" would keep the men happy and content and glad to make their practice cruise in due turn. There would be no more sickening monotony of present peace service, prolific of desertions and imprisonment. The money spent would be at compound usury for the country's prosperity. Instead of advertising for recruits there would be a waiting list of eager applicants, as in the civil service and the canal force.

With the armies and navies of the world reduced to simple police service,

with assured safety, an era of wonderful and enduring progress and prosperity will immediately ensue.

How can it be done?

The dream of an International Congress, which now has its beginnings in the Hague conventions, can be made real, present and effective. America, England, France, Germany and Japan agreed to it, and the others *must*. This consolidation is out of Morgan's line and beyond him. This world reforming consolidation can be effected. America and any two ensure the other two and thus the rest follow. Roosevelt has not only "the time, the money and the inclination" to do what he believes right, but in this case he has the energy, the prestige and the ability.

If Roosevelt will tackle the proposition he can accomplish a greater feat than any other man ever had the opportunity to undertake, and the like of which, if he does it, no other man can ever have again.

With the knowledge that Theodore Roosevelt is willing to dedicate himself to this, the greatest work of the ages, it would not appear difficult for President Taft to bring about, with the governments of the other leading powers mentioned, a conference of delegates. This conference would draw up a basis of international constitutional government to cover the questions of boundaries, arbitration, sanitation and police. The central government would control the navies of the world, except such vessels as are needed for customs coast guards in each country, and have entire direction of the forces of the nations, both naval and military, for world police service.

The basis drawn up at the conference would be submitted to the approval of each country, and then the congress would be elected under it, with Roosevelt the World President, and America's delegation, including Andrew Carnegie and Congressman Bartholdt. Eternal peace would thus be assured, and in the midst of uninterrupted and uninterruptable prosperity, the development of commerce, shipping and all the vast natural resources that invite brains and energy to become great factors in civilization, the gruesome era of wars would become but a memory.

Rev. Marion L. Burton, Ph.D.

ELECTED PRESIDENT OF SMITH COLLEGE.

Dr. Burton, who will be the second president of Smith College, at Northampton, Mass., to succeed Dr. Seelye, is a young man, having graduated from Carleton College, Northfield, Minn., as lately as 1900. He taught for three years as principal of Windom Institute, in Minnesota, and was a graduate student at Yale University from 1905 to 1907. He was then made Professor of Systematic Theology in Yale Theological Seminary, but was called after a year to be pastor of the Church of the Pilgrims, in Brooklyn. He was allowed to remain there but a year, being called to this new position in control of the largest and oldest of the women's colleges in the country. Both as teacher and preacher he has been greatly admired. A book by him entitled "The Problem of Evil" is in press. Before entering on the active discharge of his duties at Smith College Dr. Burton will spend a year in the study of educational conditions in Europe. Dr. L. C. Seelye, who retires after passing the age of seventy, has seen a wonderful growth of Smith College during the thirty five years of his presidency.

Dörpfeld's Ithaca

BY J. IRVING MANATT

PROFESSOR OF GREEK IN BROWN UNIVERSITY.

AFTER taking Troy* one's first impulse is to win home with Odysseus. True, we had to tarry five sunny weeks at Lesbos and another less sunny at Chios; but one bright July morning, with a new commander, I boarded again the trim little "Pylaros" which had carried me to Ithaca and back on my first pilgrimage thither in 1899. Then Ithaca was still Ithaca, and I had Dörpfeld's own word for it that Odysseus's seat was to be sought at the *Polis*, which he was at that time exploring. So we past five happy days on the island, living over again the grand old story, as I have recorded elsewhere.† Meantime, however, that wizard of archeology had gone on removing mountains; and when I repeated my Ithacan pilgrimage we had to seek leaf-quivering Neritos and its consort, Neion, upon Leukas.

It was with a sense of bereavement we again threaded our way into Ithacan Vathy, with its discredited headlands and all, where Odysseus and Athene never met; and the sense of bereavement deepened as we past close under Arethousa and Raven Rock and Eumæus's Pastures, now that the faithful swineherd is evicted from those scenes forever, and as we looked upon St. Andreas's little bight, where Telemachus never landed and the *Polis* where Odysseus never slew the Suitors to make an Ithacan holiday. True, when we grazed the little bare reef that has done duty for Asteris, with its twin harbors, Dörpfeld's new offense seemed mitigated. The compound improbability of that feature in that place imprest me as never before; and the more when we entered the passage between Ithaca and Leukas and discovered a genuine Greek harbor (Arkoudi) with windy heights for the murderous suitors' sentries precisely where it should be—no Ithacan Leukas there.

We steamed half way up the east side

*Hail, We Took Troy! in THE IRVINGMAN, Vol. I, No. 1, 1900.
†Ithaca, Dörpfeld, in IRVING, Dörpfeld, THE IRVINGMAN, Vol. I, No. 1, 1900.

of Leukas and (for a consideration) the captain of the "Pylaros" landed us at the little hamlet of Nidri, where we expected to find Dörpfeld digging for Odysseus's palace, but he had gone the day before to look for the Apollo temple on the cape:

"Leucadia's far-projecting rock of woe," and would not return until the morrow. Meantime, we were welcomed to his house on the shore—a far more comfortable habitation than he and Schliemann had at Troy; and, after resting from our journey, were conducted to the excavations.

Nidri lies near the entrance of a deep, well-nigh land-locked, bay, with a group of little islands before it. Behind stretches a considerable plain covered with vineyards and olives and some fine orchards of apples, apricots, plums and quinces. There are no springs in the plain, but there is a great well of delicious cold water in the olive woods near which the two young German engineers who are mapping the island have pitched their tents.

Now, living water is the prime requisite for a city, ancient or modern; and Homer's fountains—at least in the Odyssey—are good landmarks. Moreover, Dörpfeld had often remarked how the Perseia source above Mycenæ had determined the choice and development of that site; and, looking for another hill castle with an obvious water supply, he began digging here at the southern extremity of the bay, where at the foot of forest-crowned Karavolimpa an abundant spring wells up. But finding no important remains here, he bethought him of another thing. In the Odyssey people always come down to the city; it was a city of the plain. The fact that we find no Mycenæan walls in the Ionian Islands points to the same conclusion: in these islands, as in Crete, the oldest Mycenæan settlements were pitched in the little bottoms by the sea and so finally buried under alluvial deposits. The seat of Odys-

seus was therefore to be sought in the plain, but still in communication with living water. And in the hills that fence off the plain on the west three living springs are found. One of these still goes by the name of Mavroneri, which is new Greek for Melanudros: why not Homer's *Μελάνυδρος*, whither Eurykleia sends the twenty maids to fetch water for the housecleaning after the slaughter of the suitors. That was evidently Odysseus's private fountain, but the public water supply has been traced also. Above the hamlet of Palaiokatuna issues a spring which pours its water down a rocky ravine. In this ravine Dörpfeld found *in situ* at several points primitive clay pipes of a peculiar conical pattern fitted into one another and resembling roughly those subsequently found by Evans in the Palace at Knossos. Here, then, we have the accessories of a public fountain fed from a mountain source, like the Perseia at Mycenæ, thru covered pipes that keep the water cool (*κατα δε ψυχρόν ῥέειν ὕδαρ ὑψόθεν ἐκ πέτρης*): why not that fair-flowing fountain embowered in a poplar grove, with an altar of the Nymphs whereon each wayfarer makes his offering, and whither the towns-folk come to draw water—as they now come with their ewers to the great well in the olive woods. It was a made (*τυκτήν*) fountain, on whose construction three generations of princes or as many dynasties (Ithakos and Neritos and Polyktor) had wrought; it was near the town (*ἄστυς ἐγγύς*); and on the rocky road from the swineherd's lodge to the palace, as our mountain spring and aqueduct are, if the happy hamlet of Evgyros occupies Eumæus's old stamping ground.

It is a good half hour's walk from the shore to the excavations, where we found thirty men at work under an *epistates* who had served Curtius and Dörpfeld at Olympia and Schliemann and Dörpfeld at Troy. The trial trenches, already covering an area sufficient for a Homeric city, had as yet struck no notable landmark, tho they had developed at a depth of two meters a layer of early Hellenic remains and two to three meters lower still a double stratum of remains belonging to a prehistoric and Homeric settlement. Here are found house walls of

small stones joined with mortar, as at Mycenæ and Tiryns, sometimes superposed and crossing one another as built at different epochs; and shaft graves containing only the older monochrome pottery with bronze knives. The pottery is all notably simple—mainly black monochrome, tho the upper (Homeric) layer yields a light wheel-made variety with a brown slip and ornamentation of Mycenaean or rather Cretan style. Most of these remains are found in the northern part of the plain, on the southerly slopes of Skaros or Neion (*Ἰθάκη ὑπὸ νότιος*) and they are quite sufficient evidence for a prehistoric settlement here and for its continued occupation in historic time. And the higher ground now excavating would be no mean site for the dwelling of a simple island chief like Odysseus. It commands a rich plain of sufficient extent to provision the establishment—Laertes's gardens hardly afforded finer fruit than the apples and plums we gathered from one of these orchards and the vineyards were heavy with clusters, while the background of noble hills and the prospect of sea and islets and rugged Acarnanian cliffs were quite worthy of a prince. It is a spot, too, from which the suitors could readily see Telemachus's ship putting into harbor, and where those enterprising gentlemen would find space for their sports, and houses to lodge in, as they never could have done on Mount Aëtos!

We past the night comfortably under Dörpfeld's roof, and in the morning the horses had just come to carry us up to the mountain springs and other Homeric landmarks when a little boat came puffing into the harbor from Leukas, the island capital. By the merest chance we learned that it was bound for "Hiera" (as the temple on the cape is called) to bring back Dörpfeld and his party, and we at once dismiss our horses and went aboard. In coming we had scanned the Leucadian coast from the White Rock to Nidri, and now was our chance to retrace that voyage closer inshore and then back again under the guidance of Dörpfeld himself. On the sail down we were able to make out every point in the topography; and a noonday landing at Vasiliki afforded us a closer study of another plain at the head of the deepest

Leucadian bay—a plain larger and apparently more fruitful than Nidri, to judge from the luscious figs we found there fully ripe on the 11th of July. At the cape, now crowned with a pretty lighthouse, Dörpfeld and his engineers, with two young ladies of his family, were waiting in their caique to be taken aboard; and the four hours' sail back to Nidri was an old-fashioned Dörpfeld lecture to two auditors, or, rather, a Dörpfeld demonstration punctuated by many an impetuous "I believe . . . , and I can prove it," as he invariably proceeded to do.

The main thesis is perhaps too familiar to require fresh statement. Odysseus's realm is made up chiefly of four islands: Ithaca, Doulichion, Samê and Zakynthos, and this island group is mentioned repeatedly. Of the group Ithaca itself is the westernmost, lying "uppermost of all toward the darkness, while the others face the dawn and the sun." This is not the case with the traditional Ithaca; and if it were, the fourth island of the tetranesos is still to seek. Kephallenia must do duty for both Doulichion and Samê on the old theory, whether originally two isles and subsequently joined by a made isthmus or not; or, as Dodwell surmises, the fourth island may have been swallowed up by the sea soon after Homer got thru with it. Dörpfeld's solution now shifts Ithaca to Leukas, Samê to Ithaca, Doulichion to Kephallenia, and leaves Zakynthos unchanged. There you have the four isles answering perfectly to the external topography of the Odyssey—that is to say, if Leukas be an island! But the old Greeks—as well as the moderns—regarded it as a peninsula until the Corinthians cut it off by a canal in the seventh century. B. C. Dörpfeld now proposes to demonstrate by the aid of the geologists that it was an island from the beginning. Then it remains to show historical occasion for the shifting of names, and here the case is charmingly clear. It is the work of the Dorian invader who dispossesses the Achæians of Ithaca; these naturally move on to the adjacent Samê, taking their old name with them; the Samians, dispossessed in turn, together with the Kephallenians driven from the mainland, occupy old Doulichion, which is henceforth known

as Kephallenia from the larger contingent, but here the pressure ends and Zakynthos holds her own.

With this theory in general we were already familiar, and so the genial wizard has time to chart Odysseus's course over the western seas; to set out his diary of the Odyssey drawn up in parallel columns here at Leukas in 1903; and to demonstrate by it the unique Theoklymenos-Athenê theory. The fugitive seer, namely, who plays so vivid and real a part in the return of Telemachos and the tragedy of the Vengeance is only one more of Athene's "masks"; and this thesis Dörpfeld builds up with confirmation strong as proofs of holy writ.

Again: "I believe Homer produced the Odyssey at Pylos, and I can prove it"—not at Sphacteria-Pylos, with its impossible drive over Taygetos to Sparta, but at Samikou-Pylos, whence anybody can drive in a day up the Alpheos to Pherai (and was not Telemachos's host at Pherai a grandson of the Alpheos rather than of the Neda?) and in another easy day down the Eurotas to Menelaus's capital. Thus one Homeric stumbling block is neatly removed—two, in fact, for the voyages to and from Pylos are likewise facilitated. And old Nestor's early cattle lifting exploits in Elis also gain in probability. That Homer was a Pylian becomes clear as day when we mark the large rôle given to Nestor and his sons; when we note that the characteristic trees of the Odyssey (laurel, fig, cypress, olive, palm) all grow in the Peloponnese; above all, when we consider the pure Ionic dialect of the Odyssey as against the Aeolic Iliad; and when we remember that Nestor's house is the nursery, so to speak, of the Ionic stock in Attica and Ionia.

As the lecture flows on we are again passing Skydi Bay, where Telemachos lands at dawn, and commending Theoklymenes-Athenê (who expounds the falcon-dove omen triumphantly, but is rather anxious and fearful for a god) to Peiraios's protection, strikes off up these rugged heights for Eumæus's pastures. There, as Dörpfeld demonstrates, he has had full warning from Helen's eagle (Athenê, again) and from Theoklymenos's lips (Athenê's own, of course) to believe that he shall find his long-lost

father awaiting him, as in fact he does. Meantime, we are gliding past the real Phorkys Haven, where his Phæacian friends had set the wanderer ashore and Shepherd-Athenê, for the moment released from her Theoklymenos engagement, has helped him store the spoil and plan the campaign. We could not see around the sinuosities of the new Phorkys Haven, for Sybota Bay is a well-nigh hidden inlet, but our lecturer assures us that all the Homeric properties are there with choice of Nymphs' Grottoes. He has traced four or five such, far more eligibly situated than the hillside cavern a quarter hour's scramble above Ithacan Vathy; and the Swineherd's Lodge should be about equidistant from the two landings. And so it is, for there rises a round wooded plateau with two hamlets. One of these is fair Evgiros, with its fountain and oaks and a great cave whose name—*χοιροσπηλία*, or *Pig's Den*—would fit the sheltered spot under the hollow rock where Eumæus keeps night watch over his sharp-toothed swine. And is not *Sybota Bay* a reminiscence of dear old Eumæus's trade? How came this new Phorkys Haven to have carried down thru the ages the name of Swineherd Bay—ages during which Leukas under the Dorian's heel had utterly forgotten her Homeric fame? Let Wilamowitz answer that or forever after hold his peace!

And now we are passing for the third time, as we are to pass it yet again on the morrow, the real Asteris—the key to the whole problem. In the wide channel—18 miles wide—between Ithaca and Leukas, Arkoudi rises some 130 meters above the sea—a stony islet, but sprinkled with olives and enlivened by a brook; and it is the only island lying between two larger ones in all this region. How Dörpfeld's heart throbbed when he first approached it and discovered the double harbor not unlike—to compare small things with great—the twin havens of Mitylene and still sheltering on occasion the small craft that do business in these waters. With *carte blanche* to invent an Asteris one could hardly have hit it off better.

We had hoped to revisit the Nidri excavations with Dörpfeld and to make a little tour of the hills, but found we could

not do so without losing our steamer for Piræus. So we got our luggage, took hurried leave of our host, and continued our voyage by the little boat to the capital. On the way we get a glimpse of rich greenery by the Pacha's spring which once watered Læertes's farm; and then, passing the not inconsiderable remains of the bridge which once joined the Corinthian Leukas with Nerikos on the mainland, we enter the canal and lagoons. One glance at the wide, low flats removes the last lingering doubt of Leukas's insular character; in prehistoric days the sea certainly had free course here, tho the channel was never a deep one and the Corinthian canal-diggers of the seventh century had little more to do than cut thru the sand dune and dredge the narrows. As Goessler observes, it is assuredly an easier hypothesis to make Leukas an island than to cut Kephallenia in two islands by turning the Homeric sea upon an isthmus 1,300 meters wide and 185 meters above sea level! But of this Dörpfeld and his engineers will doubtless in due time be able to offer a scientific demonstration. Had Odysseus's seat been in the neighborhood of the present capital, it would have been a simple matter for Philoitios to ferry over from the main his daily contribution of a heifer and sundry fat goats to the suitors' commissariat. In fact, as we sat on the wall of the great causeway that stretches about a mile across the lagoon from the modern town to the Venetian Castle, we saw a bunch of goats ferried over from the continent quite in the Homeric manner. Now between our Ithaca and the nearest point on the main we have a ferry some twenty miles wide. And to Wilamowitz's Ithaca-Kephallenia ferry it is sufficient to say that Homer knows nothing of any herds of Odysseus on any island other than Ithaca or of any Kephallenians except on the mainland.

We left early next morning on the "Euboia," a "John" boat, which took the outside course round Leukas and the inside of Ithaca. Thus in three days with three boats we were enabled to sail quite around Leukas, covering part of the circuit twice or thrice, as well as quite around Ithaca, trebling on our track from Vathy down. It was a fortunate autopsy, particularly in one respect: it

brought out strikingly the appositeness of Homer's topography to Leukas and its utter incongruity with Ithaca. Odysseus's isle lies "uppermost of all toward the Darkness" (*ὑπερθε γὰρ ὅλης ὀφρῆς*), while the other isles (Doullichion and Samê and sylvan Zakynthos) "lie toward the Dawn and the Sun." Now, interpret *πρὸς ἑσπέραν* as we may—and it is demonstrable that the ancient charts of this coast made it an almost east and west line and that the Greek sailor still speaks of it in terms of east and west; these words of the poet point to Ithaca as the "jumping-off place"; and that is just the impression one gets as he steers past the sheer unbroken cliff, often 200 meters high, of outer Leukas and scans the Western-Northern sea in vain for any sight of land. Leukas looks on the outer darkness, while Ithaca all around, except to the southeast, faces across narrow channels the sister isles (Kephallenia and Leukas) or the Akarnanian coast.

I am here merely setting down impressions, not making a confession of faith. It is always unsafe to do that till one gets out from under Dörpfeld's immediate spell. Alkinoos and his court could not have been more spellbound by Odysseus's all-night story than is the layman by Dörpfeld's genial and confident demonstrations. "I know it and I can prove it" falls with singular power from the lips of one who has the Scene and the Book by heart and whose combinations tempt one to formulate a Dörpfeld-Athenê theory, for who but Pallas could know and prove all this? No; I reserve my judgment, as I said to the genial wizard, until he shall produce Odysseus's rambling old palace, with its olive-trunk bedstead, *in situ* at the foot of the new Neios. The confession I am now prepared to make is that his theory solves the general topographical problem so completely that, once granted, it establishes the poet's highest claims as a geographer. And that some such shift of populations and of names before the intruding Dorian actually took place is a matter of course.

And how do the old Ithacans and the new, or, rather, the new Ithacans and the old take to this late dramatic *poieteia*? I have tried the question on a dozen islanders—men, women and chil-

dren, learned and unlearned—in the course of these voyagings; and the Ithacan is always glum, while the Leucadian uniformly accepts his recovered birth-right with pride. This was notably the case with a fine family coming down on the little boat from Leukas to their summer home on Skorprios, an islet lying off Nidri. "Yes, I am a descendant of Odysseus," said the proud father, rather inconsequently, if the Dorians drove out the old stock bag and baggage. But Kyr' Mavroides from his island seat—happy island of olive and vineyard, which is all his own—regards Dörpfeld's digging on the opposite shore as a family affair and may put in a claim for any heirlooms that turn up. On the other hand, an Ithacan gentleman, whose country seat embowered in all manner of trees on the eastern slope of Mt. Aetos every Ithacan pilgrim will recall, declared: "An Ithacan I was born and an Ithacan I will die!" And he scornfully added: "Look at the stay-at-home Leucadian afraid of the water; and then consider the Ithacan with his ships in all seas and the seven hundred young Ithacans now seeking their fortune in America and South Africa—true scions of far-wandering Odysseus. Here is Captain Karabias, an Ithacan, commanding this ship (the 'Euboia')." "Why," I said, "I came from Chios the other day on the 'Kerkyra' with another Captain Karabias, of Ithaca, and he told me he had once taken the 'Charilaos Trikoupes' to New Orleans." "That he did," was the reply, "and in my service; and I am just now concerned about my 'Charilaos Trikoupes,' which is in the Black Sea, and may be the Greek steamer reported overhauled by the pirate 'Potemkin.'" Kyr' Stathatos, however, had to admit that between the Ithacans of today and the Odysseian stock there is a serious gap; for the opening of the sixteenth century found Ithaca practically depopulated and the Venetian Senate by proclamation threw open its poor lands to any one who would take and till them. Among the squatters who responded were many Cretans brought over in Venetian caravels (Greek *καράβια*), whence all of them took the name *Karabias*; and the clan *Karabias* now counts two hundred families dwelling apart in their own quarter

of the town, as the other principal clan, Petalas (to which Kyr' Stathatos belongs) occupies by itself another quarter.

If the Dorians made a clean sweep of the old Ithacan stock, the new Ithaca might well claim to be the true Ithaca as long as the old stock persisted there. But the Dorian did nothing of the kind, no more than the Norman; and the seed of Odysseus, if any there be, is quite as likely to survive in the old Ithaca, harrowed by the Dorian thirty centuries

ago, as in the new Ithaca desolated by Barbary corsairs only four hundred years ago. In either case Dörpfeld's resort to the Ithacans of Vathy, who were giving him a rather warm reception in passing, after his rape of their name and fame, was not a bad one: "Ihr dürft ja Ithakesier sein und bleiben. Ja, gewinnt euch eure alte Insel zurück!"*

*"Why, you may still be Ithacans; just win your old island back again!"

PROVIDENCE, R. I.

The Recall of the Mayor of Los Angeles

BY REYNOLD E. BLIGHT

THE INDEPENDENT of January 12th, 1905, had an interesting article by Eltweed Pomeroy, entitled "The First Discharge of a Public Servant." This occurred in Los Angeles, September 16th, 1904. The people held an election for the position of an unsatisfactory councilman and ousted him from office by a vote of two to one. This was done in accordance with the provisions of an amendment to the city charter, adopted in 1903, which compels the city council to order an election within forty days after the presentation of a petition signed by 25 per cent. of all electors voting for all the candidates for the office occupied by the official whose removal is desired. The unsatisfactory official's name must be placed upon the ballot without nomination, unless he in writing refuses to be a candidate. The other candidates on the ballots are notified in the usual way, and the candidate having the highest number of votes is declared to be elected.

On the 26th day of March, 1909, for the second time the people of Los Angeles directly recalled an official—undoubtedly the first time in history that a Mayor of a large city has been directly discharged by the people.

In January, 1907, Arthur C. Harper became Mayor by a minority vote. He was elected by the wide-open town element and the political rings, and kept faith with them to such an extent as to raise the indignation of a large portion of

the better element of the city. Several of those whom he appointed on his commissions were exceedingly unsatisfactory, one being a well-known gambler. The *Express* openly charged that vice was being protected, and the Mayor replied with a libel suit. A young, fearless assistant district attorney, Thomas Lee Woolwine, charged the highest officials with being vice protectors. He appeared before the grand jury, but the power of vice was too strong, and he was forced to resign.

Early in January, 1909, the Los Angeles *Herald* commenced publishing a series of articles entitled "Is Vice Protected in Los Angeles?" and revealed conditions which shocked the whole community. It was shown that the aforementioned police commission had been promoting sugar and oil corporations; that thousands of dollars' worth of capital stock had been unloaded upon liquor men, gamblers and keepers of dives; that the names of the Mayor and certain members of his commissions had been prominently displayed as officials and shareholders; that, it was stated, large blocks of bonus stocks had been given to the Mayor and his colleagues; and that some of the city's highest officials were business partners and boon companions of the basest and most immoral people in the town.

After the conscience of the people had been awakened, the report of the grand

jury increased their indignation. The majority report was to a great extent a whitewash, while the minority report confirmed the charges made.

In addition to the above charges, a further cause for dissatisfaction was the Mayor's appointee upon the Board of Public Works, which, having the spending of many millions of dollars, is the most important board in the city. When the term of James A. Anderson (one of the three efficient members of the committee) expired, the people were almost unanimous in desiring his reappointment. The Mayor, however, had set his mind upon the appointment of a thoroly unfit man, but owing to the pressure of public opinion, it is said, was about to yield and reappoint Mr. Anderson, when a morning newspaper (owing to its hatred of Mr. Anderson), under threat of exposure, induced him to appoint an excellent man—General Chaffey.

The next time a vacancy occurred in this board, the Mayor, feeling sure of his position and supported by the newspaper above mentioned, appointed Edward Kern, whose records both as chief of police and as councilman was thoroly unsatisfactory. This alarmed many hitherto complacent citizens, because they recognized the fact that should another vacancy occur (the ill health of a member of the commission making this probable) the appointment of a second undesirable man would give the corrupt element and the machines a majority on the board and so endanger Los Angeles's gigantic Owens River enterprise, which is tunneling mountains and bringing water from two hundred miles away.

A meeting of the citizens was called by the Municipal League, and it was asked to get up the requisite petition for the recall of Mayor Harper, and at a subsequent meeting the conducting of the campaign was put into its hands. The requisite number of names necessary for calling an election for recalling the Mayor was procured in a few days, and at the election, which occurred the 26th of March, George Alexander, the "recall" candidate (nominated at the third mass meeting convened by the League) was elected Mayor.

But, in the meantime, Mr. Kern suddenly resigned from the Board of Pub-

lic Works, and the Mayor appointed in his place Mr. Humphreys, a man who had been the choice of the Municipal League at the time of Mr. Kern's appointment. Shortly after Kern's resignation, Mayor Harper resigned and withdrew his name from the recall ballot. The resignation of Mr. Kern and the Mayor was believed to be due to the fact that the owner of the *Express* was supposed to have acquired most damning evidence against them. The resignation of the Mayor was advised by Mr. Walter Parker, the political manipulator of the Southern Pacific Railroad, and who, according to Mr. Harper's own confession, had been instrumental in electing him to office and had been his supporter ever since.

Parker's idea in advising Harper's resignation was to retain control of the Mayor's office. He knew that the new evidence obtained by the owner of the *Express* was certain to prevent Harper's re-election, and likewise believed he could depend upon the majority of the council to do his bidding—they having the power to appoint a Mayor for an unexpired term—and induce them to appoint an organization man, who after the recall election would contest the seat under the plea that inasmuch as the man sought to be recalled had resigned there was no necessity for a recall election. Had this scheme succeeded one organization man would have been displaced only to be replaced by another.

But the council, possibly fearing that the recall might be used upon themselves if this scheme were carried out, appointed William D. Stephens, an earnest friend of the recall party, to act as Mayor until the date of the recall election.

The machine brought injunction proceedings before Judge Boardwell, one of the most capable, conscientious and learned jurists in California, to prevent the holding of a recall election, on the grounds that there was no necessity for an election, as the man the people sought to remove had resigned. But the reformers claimed that the intention of the recall amendment was not only to give the people power to displace an unsatisfactory official, but also to elect his successor.

Judge Boardwell sustained the con-

tention of the reform party, and his decision is of importance not only in this local fight, but as upholding principles of nation-wide importance. Some of the important points of his decision are the following:

"Whenever the question whether or not the law requires the election of a public officer by the vote of the people or by some other method, all doubts are to be resolved in favor of allowing the choice to be made by popular vote. Special provisions of a State constitution or a city charter are to be deemed as controlling general provisions. It is clearly contemplated by the section of the charter dealing with the recall, that the successor of him against whom proceedings are instituted shall be elected by the people. The court should not lay down a rule denying this right . . . when the incumbent against whom the proceedings are inaugurated has resigned.

"It must now be regarded as settled that they [the recall provisions] do not violate either the State or the Federal Constitution,

the point having been practically determined by the decision of the Supreme Court in the Pfahler case (150 Cal., p. 71)."

The withdrawal of Mayor Harper's name from the ballot left the city only two candidates to be voted for—George Alexander, the reform candidate, and Fred C. Wheeler, the Socialist candidate. But, notwithstanding the fact that the Socialist candidate (a clean, honest, capable man), was supported by the Socialists, the majority of the labor vote, both machines, the saloons, gamblers and other undesirable elements. Alexander was elected by sixteen hundred majority. The Socialist candidate, altho unsparing in his denunciation of them, was supported by these undesirable elements, not because they loved socialism more, but reform less.

LOS ANGELES, CAL.

A Notable Negro Journey

BY WILLIAM S. DODD

[Mr. Dodd is one of the teachers of Hampton Institute, which was influentially represented in this important journey thru South Carolina. Editor.]

EVERY case of the lynching of a negro and its attendant horrors and every outbreak of race friction with its deplorable consequences receive widespread attention. The tendency, unfortunately, is to emphasize the bad and to overlook the good aspects of the race situation, due largely to the prevalent desire for the sensational and the startling. Facts connected with the problem of race, and which involve the relations of the blacks and the whites, should be fully and fairly stated and their true significance should be justly appreciated.

The recent trip thru South Carolina of Booker T. Washington and Emmett J. Scott of Tuskegee, Major Moton and W. T. B. Williams of Hampton Institute, and other well-known colored men, deserves more than a passing notice. It was a noteworthy event. This party of negroes, numbering twenty in all, and made up of lawyers, doctors, ministers,

teachers, farmers and business men, undertook this trip with the purpose of meeting as many of the citizens of the State as possible and of publicly discussing race relations in a frank, friendly and helpful way. The trip occupied a week, and meetings were held at Rock Hill, Winnsboro, Columbia, Denmark, Camden, Sumter, Florence, Charleston, Anderson, Greenville and Gaffney. Besides the places mentioned stops were made at many intermediate points to allow Mr. Washington to address the crowds which had gathered to hear him.

The churches, theaters, opera houses and public halls in which the various meetings were held were crowded to their fullest capacity with enthusiastic and interested audiences made up not only of negroes, but of the best and most influential whites. At several of the places visited Mr. Washington was introduced by the Mayor of the municipality, while the Board of Aldermen occupied seats

on the platform. In his introductory remarks the white Mayor of Rock Hill said:

"I believe that Booker T. Washington is a worthy man. I believe him to be a good man. His works speak for him in language that cannot be misunderstood; his singleness of purpose has withstood the wear and tear of the years and the most rigid investigation into his purposes and methods has not disclosed the slightest flaw. He is genuine to the core. Had he not been all that he seems to be the world would not have given him its approval thru the nearly three decades in which he has labored in the white light of public attention."

The Mayor of the city of Charleston, a scion of an old and aristocratic Southern family, welcomed Mr. Washington in a gracious and eloquent speech. Within forty-five years of the close of the Civil War, the Chief Executive of this Southern city, the capital of the State which was the first to secede from the Union, and in which slavery existed in its severest form, now introduces a negro to an audience in which were present representatives of the best families of the commonwealth.

Mr. Washington's speeches were convincing and effective, full of helpful suggestions, sound advice and timely warning. He is a genius of common sense. He recognizes, as does the thoughtful and fair-minded Southerner, that the destiny of the South is largely in the hands of the negro race. The negro woman cooks the white man's food and acts as nurse for his children. The services of the negro are indispensable in the development of the immense agricultural resources of the Southland. It is in the cultivation and ownership of farm lands that he has made the greatest material progress, and in this direction lies the largest field for his usefulness and the most promising opportunity for his real freedom. The negro by natural aptitude and training is especially fitted to till the soil, and he is heeding Washington's wise counsel to stick to the land. The South needs the negro. It is the best place for him and the safest.

Between Anderson and Columbia on the Southern Railroad lies the small and ancient village of Ninety-Six. It has the unique distinction of being the only place on earth of that name, a name given to it because of a horseback ride of ninety-six miles made by a woman during the Revolutionary War to tell the people of a battle won by the American forces. Ninety-Six of recent years has had the reputation of being so hostile to the negro that there was some question as to the advisability of the party passing thru it on a Pullman car. In response, however, to a telegram the train was stopped at Ninety-Six for twenty minutes to permit Mr. Washington to speak from the rear platform to several thousands who had come to hear him.

This incident illustrates the ground on which race prejudice largely, if not wholly, rests. The white man resents the assumption by the negro of any other than a position of inferiority.

A girl graduate of Tuskegee taught school for eleven years near a small village of South Carolina. Thru her untiring and self-sacrificing efforts the whole community was uplifted and bettered. She died some few years since, leaving behind her the memory of a choice spirit. The Washington party visited the school where she had so nobly done her work, and a beautiful tribute to her worth was given by a white man, a State Senator of South Carolina.

There was no unpleasant act or word on the part of any one to mar the pleasure of the trip, and as one of the party remarked, "There was not even a small boy at any place who called out nigger."

The experiences of this interesting trip threw light on conditions as they exist in certain Southern communities, and should encourage all those who are earnestly striving for the rightful adjustment of race relations and such as will enable the blacks and the whites to live beside each other in harmony and mutual helpfulness.

HAMPTON, VA.

Literature

The Cambridge Literature

WITH the second and third volumes of the *Cambridge English Literature** the characteristics which seemed more or less indeterminate in the first volume, partly on account of the confusion of the period included and partly on account of the incipency of the work itself, have ceased to be questionable. The undertaking is confirmed as an example of the philological method—that is, of the scholarship whose concern with literature is for anything rather than its literary significance—or, in other words, the ideas it contains. For the history of a subject essentially intellectual these articles show on the whole a remarkable insensibility and indifference to ideas.

In some instances this is all very well. It is highly desirable to know all the facts—how a book was produced and when and by whom. And in the greater number of cases included in the second volume this is about all there is to know. In short, much of the work discussed has no great literary value. But this is not so with Chaucer. In his case the literary interest is very much superior to the circumstantial or philological. And if the chapter that deals with him represents the best that English scholarship can do with such a subject in a work of these pretensions, then English scholarship is at a sorry pass. Nor is the Spenser in the third volume very much better; it is perhaps rather less inadequate, but it too falls very far short of its theme. After all, the interest and value of scholarship as such lies in the problems with which its subjects are beset—such matters, for instance, as Spenser's lost poems. These problems once settled, they have no further importance save as they advance literary criticism; as facts they may be summarized in a few lines, and the more baldly the better. But the plan of the history, in avoiding the

discussion of *cruces* on the one side and criticism on the other, falls between two stools and also raises a false impression, since it actually fails to represent the difficulties and perplexities of the study—as any one may persuade himself by reading these two papers.

With the method of the volumes, however, it is hardly profitable to quarrel, in as far as it agrees with the character of the subject. Professor Manly's chapter on *Piers Ploughman* in the second volume is, for example, an unquestionable contribution to the scholarship of the subject—tho the scholarship of the subject would appear to center exclusively on the authorship and original constitution of the poem. And here is the point exactly—not that the writers have failed to popularize the history of English literature, tho they might have given it a broader appeal than they do, but that they are so shut up in their own narrow investigations and in a single close partition of literature that they fail to see the wider bearings of their topic and are blind to the influence and effect of their favorite authors upon the development of English as a whole. By this time, with the appearance of *Piers Ploughman*, with which the second volume starts, English literature has begun to reveal itself unmistakably as a regular evolution. But this very character of expansion, to say nothing of the process, receives anything but its proper emphasis. To be sure, the general linguistic and metrical summaries, like Mr. Atkin's "Language from Chaucer to Shakespeare" and Professor Saintsbury's "Prosody from Chaucer to Spenser," and now and then a more extensive historical review, do something toward the organization of a period—but comparatively little. As a general thing the tree is cut up into logs pretty much of a length; it is no longer a growth, but a woodpile. While the distortion of general proportion to which this exclusiveness leads may be seen by the Cambridge contributor's judgment of Lyndsay's "Satire of the Three Estates,"

*THE CAMBRIDGE HISTORY OF ENGLISH LITERATURE. Edited by A. W. Ward and A. R. Waller. Vol. II, The End of the Middle Ages. Vol. III, Renaissance and Reformation. New York: G. P. Putnam's Sons. \$2.50 each.

which, "viewed as literature," he concludes, "is of a high order: the style is always clear, terse and pointed, even when neither witty nor eloquent"—a performance of which M. Jusserand remarks that "medievalism never inspired anything more incoherent." The fact is that the leading ideas or criteria of the Middle Ages and the Renaissance—which the editors have been unhappily inspired to corrupt into Renaissance—are in general far from clearly distinguished.

That such a work should be readable is too much to expect. It is enough that the information should be accessible, that it should be presented clearly and systematically. And yet as mere specimens of exposition some of these articles leave a good deal to be desired. The impression they produce is frequently confused—so much so that it would require a specialist himself to find his way about. In other words, they fail in what should be their first purpose, the orientation of the student. Our philological scholarship has never been particularly felicitous in expression; but the effect of it, when massed in such bulk as this, is unexpectedly depressing. Of course there are exceptions—chapters like Mr. Whibley's "Chroniclers and Antiquaries" and Professor Brown's "Reformation and Renaissance in Scotland." But even when the peculiar limitations of subject and method are allowed, these three first volumes of what is the most serious and conscientious history of our literature ever undertaken must still be somewhat of a disappointment, not to the general reader—of him there is no question—but to the earnest literary student, who surely has a right to find his account in a work of this kind as well as the methodic philologist.

An Unsympathetic View of the English Reformers*

WITH much painstaking perseverance Mr. Gairdner has assembled an immense mass of information concerning the early Lollards, and concerning the men who were active in the sixteenth century either on the side of the Reformation or

on that of the older church. Many of Mr. Gairdner's chapters are interesting reading, and he has done a real historical service in presenting the point of view of authority in the contest with the new forces that were impelling men to think for themselves and to protest against the abuses and encroachments of the Roman hierarchy. It is well, too, that justice should be done to the martyrs for the old faith—that Sir Thomas More and the many men of less consequence who suffered for their unwillingness to let go of their beliefs and convictions should be honored alongside of the martyrs who suffered for their opposition to the Roman Catholic Church. Nevertheless, it is difficult in these days of religious liberty to sympathize with a writer who brands all new thought, all attempts to break the intolerable bonds which the Church had laid upon men's reason and conduct, as anarchy, and who looks upon the efforts to suppress all trace of the lifework of one of England's greatest thinkers and liberators as the due exercise of governmental authority in the preservation of order, and in the suppression of pernicious and wilful waywardness which was inimical to the good governance and the peaceable activities of the Church.

It is not entirely easy to determine what Mr. Gairdner means by Lollardy. Wide views are by no means characteristic of his historical survey; but to the student of medieval life and thought the estimate which Mr. Gairdner appears to hold of Wycliffe's own teaching and of the principles held by his followers seems narrow indeed. Apparently his thesis is that all that is implied by the word Lollardy is the claim of the individual to found his religious opinions on the personal reading and understanding of the Bible. This being his view of Lollardy, he has a good basis for his assertion that Lollardy was practically extinct before the first beginnings of the Reformation and the great religious movement of the sixteenth century owed nothing whatsoever to the teachings of Wycliffe. To support this view, he goes at length into the measures that were taken to suppress and root out the heresies which had been stirred up by Wycliffe, and endeavors to prove that the English versions of the

**University of Toronto Library*
Acquired by the University of Toronto
from the Library of the University of Toronto

Bible that had so mistakenly been given by Wycliffe and his followers to the laity were forgotten, and practically unknown by the end of the fifteenth century. In short, his idea seems to be that Wycliffe's teaching was doctrinal, and had no concern with the government of the Church or the authority of the Pope, while the Reformation was a politico-religious movement in which the political aspect was of far greater consequence than the religious.

If the fact that Wycliffe's idea was rather to effect a reform within the Church than to overthrow the authority of the Pope or change the government of the Church is to exclude him from all part in the Reformation, the early activities of Luther, and indeed of almost every man who was concerned in the religious upheaval of the first half of the sixteenth century, must also be excluded, and the Reformation must be entirely cut off from all the causes leading up to it.

While Mr. Gairdner acknowledges the benefits which have accrued to the national life of England from its independence of Rome, he apparently regrets the fact that Henry VIII was obliged to summon to his aid the forces of "lawlessness" in religion, which were, in his opinion, a recrudescence of Lollardy. Lollardy in principle—in fact, apparently anything in the nature of individual religion as opposed to institutional religion—is wholly repugnant to Mr. Gairdner. He calls Henry's use of the sincere religious reformers—his necessary but unwilling recourse to those who wished for thoroughgoing changes in doctrine and practice within the Church—a "letting loose of the spirit of destruction to prevent a return to Rome." Henry made use of it for his own ends; but for his own interests he kept it under control. "And this he could do effectually," adds Mr. Gairdner, "first because he was wise and politic, and, secondly, because religious innovators had no other refuge, and were bound to support the new spiritual jurisdiction that he asserted. After he was gone the floodgates were not so easily closed, and Henry was regretted by Conservatives souls as a strong and able sovereign who at least knew how to maintain order."

There is no attempt on the part of Mr.

Gairdner to represent Henry VIII as other than the selfish intriguer who made use of a new religious force in the Church to attain his own lewd desires. Mr. Gairdner is quite frank about the motives that influenced King Henry when he first showed favor to Cranmer and set the universities of Europe in opposition to the Pope. Henry VIII's matrimonial affairs were practically the sole root of his reforming zeal, and there is something peculiarly repulsive in the idea, that Mr. Gairdner endeavors to uphold, that all the benefits that accrued to England from the Reformation sprang from such a root, while the devoted religious zeal of so many earnest reformers merely tended to disorder and was something which King Henry rightly endeavored to keep within very narrow bounds. To take out of the religious life of a country all personal conviction and enthusiasm, and to reduce it merely to a matter of order and quiet observance of settled ritual, and the acceptance of theology properly founded on ancient authority, is to turn it to dust and ashes; and if, as Mr. Gairdner seems to imply—it is to be hoped falsely—the Established Church of England represents only this theology and good order, there can be little difficulty in determining why it should be losing its hold on the English people.

The Biography of a Silver Fox. By Ernest Thompson Seton. New York: The Century Co. \$1.50.

Illustration from Seton's "The Biography of a Silver Fox."

This volume belongs to the class of "purpose-fiction," along with the problem novels on divorce apparently, for the author notifies us in a prefatorial note that "The purpose is to show the man-world how the fox-world lives—and, above all, to advertise and emphasize the beautiful monogamy of the better-class fox." Let us hope that the upper classes

of this our world will read and reform. It is needless to say, however, that Mr. Seton does not tag his moral in the old-fashioned and obtrusive manner of Esop, but tells a lively animal story in a way to interest old and young. He uses the pen as effectively as the typewriter, and his apt marginal illustrations double the value of the text.

Fame's Pathway. By H. C. Chatfield-Taylor. New York: Duffield & Co. \$1.50.

Mr. Chatfield-Taylor, the author of a biography of Molière, has chosen the early life and love of the great dramatist as the basis for a novel of adventure and characterization. It is an interesting picture of the life of a strolling player in the France of Mazarin and Louis XIV; Molière's twelve years of wandering thru the provinces made him the master of French comedy and of Paris, when he returned to the city that earlier had scorned him as a tragic actor. The provincial audiences demanded amusement, and taught Molière much of his art. Mr. Chatfield-Taylor draws an engaging portrait of Madelaine Béjart, who lured the young student from the benches of the Sorbonne to follow her uncertain fortunes. The pictures of rural France, too, are full of quiet beauty. It is refreshing to read a romance of the time of Louis XIV with so little of the court in it; a few brocaded and bewigged gallants sit on the stage or stroll across it, and swords flash in the first chapter, but for the most part the story concerns Molière and his immediate circle of actor folk and the humble people of France. "In Paris men pass for the price each sets upon himself." Paris, at last, learned to value Molière at his own price—and that a high one.

Helladian Vistas. By Don Daniel Quinn. Ph. D. Yellow Springs, Ohio. Pp. 407. \$1.50.

This book is launched by the author himself, away from the great centers of book-making. It is without illustrations, which are powerful helps in floating books. The title also sounds a little stilted. But it is fair and just to say that of the many books written on modern

Greece, from Mahaffy to the present time, this is the most full and most excellent. All the other writers have been satisfied to describe here a little and there a little. But this author has drunk too deeply in his nine years of residence in Greece ever to bring forth anything but the best treasures. He is an ecclesiastic, and accordingly particularly full in the description of the religious side of Greek life. But he is no bigot. He visits the Greek monasteries, and is received as a brother in the great monastery of Megaspelion. Now he plunges alone into the country of the Klefts, the Agrapha, famous in folk lore and story, and now he revels in experience with the Mainots on the slopes of Taygetos. He talks with them in their own dialect. No hardships daunt him. The history of the Middle Ages is his delight. While he does not slight the great centers of Greek life, he describes with an almost passionate love the out-of-the-way places. He pays particular attention to the islands—Ithaca, Kephallenia, Leukas and Zante. He is always interesting and sometimes humorous. He is a good mountain climber. It is difficult to find any important place which he has not visited unless it be Dodona, the ancient seat of the worship of Zeus, among the talking oaks. His description of Thessaly and the Vale of Tempe, in two chapters, is particularly felicitous. He also passionately loves Arkadia. He pays particular attention to the modern Church of Greece, and shows a lively interest in the ancient mystic ritual of Eleusis. His description of the struggle of the Greeks at Mesolonghi is sustained, surpassing any others. After discussing the Argolid and the "Mykenlanders," he discusses "Pre-Hellenic Writing in the Ægean," and closes with the "Hill of Hissarlik" (Troy). The least that we can say in his praise is that he has done his work well; so well that no man can carp at his spelling: "Mykenæic," "Greekland," "Korinthiac" and "Zeus." We can even condone "come conquensing," "anaskaptic experience," "began to cease from being considered as untenable." We may prophesy that when this book once gets into circulation it will receive high praise.

Literary Notes

....A beginner in the study of voice culture may find valuable help in the handy and sensible little treatise "Twelve Lessons in the Fundamentals of Voice Production," by Arthur L. Manchester, which Oliver Ditson & Co., Boston, issue in their *Music Student's Library* (\$1.00). The "lessons" are the outcome of practical studio experience and are accompanied by exercises that have been fully tested with many students of varying degrees of vocal talent. A good list of suitable songs for the beginner adds to the usefulness of the manual.

....In *The Life and Times of Anne Royall*, by Sarah Harvey Porter, are given for the first time the true biographical facts of Anne Royall's adventurous, remarkable life. Mrs. Royall is well worth remembering. As the representative newspaper woman of the day, she was more intimate with the growth and development of our national life than any other of her sex. Her life span stretched from George III to the political rise of Abraham Lincoln, inclusive. Aided by the Freemasons, she traveled extensively thruout the United States between 1824 and 1831; and hence we have "The Black Book," being a continuation of the "Sketches of History," "Pennsylvania," "A Southern Tour," "Letters from Alabama," and "The Tennessean." Together these seven titles stand for eleven volumes, which present a picture of pioneer conditions we are in danger of forgetting. Their claim upon our consideration is well presented by the biographer.

....*American Playgrounds*, edited by Everett B. Mero. Their construction, equipment, maintenance, and utility. A compilation of serviceable information concerning what has been done and what should be done to provide suitable recreation and rational physical training by approved modern methods for the benefit of the people. A practical manual for supervisors, instructors, committees and others desiring knowledge of how and what to do, with special contributions and extracts from the writings of the best authorities. Selling agents, American Gymnasia Company, Boston, Mass. (\$1.50). So reads the title page and advertisement of a businesslike looking volume of 270 pages, well illustrated with reproductions from photographs and drawings. And after looking thru the volume carefully it would be difficult to find the smallest section in which the promises of the editor are not fulfilled. Indeed, this is one of the rare cases in which a compiled book is really better than one written by a single hand. So thoroly has the editor all his matter in control, so rational and well balanced is his enthusiasm that the reader pushes on eagerly from one cover to the other, and if he were not an enthusiast in the beginning he would certainly be at the finish; in many cases he will be more than an enthusiast, he will be an active worker or promoter in the movement.

....It may seem strange that we should find in our book stalls a *History of the United States of America* in Greek. But here we have one published by the Atlantic Press, New

York. Solon J. Blastos and Nicholas Gortze have told in their own language the story of American history, a history of great deeds, well portrayed with a facile hand. Their nation, like ours, wrought out its freedom, but unfortunately only partially. Ours broadened out, inviting all comers to share its benefits, while theirs has been "cabin'd, cribb'd, confined." Over many points the authors cannot dwell for want of space. The administrations of four consecutive Presidents are, for example, not improperly condensed into less than a page. It is to the credit of the authors that they show a warm appreciation of their subject. The thirty-four pages devoted to the Civil War are the most interesting of all, and are judicially treated. Some of the authors' phrases do not exactly cover the ground. "Fanatic" is not the proper expression to use in speaking of Lincoln, who was as just as Washington. Gates was strategos, not syntagmatakis. Harper's Ferry is not a naval station *ναύσταθμος*. But these are trifles compared with the book's great merits.

Pebbles

A WELL-KNOWN temperance lecturer, who is an ardent advocate of prohibiting the public sale of liquors, was becoming dramatic over the ideal conditions prevailing in a certain prohibition town.

"I am sure all who are present will agree with me," he concluded, sinking his voice to an impressive whisper, "when I tell you that during a stay of over two months I saw but one drunken man—a most refreshing sight!"—*Temperance Advocate*.

MADAME NORDICA, America's greatest singer, appeared at the Ryman Auditorium last night and with her irresistible smile as soft and refreshing as the cooling spring beneath the fronded branches of a palm tree in the desert, captivated the immense audience before she had uttered a single note. As she raised her voice in song her hearers held their breath as tho to listen as the angel choir sang its praises at evening devotion. Her clear, pure notes penetrated to the farthest corner of the vast hall, charging, as it were, the atmosphere with melody. She has the almost inconceivable power of holding a tone as true as the most perfect musical instrument, and the rippling waves of harmony from her lips exerted an influence as soothing upon the minds of her auditors as the liquid laps of ocean waves upon some far-off strand. Every adverse and discordant sound seemed to have recognized her regal power and to have rendered homage and obeisance, for without a murmur all harsh sound waves ceased their undulations as if to leave a smooth passage for sounds of unrivaled sweetness from another world, and as the tremor of her voice gradually and almost imperceptibly grew fainter in the far distance the silence was so intense that it seemed any contrary noise would have shattered it into a thousand fragments.—*Musical Criticism in the Nashville Banner*.

The Independent

Entered at New York Post Office as Second Class Matter
Postmaster: Charles W. Benson
130 Fulton Street New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.
One Year, \$2.00. Single Copies, 10 Cents.

Single copies sent six months and 25 cents. Postage to any foreign country, in the Universal Postal Union, \$1.00; elsewhere, \$1.50. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered for any respectable journal.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

"The Only Oracle of Man"

THE death of Ethan Allen Hitchcock, Secretary of the Interior in the Cabinets of Presidents McKinley and Roosevelt, curiously reminds the generation now in active life of the real brevity of the span which unites the present age with one so different in almost every aspect that we sometimes are unable to realize that a millennium does not lie between them. Mr. Hitchcock was the grandson of General Ethan Allen, the hero of Ticonderoga, and he inherited many of the best moral qualities of that sturdy personality. Hating dishonesty and double dealing, faithful to every known duty, fearless in pursuing the domestic enemies of the republic, as Ethan Allen was in following a foreign foe, Mr. Hitchcock was a fine and admirable product of his colonial ancestry. To reflect that, if General Allen had not died at an early age, Mr. Hitchcock might have heard that doughty grandfather tell the story of Ticonderoga and the famous imprisonment, is to call to mind the marvel of national growth, of almost unimaginable progress in material prosperity, and in the transformation of human thought which have filled a century and a quarter as perhaps no other equal period of time

in human history has been filled with change and creation.

For, be it remembered, the outward and material transformation, the building of cities, the laying of a network of railroads over a continent, the travel over oceans in leviathan steamers, the substitution of steam for horse-power, and of electricity for steam, the talking thru hundreds of miles of space—these wonderful achievements are but expressions and proofs of man's progress in knowledge thru the patient following out and the ingenious application of scientific methods. They are the vindication of those who told their timid and halting fellows that the way for man to read and shape his destiny was to follow his curiosity and trust the guidance of his reason.

If Ethan Allen could have been asked what he himself regarded as his own best contribution to human well-being, he probably would not have said that it consisted in his demonstration that iron manufacturing could be conducted as a profitable business in America in the teeth not only of British competition, but of legal opposition as well, or in his daring exploits as a soldier, or even in his example of unselfish devotion to his country's cause in days of storm and stress. With that pardonable pride which men take in their thoughts as their truest and most individual creations, he probably would have said that his best gift to his countrymen was his little book on "Reason, the Only Oracle of Man."

A quaint little volume it is, not well known today, but much better worth reading than some other productions of our Revolutionary period that have attained a wider fame. Not but that it was notorious in its day. For it was promptly branded as an infidel work, and Allen was much set upon and reviled because of it. To one running over its pages today the question continually recurs: Could Allen possibly have imagined that his grandson would live to see the time when this book might readily pass for conservative doctrine? There is more than one theological seminary in which General Allen, if living, could now hope to obtain a professorship on the strength of this dissertation. It is a mild preliminary essay along the

lines of moderately elevated criticism. Allen, like Paine and Jefferson, was a deist, but more reverent than they, and with a deep regard for the principles of Puritan morality. Reduced to its lowest terms, his thesis is that all sacred books and ecclesiastical teachings should be subjected to a fearless and candid criticism. He knew nothing of the appliances of modern scholarship. Paleography and archeology had not poured out their treasures of information for the men of his time. Geology, paleontology and biology, as they exist for us to-day, were not yet born. He could not point to the results of research and say, "There are the facts; why argue further?" He could only be what he was, a fearless, honest man, who could at least protest against the habit of taking things for granted, of accepting them because they had long been accepted, of consenting to be muddle-headed because it was supposed to be unsafe and wicked to ask skeptical questions.

That was all. But do we sufficiently feel gratitude to the men who, before our modern knowledge was amassed, rendered that all as fearlessly as they fought with rifle and sword? What do we not owe to the men who let nothing stay them in the quest of such truth as they could win; who, if they could not know all that we, their children, may know, would at least be intellectually honest and clear-headed; who were determined to prove all things so far as they could, and to ask many a question which neither they nor their children's children could answer.

We hold no brief for the doctrine that reason is the only oracle of man, any more than we hold one for mysticism or pragmatism. Truth is many-sided, and the human mind obtains a little of it in many ways. But we confess to a feeling of reverent respect for the memory of men who, in the best way known to them, strove to add to it and to see it clear. And it is not a bad thing for us, who live in an age of hurry and of material standards, to turn our glance backward now and then to our forebears, who, subduing a wilderness and fighting with both savage and civilized foes, for personal and for national existence, could sometimes command the time and

the serenity of mind to think on problems of philosophy.

The Commission and Rural Religion

MR. ROOSEVELT'S Commission on Country Affairs did nothing better than stir up the sleepy country churches; perhaps we should say the sleeping country conscience. As a social church, the town church is in danger of passing into decadence or torpidity. The hillsides are dotted with unused buildings, where fifty years ago the pews were crowded with worshipers who have died or gone West. Where the organization is still operative there are only men enough for officials.

The country minister who used to take part of his salary in cord wood, which he sawed himself, while he grew his own potatoes and beans in the model garden of the village, has in a measure ceased to exist. He has been "called" into town, and the call has been heard, until many of the rural houses of worship have been turned into barns or torn down. Governor Rollins, of New Hampshire, saw this ten years ago, and tried the mending power of Old Home Week. It was a brave idea, and it has done something toward the reawakening of a better country spirit.

The Commission pleads for a reorganization of the country church along the line of a simpler life, and a more practical this-worldliness. Something has to be done to modify the strain that has become unendurable. While the victim of wealth is carried thru a round of furious pleasures, the farmer also is suffering because his work is done, not for home life, but for market. He lives for Wall Street just as much as the millionaire. It is not a sweeter home, but more cash, that at the end of the year declares for success or failure. It is no wonder that suicides multiply in the country as well as in congested communities. The farmer who plans for home first finds that he can keep the even tenor of his way, whether markets go up or go down. His first object is to obtain from the soil sustenance for his family, and this he can rarely fail to do, if he exercises thrift and knowledge.

Under the head of spiritual forces the Commission tells us that the whole people should understand it to be vitally important to stand with the rural church, and help it to become a great power in developing concrete country life ideals. On the other hand, the country church must recognize that its responsibility is to the entire community, and not to a little group of people called a church. This mutual relation between the people and the church organization is wholesome. The Church does not exist for itself, either in the city or in the country. In the city it has already branched out into associations for young men and for young women, into settlements for the poorest, into schools and playgrounds and homes for the children, and much more of a very good and godly sort. It has recognized as included in its mission teaching people household industries, how to live wiser as well as better, and how to develop the beautiful as well as the good.

In the country a boy that is taught to see better and to hear better is brought into relation with the moral life taught in the Parables. If taught to graft and to cross breed and to create, he is brought into sure relations with the Infinite Mind and Eternal Worker. The chairman of this Commission has backed up the position of his report in a volume entitled "The State and the Farmer." He takes the strong ground that a minister who distinctly prepares for a country church should take a course in a good agricultural college, as a supplement to the theological seminary. The religion of the open country should run, as he thinks, into all the common affairs of the open country. Everything which men have to do needs to be spiritualized, and you must understand that this applies to corn growing and plowing and to truck gardening, as well as to honesty in buying and selling and truth telling in general. This may be to many a novel view of religion, but it is a rational view. He prayeth best who loveth best, and if we inject honor and love into everyday work we are substantially offering acceptable prayer. We understand Mr. Bailey to mean that any uplift of the farmer and farming involves better living from the moral standpoint. It is not bigger crops we want, and that only, but we want

higher character, with nobler purposing and manlier living.

Mr. Roosevelt, when endorsing the report of the Commission, drew special attention to this spiritualization of country life. In his opinion, the chief object that we must keep in view is to develop higher ideals of community life and personal character. He would lay a special emphasis on the development of manlier local leadership in the country. No outside force, either of the Government or otherwise, can do much for the elevation of country life unless the personal ideals of the population respond. With him, we are strongly impressed with the fact that the immediate future development of our country lies in the hands of the farming population. They have it to do to counteract the tendency of congested cities to degenerate. They must furnish the fresh blood, the clean bodies, and the clear brains that meet the demands of a strenuous civilization, and surmount all difficulties.

Each rural community should forget forever old sectarian alliances, and unite in one single religious organization, to bring the moral power of the community to its maximum effect. It should baptize all work as something noble, and do all things with a sense of responsibility. No one has a right to let his farm run down, nor to grow one blade of grass where two might be grown. He has no right to be absorbed in religious formalities, which lie heavily on his conscience, while he shirks the obligations of industry and information. The uninformed and the indolent are alike guilty. Rural life is full of spiritual opportunity, and no less when it deals with horses and cows, or with beets and cabbages, than when it concerns worship.

Town Planning

THE city as a nucleus of manufacture and trade was a feature of man's earlier social evolution. It did not mark the feudal ages, but the nineteenth century, with steam power, demanded extraordinary concentration of human efforts and wealth as well as population. Some of the ancient cities were built on plans adapted to the age in which they were occupied and used, but the recent city

has been tumbled together like an unplanned conglomerate. The result is inexpressible and is becoming unendurable. Country improvement also having preceded city improvement, now turns about and demands a new sort of trade nucleus. We carried city privileges out among the hills, and we must now bring in country privileges as a fair balance. Congestion is not a necessity. There is room on the earth for all the cities, fairly spread out, and in every way sanitary and beautiful. We have got the springs and the lakes of the country flowing thru our streets and supplying our houses; what we want now is sunshine and elbow room. We are invited to believe that a city can become an ideal home; in fact, that every city of importance and size can be reconstructed on an approved plan.

New York and Berlin have been compared as the two capitals that most assimilate in their disarrangement. Under the present Tenement House Law in New York we have a pathetic travesty on decent housing; but Berlin is making a strenuous move for something better. A court that is surrounded on four sides by walls sixty or seventy feet high does not allow the air within to form currents, so that it soon grows stagnant. This evil is terribly increased during the warmer seasons by the defective cooling of the air. In adjacent dwellings there is neither in-draft nor thru-draft, so that the air soon becomes absolutely a poison. The efforts made by private individuals and co-operative societies to deal with this housing problem, and to provide buildings which will constitute real homes and can be occupied for reasonable rental, has proved to be utterly inadequate. Private charity is neither a corrective nor an antidote for exploitation of the tenement, and the development of selfish landlordism. The relative proportion of wages that goes for rent is steadily rising, and the housing is not improving in proportion.

Prof. Benjamin Marsh reporting on the essentials of town planning, as found in his review of German cities, makes the proposition involve first of all the dividing of a city into districts, in each of which buildings must not exceed a maximum height, nor cover more than a given proportion of the included space.

Factories must be restricted to a specific locality, and where mixt with dwelling-houses, it must be only for the houses of workers in the factories. A very large majority of the cities now engaged in town planning not only own their own lines of sewers, but their own street railways, exercising municipal control over lines that are under private management, and securing a large profit from them.

The provision for open spaces, parks, playgrounds, squares for monuments and fountains is based on a fixt understanding of their relative needs. In most cities the municipality has purchased a large tract of land. This is recognized as the only way in which the city can exercise a determinative supervision over real estate, and prevent speculation in land, which will make homes and gardens for its working classes impossible. In a few cases municipalities have erected houses for their own employees.

In most cases the cities which have adopted a town plan have done it thru a special commission, including, as a rule, the most expert architects to be secured. Munich explains that it is doing its work on the ground of the health of the people and their well-being. And for this reason they have employed the most experienced landscape planners and builders available. In Berlin, which we have said closely resembles New York, the preliminary work is conducted by three persons; one representing the architect league, one the city proper, and the third standing for the suburbs. There is also a committee of labor consisting of about thirty members.

The general plan upon which the municipality will finally act must answer the following questions: How shall the main thoroughfares (including radial and circular streets as well as park streets) be laid out for the advantage of horse vehicles, automobiles and bicycles, as well as pedestrians. There are further to be considered railroads for travel and freight, with connections at the suburban, local and continental railroad stations, elevators and subways; street cars; principal junction centers of traffic; stockyards and slaughter houses. Waterways are to be provided, including canals and harbors, with docks and piers for loading and unloading, and for passenger traffic. The whole city must be distrib-

uted on an industrial as well as a residential plan, providing separate quarters for manufacturing, for commerce, and for cottages. Large areas must be provided for the construction and maintenance of parks and for water areas. Under this head there must be provided, beside the public gardens and lakes and ponds, places for public entertainments and exhibitions; race tracks and grounds for the ascensions of aeroplanes; places for military drills and shooting practice; and, finally, room for cemeteries. The park, wood, field and water areas must be evenly distributed, or as nearly so as possible, so that they may be easily reached by the inhabitants of the districts built upon. Places for monuments and public buildings, such as churches, town halls, schools and colleges, libraries, observatories, museums, hospitals, theaters, gymnasiums, baths and market halls must be provided, with baths and boating wharves, ornamental gardens and garden patch settlements, and, finally, with schools in woods and homes for the aged.

Instead of continual patchwork and tinkering at the edges of our cities, the determination is to reconstruct them on a definite plan that shall give to the industries their just opportunities while model homes are furnished all classes of the community. The dark ages are to be eliminated, with all their heritage of slum, crookedness and congestion. We have acquired a firm faith that it is possible to make city life as wholesome and as free from degenerative influences as country life. Those who are working at this great reform believe that the future city may be as free as any large village of those conditions that make for misery and crime.

Sham Revision of the Tariff

The controlling majority in Congress does not intend to make a real revision of the tariff. Its purpose is substantially to re-enact the present law, now twelve years old, with a few apparent reductions of little or no value to consumers; with a considerable number of increases, avowed or concealed; and with the entire bill subject to an increase of perhaps

20 per cent., so far as four-fifths of the imports are concerned—for the use of maximum rates, either as proposed by the House, or in accordance with the plan which, it is said, the Senate Committee prefers, will increase the ordinary duties. The result of the special session's work can now be foreseen. We know what the House has done; we have the Senate Committee's bill, which probably will be changed for the worse when action is taken concerning the rates that were withheld from it; and the limits within which the conference committee will do its work are already quite clearly marked.

Mr. Aldrich's explanation of the changes made in his committee's bill was inadequate and misleading, as Mr. Payne's description of the original House Committee's bill had been. Only by careful examination of each measure have many of the objectionable features been brought to light. We do not refer, of course, to such changes in the Senate bill as the imposition of a duty on iron ore and the restoration of substantially all the Dingley rates on meat products, grain and vegetables, but to the effect of reclassification and of a substitution of specific for ad valorem duties on cotton fabrics and other goods. As an example we point to the report of a merchants' committee that one of these obscure changes increases the duty by 88 per cent. Again, a dealer in cutlery publishes a table showing that the Senate bill adds from 42 to 57 per cent. to the duties on razors. Mr. Aldrich said that the substitution of specific rates in the cotton goods schedule had not increased the old ad valorem rate. But Mr. Lodge, a member of the committee, on the same day published a statement to the contrary, rejoicing that the change had been made.

It is misleading to compare the rates of this bill with those of the House bill. Comparison should be made with the Dingley tariff, which Congress professes to be revising. For example, it is pointed out that the high rates of the House bill on hosiery and gloves have been rejected by the Senate Committee. But what rates are recommended in place of them? Simply those of the present Dingley law. Nor is it especially to the credit of the makers of either bill that duties on tea and coffee are not now proposed, for

both these commodities are now on the free list. The Senate Committee may point with pride to its rejection of the House bill's duty on cocoa, but the average consumer does not forget that there is no duty on cocoa in the present tariff.

As we look at the two bills, we are tempted to guess that some of the astute revisers sought, by proposing such new taxes as these, and the increases on gloves and stockings, to divert public attention from certain other parts of the original bill, to draw the fire of popular indignation, so to speak, and then finally to satisfy complaint by restoring the provisions of the Dingley law, at the same time quietly saving other changes—some open, some obscured—which, from the first, they had determined to retain. But the activity of Ex-Congressman Littauer appears to upset this theory, so far as it relates to gloves.

Why was a revision of the tariff undertaken? Was it not in response to a demand from the people, who believed that the Dingley rates were too high and should be reduced? It has been admitted by certain persons who were prominent in the construction of that tariff that it was made so high in order that there might be a margin for reductions to be caused by treaties of reciprocity. After these treaties had been negotiated, the Senate would not accept them. Did the people ask, last year, for a revision that would increase Dingley rates or even re-enact them? Did they ask for the Payne bill, which, as Mr. Payne admitted, would increase the average rate from 44.16 to 45.72 per cent.? Was an increase or a re-enactment of the present tariff promised to them by Judge Taft and the Republican party?

They have hoped that this tariff legislation would reduce the cost of living. The index number obtained by one of our great commercial agencies from the average prices of groups of commodities shows that the cost of living is higher now by 37 per cent. than it was when the present tariff law was enacted. A majority of our people believe that this cost can be, and ought to be, reduced by a revision downward of the tariff rates. Such a revision many of them expected. They will be disappointed.

State Rule Over the Church

It is a new principle, scarce a hundred years old, that the Church shall be free of State control. It was put as an amendment into the Constitution of the United States as a condition of its adoption by the States, that religion should be free, but this did not prevent the separate States from supporting religion by public taxation, and, within the State, necessarily having a certain control. Now every State Constitution follows the United States Constitution, and no law can be enacted that shall in any way control the action of a church. The most the courts can do is to determine what the ecclesiastical rule is in a case where property is involved. For example, in the case of union between the Presbyterian and the Cumberland Presbyterian Churches, the State courts have been appealed to to decide whether, under ecclesiastical law, the Cumberland Church had the right to carry over its property in the several States, and the decision, except in the State of Tennessee, has been in favor of the union.

But this sensible and liberal rule of separation of Church and State is quite new. Jewish law knew nothing of it, and the Christian Church followed the Jewish precedent from the time of Constantine. In Germany the Government appoints the professors in the theological seminaries, and in England the King is head of the Church and appoints the bishops. In France, until within the last two or three years, the Government, which was charged with being atheistic and ruled by Free Masons, had the right to nominate all bishops to the Pope, and no Papal rescript could be promulgated without the consent of the Government, which had the right to forbid a bishop to go to Rome. And when the Government made a final separation of Church and State, and broke the Concordat, the Church complained bitterly.

The conditions in England are very strange. As we have said, the King is head of the Church. Thus a Premier who is a Methodist or a Jew would control the appointments of bishops. This is an impertinence and utterly ridiculous to American intelligence. Of course, the Government means to act wisely

and graciously, but all this is none of its business.

A curious case is now presented to Parliament. Canon Hensley, one of the ablest clergymen in the Anglican Church, who is in charge of St. Margaret's, the fashionable church attached to Westminster Abbey, accepted an invitation to preach in a Nonconformist "chapel," as they call it, in Birmingham. A rigid rector, in whose parish the chapel was situated, forbade him to preach there, but he did it just the same. He thought it an act of impudence, as it was; but the rector was within his rights under ecclesiastical law, and he has brought charges against Canon Hensley, which the bishop is compelled to accept against his will.

Now a bill has been drawn up for action by Parliament to put an end to such a scandalous trial as that of Canon Hensley will be. The bill would make it lawful for any clergymen of the Church of England to preach in a Dissenting chapel, and for any member of a Dissenting Church to preach in an Anglican Church. This is as it ought to be, but it is not the duty or right of the State, of Parliament, to reform the Church. It can under the British Constitution, but that Constitution ought to be changed. The High Church men, who believe that Nonconformity is schism, have the right to protest against what they believe to be wrong. Let the Church reform itself within itself, and not be forced by brute law. We do not wonder that a sentiment in favor of separation of Church and State is growing in the High Church, or, at least, in Ritualistic circles. They are saying much of Erastianism, but not yet with any seriousness, or they would not resist the proposal to disestablish the Church in Wales.

Another amusing illustration of English infelicity we find in the official legal chronicle of a late issue of the *London Times*. Between the divorce court proceedings and a trial for ship breaking, appears a two-column report of a sitting of the Consistory of London, with Dr. Triamam as chancellor. We quote a few paragraphs because they illustrate two evils of the British Government, the union

of Church and State and excessive centralization:

"This was a petition by the vicar and church wardens of the parish of St. Michael, Bromley, in the County of Middlesex, for a faculty authorizing them to use a holy table which stands in the North Chapel in the church of the parish, which chapel is separated by a partition of wood and glass from the rest of the church and contains a separate small heating apparatus, thereby causing a great saving in the cost of heating."

"Mr. Etches asked whether, when the screen was placed in front of the organ pipes, the table in the aisle on which hats and umbrellas had been formerly placed did not assume the appearance of a holy table.

The vicar replied that it had the appearance of a holy table or altar before the screen was put up.

Had it then more the appearance of a holy table? The appearance of the holy table was not altered in the least.

Replying to further questions, the vicar said that after the screen was placed at the back he did put on the holy table two candlesticks with candles in them. It ceased to be used for hats."

"Mr. Etches—Is the aim of the teaching to inculcate that the object of worship is on the table? Do you wish to make the children believe that the object of their worship is located on your so-called 'altar'?"

The Vicar—I do not know what you mean at all.

Mr. Etches—Is it a fact or not that you wish to introduce into the church the consecrated Host?

The Vicar—No, certainly not.

Mr. Etches—Were the children taught to worship the elements or the table?

The Vicar—No, certainly not. I am not a Roman Catholic. How dare you ask me, a clergyman of the Church of England, whether I teach Roman Catholic doctrine?"

"At this point a discussion took place between Mr. Etches and the vicar as to the use of the word 'altar,' Mr. Etches contending that a communion table could not be so described.

The vicar said the communion table was an altar, because it had the five crosses of consecration upon it."

"In the course of some further cross-examination, the vicar used the phrase 'high altar.'

Mr. Etches—I did not know there was a high altar in the Church of England.

The Vicar (to the chancellor)—Am I to be insulted by this person?

Mr. Etches disclaimed any intention of insulting the vicar."

"The vicar said the matter of vestments was outside the question before the court. If they were going into vestimental matters, it would take too long. The ordinary vestments at the children's Eucharists were the cassock, plain alb, girdle, stole, amice, chasuble, and maniple. All those could be found in Edward VI.'s first Prayer book. He did not use a cope or a biretta. He was not aware that these vest-

ments had been condemned by the highest courts in the land.

Mr. Etches—Are they used in the Church of Rome?

The Vicar—I think it is very likely."

Imagine a judge of the United States District Court—or any other sensible man—gravely listening all day to parish squabbles on such questions!

Most happy is the general consent of all Christian and other bodies in this country in support of the American principles of the separation of Church and State. Even the Catholics rejoice in it, and Cardinal Gibbons reports to the Pope that it works well with us. To be sure, this is not the accepted doctrine of the Catholic Church as expressed in official documents, but it is approved under present conditions, altho it is held that the State ought to foster and support the Church. The only failure to accept the full principle is in the demand for support of religious schools out of public funds, but this is a demand made by the clergy rather than the laity, and is one that it is not expected will be granted. It would be a timid Church, lost to self-respect, that would be willing to ask the aid of the State to teach the elements of its religion to its own children. What else is a Church for?

The Veiled Revolution

TURKISH political movements, like Turkish women, wear the yashmak. It is thinner of late, but still a disguise. The sudden overthrow of absolutism by a bloodless revolution nine months ago took Europe by surprise, and the overthrow of the revolutionists last week is almost equally unexpected and mysterious. There was practically no resistance offered in either case. The Young Turks quietly disappeared in a night, just as the old palace clique did then. Both were army revolutions, but the first was carried out by the officers against their superiors, and the second by the common soldiers against their officers. The danger of starting a revolution is it keeps on revolving. Chronos devours his own children. The classic cycle runs from Lafayette to Mirabeau, Mirabeau to Danton, Danton to Robespierre, Robespierre to Napoleon, Napoleon back to the Bourbons. But the

political taxonomist cannot analyze and classify revolutions as the botanist does plants. The Committee of Union and Progress, which led the first uprising and has virtually ruled the country ever since, does indeed form a pretty parallel to the Jacobin Club, but is this new revolt reactionary or radical? The soldiers who gathered in the square of St. Sophia cheered for "Liberty and the Sultan," as formerly they cheered for "Liberty and the Committee of Union and Progress." Perhaps either watchword involves a contradiction in terms. The only real power in Turkey is the army, the common soldiers, not the officers. It was the hint of the dispersal of the Sultan's bodyguard that precipitated the outbreak. They may, like the Prætorian Guard, sell the empire at auction some day to the highest bidder. The Ottoman Empire is, as it has ever been, a stratocracy.

We have always heard that the Turkish soldier was a fiend in human form, who could hardly be restrained by his officers from rapine and pillage. Yet here they unceremoniously dismissed their officers and for two days and nights ranged the streets of Constantinople, using up a million or more rounds of ammunition it is true, but chiefly firing in the air for the mere fun of the thing. The fatalities were mostly accidental and not much more numerous than in one of our Fourth of July celebrations.

The Mohammedan priests were active in fomenting the recent revolution, but here, as in Persia, they are upholders of constitutionalism and take an active part in parliament. The Shah of Persia declares parliamentary institutions incompatible with Islamic law. The Sultan would doubtless decide in the same way if he dared. But the priesthood of both countries is inclined to be anti-dynastic.

It is one of the curiosities of Mohammedanism that both the two great sects into which it is divided are ruled by sovereigns who are illegitimate from their respective points of view. The Shah is not an orthodox ruler to the Persian Shiites nor the Sultan to the Ottoman Sunnites.

The third factor in the movement is the Sultan, but what part he played is,

a usual, indeterminate. He has doubtless received undue praise for astuteness and blame for villainy, but how much of both belong to him personally will not be known until the day when antiquarians work over the secret archives of the Yildiz Kiosk and by that time nobody will care. The European Powers have come to the conclusion that Abdul Hamid has a different principle from that of the Old Guard. He may surrender but he never dies. He surrendered gracefully to the Committee of Union and Progress. He welcomed the new parliament with some cordiality as he did that of thirty years before and then began to undermine it as he did then. Fifty thousand dollars he is said to have given to the theological students for their services in the present affair. If one wanted to get up a revolution in the United States he would hardly begin by subsidizing Andover, Princeton and Union seminaries, but Islam is different from Christendom. To the mutineers who appeared before the windows of his palace he promised amnesty and a new commander; to the priests he promised the maintenance of the law of the Koran in all its purity. As Grand Vizier he appoints Tewfik Pasha, a statesman of the old régime and a friend of Germany. The Young Turks were pro-English in their sentiments and it was supposed the revolution meant the overthrow of the German influence which has for many years dominated the Porte. So, too, it was supposed a few months ago that Germany had been "isolated" and had become a negligible factor in European politics. But the foreign relations of the Balkan States have been settled by orders from Berlin and it may be that in the internal affairs of the Ottoman Empire the Kaiser will have a hand.

But the Young Turks have gathered at their old stronghold, Salonika, and threaten the capital unless their power is restored. Enver Bey and Hakki Bey, their leaders in the revolution, have come back from their honorary banishment at the courts of Berlin and Vienna, to do over again the work that has now been undone. The demand for the deposition of the Sultan becomes more outspoken than it was before. The warships of England, Russia, France and Germany are gathering along the coast ready for

action, and with civil war threatening in European Turkey and massacres in Asiatic Turkey of a thousand native Christians and two of our American missionaries, there is like to be need for them. But the future is behind the veil.

Swinburne Again

Last week we took the liberty to speak frankly of the influence of Swinburne as a man of letters. It has somewhat amused us to observe the laudations—or the silences—of other journals. One would think to read the rhapsodies of some of the obituary writers that the greatest singer of the century past had left us. But we also note that a most ominous reserve was maintained by the English men of letters who might have been expected to attend his funeral. They were not there—none but his two intimate friends, George Meredith and Watts-Dunton, with whom he lived. The others did not come, and sent no wreaths of flowers or verse. There was not a word of appreciation, not a message from any British writer. That surprises and offends the sort of people to whom form is everything and content nothing. We may conclude that he had condemned himself, had put himself out of the pale of sympathetic approval. What we said plainly before his burial they said by their silence at his bier. We may add that his Catholic faith could not have been very deep or permanent, for he directed that there should be no religious services at his burial, and the clergyman who presided had accepted the condition, but thought better—or worse—of his promise, and did make use, to the surprise of those present, of a certain portion of the burial service.

Education in the South

While the system of public schools was imposed on the South by an unwelcome authority, it has been accepted by all the States as essential. Its first great advocate was the Virginian, Dr. Curry, and during the past seven years the appropriations for education in those States has increased annually, as Mr. Robert C. Ogden tells us, at the rate of \$11,000,000 a year. The Legislatures are giving increased appropriations to the State universities, agricultural and mechanical colleges and col-

leges for higher education of women. For buildings, support and equipment Virginia appropriated at the last session \$336,000; North Carolina, \$260,000; South Carolina, \$388,000; Georgia, \$369,000; Florida, \$197,500; Kentucky, \$178,000; Tennessee, \$50,000; Georgia, \$369,000; Alabama, \$315,000; Mississippi, \$357,000; Louisiana, \$87,000; Arkansas, \$150,000, and Texas, \$323,000. To these amounts are to be added the receipts from the funds established by Congress for agricultural colleges and some other funds. A chief influence for this progress is to be found in the Conference for Education in the South, of which Mr. Ogden is President, and which has been assailed in certain quarters, as if it were intermeddling with domestic affairs. But the influential men with Mr. Ogden are mostly Southerners, and the meeting of the Conference in Atlanta last week showed the general approval of its service. With it in the closest alliance is the Southern Education Board, with its millions, which has given much incidental aid to institutions both public and private, black as well as white, and particularly for industrial and agricultural education. We are in hearty sympathy with the urgency of Mr. Ogden in his address at Atlanta that the Bureau of Education at Washington be made a department, and its work of research and administration be much enlarged. Education is a chief interest in the country, and is at the basis of all prosperity. The appropriations of the last Congress to the Bureau of Education were simply niggardly as compared with appropriations for naval construction.

✱

Comparative Benevolence *The Churchman* and Dr. John P. Peters and the other Episcopalians who have condemned the policy of Trinity Church in this city as selfish and as most ungenerous in its decision to close St. John's Chapel, were beaten four to one in the election for members of Trinity Corporation last week. The voters from St. John's were a unit, but Trinity and its other supported chapels were summoned to defend the present policy and plans and they did so as a matter of loyalty, and overwhelmed their critics. Nevertheless, it was a brave fight, even if it

was sure to be lost, and the results will be long felt. It has brought out very clearly the fact that an endowment to support a church is benumbing in its influence. One can endow a charity, but to depend on endowment to support the current work of a church dries up the very fountains of benevolence if not of religion. Comparison has been made between the gifts for missions made by Trinity Church and those made by churches that depend on themselves. The congregation of Trinity, whose landed property, free of taxation, is assessed at \$17,000,000, and nearly the whole of whose running expenses was paid from the income of its other endowments, gave last year but \$3,237 to both home and foreign missions. Compare with that record the Fifth Avenue Presbyterian Church, which raised \$63,325 for the support of its own work and its two missions, and then \$82,343 for the boards of home and foreign missions, and \$159,000 more for miscellaneous charities. All Trinity's ten churches, some very wealthy, gave last year but \$14,393 against the \$82,343 of the Fifth Avenue Presbyterian Church. Supported by the annual gross income of \$791,000 from its property Trinity closes this downtown St. John's Chapel against the wish of its members. *The Churchman* compares the gifts for foreign missions of two leading Presbyterian churches, the Fifth Avenue and the Brick Church, with the gifts to the same cause by five leading Episcopal churches in this city, and finds that the latter do not give a quarter as much per communicant. It must be remembered, however, that the energy of the Episcopal Church thru the country has been given to extension at home rather than abroad, and that this extension in the cities has involved great expense in the erection of superior houses of worship. The rapid growth of the Episcopal Church is proof that it has not been, on the whole, ungenerous at home.

✱

A Girard College for Girls Girard College is one of the great institutions of Philadelphia. It provides free education for orphan boys. It occurred to Charles E. Ellis that there ought to be a girls' college for fatherless girls, and this he has provided

for by his will. Of course, it will be named after him—that is what nearly all rich men stipulate for, altho one princely giver definitely excludes his name from the institutions he has founded. Those who solicit for endowments always suggest that a chair be named after the giver, and it is a pardonable weakness to allow the suggestion. Mr. Ellis's millions were acquired in the street car business, and with his death there can be no taint attached to them. Stephen Girard's gift was made at a time when religion was at its lowest ebb in this country, and it was provided by his will that no clergyman should be admitted within its doors. Such a provision could hardly be inflicted on an institution now, and this girls' college is to be non-sectarian, but King James's Bible is to be read daily, so the report has it. If that is exact it would seem that he was a man of such narrow views as to object to the Revised Version. But those in control will find it easy to use also the better version, even as Girard College has not been able to exclude religion or even clergymen. Another provision of the will is utterly to be condemned, that which confines the benefits of the college to girls of Caucasian birth, as if Japanese and Chinese and negro girls do not have as much need of education, and as much right to it as those with a whiter skin.

This year is the semi-centennial of the John Brown raid, and altho no one can quite defend his choice of a way to end slavery, yet it had a great sympathetic value, and will be celebrated in various ways. After the War, Storer's College was founded at Harper's Ferry to educate colored youth, and the Government gave it several buildings that had been used for the Arsenal and the rifle works there. But the building which John Brown used as his "fort" and where he was captured, was removed to make room for a railroad extension, and then taken to Chicago and re-erected as an attraction for the World's Fair. Miss Kate Field had it taken back to Harper's Ferry and erected in a field which she ~~designed to make a pleasure park~~, but her death interrupted the plan. It will ~~now be removed to the grounds of~~ Storer College and used for a library, and, later, a museum. Lincoln Hall,

erected for the college by funds from the Freedmen's Bureau, has lately been consumed by fire, and will be replaced by a stone building.

The grave news from Turkey of the assassination of two American missionaries at Adana—the Rev. Daniel W. Rogers, of the American Board, and the Rev. Mr. Maurer, of Hadjin—gives occasion for anxiety for the safety of other American missionaries, of whom perhaps twenty were attending a conference at Adana. They and several thousand Christians who fled to the mission quarters for protection are at last accounts surrounded by the mob which has burnt so large a portion of the city and killed over a thousand persons. These two young men died as martyrs, as so many died in the Chinese Boxer uprising, and, as there, the native Christians seek safety under the protection of the missionaries.

It is a superintendent of schools who has read with great interest Marion Harland's article "Are Our Women Ruder than Our Men?" and he declares that she gives the women even too much credit when she says that hardly one in ten thanks a man for giving his seat to her. Our correspondent has carefully watched such cases for years, and all the way from Boston to Denver, and he declares that scarce one in twenty shows any duty to thank the one who has yielded his seat. The trouble, he thinks, comes from the failure of schools to teach girls good manners.

Mr. Carnegie's minor gifts were for libraries, but his money holds out, and is given now more miscellaneously for education. The last offer we hear of is of half the cost of a \$35,000 dormitory for girls at Wilberforce University, the colored college of Pennsylvania of which Dr. W. S. Scarborough is president. It ought not to be difficult to raise the other half.

They are making progress in England. The teachers' conference last week held an animated discussion on mixt schools for both sexes, and decided by a large majority not to condemn them. In another ten years they may get so far as to approve them.

INSURANCE

Insurance Notes.

THE life insurance agent is proverbially long suffering. He labors in season and out of season with a prospect until he secures his application, and even then the prospect has too often been permitted to change his mind and reject the policy he has agreed to take when it comes to hand. *The Weekly Underwriter* cites a recent case where the worm turned and mentions a suit that was brought in the New York Supreme Court by Edward J. Wessels, formerly an agent of the Northwestern Mutual Life, against Harry A. Munn, a coal operator of New York and Orange, N. J., to recover \$2,600 commission alleged to be due on the procuration by Wessels of life insurance policies aggregating \$100,000 on the life of Mr. Munn. According to Wessels, on February 28th, 1908, he and Munn entered into an agreement under which Wessels was to procure \$100,000 insurance on the life of Mr. Munn. On March 21st of the same year Wessels says he did procure this amount of insurance, and four days later, when he delivered the policy to Mr. Munn and demanded \$4,075, the annual premium, the latter refused to accept the policy and repudiated the agreement. Wessels then began the suit to recover \$2,600, the amount of his commission. The matter came to the attention of Justice Hendrick recently, when Mr. Munn asked the court to compel Wessels to put up security for the costs of the action, on the ground that the latter is not a resident of the State, and, further, that the action is "an unusual one." The court denied the motion with \$10 costs. It would seem that it ought to be possible to enforce a contract of this kind quite as easily as a contract of any other kind.

THE license of the Home Life is not to be revoked in Ohio after all. Commissioner Lemert, of that State, had a revocation under consideration because counsel for the Home Life violated a State law which prohibits a foreign company from transferring a suit from a State to a Federal court. Attorney-General Denman, of Ohio, has advised against the infliction of the penalty provided for this,

which is the revocation for three years of its license to do business in the State. This was resolved upon because the company's counsel, in ignorance of this law and without consultation with the technically offending company, had so transferred a suit brought against the company by former Lieutenant-Governor Asa W. Jones, involving the settlement of a policy claim. The suit was subsequently reinstated in the State court.

At the annual meeting of the Provident Savings Life Assurance Society last week, E. E. Rittenhouse was re-elected president, and Frederick J. Dickson secretary. The new comptroller is Sidney R. Conklin, who has also been elected a director. Frederick W. Kavanaugh, a woolen manufacturer, of Waterford, N. Y., was elected a director in place of Timothy L. Woodruff, resigned. The superintendent of insurance has been requested to fill the three vacancies of the board with policyholders and has agreed to do so. The assets have increased nearly \$100,000, and the surplus \$103,000 during the first three months of the year.

Nickel-in-the-slot machines are perhaps not the most ideal of insurance solicitors, but they serve to acquaint certain people with insurance who might not otherwise become policyholders. When a man buys the very restricted policy form of insurance that is vended by a slot machine, the way is made easier for him to become a policyholder along broader lines. The more general the knowledge regarding insurance the better it is for the man wishing to insure. The more a man knows about insurance the better he will like it, and in this connection the nickel-in-the-slot machine has some educational value.

Mr. William N. Compton, sometime a district manager for the John Hancock Mutual Life Insurance Company, of Boston, Mass., in the District of Columbia, where he has made an excellent record, has been appointed general agent for the Company in Greater New York.

FINANCIAL

Trade and Securities

EVIDENCE of improvement is seen in the railway earnings, both gross and net. Gross earnings for March were larger than those of March a year ago by about 11 per cent., but as March, 1908, showed a decline of $14\frac{1}{2}$ per cent., the favorable condition of the first part of 1907 has not been wholly regained. There has been a steady upward movement in gross since the beginning of the year. A still larger increase of net earnings is shown by the reports, 32 per cent. for February, following 22 for January. This significant growth is due mainly to the economies suggested by panic depression.

In the field of general trade reports for last week indicate but little change, but the tendency is upward. There is very noticeable activity in building, reports from 95 cities for March showing an increase of 46 per cent. over February, and 82 per cent. over March, 1908. For the first quarter of this year the increase was 88 per cent. Construction of large buildings has been stimulated by the low price of structural steel, great quantities of which have been sold. As about 1,000 sawmills are to be closed, with the avowed purpose of raising the price of lumber, this may tend slightly to restrain activity in the erection of small structures.

The market for securities was irregular last week. Declines, due in part to the effect of events in Turkey upon prices in Europe, were followed on Saturday by gains, but the net result was a loss for nearly all the active stocks. An exception was seen in Reading, where a net advance of 4 points was attributed by some to a conviction that the Supreme Court's decision concerning the commodities law would be favorable to the coal railroads. Upon further rumors that the company's surplus would be distributed by means of large dividends, the price of Lackawanna advanced 55 points, but only 800 shares were sold.

....A syndicate representing, it is said, all the independent steel companies except Jones & Laughlin, has bought

100,000 acres of land containing coking coal, in Pennsylvania, paying about \$50,000,000.

....Merton & Co., of London, estimate the world's output of copper in 1908 at 748,625 tons, against 713,865 in 1907. More than half of the quantity was produced in this country, to which 32,055 tons of the year's gain of 34,760 tons are credited.

....Travelers sailing last week carried the first issues of the "new international money," or travelers' checks, for the use of which European and American bankers are co-operating. These checks are for \$10, \$20, \$50 or \$100. They are handsomely engraved, are printed on paper which is protected against counterfeiting, and bear the acceptances of the banking institutions on which they are drawn.

....Returning last week from a trip of several weeks in Europe, W. J. Wollman, of the house of J. S. Bache & Co., reported that he had found abroad much and growing interest in American securities. "One hears them discuss on all sides," said he, "both in England and on the Continent. They are buying our securities and putting them away. They again feel entire confidence in America, and are actually looking to this country for leadership. Many bankers say that business in England and France will be dull there until trade is stimulated by revival here."

....The Farmers' Loan and Trust Company, of which Edwin S. Marston is president, and which has recently improved and enlarged its property, now owns almost the entire block surrounded by William and Beaver streets and Exchange place. The trust department, the loan department, the transfer and reorganization department, as well as the other departments, have ample room for the transaction of the company's very large business. The company has branch offices at 475 Fifth avenue, as well as in London and Paris. Its capital is \$1,000,000; its undivided profits exceed \$7,000,000, and its total resources are more than \$132,000,000. The company was chartered in 1822.

NEW YORK, THURSDAY, APRIL 29, 1909

No. 3152

Survey of the World

Tariff Rates in the Senate

In the Senate, last week, the first formal reading of the Finance Committee's tariff bill was concluded, and the bill will be taken up this week for consideration by paragraphs for amendment. In the first reading many important provisions were past over at the request of Senators who oppose them but were not ready to discuss them thoroly. At the beginning of the week, Mr. Aldrich opened the debate with a long speech. Asserting that the pending bill would yield sufficient revenue, he said that Congress had been guilty of "unprecedented extravagance" in appropriations. Expenditures, in his judgment, could be reduced \$35,000,000. He was satisfied that the appropriations made last year "could have been reduced by at least \$50,000,000 without impairing the efficiency of the public service." He was authorized to say that in reducing expenses and improving the methods of making appropriations, Congress would have the earnest support and hearty co-operation of the President. Sharply opposing propositions for an income tax, he remarked that the imposition of such a tax would be unwise, unjust and prejudicial to the interests of the people. The interest rate of Panama bonds to be issued should be raised to 3 per cent. He was confident that tariff revenue would be increased under the proposed law by general prosperity and by new measures to prevent undervaluation.—There is a vigorous movement in the Senate for an income tax. The Democrats are committed to it, and the number of Republicans who agree with them about this is variously estimated at from twelve to twenty. It is expected that the vote, when taken, will be a close one. Mr. Cummins's income tax amendment has

recently been so modified that all incomes below \$5,000 are exempt, while the tax on larger incomes is graduated from 2 to 6 per cent. He thinks it would yield \$40,000,000. It is understood that the President is inclined to accept Mr. Aldrich's views as to the tariff revenue. If this revenue should not be sufficient, he would add a national inheritance tax. Next in the list of such taxes, in his opinion, should be a tax on corporation dividends, and he would place an income tax last. Senators who ask for an income tax do this either because they do not accept Mr. Aldrich's estimates of tariff revenue, or because they hold that such taxation is more just than tariff taxes upon consumption.—In the course of the debate, on the 22d, the character of the committee's revision was severely criticised by several Republicans, notably by Senators Dolliver, Nelson and Cummins. Mr. Nelson said that the existing high duties upon woolen goods, cottons, glassware, crockery and other necessities should be reduced. Mr. Dolliver held that Congress had not assembled in special session to increase the present duties or to re-enact them. No voice had been raised for either of these courses. It had been expected that duties would be reduced wherever this could be done without injuring an industry. There was a prospect that when the session finished its work, the result would so closely resemble the present Dingley tariff that many people would wonder why the session had been held. He complained of obscure changes that greatly increased the present duties, asserting that in one case the increase was 600 per cent. Mr. Aldrich and others replied that such changes as had been made were required for adequate protection. Two or three Republicans joined the Democrats in say-

ing that a revision downward had been promised, and that now a revision upward was proposed. Mr. Aldrich replied that there had been no such promise. The Republican platform had called for duties that would compensate for the difference in labor costs, with the addition of a reasonable profit for American manufacturers. The committee's bill was in accord with this rule. He was asked by Mr. La Follette to show the differences in labor costs, and he promised to do so at a later date. Mr. Bailey asserted that the Republicans would have lost control of Congress if they had told the people last year that they intended to revise the tariff upward, or even to re-enact the present rates. He asked why a prohibitory rate upon gas retorts had been increased 200 per cent.—At the end of the week, the committee decided upon several important amendments. The present duty of 15 per cent. on hides (free in the House bill) is to be restored. Wood pulp is on the free list in the House bill, which reduced the duty on print paper by two-thirds. It was reported that the committee would restore the old duty on wood pulp, or a large part of it, and that this action was due to the influence of Senator Hale. It was also said that a duty on crude petroleum would be proposed. Independent producers of oil have told the committee that removal of the duty, as proposed by the House, would be injurious to their interests and beneficial to the Oil Trust, which would be able to import oil from Mexico at low cost. They asserted that if there were no duty the Trust would soon suppress all domestic competition in either crude or refined oil.

Ex-Governor Taylor
Pardoned

Governor Willson, of Kentucky, on the 23d granted full pardons to ex-Governor W. S. Taylor, Charles Finley, John L. Powers, John W. Davis, Zachariah Steele and Holland Whittaker, all of whom had long been under indictment for complicity in the murder of William Goebel. Some months ago he pardoned James Howard and Caleb Powers, who had been convicted. The only person now in prison for that memorable crime is Henry Youtsey, who is serving a life sentence. The Governor says it would

be impossible to get a fair trial for the six men in the county where the crime was committed. Thoro study of the reports of all the trials, together with his remembrance and knowledge of events, has convinced him that ex-Governor Taylor "had no part in or knowledge of the murder and would never have been indicted but for the political excitement and the passion to prosecute every one whom excited imagination or selfish partisan interests could drag into the field of blame and abuse." Taylor and Finley (the later was Secretary of State) have been living in Indiana since the indictments were found, and three successive Governors of that State have refused to give them up for trial in Kentucky. When the pardons were granted, last week, it was thought that John L. Powers (a brother of Caleb) was in Honduras. A day or two later it was ascertained that he was living in Kittanning, Pa., where he was known as Prof. John W. Christie. Returning from Honduras some years ago, he took this name and became an instructor in a business college in Pennsylvania, where he married one of his pupils. Before the wedding he told her the story of his life, and he was married in Canada under his true name.

Peace for the
Anthracite Mines

At the close of a conference held on the 21st and 22d, at which representatives of the anthracite coal miners' union met the operators' committee, it became known that an agreement had been reached, and that, in all probability, the papers would be signed before the end of this week, after approval by a miners' convention. President Lewis reported that the operators had offered concessions. So far as can be learned at present, however, these are merely that prices for new work shall be fixed by the conciliation board; that a discharged miner may appeal to the board for an investigation, and that the rate of wages required by the old agreement shall be restored if at any place it has been reduced. The agreement in force during the last three years is to be renewed for another term of three years. —A strike of the street railway employees in Pittsburgh is expected. When their agreement expired, on the 20th,

they asked for an increase of pay. The company offered the old agreement, pointing to a reduction of receipts and to thousands of applications for employment. This offer was rejected, and by a vote of 2,288 to 123 the men decided to strike if the company should make no concession.

Night-Riders to Pay Damages Lee Baker and Nathaniel Frizzell, negroes, were cruelly whipt by night-riders and driven from their homes in Birmingham, Ky., a little more than a year ago. The confession of a night-rider having disclosed the names of their assailants, they brought suit for damages, each asking for \$25,000. At the trial in Paducah, on the 20th, the verdict of the jury gave them the full amount. The defendants were Dr. E. Champion and thirty-nine other persons, all of whom were named. None of them ventured to make a defense in court. Among the witnesses were the confessing night-rider and Dr. Robert Overby, who drest the negroes' wounds and was warned that he must leave Birmingham for doing so. In the same raid an aged negro and his infant grandchild were killed. Damage suits brought by their surviving relatives are yet to be tried.—At Ada, Okla., on the 19th, a mob took from the jail and hanged J. B. Miller, of Fort Worth, Tex.; B. B. Burrell, of Duncan, Okla., and Jesse West and Joseph Allen, of Canadian, Tex. These men, well-to-do owners of cattle ranches, had been arrested for the murder, in February last, of ex-United States Marshal A. L. Bobbitt, who was shot from ambush. Burrell had become a witness for the prosecution and had told how the murder was planned and committed. The lynched men had not led peaceful lives. It is said that Miller had killed twelve persons. In the lynching mob were many prominent citizens of Ada.

Railroad Topics The Senators from Utah have laid before the President complaints from their State that the Harriman and other railroads discriminate against it. Their statements show that freight rates from the East or Middle West to Utah are twice as high as rates from the same points to San

Francisco. The charge is made that there is a conspiracy of the roads, in violation of law. There will be an inquiry by the Department of Justice.—In September, 1906, the Pennsylvania Railroad Company sold \$19,000,000 of stock of the Norfolk & Western. The investment had been made, it was explained, to prevent rebating. This purpose having been accomplished, the stock (a part of the company's holdings) was sold in deference to public opinion and because of the allegation that the company sought to control the bituminous coal trade. Last week the Pennsylvania bought back this stock, and its interest in the Norfolk & Western is now about 38 per cent. of the capital shares.—There are rumors in Boston that the Government's suit against the New York, New Haven & Hartford Railroad Company for violation of the Sherman act by purchasing trolley lines and Boston & Maine stock, is to be dropped.—In Ohio, the Circuit Court of Franklin County has decided that the Hocking Valley road must not control three other roads engaged in the coal trade. This decision also prevents the same company from controlling three coal companies. The suit was brought by the Attorney-General under the State's Anti-Trust law.

Cuba's New Army Much progress has been made in organizing the new Cuban army. When the ranks are full, President Gomez will have nearly 6,000 armed men under his control. There will be two regiments of infantry, two battalions of light field artillery, four battalions of mountain artillery, and a corps of coast guard artillery. No provision for cavalry has been made, this branch of the service being represented by the rural guards. The President is arming the soldiers with German Mauser rifles of the latest model, and the artillery will have Schneider-Canet guns from France. The uniforms are of khaki, like those of the United States troops. The pay ranges from \$21 a month for a private soldier up to \$3,600 a year for a colonel, \$5,000 for a brigadier, and \$6,000 for the commander-in-chief, Faustino Guerra, who was the leader of the revolutionists in 1906. A majority of the soldiers will be stationed

at Camp Columbia, Havana, where there is now going on the training of officers.—It is expected that Congress will approve President Gomez's project for exchanging a tract of the Government's waterfront land, now occupied by the old arsenal, for land of the United Railways Company on the Prado, and for the erection upon this latter tract of a new Presidential palace, halls for the Senate and the House, and buildings for the postal service and the courts, at a cost of about \$6,500,000. The railroad company undertakes to spend \$1,500,000 upon docks and warehouses and also offers to erect the public buildings upon terms which include a mortgage.—In the House, at Washington, last week, Mr. Helm, of Kentucky, introduced a resolution providing for the annexation of Cuba whenever a majority of Cuba's voters shall ask for it. This is intended, he says, merely as an invitation.

Castro in France Ex-President Castro, of Venezuela, arrived at St. Nazaire on the 23rd, and at once proceeded to Paris. In interviews with reporters he bitterly criticised the French Government, attacked the Government of the United States, and asserted that the Venezuelans were ingrates. He regarded himself as a prisoner of war, he remarked, because he had been expelled from Martinique and sent back to France. But it is understood that the French Government will treat him as a private traveler. He said:

"I am the victim of the United States, which has imposed measures against me upon Europe, whose interests I had defended against the invasion of the United States. The day will come when the European Powers will realize their mistake. They failed to understand the significance of the seizure of Panama. Now the first act of the United States against the sovereignty of Venezuela has been committed." He should never lay claim to the Presidency, he continued; his aspirations were confined to the management of his private affairs and the "planting of lettuce, like Diocletian." Passengers on the steamship report, however, that during the voyage he said that if he could have landed in Venezuela he would have raised an army and overthrown Gomez. It is said that he will go to Spain and then attempt to reach Cuba. Dispatches from Caracas say that when he expected to

land at Trinidad many opponents of Gomez were awaiting him there, among them General Mendible, who, as Governor of Guarico, defied Gomez and killed the military commander of that province; also General Torres, who killed the officer sent by Gomez to replace him as Governor of the Province of Colon.—President Gomez has released from prison all who were arrested at the time when Castro was deposed, including those accused of plotting to assassinate Gomez himself. It is expected that France and Holland will soon send diplomatic representatives to Venezuela. The agreement made by Gomez with our Government for the arbitration of pending claims by The Hague Tribunal has been published. The hearing will begin in February next.

Young Turks Advance on Constantinople The movement of the Third Army Corps

from Salonika to the capital was carried on during the week with astonishing precision and celerity, and the troops, tho technically insurgents, showed far better discipline than those nominally defending the Government in Constantinople. The railroads leading to the capital were monopolized for military purposes to the exclusion of passenger service. Six trains a day were dispatched from Salonika, each containing a battalion or its equivalent in munitions and provisions, and the troops were disembarked near the city according to a plan of investment evidently long before worked out in detail. The lines followed in a general way those of the Russian campaign of 1878; some of the old Russian fortifications were occupied and the suburban town of San Stefano, where the conqueror dictated his terms to the helpless city, was made the headquarters of this new beleaguering. Here Cheftek Pasha, commander of the Third Army Corps and the other constitutionalist forces, arrived from Salonika on the 23d and here he was met by Tewfik Pasha whom the mutiny had made Grand Vizier the week before. The Grand Vizier showed no disposition to treat as an enemy the forces assembling to put him out of office. Both he and his Cabinet express a willingness to resign at any time and only held their positions in order to

maintain a formal Government and to protect the person of the Sultan in this crisis. Nazim Pasha, who had been placed in charge of the troops defending the capital, also consulted freely with the leaders of the advancing army, both by telegraph and in person, and carried out plans in co-operation with them for the avoidance or postponement of a conflict. Parliament, after hearing the preliminary announcement of the new ministry under Tewfik Pasha, declined to give him a vote of confidence, and went over in a body to San Stefano, "the Versailles of Constantinople." Several Turkish warships left their anchorage at the mouth of the Bosphorus, where they were stationed to defend the Yildiz Kiosk, and slipped down to San Stefano as a demonstration that the navy was with the Constitutionals. Soldiers in small groups and by the hundred, secretly and openly, sometimes unarmed and sometimes with trains of machine guns and ammunition, escaped from the city every day and joined the investing army. This army presented the unusual spectacle of Moslem and Christian, Greek, Albanian, Bulgarian and Turk marching side by side in a common cause and camping in the same tents without quarreling. The leader of the band of 500 Bulgarians placed in front of the investing army was the bandit who eight years ago kidnapped the American missionary, Miss Stone. The Young Turks are very largely disposed to insist upon the deposition of the Sultan as the only assurance against their work being again upset, and Parliament in secret session at San Stefano is said to have adopted a resolution to that effect, but the official proclamation of their military leader, Chefkets Pasha, is more moderate in its tone.

The Capture of the Capital

The forces of the Constitutionalists from Salonika took possession of Stamboul on the 23d with practically no opposition, and early the following morning crossed the bridge over the Golden Horn to Pera, the foreign quarter of the city. The Young Turk leaders had assured the legations that they would be protected in any event, and the promise was made good. As fast as

each section of the city fell into their hands it was policed by gendarmes, a thousand of whom had been brought from Macedonia for this purpose. Although there was irregular fighting between individuals, bands and companies in the streets and between the houses for most of the day, every precaution was taken by the soldiers to prevent foreigners from being injured even though as spectators, photographers and newspaper correspondents they persisted in entering the danger zone. Major Enver Bey, who started the revolution of last July in Salonika, led the advance of the troops against the Yildiz Kiosk, and as he entered Pera he stationed a company of infantry to guard each legation. The only serious resistance was from the soldiers at the Tash-kishla and Taxim barracks, between Pera and the Yildiz Kiosk. These were chiefly Salonikan chasseurs who had been brought to the capital and placed in the Sultan's body-guard by the Young Turks in order to protect the interests of their party, but, alienated by city life and the atmosphere of the court from their Macedonian comrades, and seduced, as it is supposed, by the bribes of the Sultan, they had led in the mutiny which overthrew the power of the Young Turks in the capital two weeks ago. They were therefore regarded as traitors by the Salonikan troops and could expect little mercy from them. Artillery was brought to bear against the Taxim barracks and its walls were soon demolished. A flag of truce was waved from the barracks, but as the soldiers came forward to take possession they were, either through treachery or some misunderstanding, met by heavy volleys and suffered a considerable loss. The attack was thereupon renewed and the barracks captured. Those who refused to surrender were shot. It is reported that about five hundred men were killed during the day and as many more wounded. The garrison of the barracks in Scutari, opposite Stamboul, numbering 4,000 men, refused to surrender and threatened to bombard and destroy the city if the army from Salonika took possession of it, but Chefkets Pasha notified them that he was aware of the fact that they did not have enough ammunition to do much damage.

and that if they fired a shot he would carry the war into Asia and give them enough to attend to at home. Sixty big guns were placed into position to bear upon Scutari and a cruiser drawn up within range of the barracks and made ready for action, whereupon the garrison surrendered. No attack was made on the Sultan's palace at the Yildiz Kiosk, and on the following day this was peaceably surrendered to the Constitutionalists. It is said to have been the Sultan's

The disturbed district extends around the Gulf of Alexandretta, from Latakia to Mersina, and 50 or 100 miles inland. The outbreak of fanaticism showed a striking coincidence with the reactionary movement in Constantinople instigated by the Sultan and it subsided gradually as the triumph of the Young Turks at the capital became known. Apart from this there is no direct connection established between the two movements. The conflict at Adana was started by the

YILDIZ KIOSK

The kiosk of the Sultan at Yildiz, here surrendered to the Young Turks from Scutari. In the distance is Scutari, from which bombardment was threatened. Between is the Bosphorus, on which are four Turkish ships.

express order that no defense of Yildiz Kiosk should be made. The garrison of 4,000 Albanians was disarmed and marched out of the palace under escort of the Macedonian troops. The city is under martial law and no general disorder is anticipated.

Massacres in Asia Minor

Almost all the cities and villages containing Armenian Christians in Cilicia have either suffered from attacks of the Mohammedans or are in great danger.

shooting by an Armenian of three Turks, one of whom died. The Armenian was on the following evening beaten to death by a Mohammedan mob. The shops of both parties were closed and the Armenians appealed to the Governor for protection. This was promised, whereupon the Turkish and Armenian leaders went thru the streets urging the reopening of the shops. Rioting, however, soon began again and continued for three days. The Armenian quarter was looted and burned in spite of a stout defense. The two Americans, Rev. D. M. Rogers and

Rev. Henry Maurer, a Mennonite missionary, were killed while trying to save the house of an aged Turkish woman. The total number of lives lost in the ensuing series of massacres is not known, but is estimated at 25,000. In some cases the fanatical peasants have attacked Armenian villages and destroyed all the inhabitants, men, women and children, in the old Saracenic manner. Hadjin, near Adana, has been besieged by Moslems from the surrounding country for a week, many houses in the suburbs being burned. In Hadjin there are five defenseless American women missionaries—Miss Rose Lambert, Miss Virginia H. Billings, Dr. Elizabeth Hawley, Dr. Emily F. Richter and Miss Bowman. At Tarsus are many other missionaries, among them Miss Lizzie and Miss Adele Brewer, sisters of Justice Brewer, of the Supreme Court. The mission at Tarsus is protecting 3,000 refugees and is in great need of food and medicine. Several hundred houses have been burned in Tarsus and 50 or 100 people killed. An urgent appeal has been sent out from the missionaries for money to provide for the native Christians. Thousands of dollars a day are needed to provide for widows and orphans and to furnish the destitute with immediate relief. At Antioch the pillage of the Armenian quarter has been unchecked and many Armenians have been massacred. Deurtyul, an Armenian town of about 10,000 on the coast near Antioch, is surrounded by Kurds and Circassians and is in danger of being destroyed. The water and food supply has been cut off. A British warship visited the town for the purpose of attempting its relief, but the Governor refused to allow the landing of a party. French, British, German and Italian naval vessels are now in the gulf. The American Government has ordered the cruisers "North Carolina" and "Montana" to be sent from Guantanamo, Cuba, to Asia Minor.

The Relief of Tabriz

The city of Tabriz, in north-western Persia, which has for months been besieged by the Shah's troops, has a brief respite from its troubles. The British and Rus-

sian representatives at Teheran united in making serious representations to the Shah on the necessity of relieving the situation by a change of policy, and urged him to call a national assembly and adopt political reforms. Whether the Shah will consent to the restoration of the constitutional *régime* is yet uncertain, but he has authorized an indefinite armistice, during which supplies of food may be admitted to Tabriz. The Nationalists defending Tabriz were notified of the armistice by the consuls and ceased fighting, but the Shah neglected to inform his troops of his action and they took advantage of the cessation of hostilities to seize an important position. The British and Russian legations have protested to the Shah against this violation of the common usages of war. Satar Khan, leader of the Constitutionalist forces in Tabriz, tho hard prest, has stoutly refused to surrender, altho the distress inside the city on account of lack of food and other necessities of life has been so great that the women have organized street demonstrations against his policy. Two foreigners in Tabriz have espoused his cause, Mr. Moore, an Irish newspaper correspondent, and H. C. Baskerville, an American teacher. The latter was killed in leading a forlorn hope against the besieging troops. In the sortie led by Baskerville 60 men were killed and 100 wounded, the party being practically annihilated during the charge. Of course, Moore and Baskerville forfeited their claim on the protection of the British and American governments by taking arms, but there are many missionaries and other foreigners in Tabriz for whom protection is necessary, and Russia is the only country which is prepared to intervene. Both the British and American governments have indirectly express their hope that Russia would send an expedition to Tabriz and Russia is only too willing to comply. Two companies of Cossacks stationed at Julfa have crost the frontier for Tabriz, occupying the Persian towns along the route, in order to keep up communication with the Russian outposts. The leader of the expedition is General Sparsky, who a year ago led a punitive expedition into Persia.

The States and National Treaties

BY GEORGE W. ALGER

[This article presents a most important international difficulty, one which we have not neglected to consider editorially. The author, a leading New York lawyer, offers a thorough legal view of the case.—EDITOR.]

IN the discussion of the so-called Japanese question in his inaugural address, Mr. Taft has at the very outset of his administration undertaken to correct a very serious defect in the national authority over the relations between foreign government and our own when disturbed by the hostile action of State or municipal governments. He says, after discussing Asiatic immigration and the diplomatic problems connected with it :

"We must take every precaution to prevent, or failing that, to punish outbursts of race feeling among our people against foreigners of whatever nationality who have by our grant a treaty right to pursue lawful business here and to be protected against lawless assault or injury. This leaves me to point out a serious defect in the present Federal jurisdiction which out to be remedied at once. Having assured to other countries by treaty the protection of our laws for such of their citizens or subjects as we permit to come within our jurisdiction, we now leave to a State or a city, not under the control of the Federal Government, the duty of performing our international obligations in this respect. By proper legislation we may and we ought to place in the hands of the Federal Executive the means of enforcing the treaty rights of such aliens in the courts of the Federal Government. . . . We cannot permit the possible failure of justice due to local prejudice in any State or municipal government to expose us to the risk of a war which might be avoided if Federal jurisdiction was asserted by suitable legislation by Congress and carried out by proper proceedings instituted by the Executive in the courts of the National Government."

If this proposal is met with appropriate Federal legislation, an important legal question of great difficulty, which has time and again caused complications in our relations with foreign powers, may be solved.

What may be called the theoretical supremacy of the national over the State government in relation to treaty rights of foreigners is firmly established. The constitution is clear on the subject and gives to the nation a grant of power, subject to law and not to the interference of the States over the whole subject of our relations with foreigners. The treaties entered into by the national government are a part of the supreme law of the land, and the judges

in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding."

As embodied in the declaration of the United States Supreme Court, the supremacy of treaty rights over State laws is one of the oldest and best established of constitutional principles. The question first arose in that court in 1796 in *Ware vs. Hylton* with reference to the treaty of peace between this country and Great Britain which followed the War of Independence. A British subject sued citizens of Virginia on a debt contracted prior to the Revolution. The debtors pleaded that the debt had been abrogated by the war and confiscated by the State of Virginia as a war measure and that they, the debtors, had made part payment to the State on this debt. The British plaintiff replied, setting up his rights under the Treaty of 1783, asserting that this treaty was the supreme law of the land and therefore paramount to all State legislation, past and future. The United States Supreme Court sustained his contention and the action of the State of Virginia in confiscating the debt was held null and void. The case is an interesting one, not only in the principle it established, but because it is the only case in which John Marshall ever appeared as counsel before the court of which he was afterward to become the Chief Justice, he representing the defeated defendants. This case has been for over a century the leading authority on this branch of constitutional law.

Various cases have arisen in comparatively recent years construing State statutes purporting to limit the liberties of aliens, more particularly the Chinese and Japanese. A long series of these laws have from time to time been past, mainly in the Pacific Coast States. Among the statutes of this kind which have been held void as unlawfully interfering with treaty rights have been laws in Oregon forbidding the employment of Chinese labor on public works, and in California prohibiting corporations from employing Chinese

labor. Another California statute, nominally preventing debauched women from landing in the ports of the State, altho apparently general in its terms, was in reality aimed at *all* Chinese women. On that ground it was held void. In the Chinese queue case Justice Field held an ordinance of San Francisco to be invalid which provided that every person imprisoned in a county jail upon a criminal charge should have his hair "clipped to the uniform length of one inch from the scalp." This was held invalid, because it denied equal protection under the laws to the Chinese, and because, as it was aimed at them as a particular class of aliens, it violated the treaty stipulations with China. State laws forbidding aliens to take title in fee to real estate have been repeatedly held invalid as interfering with treaties with foreign nations. In New York the section of her labor law which forbids employment of aliens on public works was held to be void as interfering with the treaty rights of Italians. Numerous other cases have arisen and will continue to rise in which the supremacy of the national treaty making power will be asserted over hostile State laws. Except as to matters relating to purely local affairs properly included under the State police power, expressed in statutes in character and purpose devised in good faith for the protection of the general health and welfare of the community, there is no important limitations upon the treaty making power of the Federal Government and the supremacy of this government over State law in conflict with them.

What may be described therefore as the theoretical supremacy of the Federal Constitution is not open to doubt. What is important today is the power of the Federal Government to deal adequately and promptly with precisely such conditions as have recently threatened our friendly relations with Japan in the proposed legislation in the Western States. Time and again this national Government has been put in embarrassing positions by hostile demonstrations in or by the States against foreigners, which the Federal Government was not in a position to prevent, and for the consequences of which the foreign governments have looked to the nation for redress.

At least three times the United States

has been threatened with international difficulties thru the interference by the States with the treaty rights of foreign subjects. In 1837 arose the so-called "Caroline" affair. A steamboat of this name was engaged in transporting recruits to a rendezvous in Niagara River for cooperation with some Canadian insurgents. An expedition was sent out from Canada against these insurgents which attacked this boat on the American shore, killing some of the crew and letting the boat itself go over the Niagara Falls. An international controversy arose between the United States and Great Britain over this affair, our government claiming that American territory had been invaded. While diplomatic adjustment between the nations was under way one McLeod, who had been in the Canadian expedition against the "Caroline" was arrested in New York and put on trial in the State courts for murder in having caused the death of one of the crew of this boat. McLeod obtained a writ of habeas corpus stating that he was engaged in a governmental act for the British crown and that the matter was not one within the jurisdiction of the Courts of New York. The writ was dismissed by the State Court and McLeod sent back for trial. Great Britain immediately presented the matter to the State Department at Washington and the note of the British minister contained some expressions which are worth repetition.

"Neither can Her Majesty's Government admit for a moment the validity of the doctrine advanced by Mr. Forsyth (Secretary of State) that the Federal Government of the United States has no power to interfere in the matter in question, and that the decision thereof must rest solely and entirely with the State of New York. With the particulars of the internal compact which may exist between the several States that compose the Union, foreign powers have nothing to do. . . . Therefore when a foreign power has redress to demand for a wrong done to it by any State of the Union, it is to the Federal Government, and not to the separate State, that such Power must look for redress for that wrong. And such foreign Power cannot admit the plea that the separate State is an independent body over which the Federal Government has no power."

He closes his letter by the significant statement:

"Her Majesty's Government entreats the President of the United States to take into his most deliberate consideration the serious nature of the consequences which must ensue from a rejection of this demand."

Mr. Webster in his reply could find nothing to say, except in substance that the Courts of New York were courts of high character and whatever McLeod's rights were, they would no doubt be sufficiently protected there. Fortunately for the international complication McLeod was acquitted, but the spectacle is scarcely edifying of the Federal Government awaiting anxiously the outcome of a trial by a court in which the Federal law officers had no standing, of a case which might involve the national in a foreign war.'

In 1851 came a further complication between the State and Federal authorities involving possible international trouble. A New Orleans mob, having heard of the execution of fifty young Americans in Havana who had taken part in the ill-starred Lopez expedition against Cuba, made an attack upon the Spanish Consulate and upon Spanish coffee houses and cigar shops. The Government of the United States was obliged to pay indemnity to the Spanish Consul, but declined to pay for the losses of Spanish subjects, claiming that these aliens had no greater right than the citizens of Louisiana, the State in which this affair occurred, and disclaiming for the Federal Government any responsibility. The Federal Government ultimately paid, however, indemnity to these subjects of Spain for the losses sustained by this New Orleans mob.

In 1891, forty years later and again in New Orleans, occurred the so-called Mafia riots. Italians who had been accused of complicity in Mafia outrages were taken by the mob and hanged. The Italian Government promptly demanded indemnity for the families of the men who had been killed. Friendly feeling between the two countries became so strained that diplomatic relations were practically suspended. Louisiana herself did nothing to punish those who took part in the lynching of these Italians, and in a suit brought in the United States Circuit Court by the heirs of one of the Italians against the city of New Orleans, a recovery of \$5,000 was reversed on the

ground that the city was not liable, there being no *State statute* which afforded a remedy. The treaty which then subsisted between this country and Italy professed to "guarantee to citizens of either nation in the territory of the other the most constant protection for the security of their persons and property." The best that Mr. Blaine could say to the Italian Government was:

"If it shall be found, as seems probable, that criminal proceedings can only be taken in the courts of Louisiana, the President can, in this direction, do no more than to urge upon the State officers the duty of promptly bringing the offenders to trial."

The attitude of the Italian Government toward this decision of the State Department is made clear by instructions of the Italian State Department to the Italian ambassador:

"We are under the sad necessity of concluding that what to every other government would be the accomplishment of simple duty is impossible to the Federal Government. It is time to break off the bootless controversy. We have affirmed and we again affirm our right. Let the Federal Government reflect upon its side if it is expedient to leave to the mercy of each State of the Union, irresponsible to foreign countries, the efficiency of treaties pledging its faith and honor to entire nations."

Again the local lawlessness was paid for by the nation, and 125,000 francs given to Italy to make good to Italian subjects damages sustained at the hands of a mob whose outrages the nation had been unable by law either to prevent or redress.

To foreign observers nothing could appear more extraordinary than the recent spectacle of the President of the United States anxiously appealing to the Legislature of a State to respect the national faith pledged to Japan, and conducting to all intents and purposes a Federal lobby against proposed State legislation which threatened to destroy the harmonious relations of the nation with a foreign country. The campaign which President Roosevelt was obliged to conduct in California should be made unnecessary.

When President Taft says:

"By proper legislation we may and ought to place in the hands of the Federal Executive the means of enforcing the treaty rights of aliens in the courts of the Federal Government,"

he is supported in his views by leading constitutional jurists who have time and

... treaty of the United States.

again asserted the propriety and constitutionality of such legislation.

Professor Pomeroy, in his "Introduction to the Constitutional Law of the United States," in discussing the scope and extent of the executive function of the President in regulating foreign relations; says:

"There is here, as I believe, a mine of power which has been almost unworked, a mine rich in beneficent and most efficacious results. The President may and must manage the foreign relations; he may in the manner prescribed enter into treaties. . . . Where the act is legislative in its nature, the Congress may legislate; where the act is executive in its nature, the President may execute. *But Congress may in aid of this function of the President, pass laws which are addressed directly to the separate States, and which control the acts of their governments. The States have no international status; but they may thru their governments, do such acts as endanger the foreign relations of the nation; for these acts the Government is responsible to the foreign Power, and cannot evade the responsibility by asserting its want of control over the State. As the responsibility rests upon it, the power must belong to it.*"

It is this unworked "mine of power" to which Professor Pomeroy refers that President Taft seeks to have developed by the nation. It will not do to say in an argument against the development of that power that it may be unwisely used. It will not suffice to say that ill considered treaties negotiated by the President and adopted by and with the consent of the Senate may imperil the white man's supremacy in the West and jeopardize the life standard of American labor. It will not do to say in an argument against the existence of this power that its unwise exercise may give the scum of Europe in the industrial centers of the East a political standing dangerous to the economic and civic welfare of the manufacturing States by putting the ballot in hands incapable of using it. Such arguments which are not infrequently made are properly addressed as arguments not against the logical and necessary extension of the treaty enforcing power, but against unwise treaties and bad naturalization laws. The treaty making power is a great but necessarily national power. It may no doubt like other great powers be unwisely exercised. But as Judge Gray says in writing the opinion of the Supreme Court in *Fong Yue Ting* against the United States:

other nations recognize or treat with is the Government of the Union, and the only American flag known thruout the world is the flag of the United States."

The flag of the United States must be respected not only abroad but at home, not only by foreign nations, but by the several States. In our relation with foreign governments congressional action is necessary to produce this desired result. As Mr. Charles Henry Butler in his learned and valuable work on "The Treaty Making Power of the United States" has well said:

"The question of responsibility on the part of the Federal Government for violations of treaties by the action or neglect of the States is not only a very serious one but one which sooner or later will give rise to controversy between this Government and foreign Powers, which will eventually be the subject of international arbitration. So long as the States are prohibited from negotiating with foreign Powers, those Powers will naturally insist that the United States shall itself assume all obligations which may arise from treaty violations, as it is the only power that can deal directly or indirectly with the foreign Powers whose interests are affected; while, however, it is a matter of complete indifference to any foreign Power having a grievance against the United States, whether the National Government has or has not the internal power of enforcing compliance with the treaty stipulation by the separate States, or of compelling those States to reimburse it for loss resulting from such violation, it is a matter of great importance to the United States individually and collectively that our foreign relations and the settlement of all disputes arising under treaties, no matter what may be the occasion thereof, should be entirely controlled by the National Government, in order that no single State may involve the entire country in international complications."

The propriety and necessity of legislation such as the President proposes in his Inaugural cannot fairly be questioned. It involves no recurring phrase of the States rights doctrine. The bogies of centralization of power or executive despotism cannot fairly or with a show of reason be raised against making actual and complete an authority granted to the nation in express terms in the Federal Constitution. The duty of keeping faith with foreign powers is not a local matter for States or cities to observe or disregard. The peace of the whole country, its harmonious relations with the nations of the world demand that the national power to keep treaties shall be as efficacious and as certain as the power to make them.

NEW YORK CITY.

"The only government of this country which

MUSIC ART AND DRAMA

Operatic Achievements

Oscar Hammerstein has gone to Europe to engage more singers for his next season, which is to be much busier even than the very busy past season. His biggest success has been Richard Strauss's "Salome," which was sung ten times. No wonder that he is trying to induce Strauss to come over next season for a time to conduct both "Salome" and his new opera, "Elektra," which is to be produced in the opening week. He needs a new conductor, and a great one at that. Strauss, should he come, would not be likely to direct anything but his own operas. There have been rumors regarding Messenger, the popular operetta composer, at present one of the directors of the Grand Opera in Paris; and he seems to be willing to come if he can get leave. The Paris Opéra is not paying expenses, and he would be glad to escape. He is rated high among conductors, and Hammerstein might do worse than get him as his first aid.

The departure of Campanini, tho deplorable, was inevitable. In some respects he was a man of the Seidl type—a hard worker, ready to toil ten or twelve hours a day, and enthusiastically devoted to his tasks. But he was inclined to overwork the artists, and he wanted to be absolute boss—to dictate the repertory as well as the singers. Hammerstein would not stand this, all the less because Campanini favored the Italian operas and singers, and the public had shown an unmistakable preference for the French half of the show. So the two men parted. With Messenger, the French would be likely to preponderate still more next season.

FOUR YEARS AGO CAMPAVINI "SAVONNE" (which was sung in French), the most popular operas at the Manhattan proved to be three French operas, "Thais," "The Tales of Hoffmann," and "The Juggler of

Notre Dame," and the Italian "Lucia"; each of which was sung seven times. "Lucia" is the opera in which the public loves Tetrizzini most. She also helped "Traviata" to five performances; but it is noteworthy that even she, the most popular of colorature singers, could not rescue the Bellini operas. "I Puritana" was sung only twice, and "Sonnambula" three times. This fickleness of the public made the fickle Hammerstein lose his faith in Italian opera and pin it on the Parisian products.

Mary Garden has more than held her own, and the baritone, Renaud, has become as great a favorite as if he were a tenor—an unusual thing. "Thais" and "The Juggler" owe quite as much of their popularity to him as to Mary Garden—if not more, and he is the soul of the "Tales of Hoffmann." For his sake "Don Giovanni" will be revived the first week of next season, and he will also be heard as Iago and in one or two Wagner operas. Miss Labia will be the Elektra in the Strauss opera instead of Miss Garden, who doubtless thinks that one Strauss opera is enough of a strain for one season. There is a story that at a rehearsal of this opera Strauss stopped his 125 musicians and told them to play louder, because at one place he "distinctly heard the voices on the stage." A wag, no doubt, invented this anecdote; but it hits the nail on the head.

At the Metropolitan

There was almost as much politics as music at the Metropolitan Opera House during the past season. The fact that the "administrative manager," Andreas Dippel, got considerably more praise in the newspapers for his share in improving the performances than the "general manager," Giulio Gatti-Casazza, got, aroused ill feeling in some quarters, and

attempts were made to get rid of the too-popular Dippel. But this was found to be impossible; it would have been like discharging a man for doing his work too well, and would have made the directors a butt of ridicule. So peace was patched up and Dippel remains. Next season, however, he will have control of some of the French operas, especially at the New Theater, while his partner will superintend some of the Wagner operas, notably "Lohengrin," which is to have a brilliant revival.

It is owing to Mr. Dippel's rare managerial ability that the Wagner operas have again become as profitable as they used to be. For a year or two it looked as if he would have to play second fiddle to Puccini, but now he is at the head again. He had thirty-four performances, while Puccini had twenty-six, and Verdi twenty-four. This achievement is the more remarkable because it cannot be denied that the casts in some cases were inferior to those of some preceding seasons. What made up for this was the improvements in orchestra, chorus, ensemble and stage management.

Apart from the Wagner operas, Dippel won a big success with the Bohemian opera, "The Bartered Bride"; but D'Albert's "Tiefland" did not do well enough to ensure a place for itself in next year's repertory. Mr. Gatti-Casazza's successes were due chiefly to the admirable work of the conductor he brought with him from Milan, Mr. Toscanini; under him "Aïda," "Madama Butterfly" and "Falstaff" were given in a magnificent manner.

There were 143 performances at the Metropolitan and 116 at the Manhattan, making a total of 259. That seems a goodly number for one town, yet it will be far exceeded next season; but it is not likely that we shall hear again two of the novelties brought over by Mr. Gatti-Casazza; namely, "Le Villi" and "La Wally." One of the Wagner operas, "Götterdämmerung," was brought out under the direction of Mr. Toscanini, who proved that he can enter into the spirit of the greatest German master as thoroly as into that of Verdi or Puccini. The other Wagner operas, excepting "Tristan," were under Mr. Hertz, whose popularity is ever growing. Mr. Mahler distinguished himself by the admirable man-

ner in which he conducted "The Bartered Bride," "Fidelio," "Tristan," and, particularly also, Mozart's "Figaro," with Geraldine Farrar, Sembrich and Eames. Miss Farrar fortunately remains, but Mmes. Sembrich and Eames have left us, and we shall never hear another "Figaro" equal to that of this season. Mme. Nordica fortunately has been re-engaged for the Wagner operas, and it is likely that Mme. Calvé also will be heard again. The Metropolitan needs big names.

Apart from the departure of Sembrich and Eames, the most regrettable incident of the Metropolitan season was the disablement, during its last month, of Caruso. When a man can earn \$55,000 in one year by singing into a talking machine, and about \$150,000 more by singing on the stage, the temptation to overdo must be enormous. Caruso succumbed to it, and it is not likely that he will appear in public again before next autumn. Those best informed do not fear any permanent impairment. He is simply being punished for indiscretion, as was Jenny Lind when Manuel Garcia told her: "It would be useless to teach you, miss; you have no voice left." But he did teach her, and her voice came back, more beautiful than ever. Let us hope the same of Enrico Caruso.

Should he fail to return, it is not at all likely that the Italian performances would continue to predominate, as they did during the past season, when there were 73 of Italian works, as against 45 of German and 19 of French. Of the nine novelties promised, only four were given. This is an old story, and, compared with the past, keeping a managerial promise nearly one-half is a good deal; but in this case even more would have been done had it not been for the many extra performances in Philadelphia, Baltimore and Washington during the New York season, which made rehearsing impossible.

Mahler, Nordica and Wullner

It is because of the growing difficulty of securing a sufficient number of rehearsals that Mr. Mahler hesitates to remain one of the conductors at the Metropolitan. He is now at the head of the reorganized Philharmonic Orchestra, and as such he can have all the rehearsals he

wants, the expenses being paid by a group of wealthy music lovers. To give the Philharmonic subscribers a foretaste of what is to come next season, two extra concerts were given at which Mr. Mahler conducted, among other things, Beethoven's seventh and ninth symphonies, with a spirit that made them seem practically new. He will conduct at least forty Philharmonic concerts next winter and spring, the usual eight pairs of subscription concerts, and, besides these, Beethoven and historic cycles, and a Sunday afternoon series. For the first time in its long history the Philharmonic will also be heard in other cities, like Mr. Walter Damrosch's New York Symphony Orchestra, concerning the future plans of which no definite statement has yet been made.

One of the most notable of recent concerts was a song recital given in Carnegie Hall by Mme. Nordica, who demonstrated that her voice is still in its prime. It was owing to the enthusiasm aroused on this occasion that the two managers of the Metropolitan promptly called on her and engaged her for the next opera season. Her voice is as luscious as ever, and she is one of the few artists who can apply the true *bel canto* to the singing of Wagner. She is also one of the few vocalists who, in the delivery of a song at a concert, make the audience cognizant of the mood of the poem to which the music is set.

In this respect the great American prima donna reminds one of Wüllner—if somewhat less eloquent in her delivery, she has the advantage over him of a much more agreeable voice. As for Dr. Wüllner, his coming to America will mark an

epoch in our musical annals. He came over to appear in perhaps a dozen concerts, and remained to give eighty. He showed that German songs on the concert stage can be sung so as to arouse as much enthusiasm as Italian arias in the opera house sung by a Caruso. Considering the poor quality of his voice, his achievement is, indeed, simply miraculous.

It has often been pointed out—Mme. Sembrich spoke of it just before she left America—that an opera singer today, if she would succeed, must be an actress as

well as a vocalist. Geraldine Farrar owes her brilliant success quite as much to her acting as to her singing, and Mary Garden owes hers almost entirely to her dramatic instincts. (One can understand this in the case of the operatic stage, but on the concert stage it remained for Dr. Wüllner to show what an extraordinary advantage it is for the singer to be also an actor. Not that he makes obtrusive gestures; these would be out of place; but he enters into the spirit of the poems in a way possible

only to one who, like himself, was once an actor. The lesson should not be lost on the thousands of young Americans who wish to earn fame and fortune on the concert stage.

Emil Carlsen at Bauer-Folsome's

We spoke last month of a fine picture by this artist at the Academy exhibition called "Surf." Mr. Carlsen has been holding an exhibition of pictures for three weeks at the above mentioned gallery, and we believe has established there with a lasting reputation among those

EMIL CARLSEN

who frequent such displays. The sixteen pictures include seascapes pure and simple, pictures from Venice, "A Woodland Scene," "Fishing Boats Going to Sea," and a "still life" called "Study of a Carved Panel." It is in the large pictures of the sea that Mr. Carlsen lives up to his Danish blood, in the presentation of what may be called his own seas. His nature seems to be hardly sensuous enough to convince us when he treats of Venice, especially with Turner in our minds, and, altho his studies in any direction must always be interesting to the student on account of their quality, we shall come back to his vast seas and skies if we wish to be at home with the man in the fullness of his power. "Moonlight on Kattegat" is a sublime and entrancing picture; some lucky person has purchased it. Two of the other pictures were also sold.

Other Galleries

The exhibition of "Ten American Painters" at the Montross Gallery was not as generally interesting as their last year's effort; in fact, it might be described as dull and lacking inspiration. Every one knows the "Ten" can paint.

Mr. Louis Loeb has a retrospective exhibit at the Macbeth Gallery, and the prospect is a little agitating. Has Mr. Loeb aimed beyond the strength of his right arm? How often has he made more than an "outer" below the bull's-eye? Has he always been sincere? And was he the right person to paint such a poet as Israel Zangwill? These are questions that trouble us when we look down the vista of Mr. Loeb's artistic endeavor. One more query, Are these "retrospects" to become epidemic? Marathons are in the air just now, but shall we see Waterloos?

Mr. Childe Hassam has also shown recently some studies made in Eastern Oregon; they might be useful to an illustrator.

It may be interesting to mark the artistic events of the year with the idea in our minds of their effect on the art-loving public.

Just before Christmas Mr. H. O. Tanner, the negro painter, came over from Paris with a number of pictures which

by their excellence had won for him the respect and admiration of the picture-loving public in that city. His subjects were drawn from Biblical stories, and were rendered with an intensity of spiritual insight, with regard to the characters of the *dramatis personæ*, we believe, never before seen in the art of the painter. The vision was so clear that it conveyed an instant impression of truth, the technique excellent, and the background studied from the country in which the scenes were laid. A charge of 50 cents was made for admission. The galleries were rarely if ever crowded.

At the Academy exhibition a little later appeared a sculptured group called "The Blind," by Lorado Taft, a psychological study of the greatest interest and beauty, handled with great breadth and masterly in composition. It caused no sensation.

Suddenly, without any great flourish of trumpets, the lights were turned up at the Hispanic Society's Gallery and the works of Sorolla of Batista were offered to the public for inspection free. The brilliant technical merits of the work shown, some 300 canvases great and small, as well as the charm of the man, seen thru his point of view of the human life he chose to paint, entirely suited the spirit of New York. There seemed to be little that the average visitor could not appreciate, so that it became a craze to see Sorolla, and fashion turned out in the evenings to bask in his sunshine and digest its dinner. The note or two of pathos among the pictures was just sufficient to cause people to turn with pleasure to the sport of sea bathing under a brilliant sky, or the almost equal gratification of watching some one else work. The whole show was a great success.

On the other hand, the German exhibition was not so easily understood. The pictures, with few exceptions, did not suggest beauty at first glance, while reflection and digestion revealed a wrestling of the spirit among the best men and an endeavor to express an idea.

The message of the Germans was not received with any great enthusiasm by the average person interested in art.

Concerning the work of Arthur B. Davies, most art lovers are quite decided; they either ridicule or wholly admire

The two camps seem to split upon the drawing of his figures. Those who disapprove do so because they require the academic drawing of the figures to which they are accustomed. The worshipers find something in the individuality of expression. They would not change a single brush stroke made by the artist, because they feel the presence of a master mind at work. Those who are acquainted with the artist know that he can draw as academically correctly as any one.

Davies is a prophet and a revolutionist. His exhibitions will always be an event:

"We are the music makers,
And we are the dreamers of dreams,
Wandering by lone sea-breakers,
And sitting by desolate streams;
World-losers and world-forsakers,
On whom the pale moon gleams:
Yet we are the movers and shakers
Of the world for ever, it seems."

Would such a quotation apply to Bouguereau?

The Grolier Exhibition

The Grolier Exhibition, which began on April 16th and continues until May 8th, is concerned with the work of the late Edwin Davis French, 1851-1906. Following an earlier exhibition of Mr. French's work at the Lenox Library, the present Grolier showing is a much larger and better selected showing. Mr. French is best known from his work as a book plate engraver, but that his talent was not confined to this rather narrow field is made manifest from the many examples of his work in other fields that found a deserved place in the Grolier Club galleries. A most interesting feature of the present exhibition lies in the massing of a number of Mr. French's plates in several states, showing the development of the plate in the artist's hands. Much of the success of the French Exhibition is due to the assistance rendered by Ira H. Bramford, the author of "Edwin Davis French," a memorial, privately printed in 1908. Included in the exhibition are a number of engravings made by Mr. French to the *William de Bary*, issued by William Loring Andrews. Those who are interested in book plates should not miss seeing the present Grolier Exhibition.

A very interesting collection of Chinese paintings belonging to Professor Isaac Taylor Headland, of Peking University, was on view at the galleries of Pratt Institute, from April 6th to April 17th, inclusive. There is a very marked difference between these Chinese paintings and the Japanese work in a similar field with which we have become more or less familiar in recent years. The Headland Collection was particularly strong in landscape and figure work. Some of the pictures were made up of a series of panels each complete in itself and yet forming a fractional part of a large group. One of the numbers was a tiger produced by means of finger marks. The coarser lines were the result of thumb marks and the finer lines were produced thru the agency of the finger nails, the whole forming a most excellent representation of a tiger. Many of the pictures were naturally under the strong influence of Chinese folk lore.

Following the exhibition of the Sorolla paintings, the Hispanic Society showed a collection of paintings by Ignacio Zuloaga and the Members' Spring Exhibition at the National Arts Club, began on April 15th and will continue until May 8th.

The Guild of Book Workers, Third Annual Exhibition and Sale of the work of members began at the Old Tiffany Studios on April 20th, and continued until the 24th. The exhibition included illuminating, printing, binding, type, tools, book covers, and book plates.

At the Anderson Art Galleries painter etchings, engravings and objects of art, including those belonging to the estate of the late Clarence Cook were shown from April 19th to April 27th.

At the Keppel Gallery the exhibition, which began on April 8th and continues until May 4th, included engravings after Watteau, Lancret, Pater, Chardin, Boucher, Van Loo, Fragonard, and other artists of the XVIII Century in France.

The Forest Press, at 51 West Tenth street, has taken over the old Japanese prints, formerly shown by Mr. Bolton Coit Brown, and is continuing the exhibition of a number of color prints by Hiroshige, Toyokuni I, Utamaro, Kunisada, Yeizan, Hokusai, Toyokuni II, etc.

Drama

The dramatic season has been disappointingly commonplace; even in the matter of its revivals there has been nothing traditionally important, unless we measure the rarity of "King John" with the more frequent presentation of "Richelieu." Plays have dropped one by one from public notice, only to be superseded prematurely by the spring and early summer supply of musical comedy, such as De Angelis in "The Beauty Spot" and Hitchcock in "The Mascot." Comedies

a social code. In such a theme there is opportunity for some sharp truths, where the natural woman confounds the social leaders; but unless this is done with a forceful understanding of all that comes under the inclusive term "unrest," it will lack conviction. "The Return of Eve" did not have carrying power of soul, tho it played lightly with the social problem. Had the dramatist been capable of it, an effective play might have been made from a knowledge of society "over the teacups" and Huxley's discussion of "nat-

WILLIAM HAWTRY, IN "AN ENGLISHMAN'S HOME."

intended for fall production have been rushed on to fill gaps, and other plays have forestalled acknowledged successes on the road. The season has had a struggle to keep alive.

Miss Bertha Galland in Lee Wilson Dodd's "The Return of Eve" remained but a short while; the vehicle was difficult, inherent in the very contrast which exists between a state of nature and the limitations of modern society, subject to

ural rights." The opportunity is still open.

Mr. Sothern's essayal of the rôle of Richelieu not only forced comparison with Booth, but in the careful, painstaking reading of his lines clearly indicated his conscientious reproduction of a remembered model. We all know what to expect when Bulwer is given us on the stage—a romance which is out of fashion now; theatrical trickery such as the aside,

the soliloquy, the outburst of poetic passages, and the habit of lingering upon the most cant phrases; then again one is always sure of the stereotyped turbulence of the stream of true love. As Mr. Sothorn hurdled over familiar passages such

MISS DORIS KEANE,
in which Mr. Sothorn tells this story in comedy."

as "the pen is mightier than the sword," or "there is no such word as fail," it was easy to see among the audience the older generation nudging the younger generation to note what had thrilled them in days gone by. It is almost a repudiation

of Ibsen to have Sothorn at one theater and Mantell at another assuming the robes of the cardinal—almost a reversion of types in these modern times. Nevertheless, Bulwer, however over-romantic, created excellent acting parts; no one has successfully competed with him in the portraiture of Richelieu, which from the mechanics of art is rich; hence Macready, Booth and Henry Irving found in the rôle marked satisfaction.

Mr. Sothorn withstood comparison well; we preferred his little side readings and shadings to his "set" speeches; yet there was nothing distinctively his in the rendering; he even adhered to the old-time custom of marking the emotional value of scenes by musical accompaniment. It was as tho he had wilfully stepped back several decades in dramatic history so as to uphold tradition in all its out-of-place methods. Mr. Sothorn is not only ambitious, but he is satisfying on the whole. That he attempts what he does is to his credit, but we hope he will not lose sight of the fact that above all he is a comedian; each year he attempts to widen the breach between himself and his natural talents. If the New Theater contemplates presenting him in a revival of "Coriolanus," they should remember that his abilities are best suited to Villon and Dundreary.

Two plays have come to our notice which we gladly comment upon; it was at first hard for us to take seriously the jingo element permeating Major Guy du Maurier's "An Englishman's Home"—the play which upset the British Isles; but *in toto*, it deserves warm commendation, because of its frank melodrama, its hardly logical crisis, its tragic undercurrent of truth, and its satiric application to English army conditions.

The other play is J. Hartley Manners's adaptation from the German of "The House Next Door," a most excellent comedy, played in almost cameo fashion by Mr. J. E. Dodson. "The House Next Door" is the home of the refined Jew, who is a man and a citizen as well as a racial representative. When the curtain finally drops, it shows Sir John on his way next door to make all well, after stormy scenes in which he has shown himself far less a gentleman than the Jew. At times the playwright is inclined to cartoon just a little, to lay on color over thick. Such.

for example, is the fault of the scene where Sir John, longing for a breath of Christian atmosphere, finds his wife reading Zangwill, his daughter playing Rubinstein, his son engaged by Hammerstein, and the like. But so persistently does "The Children of the Ghetto" come in his path, that in sheer desperation he determines to read the book.

Mr. Dodson plays the rôle excellently; he comes as near Mr. Mansfield in the perfectness of his detail as any contemporary; it is a portraiture which gives us encouragement and which makes us welcome the return to the metropolitan stage of so good an actor. The managers have certainly forestalled Zangwill's "Melting Pot" with a successful piece; its one weak spot is in Sir John's sudden tempering of his "Jew hate."

Mr. Clyde Fitch is a dramatist we have always with us and at present there are two of his plays on the boards. We continually go to see him with a strong desire to alter, or at least to enrich, our last impression of him. He is an American playwright of vast resources, but he may hardly be said to do them full justice. No one has a keener dramatic sense of life than Mr. Fitch,

GRACE GEORGE.

In "A Woman's Way," Hackett Theater.

but his "habit" limits his expression continually. "The Bachelor" is the old story of a man falling in love with his stenographer; it is embedded in little hackneyed detail that detracts from the rôle in which Mr. Charles Cherry "stars"; it is a light treatment of the old saying that bachelors are selfish animals after all; it is full of "bits" that are wasted because of no permanent substance to hold them together.

Such is the underlying weakness of "The Happy Mar-

riage." At a crucial moment, when the wife confesses to her old nurse that she intends to leave her husband, when the nurse decides to go with her mistress, the

faithful old body says: "This is where I pray hard." "Yes," replies Mrs. Thornton, in true Fitchian style, "but pack first." This represents Mr. Fitch's tendency to dodge the issue; his subjects are often larger than his treatment, and by the fragmentary flashes we realize that he sees the sexual, the social tragedies of life, even tho he fritters them away.

"The Happy Marriage" borders on direct preaching also; we have heard before on our stage the plea that lack of sympathy on both sides may be overcome by mutual

BERTHA GALLAND.

In "The Return of Eve."

compromise; Mr. Fitch is not satisfied with the possibility that his situations will convey this truth to the audience; he almost holds up the action while he tosses across the footlights a diatribe against the evil, and a suggestion as to the possible remedy. There are Fitch touches to the dialog, both feminine and local, and Edwin Arden acquits himself adequately; his work is earnest and dignified. But Miss Doris Keane in the rôle of jealous wife was totally miscast; she exhibited no depth of understanding, no maturity of ideas which a five years' married life, Nora to the contrary, would have inculcated. Her efforts were marked by youthful mannerisms which would be well to correct before it is too late. Miss Keane has had opportunities by which she should have profited.

In retrospect, we are met with difficulty in indicating the season's notable features; "What Every Woman Knows" has been distinctive, but not exceptional; it will rank with Barrie's "Professor's Love Story." Notable

has been the absence of Ibsen this year, giving rise to the speculation as to public interest in the Norwegian. A certain amount of coarseness has been exhibited during the season which had better not have been, but, however weak the accomplishment, the activity of the American dramatist particularly has been encouraging. Sheldon's "Salvation Nell," Moffitt's "The Battle," Hurlbert's "The Fighting Hope," Klein's "The Third Degree" have had success; while "The Gentleman from Mississippi" and "The Man from Home" bid fair to run into the summer months. Rural comedy has been ably represented by Mrs. Edith Ellis in her pleasant piece, "Mary Jane's Pa," while "The Devil," let loose over the theatrical circuit, lost his grip. Apart from the repertory work of Miss Marlowe, Mr. Sothern and Mr. Mantell, perhaps the largest individual success may be credited to Mr. William Faversham in "The World and His Wife." The season has just maintained its average level.

On "First and Last Things"

To H. G. Wells

BY JEFFERSON B. FLETCHER

You, a philosopher and famous, choose,
 You put it, to believe that death ends all;
 Save that the Species (with a capital)
 Goes marching on in Brobdingnagian shoes,
 Elate, along skull-paved, broad avenues
 Unto some foreordained Valhalla hall,
 Where girls are "fair and most divinely tall,"
 And god-like boys hold altruistic views:
 And *Alas!*—But let that pass. Suppose, for
 you,
 Famous and a philosopher, to live,
 Once life has given the best life has to give,
 Were irksome; yet for us that never knew
None—my friend—*For* dreams never can come
 true,
 Who failed, or fell,—what cheer? What pal-

We ask, indeed, not any palliative
 For truth; but when you blandly urge the view
 Which leaves us comfortless, and *will* it true,
 And praise it, that we cannot all forgive,—
 We who have somehow missed our chance—to
 live!
 We would not whimper to the winds, or chew
 The lotus of illusion; we, as you,
 Would sift all things, tho hope slip thru the
 sieve:
 And if we are worm-bitten leaves that fall—
 We others—by our rotting to infuse
 Into next season's foliage fairer hues,
 Profuser sap,—so be it: death ends all!
 But shall the cankered, bruised leaf, grateful
 call
 Life good, or that which made it live excuse?
 NEW YORK CITY.

A Call on My Washwoman

BY LOUISE DUNHAM GOLDSBERRY

YES, it's comforble. That is, I should say yes ma'am. Quite comforble.

They's just us two; not countin' my dead babies. I had such a many babies. None of 'em ever lived more'n a year or thereabouts. Soon's one'd go another'd come. Lord, Lord, such a lots of people goes to waste, that-a-way. Takin' all the long journey out o' the darks to get here and sort o' losin' heart at first glimpse and just hurryin' back. It aint reely worth the trouble o' bein' born, is it?

Somehow, I aint never quite buried them babies I had. I never honed for children, nohows. I couldn't understand what on earth the Lord meant to let 'em come. There wan't usually victuals enough for me and my husband, let alown crowdin'. Looked like He sort o' fergot and let 'em come and got scared and snatched 'em back quick. I allus give Him proper praise for rememberin' in time, 'fore they got old enough to go hungry.

But seems like I can't let 'em stay dead. Wherever we lived, and it looks like we're pretty much on the hunt for a place *to* live, usually, *wherever* we live them little dead babies goes too. Soon's the first night comes and I put out the lamp, there's all them little, little babies!

Sometimes it near about crazes me. There wa'nt but one ever lived long enough to learn to talk any, and there they all are, waitin' to be took up and hugged. And I'll hear that one that could talk just blabbin', "*Ma-ma, ma-ma,*" and I'll hear her bits of feet goin' pitty-pat, pitty-pat.

Sometimes I just can't bear it, and I say right out, "For Christ's sake, *can't* you stay in Heaven and leave me be?"

But it ain't a mite o' use. And I just ups and takes 'em all to bed with me and the littlest one has his hand in my bosom, huntin', and my heart's just like a fiddle with them baby fingers pullin' at the strings. Why, don't *you* know, ma'am? Didn't you never have a baby? *Don't*

you know how your heart takes to swellin' and breakin' when a dead baby's hand is in your bosom and a dead baby's mouth's huntin' your breast?

You didn't? You aint never had a baby? Lord, Lord, what mistakes this life *do* make! Here you might have had all o' mine, almost, and raised 'em nice and decent, like *folks*; and I got 'em *all* and you never got *none*. Lord, Lord, such a pity to waste good human bein's that fashion.

I expect you aint never been poor, too: reel poor. Like this, say. It's right high up, but it's better'n a basement in a little Jew faced alley. "*Jew faced?*" Don't you understand? Where the houses sort o' bolsters each other up and they's a big factory one side and the smokestack dribbles sut and smoke and the big suttly factory sort o' scowls down on them houses. I *allus* called it "*Jew faced*"; dark and bushy eyebrows, scowlin'.

This, now, 'way up heres, why, it's *splendid*! I don't mind them stairs, for when I'm through climbin', why, here I *am*. No smoke's up here, suttin' *everything* and the top o' that tree certainly is a lovesome sight. 'Long 'bout five o' mornin's, comes a swarm o' crows flyin' cat-a-corner, southwest. I expect they's a *million*; and evenin', 'long 'bout half-after-five, they come back, flyin' north east. I wished I knew *where* they come from and where they go *to*. Last night the sunset was fierce. It had cleared from snowin' and the sky was yellower'n an orange, over yonders, and them crows come tailin' acrost. Just a drift o' flyin' live black things. It was fierce.

'N I've got a nice room. Don't you admire that wall paper? I allus just honed for a wall paper with red and blue and green roses and birds flyin' in and out amongst 'em. It looks reel expensive, don't it? I don't expect there's handsomer paper on the Guv'nor's bedroom, do you?

Lord, Lord, how nice I could raised them little dead babies, now.

Down in that yard, that one, there's

pigeons. Eighteen. "*Look at me, Look at me,*" they keep sayin', and I keep company with them pigeons a good deal. The boy they belong to aint as handsome as *my* boy'd 'a' been, but sometimes I pretend he *is* my boy. He don't know it and it aint hurtin' his mother a mite for me to help own him. And them little girls down there, too. They can't hold a candle to what *my* little girls'd 'a' been, but I just pretend that, too.

Yes, ma'am, I'll do your wash the best as ever! It's been a reel society call we've been enjoyin' together, aint it? I've got that beautiful roof out there to hang 'em out on, and the winds up here is clean and sweet-mouthed and blows all the smell o' suds out.

Yes, ma'am, Wednesday evenin' sure.

Lord, Lord, I allus *did* love good society!

WASHINGTON, D. C.

Postal Savings Banks

BY WILLIAM H. KERN

[The author of this article is Secretary of the Dollar Savings Bank in this city, and this article presents the strongest objections to the proposed reform.—EDITOR.]

POSTMASTER - GENERAL MEYER, in THE INDEPENDENT and elsewhere, has fairly stated the views of those in favor of postal savings banks. Savings bank officials agree with him that savings banks will not be affected by the present plan, but believe it will be too expensive to be practical, not so necessary as made to appear, and violates fundamental principles of American government. Many experts on savings proposals and currency schemes have carefully considered the question and declared that no postal savings project suitable for this country has yet been found. The late convention of the American Bankers' Association decidedly condemned the postal savings plan. European countries conducting postal savings banks have large national debts and always expect to have them. Our country is extinguishing its debt. Their postal savings can be invested in government bonds at a comparatively fair return and be permanently so invested; ours cannot. The schemes so far devised for this country either fail to offer attractive rate of interest, without which the postal savings bank will not have large accounts and be self-supporting, or offer such an amazing field for political power and its probable attending corruption as to appal one at the start, or propose directly or indirectly to pay current rates of inter-

est by taxing the people at large. I would briefly show, as they occur to me, a few prominent objections to the plan outlined by the Postmaster-General.

First, the expense. The Postmaster-General believes that one-quarter of one per cent. will cover the cost. The expenses of large and representative savings banks in New York City vary from one-fifth to one-third of one per cent., and they are considered models of economy in management. The postal bank system requires more clerical work than such banks. The local postmaster, in addition to waiting on the depositor, will, for his own protection and for the identification of a lost deposit, have practically as much record work to do per deposit as a savings bank. The deposit will then be forwarded to headquarters, where it is to be checked up and posted and the funds distributed, this practically making as much work again as that of the bank. Besides this, the local postmaster must remit the deposit to headquarters, and the headquarters must acknowledge the deposit by letter to the depositor.

The savings banks mentioned receive deposits up to \$3,000, and have average accounts of over \$500 upon which to base the percentage of expense. The postal bank system limits itself to accounts of \$1,000, and expects to handle the small deposits, and expects its deposits will be withdrawn and placed in savings banks

as soon as they reach any respectable size, presumably when they amount to \$50 or \$100. The savings banks have but little cost on the large and rather inactive old accounts, but find that the opening and handling of new accounts and small accounts is done at a loss. While exact figures are not easily obtainable, it is safe to say that if the savings banks had the same kind of accounts as the postal bank expects, their percentage of expense would be from one to one and one-half per cent. Putting these facts together, and assuming that the clerks and local postmasters expect to be paid for services rendered, the ratio of expense in the postal system would be from two to two and one-half per cent. on deposits instead of one-fourth of one per cent., and in addition, the post office department proper expects to carry the expense of the care and remitting of the money and the letter of acknowledgment. The criticism of the English Postal Savings Bank system is that its expenses have been covered up under the expenses of the post office proper, and further, it is apparent, from the figures shown by the Postmaster-General and from conversation with Englishmen, that their postal system is very slightly used for large and profitable accounts, but mainly for pocket money, and as a training school for children.

Second, whether necessary. There are many savings banks thruout the United States not enumerated in the Postmaster's argument. They are capitalized savings banks rather than mutual, but none the less trustworthy and they cover the same ground. Also many commercial banks accept savings deposits, and there are but few commercial banks in the country towns that do not offer accommodations to the savings depositor under one form or another, so that the total absence of banking facilities is limited after all to very small country places. But, under the present system of registration of letters, the average depositor can better afford to pay the charges and send his deposits to an established savings bank and receive three and one-half or four per cent. per annum, than to deposit under the proposed postal system and receive two per cent. Savings banks statistics show that on an average a de-

positor deals with the bank not over ten times a year. Consequently, average accounts of \$125 or over would be better off if entirely transacted with a savings bank. Such transactions by mail are as quickly done as they could be under the postal plan, and are simpler in some ways.

Third, delay of mails. The savings banks furnish large banking rooms and have clerks able to speak different languages. Local postmasters, on the other hand, will be obliged to get along the best they can with foreign-speaking people congregating in a small post office, and probably be required to wait on them at the same time the mail is being received or delivered. Will the depositor be required or willing to await a convenient hour for the postmaster? If not, any one having experience with country post offices around the times of departure and arrival of the mail has only to think for a minute to realize whether it would be well to have the mail delayed while the postmaster is trying to wait on some illiterate persons with all the slowness and intricacies of opening a new account or making a deposit.

Fourth, general principles. The plan of the Postmaster-General and of those favoring a postal savings bank brings in a principle totally contrary to American policy. Our citizens deal with commercial banks, savings banks, insurance, railroad, mining and manufacturing companies—corporations of their own establishing. If the savings bank is not safe for the man with a dollar, national banks are not safe for the man with a thousand. If it is necessary for the Government to establish postal savings banks, it becomes also its duty to establish commercial banks, write insurance, furnish transportation, etc., etc. It is the American principle of independent firms and corporations, versus the new principle of paternal government.

Deposits with the postal savings bank cannot for governmental reasons be attached, and the bill so provides. Persons with a desire to escape paying their debts need only to deposit in the post office. This would be another vital change in American law, altho possibly it would be agreeable to some. Also the postal system provides that should a national bank

fail, the postal funds on deposit will be a preferred claim. Is not this principle wrong? It amounts to class legislation, and would make the ordinary depositor in the national bank less secure. If the end sought is to accommodate the public with better banking facilities, such end could be better reached by removing the restrictions, which now prohibit national and commercial banks from dealing with the small depositor, otherwise called the savings depositor, and by devising further improvement in the system and price of registered mail. Again, the deposits in savings banks mainly find investment in first mortgages. The surplus money of the country national bank is redeposited in city banks, and their surplus money is largely put out in call loans. In this last analysis, therefore, money deposited in savings banks mainly aids people in home building, while money deposited in the postal savings bank will, under the plan proposed, be somewhat, if not largely, used for stock speculations.

The postal savings system in this country as at present planned, would not affect savings banks, but it is one of those projects, which, if once adopted, cannot easily be laid aside. Conversation with local postmasters enables me to say that they already understand that if the postal savings plan is adopted, their re-

muneration—which is practically based on the number of stamps sold—will not be increased for the present, but they expect a large addition to their work, and that later they will be fully cared for under a new schedule. This can only have one meaning; that if the project be adopted, the public is to be hoodwinked for the first year or two as to the real cost of the new law. Sooner or later it would also become a party question about raising the rate of interest to three and one-half or four per cent., the same as usually paid by savings banks, and taxing the nation at large directly or indirectly for the deficit. If this should be done, of course, the majority of the savings banks would be eliminated.

The actions of a part of our foreign population during last year's panic furnishes the Postmaster General with some good ammunition, but such powder fails to explode under the prosperous conditions prevailing in this country ninety-two per cent. of the time. It may not be expressing it too sharply to say that we do not want to upset our American institutions to accommodate the few foreigners uneducated in our ways, or too distrustful to do business with us, nor do we want to see laws enacted under a plausible name, that whatever else they do, surely increase largely our load of political bondage.

NEW YORK CITY.

A Tip to Poets

BY AMOS R. WELLS

Tho Shakespeare and calm Wordsworth loved it well
Avoid the sonnet, follower of the muse!
Tho Milton 'joyed its supple grace to use,
And Petrarch formed it in a golden bell.

If coon-song or a limerick—'tis well;
Nor ballads will the editor refuse;
But classic fair refinements he escheweth.
Avoid the sonnet, for it will not sell!

Forget its orderèd passion, and forget
The stately, measured cadence of the lyre.
Assume the cap and bells, and learn to fret
Some banjo's crudely titillating wire.
What's art, what's beauty, when a man's in debt?
Fie! here's another sonnet for the fire!

VERMONT, MASS.

Work and Welfare on the Canal

BY W. J. GHENT

[This is the second article in our series on the Panama Canal. The changes since the first visit of our representatives three years ago, were described last week by Mr. Garrison Richardson. Other articles will follow.—EDITOR.]

TO see the Canal for the first time is to be struck with a sense of the magnitude of the undertaking. The three-score steam shovels, scattered along four and a half miles of the Culebra Cut, heaving and panting as they scoop out the sides of the hills and toss the dirt and rock upon the waiting flat-cars; the great dams that are being laid and the huge hill that is being built up at Gatun; the shallow channels that are being dredged, the rock ledges that are being blasted out, the thousand activities along a line forty-seven miles in length, make an unforgettable impression of immensity and vastness. You wonder first how such a task was ever attempted. As a vision of the completed project comes to you, you feel a momentary shade of disappointment that so much is yet to be done. And then you reflect upon the greatness of the work and upon the difficulties encountered; and you observe more closely the steady advancement of the labor. You are satisfied with the achievement so far attained, and are proud of the force that has so courageously attempted the task. You leave it all with a sense that the work is being hurried forward at the utmost possible speed, and that the Canal will be finished in schedule time.

For it is a great work—this cutting of a continent and the making of a channel navigable for the largest ships. Hills must be torn down, and others built up; shallows must be dredged, gigantic masonry must be laid, a large lake must be formed, a railroad line relocated thru virgin jungle, and the aspect of the whole Zone utterly changed. All the most modern appliances have been brought to the task, and an army of workmen and officials, white American and European and black West Indian, with scattering additions from almost all nations and races, have been set to work. There are 31,815 of these employees, ac-

cording to the latest report—25,192 on the Canal proper, 5,874 on the railroad, and 749 in the Commissary Department. Day after day, in fierce sunshine and in tropical rain, they keep, or are kept, to their work, and every day records a net gain in the completion of the Canal.

The labor force is the most heterogeneous one ever gathered together since the unfortunate attempt to construct the tower of Babel. Of the 31,815 employees, 24,296, according to the last census, are accounted for as living in the Zone proper. Of these, 5,625 are Barbadian negroes, 4,655 Americans, 3,800 Spaniards, 3,535 Jamaican negroes, and 1,676 negroes from Martinique. Italy furnishes a contingent of 762, Greece of 316, and Great Britain and Canada, 241. The remotest quarters of the globe are represented in some degree. Virtually all the places of direction and skill are held by the Americans and Britons. The common labor is West Indian, Spanish, Italian and Greek, with a small sprinkling of Portuguese. The Isthmian native disdains common labor. There are 535 natives employed, but they work usually at light jobs, which do not call for over-exertion, physical or mental.

The West Indian labor is admittedly poor and undependable. It is slow to move, weak in force, and difficult to teach. It is, moreover, hard to hold at steady employment. But the opinion is general that it has considerably improved under discipline. It is poorly paid, averaging somewhere between ten and thirteen cents an hour, American money, tho a few of the better workers receive sixteen cents an hour. But tho this wage is low, it is more than this sort of labor ever before received. The white European labor is far more efficient than the black labor. The Spaniards probably lead the list, with the Italians second. Twenty cents an hour is the standard rate for

this class, tho there are exceptional rates of twenty-five cents, and even more, for especial skill and responsibility.

American and British white labor is all skilled or trained. Wages may be said to average roughly from 40 to 80 per cent. more than in the United States. Mechanics proper are generally employed at an hourly rate; foremen, dredge-men,

engaged in the United States and working at monthly rates get a yearly vacation of six weeks with pay. The "hourly" men object strenuously to the discrimination against them in this particular, and insist upon yearly vacations with pay. In a succeeding article, in which labor conditions will be considered in greater detail, this matter will be further treated.

CONSTRUCTION GANG AT GATUN.

The American foreman is always in evidence directing the work of the West Indian negroes.

steam-shovel men, clerks, accountants, draftsmen, engineers, conductors and others, at a monthly rate. Overtime at price and a half is paid "hourly" employees on the basis of an eight-hour day. Office men work from seven to nine hours, or longer, and do not get pay for overtime. Certain "monthly" men, such as dredge-men, steam-shovel men, foremen, engineers and conductors, get an extension of vacation for their overtime. But their work-day is figured on the basis of nine hours, in spite of the pretense of the Commission that eight hours is the standard work-day. All skilled employees

The general attitude of American labor on the Zone is one of satisfaction with its treatment. There are plenty of petty abuses and injustices, which will be considered later. It is sufficient to say for the present that the men believe the Commission means to treat them decently and fairly. An army régime must necessarily fail in many respects in interpreting the viewpoint of workingmen; and besides, there are numbers of foremen and superintendents, who, drest in a little brief authority, abuse their powers to the discomfort and wrong of the men under them. There is also, in spite of the de-

nials of the Commission, an exasperating system of "gum-shoeing" or spying on the men. But considering the situation as a whole, these are regarded as incidental and minor matters, or as remediable in time, and the skilled labor force, with certain exceptions, appears to be a fairly contented army.

There are several trade unions. The machinists, locomotive engineers, blacksmiths and helpers, boiler-makers and iron ship-builders and helpers, steam, hot-water and power-pipe fitters and helpers and the dredge-men and excavators have local organizations. The telegraphers began an organization

some time ago, but it was allowed to die out. None of the workers need an organization so badly as they; for they are overworked, are subjected to a great many exactions, and so far have been unable to obtain any redress of grievances. The unions have no direct dealings with their employers. The Canal Commission insists that it is running an open shop, and declines to recognize the unions formally. Mr. Bishop, however, in his function of Complaint Commissioner, has had the good sense to receive committees representing the men, if not the unions. A more formal recognition is not demanded, and ne-

The steam shovel is like a trained elephant in the way it picks up its load and deposits it on the flat.

gotiations are carried on amicably—tho not always with results satisfactory to the men.

There are a number of Socialists on the Zone, but there is no Socialist reading club or local. There was a reading club at Colon a couple of years ago, but with the return of its organizer to the United States it was allowed to die. There is no indication that the Commission would oppose such an organization or discriminate against its members.

Most of the men complain of the lack of means of recreation. The Commission has four excellent clubhouses, operated under the management of the Y. M. C. A., for the benefit of the men. The usual indoor games are played there. There is also a good deal of baseball up and down the line, and there are frequent social gatherings and dances. To a person reared in a Northern village the means of recreation would seem to be ample. But most of the American work-

ers are city men, and one who has known the varieties of enjoyment accessible in New York or Chicago finds life on the Zone inexpressibly dull.

No doubt, most of the men would rather be home—back in "God's country," as they say. There are some who will tell you that they would rather live on the Zone than anywhere else; that they have become acclimated and that they never want again to see a Northern winter. But these are the exceptions, and a certain pathetic note of exile from all that is dear comes out in the speech of the overwhelming number of men you meet. They are down there because conditions are bad at home, or because they wanted for a time a change of scene, or because connection with so great an enterprise appealed to their imagination or their pride. But they dream wistfully of a return to their homes; they work doggedly, even enthusiastically at times, and save money against the day a few

A STREET OF PANAMA IN 1907

THE COMMISSIONERS, WHO HAVE BEEN HERE SINCE 1904, AND SHOWS THE AMERICANS INSTALLING A DRAINAGE SYSTEM AND PAVING THE STREETS.

It is against these stores that the Panamanian merchants protest, as they underbid the high local prices.

months or a few years hence—when they may find themselves back in “the States,” with enough savings to make themselves secure.

The health of the employees is good. The sick rate and the death rate are being gradually lowered. The February death rate among employees was 43 per thousand in 1906, 25.62 in 1907, 12.72 in 1908, and 10.98 in 1909. There were forty-two deaths of white Americans during the calendar year 1908. Half of these were due to violence of some form. The death rate from disease in this class was thus 3.84 about the same rate as that for the army of 1907. There has been no case of yellow fever since May, 1906; no case of plague since August, 1905. There has been no case of small-pox for more than a year. There is still malaria, but only about one-third the number of cases there were three years ago. War on the *anopheles* and *stegomyia* mosquitoes, which carry malaria and yellow fever, has been relentlessly waged. I did not see

a single mosquito in Colon, a town which was once considered the pest-hole of the planet. In Panama City I killed two. At Culebra I had the ex-

perience of seeing five which had been captured by a sanitary officer, bottled alive and were being sent to Ancon for dissection and study.

THE COMMISSION CLUB HOUSE AT CULEBRA.

One of the four Club Houses that furnish recreation and social life to the Canal employees.

THE CITY OF PANAMA.

Taken from Ancon Hill, showing the contour of the city, with the Pacific Ocean beyond.

The social order of the Zone may best be called a military paternalism. The army régime is in full sway. There is a civil government with magistrates and judges, but whatever their nominal place may be, they are in fact subordinate to the military régime. The kind of justice dealt out in some, if not most, of the courts is not the sort that would be tolerated long in a democracy. The men complain of the savage rigor with which even petty misdemeanors are punished all along the Zone. Nor is it well to criticise the Government and remain in the Zone, as the recent prosecutions of Messrs. Davis and Young for "criminal libel" have shown. It is not necessary to defend the conduct of either of these men. Mr. Young, who attacked the Government in an article in the *New Orleans Picayune*, made a number of sweeping and unfounded assertions. Both men were at fault. But the unnecessary harshness of their punishment shows

rather an attempt at judicial terrorism than a willingness to mete out justice.

The government and social order is a military paternalism. The paternalism comes out in the wonderful work of the Commissary Department. In a future article I shall treat this subject with more of the fulness of detail that it deserves. For the present, it may be said that the efficiency of the working force has been perhaps doubled by reason of the work of this department. Any crippling of the Commissary, which would inevitably come by compromising with the preposterous demands of the Isthmian merchants, would delay the building of the Canal. It is earnestly hoped that no interference will be made. Yet it is known that pressure is being brought to bear on Senators and Representatives to this end. Exactly what motive is behind the movement in the United States is not known. Some of the Western trade associations have taken the matter up, and are push-

ing it with more or less energy. But it is not believed that they can show sufficient strength to injure the Commissary.

The Commissary is technically a part of the Panama Railroad Company. But the President of the railroad company is also Chairman of the Canal Commission, and the Subsistence Officer, Major E. T. Wilson, is under the authority of the Chairman, and not of the General Manager of the railroad. Credit for the first steps in making the Commissary what it has become is generally given to Mr. Jackson Smith, the former head of the department. After the resignation of Mr. Stevens, Mr. Smith also retired from the service. The present Manager is Mr. John Burke, a railroad man, formerly of Indianapolis.

The Commissary operates a wholesale dry goods department, a wholesale grocery department, a mail order department, a purchasing department (in Panama), fourteen retail stores, seven cigar stands, a cold storage plant and ice factory, a laundry, a bakery, a coffee-roasting plant, an ice cream factory, a printing plant and a clothes-mending and pressing shop. Auxiliary to this work, tho technically separate, is the operation of seventeen "line" hotels and two general hotels (the Tivoli, at Ancon, and the Washington, at Colon), twenty-four messes for European laborers and twenty-four kitchens for West Indian laborers.

The business of the Commissary for the last calendar year aggregated \$4,559,805. About three-fifths of this represented goods sold to employees and one-fifth to goods sold to the hotels and messes. The workshops (bakery, laundry, factories, etc.) turned out 24,000 tons of ice, 42,000 gallons of ice cream, 5,400,000 loaves of bread, 85,256 pies and 34,024 pounds of cake. Nearly two and one-half million pieces of laundry were washed, and the printing plant produced 30,000,000 impressions.

The Commissary is an assured success. It has shown the absurdity of the ancient superstition that organized society, the state, cannot attend to the needs of a people as economically and with as efficient service as can an individual or a corporation. No doubt there are faults in the service and no doubt there are further economies yet to be reached. But a splendid achievement has been made. The claim of an employee of the department that "we deliver a greater quantity and variety of goods, over a broader area, within less time and with fewer errors than is done anywhere else in the world," is probably true in every particular. The Commissary has made possible the present efficiency of the canal workers, and the further prosecution of the work at the present rate is in large measure dependent upon keeping the Commissary up to its present standards of service.

A Meditation

BY HARRIET McEWEN KIMBALL

O MYSTERY beyond the reach
Of all created thought or speech!—
Constrained as man from nature's cage
Our God became our sacrifice.

One life, decreed all lives to lift
In union with its wondrous gift,
Constrained eternal love to show
By bearing all their weight of woe.

Sinless, as Chief Transgressor He
Poured out His blood upon the tree,
While penitence and unbelief
Reaped His compassion and His grief!

For us, for us, true God, He bled
From nail-torn hands and thorn-crowned head:
From spear-rent heart—the heart of God!—
From feet that Sorrow's wine-press trod.

Poor souls, who thirst and hunger, see
Your hope, your help, in Calvary;
Find here the crown of all your quest—
God's boundless love made manifest!

PORTSMOUTH, N. H.

Visions

BY LOUIS CHARLES KARPINSKI

THE French Journal of Elementary Mathematics, *L'Enseignement Mathématique*, recently instituted an inquiry into the methods of work of mathematicians. With striking unanimity these scientific men testified that they were the subjects of visions. By this is meant that many mathematicians affirm that they have moments of inspiration when, without premonition, suggestive and fruitful ideas come to them. The most eminent man of science in France, Henri Poincaré, recently elected to the French Academy, in the place of the poet Sully Prudhomme, gives a detailed account of his own method of work in a paper on "L'Invention Mathématique," read before the Institute of Psychology in Paris. Poincaré states that he would occupy himself at his study table with some problem regularly for a period of weeks with apparently no results. Other duties intervening, he would dismiss the problem entirely from his conscious attention, when suddenly, without warning and at a time when he was consciously engaged in other occupations, the fruitful idea necessary to solve the problem that had previously engaged his attention would flash into consciousness.

Two characteristics of these moments of inspiration are given by Poincaré as worthy of note—the first that the inspiration is always preceded by a period of conscious work, of application without, mayhap, any evidence of success, and the second is that the inspiration gives the clue to the solution of the problem, but not the complete detailed solution. The pregnant moment must be followed by

work of elaboration to perfect results, and is itself always subsequent to conscious effort.

Sir William Hamilton, the inventor of *quaternions*, relates the circumstances of the appearance of the germinal idea in the following detailed manner: "They started into life, or light, full grown on the 16th of October, 1843, as I was walking with Lady Hamilton to Dublin, and came up to Broughton Bridge, that is to say, I then and there felt the galvanic current of thought close; and the sparks which fell from it were the fundamental equations . . . exactly as I have used them ever since. I pulled out on the spot a pocketbook, which still exists, and made an entry, on which at the very moment I felt that it might be worth while to expend the labor of at least ten (or it might be fifteen) years to come. But it is only fair to say that was because I felt a problem at that moment solved—an intellectual want relieved—which had haunted me for at least fifteen years before."

Other mathematicians have testified to being awakened in the night by such inspirations—also only suggestive and requiring detailed work for their completion. So numerous and so elaborated are these experiences that this art of working may well be regarded as typical of a great class of thinkers—while not necessarily the method of all.

Nor is this unconscious working of the mind at all peculiar to mathematicians. Ibsen, in a letter to Björnson from Italy in 1865, writes that for a full year he had not succeeded in accomplish-

ing any literary work. "Then one day I went into St. Peter's, . . . and there all at once there dawned upon me a strong and clear form for what I had to say." Ibsen in St. Peter's received the inspiration for that great tragedy "Brand." Note also that he had been working, apparently fruitlessly, and that to make the vision of value to him and the world required two months of hard labor.

Goethe referred frequently to these "pregnant moments" in which harmony is brought about between the world of reason and the world of sense, usually antagonistic to each other. Strikingly similar is the language of Poincaré to the language of Goethe, both referring to this precious moment in experience as that which brings harmony out of chaos, an instant in which is revealed the underlying harmony of a series of disconnected elements. Goethe had a special name for this phenomenon, speaking of it as the "aperçu," the vision moment. Further similarity is shown in the fact that Goethe's "aperçu" is regarded by the greatest German critic, Richard Meyer, as always being subsequent to study and in that the necessary elaboration was often a kind of drudgery from which the great poet shrank. "A gift from above, . . . beyond all earthly power," says Goethe, and one which entails hard labor on the part of the recipient. "All that we find out, discovery in the higher sense, is the remarkable achievement, the activity of an original feeling for truth, which having been unfolded in repose, unexpectedly and with lightninglike rapidity, leads to a fruitful comprehension. It is a revelation developing, from the inner to the outer world, which allows man to divine his likeness to God. It is a synthesis of world and spirit which gives the holiest seal of the eternal harmony of being" (Goethe).

With some authors the inspiration does more than suggest. George Sand felt that she was a passive agent in the power of some unseen force—hardly knowing what she wrote. Hawthorne regarded it as an aspect of compelling fate and Thackeray declared that, in spite of himself, he was compelled to go a certain way. Schiller and Shelley, George Eliot and the Rossettis, and scores of other lit-

erary lights, are known to have had these moments of inspiration, these visions.

The eminent H. Beaunis, Director of the Laboratory of Physiological Psychology at the Sorbonne, advances entirely similar views in a recent article appearing in the *Revue Philosophique* on "How My Mind Works." This testimony is the more valuable in that it is the observation of a trained observer of mental phenomena. After stating that ordinarily he is a slow thinker, Beaunis proceeds: "Once the machinery is in motion, my intellectual activity evolves with the greatest ease, without effort. When I have once decided to formulate the ideas that have run in my mind for years, I have only to allow my pen to run, I write as under dictation. . . . At a given moment, without my knowing why, appears the mother idea, as I call it, that is to say, the idea which, once entered into my consciousness, gives birth to a series of secondary ideas which are like the fruit of it and which constitute the work itself. This fruit is subject to my mental activity, of which I am conscious and which I direct at my pleasure; but as for the mother idea it is not so, it surges into my consciousness without that I am in any way regarding it. It is a spontaneous manifestation of which the most minute introspection does not teach me anything. This idea surges from the depths of the unconscious, and it is upon this idea that I work with my mental activity, consciously and voluntarily." We may add: "The wind bloweth where it listeth, and thou hearest the voice thereof, but knowest not whence it cometh and whither it goeth." Characteristic, for such an inspiration with Beaunis is again the necessary preliminary preparation and the equally necessary subsequent elaboration.

The universality of this form of mental experience could be further illustrated by the testimony of philosophers, inventors and workers in almost every field of human thought. Why may we not ascribe many of the visions recorded in the New Testament to similar influences? There is a widespread curious disrespect for the mental life of Jesus and the apostles, denying to them any power of independent thought. Any explanation of their methods of work is acceptable save one which

regards these men as mental workers in the field of religion. Peter, in particular, is usually regarded as an ignorant man. Ignorant he was in a narrow sense, capable in a large sense, when he began his course of study under the Master; three years under the greatest teacher of the world made him a trained thinker. Peter's education was not complete, but his training gave him a method of work.

Jesus had taught his disciples by precept and example the necessity of contemplation—of drawing apart from the mob for communion with one's self and for communion with the Higher Being. "But the Comforter, even the Holy Ghost, whom the Father will send in my name, he shall teach you all things and bring to your remembrance all that I said unto you." So spake Jesus to his disciples, and who shall say that Jesus did not speak as in a parable of that light that would come to them, often suddenly and mysteriously, revealing the deeper meaning of all that He had said unto them. How strangely contradictory it is that so many are willing to ascribe to Jesus all power and yet unwilling to grant that He had any profound grasp of the workings of the human mind.

Peter, like Mary, pondered the sayings of Jesus in his heart. Then one day there came a vision of a great sheet being let down from heaven containing all manner of beasts and, at the same time, a voice saying: "Rise, Peter, kill and eat." "Not so, Lord, for I have never eaten anything that is common and unclean." Then was revealed to him that before God no thing is unclean and that before God all men are equal, Jews and Gentiles. In this clarifying instant Peter saw that the Jewish conception of the unclean was not compatible with the teachings of Jesus, and he saw further that the divine ruler of the universe had no favorites, neither among nations nor among individuals. This revelation was made to a mind prepared by contemplation, and the full significance came only thru elaboration and interpretation of the vision. In all the essential conditions the revelation to Peter was like the revelations described above as coming to scientists and poets and writers.

Paul was a more profound thinker

than Peter; he had occupied himself for many years with spiritual questions and many problems of life were troubling his mind. Paul's religion was unsatisfactory in two distinct ways. Personally he could not satisfy the requirements for righteousness as formulated by his theology, and, in the second place, this sincere lover of humanity could not harmonize Jewish views of the omnipotence and oneness of God with a scheme of salvation that included only the Hebrews. The solution of this double problem flashed upon his consciousness on that journey to Damascus like a bolt out of a clear sky, giving him a conception of righteousness by faith available to all men. Nor had Paul realized that the doctrines of this despised sect of the Christians were effecting in his mind a harmony between righteousness and law, between Gentile and Jew—between elements that had been antagonistic to each other. Indeed the very sources of his dissatisfaction with his own religion may not then have been clearly formulated in his consciousness; later the understanding of his mental unrest previous to his conversion came to him, as is evidenced by the letters more particularly to the Galatians and to the Romans. Nor did Paul at all comprehend the part played by the dramatic setting and by his own physical condition in this revelation. The dreary sameness of the desert, like the vastness of the sea, gives the necessary mental quiet that is favorable to the birth of new ideas.

The accompanying phenomena of a great light and sudden blindness offer no difficulty to the psychologist—especially when the constant glare of the desert is considered. Not to dwell upon this phase it may be stated, without fear of contradiction, that with a deeper understanding of the nature of this Oriental mind—the time, the place and the man—the incident of physical blindness of three days' duration is trivial in comparison with the revolution that had been effected in Paul's mental life.

Of profound significance for the Western World was Paul's sudden determination to go on to Greece. "And a vision appeared to Paul in the night; there was a man of Macedonia standing, beseeching him, and saying, Come over into

Macedonia, and help us." Europe and not Asia thus became the battlefield of Christianity. Diverse influences were at work to make possible this vision. The Greek influence of Paul's native city of Tarsus, the language which he spoke and his knowledge, however slight, of Greek literature, combined to attract him toward Greece as the natural outlet for his activity, no less than the fact that this was a step toward Rome. Other visions Paul had, too, but he cites in detail only these which are fundamental in the spread of Christianity.

Great thoughts, like beautiful flowers in the spring, appear suddenly full grown to enrich the world. But as with the flowers, "that time which the seed spends in the earth belongs decidedly to the life of the plant" (Goethe). So the unconscious preparation of the germinal idea is a part of the life of the soul. When the psychology of the New Testament is written revelation will be appreciated as a product of influences still at work and more widespread will be a true respect for the mental life of Jesus and the Apostles and Paul.

UNIVERSITY OF MICHIGAN ANN ARBOR

Joan Beatified

"Domremy rendit à cause de la Pucelle."

BY FREDERIC WELTY

DOMREMY! oh Domremy! the Maid is coming home!
A-riding up thru Haute-Saône, sent by the Pope of Rome!
They've crowned her at the Vatican and named her Queen of France,
And bade her rule from Vosges and recall each errant lance;
For the Dauphin, oh the Dauphin! he is dead this yesteryear,
And the Maid forsook at Rouen stands recarnate by his bier!

Domremy, oh Domremy! how the haunted woodland sighs
For the falling of her footstep, for the laughing of her eyes!
How the clover-fields have mist her, and the sparrows and the wrens,
Ah! the days how slow they wandered since what hour she left the glens
For the winning of a kingdom and the making of a King,
For the blazing of the faggots and the coarse herd's bellowing!

Domremy, oh Domremy! across the meadow dew
She is coming, she is coming, by the turning of the Meuse.
And her Voices, oh her Voices! they are calling as of old
In the happy greening pastures. Turn her sheep out from the fold.
Bring the wine-bags from the closets, heap the blossoms on her grot,
To show that you remembered when the Lords of France forgot!

Domremy, oh Domremy! the Maid is coming home!
A-riding up thru Haute-Saône, sent by the Pope of Rome!
St. Catherine rides before her and St. Margaret rides behind,
And the tramping of her legions is the roaring of the wind.
She is coming, she is coming, in the rising of the sun,
To rule as rule in Vosges till the years of God be run!

FINIS

Literature

The Crisis in Belief

THIS volume is composed of the Baldwin Lectures for 1909, a course endowed for the purpose of having annually presented at the seat of the State University of Michigan a "defense of Christian truth" by a member of the Episcopal Church. This explanation, tho necessary, is a poor way to begin the book or a review of it, for it is not in the least like the conventional course of perfunctory apologetics. Here is nothing of the partisan or special pleader, no picking of flaws or pointing out of inconsistencies in arguments or private characters of opponents, no grudging of concessions or masking of forced retreats.

Professor Wenley is not merely a man of wide reading; he is a man of wide comprehension and sympathy. He has the rare ability to discern the real significance and bearing of modern movements of thought in very different fields. This is shown in the three chapters dealing with the causes of "the crisis in belief:" Lecture II, The Waters of Meribah, outlining the rise and dominance of scientific modes of thought; Lecture III, Breaches of the House, showing how our new knowledge of ancient history has altered our conception of the role of Israel among the nations; and Lecture IV, Humiliation in the Midst, dealing with the higher criticism of the New Testament. The only fault we find with this is that it is too well done, it is the most interesting part of the book, which is altogether improper. It reminds us of the story of the preacher who announced that next Sunday he would give two sermons, dealing respectively with the arguments of infidels and their refutation. At the morning service there was a large congregation and he presented with great fairness and force the chief attacks on Christianity. In the evening it rained and nobody was there but his wife and the sexton. We fear that some of the Ann Arbor students

may have dropt off in the middle of the course, or, if not, that they found its latter part too vague and difficult to follow. In that case, their souls may be in a parlous state.

That Professor Wenley made his *Paradise Lost* more interesting than his *Paradise Regained* is natural, altho unfortunate, for the constructive argument is thorogoin and well adapted to the present crisis. We can only indicate its tenor by the following paragraph:

"Christian conviction, then, presents at least three arguments. First, it is normative, in that it erects a standard of value whereby it rates the religious worth of every event incident to life. Secondly, this standard pivots upon an ideal present to the inner vision. Thirdly, this presence is conceived as the witness of our eternity, when, having freed ourselves, thru its efficacy, from the thrall of time and sense, we come to realize that only in the dimension of the spirit can men flourish so as to accomplish work destined to deathlessness. . . . As we have seen, we know little about the biography of the earthly Jesus, so little that we cannot hope to reach the eternal Christ even by most minute study of the New Testament accounts. Christianity persists in all that Christ continues to be, far rather than in what the man Jesus did during the recorded fragment of his temporal career. The fulness of the personality transcends our most accurate determinations of the teaching as reported by disciples. . . . For the Christian, human life on this infinitesimal planet is either a quantitative phantasmagoria, or is capable of being charged with awful responsibility as the fullest theophany patent in time, destined, moreover, to perfect completion thru a divine humanity realizing itself untrammelled in the kingdom of God. And this divine humanity is achieved without flaw, once for all, by and thru Christ."

A Century of Archeological Discoveries

IN this timely appearance of a remarkable book* Dr. Gardner is brought in as a sponsor. It must be a delight to him to act in that capacity. In the brief preface he speaks of the work of the Ameri-

*A CENTURY OF ARCHEOLOGICAL DISCOVERIES. By Professor A. Michels, University of Strasbourg. Translated from the German by Bettina Kallenberg, with a preface by Percy Gardner, Litt.D., Honorary and Master Professor of Classical Archaeology of the University of Oxford. With illustrations. Pp. xxi, 1966. New York: F. P. Dutton & Co. \$4.00.

*MODERN THOUGHT AND THE CRISIS IN BELIEF. By R. M. Wenley. New York: The Macmillan Co. \$1.50.

can School, and adds: "It has especially devoted itself to the digging up of ancient Corinth, a task rendered very hard by the depth of earth which has accumulated over the city." With his accustomed delicacy he adds: "It would not be suitable in this place to write more as to English and American discovery in Greece." He adds to the translator: "The work, as I know, has been a labor of love, done 'for science, not for reward.'"

We know the gifted Fürtwängler whom we have recently lost, and how almost every object of art was clear as daylight to him. But his interpretations were not *always* right, altho they were nearly always so. Dörpfeld, in the realm of architecture, came to be his equal, and these two men are types of workers each in their own line. They were producers if not creators.

Michaelis is a careful looker on. Probably no man in Europe or America is so well able to form a just judgment of the whole field of classical art, and of what the workers are doing from Dan to Beersheba. If one doubts this one need only to read even a quarter of the book to be convinced. He is perfectly sane, moving serenely over cast-off notions such as prevailed in the days of Urlichs and others, who past as archeologists.

He has positive judgments also to deliver. The much talked of bronze statue from Antikythera he regards as "an example of Peloponnesian sculpture under Attic influence." He relegates the Mesenian artist, Damophon, to the second century B. C. and puts the Laocoon in the middle of the first century B. C., making it a splinter, as it were, of the Pergaman altar. Does he not nod, however, when he makes "the Apoxyomenos found at Trastevere the mainspring of our knowledge of the great reformer in art, Lysippos?" On page 323 the light seems to come from Agias.

The author takes a view which must probably ultimately prevail, that not only the bronze bowls from the region of Perugia but also the chariot reliefs and even the far-famed Chimera belong to Ionic art. The twenty-nine full page illustrations are a splendid addition to the book. The chronological table and the very full index are extremely useful.

The Chippendales. By Robert Grant. New York: Charles Scribner's Sons. \$1.50.

The Chippendales are most happily named, spindle-legged aristocrats, of Boston, who have been polished to a degree of luster, like old mahogany, and who stand stiff and precise in the rooms of old-fashioned houses. Judge Grant contrasts this family with a man of different mold, who "comes to Boston to make his fortune" in the first sentence of the opening chapter; whose success is of the bold and blatant sort, and who may be considered a fair type of plutocrat. He is not wicked in any conventional sense; he is invariably affable, neither vindictive nor cruel; but he is constitutionally obtuse to all the finer shades of feeling which are the true Bostonian's native air. He gets on the nerves of the Chippendales. His antithesis, Henry Summer, is a Boston product to the marrow of his bones. It is a city where it takes a young woman fifteen years to decide which of her suitors she prefers, and it takes quite as long for one of them to find out how to propose to her; a city where an invitation to the Puritan Ball is a vital question, involving social tragedy if it be denied; and the discussion of the statue of Bacchante becomes a fiercely contested battle which is one of the most diverting episodes in the book. This tempest in the artistic teapot is trivial in itself, but it is a matter of life and death to the deadly earnestness of its impassioned participants. Yet, in spite of his rigidity, the hero is not ridiculous; his dignity and distinction remain unshaken under satire, and he is not without aggressive moral energy, altho Judge Grant says of him and other antiquated furniture of the city of the Puritans, whether Chippendale or Sheraton:

"What a Bostonian will not do has ever been, perhaps, his highest title to distinction."

Egoists. A Book of Supermen. By James Huneker. New York: Charles Scribner's Sons. \$1.50.

This new volume of literary biographical studies has all the characteristics of Mr. Huneker's earlier ones; the sympathetic yet not uncritical exposition, the ingenious interweaving of dates, references and book titles so that they do not

interrupt or impede the flow of the theme, the quick-witted sentences, the hints of wide reading in unconventional fields and the abundant quotations. Mr. Huneker has a genius for quotations. If he sometimes drags them in, no matter, they are always worth this exertion. But there is not so much of novelty and originality about this volume as the preceding. Can it be that the supply of literary anarchists and moral iconoclasts is becoming exhausted? It looks so, for most of this book is taken up with subjects long ago overwritten, Flaubert, Baudelaire, Stendhal, Blake and Pater. The two new mystics to whom he introduces us, Ernest Hello and Francis Poictevin, he does not make very interesting to us. The best essays are those dealing with men of whom he has previously written even more brilliantly, Ibsen, Nietzsche and Stirner. On the whole we shall not be sorry if Mr. Huneker is running short of new material in this field, for then he may stop being an echo of other men and give us his own philosophy in the imaginative, sensuous style of which his first books showed him a master.

Baldassare Castiglione. The Perfect Courtier; His Life and Letters, 1478-1529. By Julia Cartwright (Mrs. Ady). Two volumes. New York: E. P. Dutton & Co. \$7.50.

In these two volumes we have a fresh study of the Italian Renaissance presented in connection with the life of one of the most attractive characters of the period. Castiglione is more a man of the present than almost any of his contemporaries. He stands apart as having much the same conception of life and the same personal character as the "gentleman" of today. To the non-professional student of Italian history there has been in English comparatively little material for the study of the personal side of the Italian Renaissance. Under these circumstances Mrs. Ady's book is all the more welcome. Her excellent biographies of the two d'Este princesses, Beatrice, Duchess of Milan, and Isabella, Duchess of Mantua, were warmly received as valuable additions to the popular literature bearing on the period and as having just claims to be regarded as

scholarly works. They had the advantage of being composed upon a clear and simple plan, for each presented the life of a woman prominent in the world of art, letters and politics, and connected with a relatively small city state where she was placed at the very center of its life. In the present work the author has chosen a character of no prime importance in himself but placed in connection with very many of the most important personages of the period. When the reader is forced by the author to turn back to the personality of the guide of what might be described as a "personally conducted tour" among the great men and women of the Renaissance in Urbino, Rome, Spain and elsewhere, he finds that the accomplished gentleman thrusts himself a little too persistently into a prominence hardly belonging to him. Plenty of anecdote such as Cellini gives us would have been welcome but the excellent Castiglione has little of that to give us. There are too many changes of scene, too many big characters, too many and too varied events for the book to make a clear and artistic impression. It is difficult to see how this defect in the design of the book could have been avoided by the author when once she had chosen such a character as Castiglione. As a character for a biography he certainly appeals to the student. His great book, which has recently appeared in two new editions in English, has made him known to many, and some account of him was demanded. The book has been based very properly upon extensive research and careful study. The result, however, hardly compares in effect with the author's two recent biographical studies in the same period.

A Canyon Voyage. By Frederick S. Dellenbaugh. With 50 Illustrations. New York: G. P. Putnam's Sons. \$3.50.

Amid the multitude of volumes annually wasting superlatives on voyages, travels, and petty, prosaic explorations of country brooks, it is refreshing to come upon one in which the superlatives are not wasted. Such a book is Dellenbaugh's *Canyon Voyage*. The trip made in 1871-2, and described in this hand-

somely illustrated volume, was the second part of the famous Powell Expedition down the Green-Colorado River in the heart of the Rockies—the first, or preliminary, trip having afforded a less extended range of investigation and fewer data for a scientific report. The second voyage, never before fully written up, certainly furnished all that was necessary in the way of thrilling incident—incident due to a protracted fight with a most strenuous river on its own unequaled vantage ground of rift and cleft, scarp and battlement. The author, as artist and assistant topographer for the one-armed Major, was a youth of nineteen, ready to take any risk with cooking utensils, rocks, and river rapids for the sake of his art, and particularly for his joy in a mountain life, of which he was to have something like ten years. The first “camp kettle” of the explorers was set up at the Green River, in Wyoming, at the point where the Union Pacific had then but recently made its raw cutting through the Rockies. Six months after the start—that is, November 3rd—they heard of the great Chicago fire—a bit of news a month old to the rest of the world. They were then at the mouth of the River Paria, having repeated and bettered what was justly considered “one of the greatest feats of exploration ever executed on this continent.” Accompanying the Colorado at the bottom of its mile-deep rift, they had pierced the mountains for a distance of six hundred and fifty miles, tumbling down the stream by its most prodigious plunges to a level nearly 3,000 feet lower than that of their starting place. Often their rate of travel in that “hell of foam” exceeded the speed allowed by law to the red-devil autos of today, in rapids that had never before been taken by white man, alive. For the better part of this six months this busy exploring party had triangulated the stream, measured and named the heights, held the camera to the roaring floods, almost catching the thunder of them, and still every man was alive, and, three times a day, hungry. Their twenty-two quarter-barrel sacks of flour were exhausted; the one gill of whisky, which the author acknowledges as a part of his outfit, had lasted through

the first five months, and then was used, perhaps, in one wild medical debauch. Even the tobacco, prudently withdrawn from its first destination—the peace pipes of the Navajos—had, we infer, gone up in smoke. Once or twice, in the more open valleys, the empty larder had been replenished with venison, but usually when the deer was accessible the rifle was not.

Hero and Leander: A Tragedy. By Martin Schütze. New York: Henry Holt & Co. \$1.25.

If it were possible to imagine such a thing as a school of literature with an original literary requirement equivalent to the thesis demanded by our present philological faculties (and why is not one plan as feasible as the other?), then Mr. Schütze's tragedy would be a very creditable performance in this kind. Mr. Schütze has correct ideas of dramatic construction and versification—even more, he has some invention; in several instances he has happily renewed or modified the episodes of his fable. But admirably as he has kneaded his clay, he has not succeeded in animating it. His drama still lacks a pulse. Let any one who is curious in such matters compare the first scene of his fourth act with the first scene in the third act of Racine's “Andromache.” Curiously enough, the situation is exactly the same. In both cases one friend is trying to dissuade another from a dangerous abduction; in both cases the former finally yields to the latter's insistency and consents to become an accomplice in the attempt. What difference does it make that in one instance the friends are called Orestes and Pylades, in the other Leander and Naukeros? The one set of names is as good to conjure with as the other. The point is that in Racine the dispute has the color, the petulance, the gristle of life; whereas in Mr. Schütze it is tame, meager and nerveless. Even in the sudden revulsion of feeling, whereby Naukeros abdicates his own reason for his friend's passion, he finds nothing better to say than

“Leander, I will do
As you desire.”

Literary Notes

....*The Bulletin of the International Union of American Republics* is one of the most attractively illustrated magazines that comes to our table. The April number contains a report of the first Pan-American Scientific Congress held at Santiago, Chile, in which twenty delegates from the United States took part.

....It requires courage and enterprise to dislodge one of the shelf-full of tall volumes bound in black or red of Plato and his philosophy, but the translation of the *Republic* by Prof. Alexander Kerr, of the University of Wisconsin, and published by his son, Charles H. Kerr, Chicago, is appearing in little pamphlets that one can put into his pocket and read on the way down town, quite as much to his interest and profit as the morning paper.

...."Songs from the Operas for Soprano," edited by H. E. Krehbiel; "Bach Piano Album, Vol. II. Larger Compositions," edited by Dr. Ebenezer Prout; "Edvard Grieg—Larger Piano Compositions," edited by Bertha Feiring Tapper; and "The Greater Chopin," containing twenty-eight of the immortal Pole's "greater" piano pieces, prefaced by one of James Huneker's brilliant and stimulating essays, are the latest volumes (\$1.50 each) in *The Musicians' Library* to reach us from the Messrs. Ditson. This unique series of beautifully printed music books is a real boon to musicians, whether professional or amateur, and to all people who really love the noblest art. And these new volumes are all edited with the same authoritative and painstaking care that characterized the earlier issues in the collection.

....Rosa Newmarch's *Life and Works of Tchaikovsky*, first published ten years ago and for a long while the only account of any worth in English of the career of Russia's greatest composer, is now reissued (imported by Scribners, \$2.50 net) with nearly 200 additional pages by Edwin Evans, treating technically and critically of Tchaikovsky's music under such headings as Instrumentation, Form, Idealism, Nationalism, Individuality and Criticism, and providing elaborate analyses of the piano trio, op. 50, the piano concerto, op. 23, and the fifth and sixth symphonies. These analyses contain much that is interesting to those with sufficient musical education to understand them, but Mrs. Newmarch's chapters and Tchaikovsky's own musical criticisms and "Diary of My Tour in 1888" still form the more interesting and the more valuable part of the book. It was worth reprinting.

Pebbles

SUCCESSFUL AD.

SEVERAL weeks ago a Kansas editor advertised the fact that he had lost his umbrella and requested the finder to keep it. He now reports: "The finder has done so. It pays to advertise." —*Kansas City Journal*.

ON a birthday before they were married she gave him a book entitled "A Perfect Gentleman." On a birthday after the marriage she gave him a book entitled "Wild Animals I Have Met." —*The Citizen*.

"Now, children," commanded the austere instructor in advanced arithmetic, "you will recite in unison the table of values."

Thereupon the pupils repeated in chorus:

"Ten mills make a trust,

"Ten trusts make a combine,

"Ten combines make a merger,

"Ten mergers make a magnate,

"One magnate makes the money." —*Wall Street Journal*.

THE young man kissed her, and she screamed.

"What's the trouble, Kitty?" demanded a stern voice from upstairs.

"I—I just saw a mouse," she fibbed.

Presently the young man claimed another kiss, and the scream was repeated. Again came the stern voice:

"What is it this time?"

"I just saw another mouse."

Then the old man came down with the house cat, a mouse trap and a can and sat in a corner to watch developments. —*New York Sun*.

THE SANJAK OF NOVIBAZAR.

[It has been suggested that, as a solution of the Balkan problem, Austria-Hungary divide the Sanjak of Novibazar between Servia and Montenegro.—*News Item*.]

As a casual newspaper reader;

As a person "just wanting to know";

As one seeking light in the darkness

(Not to be too inquisitive, tho)

On this one point I'd like information,

If you're sure I don't trespass too far—

What is it—won't some one please tell me?—

The Sanjak of Novibazar?

With many strange terms I'm familiar;

Terms smacking of peace and of war,

Which the versatile press correspondents

Delight to lug in by the score.

Kraal, kopje, and veldt—Yildiz Kiosk;

The Duma dissolved by the Czar,

But I do not yet know what they mean by

The Sanjak of Novibazar!

I can prate of the Punjab; the Mejliss,

And I know when a jehad's proclaimed,

Mashruteh is likewise familiar,

And I think I have Selamluk tamed;

I can understand, too, casus-belli,

Beni Snassen, and tribal duar,

But I'm blest if I see any sense in

The Sanjak of Novibazar.

Why should this, of all things, be conceded?

Is it flesh, fish, or fowl, anyway?

Can it sit up and beg, and take notice?

Does it live with his Highness, the Bey?

Now, I don't want to make any trouble,

And I know what so many things are,

So, won't you please kindly explain it—

The Sanjak of Novibazar?

—*Concordia Times Star*.

The Independent

Entered at New York Post Office as Second Class Matter.
Publisher, Clarence W. Bowen.
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Next binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Is It a Moral Issue?

IN both parties the State of New York is pretty completely ridden by party bosses. They form combinations among themselves and sometimes with each other. The people are managed by those who are willing to give time and labor to the business of politics, for the advantage of themselves; for the multitude of voters cannot or do not concern themselves much with the matter. They think it is not worth while. Thus it often is not so much the rule of the people as it is the rule of the bosses. At times the people have the chance to express themselves, as at a Presidential election, but usually they are told by their self-appointed leaders, who select the candidates for them, for whom they should vote, and they have no other choice.

The old system does not trust the people. It calls for caucuses which choose one set of delegates for the State convention, another for the Assembly convention, another for the Senatorial convention, another for the judicial convention, and another for the county convention, and all so mixt and muddled up that the ordinary citizen, who has all he can do to attend to his own work, cannot keep

the run of it all, and the management goes to those who can make it pay; and this gives rise to all sorts of bargaining and corruption. Often the saloons rule the caucuses, and often corrupt interests pay the expenses and buy the decision.

Thus it becomes a moral issue to bring the rule back to the people, to make our Government once more democratic and not the rule of the bosses.

This reform is accomplished by the direct primary system, under which the candidates are not only elected but also nominated for election by the voice of all the members of the political party. There may or may not be a party convention of the ordinary style for nominations, but there will be time given for those who choose to agree on other candidates if so they wish. Thus for Governor, Senator, or other officer to the lowest, there may be two or three or half a dozen candidates before the members of the Republican or Democratic party, and they will all vote and select which of the names presented shall be their party candidate for the office on Election Day. No clique then will dare to put up a bad man, because it is known that the people will reject him. It is a plan to eliminate most of the evils which come thru the nomination of men of lax character, known to be the tools of greedy and corrupt interests.

The plan of direct primary nominations is more or less completely in operation in twenty-five States. It is mandatory and applied to all offices in fourteen States; in Illinois, Wisconsin, Iowa, North and South Dakota, Kansas, Nebraska, Oregon, Washington, Oklahoma, Missouri, Mississippi, Louisiana and Texas. These States have a population of over twenty-five millions, and it is to be observed that they include States both North and South, in the middle section of the country and in the far West. Three other States have mandatory primary laws which include nearly all officers. They are Pennsylvania, Ohio and Minnesota. This list brings us well to the East. Five other States have permissive laws covering practically all offices, and the permission is generally used. These States are Michigan, Kentucky, Tennessee, Florida and Alabama. In three other States the law is mandatory in cer-

tain localities. These are Massachusetts, New Jersey and Indiana. The reader will be surprised to see the rapid extension of the principle. It is growing fast. Wherever it is tried it is liked and there is no chance of its repeal. At the last election fifteen Governors were chosen who had been nominated by this direct popular method.

But the professional politicians do not like it. Of course, they do not. In the State of New York the Senate and Assembly rejected the plan offered by Governor Hughes, by an overwhelming majority, that majority controlled by the political leaders. They have beaten the Governor, but he does not stay beaten. He does not consider it a defeat when the Legislature rejects a reform measure. It is a mere temporary rebuff. He is not much concerned. He knew he could expect nothing better from them, and he goes to their masters and presents his case to the people. The anti-gambling laws were enacted not because the Legislature wanted to, but because Governor Hughes had been to the people, and the people demanded the measure. So he goes to the people again, and the people will speak. They want to get rid of boss-rule, in this State and in all our States, and one chief way to secure the riddance is by this measure. We do not pretend that any one bill, that offered by Governor Hughes or any other, is perfect, but the principle is democratic inasmuch as it appeals to all the people—and to appeal to the people is safe so long as the body of the people believe in good laws honestly executed. For an intelligent and moral people democracy is safe. Hitherto the people have been vastly better than the men whom by the indirect method of the caucus they have chosen.

The End of the Counter-Revolution

It was William Watson who, in a sonnet during the period of the Armenian massacres, following a dramatic biblical poem, represented all Hell as greeting the Sultan, and designated him as "Abdul the Damned." We may be allowed to soften the proleptic and profane vowel and designate him as Abdul the Doomed.

The Young Turks' revolution, by which they captured the government, compelled the submission of the Sultan and proclaimed the constitution and liberty, was so amazing, so contrary to Turkish precedents and prejudices, that a counter-revolution seemed likely, and the attempt came early. The more fanatical common soldiers in garrison in Constantinople dispersed the Parliament and compelled the resignation of the Cabinet, and proclaimed themselves the defenders of the Sultan and his rights. Coincident with this came the outbreaks in Asia Minor and Syria and fresh massacres of Christians. It seemed as if all was in danger of being lost, and that the old oppressive rule of the Sultan was to be restored, with fresh exactions and assassinations of the Armenians. But the stern purpose and power of the Young Turks in their committee at Salonika was not understood. Their army began to move on Constantinople. Last week they invested the city and on Sunday they entered and were most warmly welcomed, except by the Albanian Guard of the Sultan, who fought for a while, but finally capitulated, not without blood. It is said that two thousand were killed, two thousand Moslems this time. The counter-revolution had failed. The motion to reconsider was lost.

We may now confidently hope that the crisis is past and that constitutionalism and liberty for Turkey are safe, notwithstanding the terrible disorders at Adana and in other cities. But this means the extinction of the Sultan's power. He may not be killed or deposed, altho the latter is possible and really desirable, but he will lose his faithful and favored Albanian Guards and will be left powerless to intrigue, a simple puppet to be moved by strings at the will of the performer. Abdul is doomed.

From henceforth Salonika will be sung in song as the Mecca, the holy place, of Turkish liberty. To Salonika the weary people cried, in a voice like that which Paul heard, but it was: "Come over from Macedonia and help up," and the call was obeyed. Salonika was the city which Saint Paul best loved, and to which he wrote in words which might well apply to the sudden and unexpected revolution in Turkey. "The day

of the Lord so cometh as a thief in the night." It was incredible. Men would not at first believe their own eyes and ears. But it has come, and the effort to put back the old rule has failed, and we may now hope that Turkey will become prosperous and free, even as once it was the choicest part of all the world. And this we may anticipate, that even if Turkey has lost forever her shadowy rights in Bulgaria and Servia and Montenegro, Austria must forego her hope to gain the sea at Salonika. That port belongs to Turkey and will be held as precious for its history as well as for its commercial and naval value.

Cuba: The Problem

THE news from Cuba is not encouraging, and the end of our experiment of trying to make a reputable republic in that island is not at present in sight.

Officially speaking, we drove Spain from her last stand in the Western world because she ruled there so inefficiently and so cruelly that unendurable complications arose year after year in the relations between Cuba and the United States. Actually, the official history of the affair is not greatly different from the account of it that an unbiased, unofficial historian would write. That in the long run events will justify the course that Congress and President McKinley's administration took, we believe. Whether they have justified it already is a question over which dispassionate minds may differ.

We kept our pledge to make Cuba independent on condition that she should keep the peace. We did not actually cut the cable by which we had her in tow, but we gave her plenty of slack. She did not use her liberty in a way satisfactory to herself or to us. At the request of her own elected President, who acknowledged his incompetency to deal with domestic disorder, we intervened. Without bloodshed, and at a comparatively moderate expense, we restored order in the island in a very short time, and soon had public affairs smoothly running there. For the time being life and property were as secure there, and daily existence there was as humdrum as they are in Connecticut or Oklahoma.

This bit of discipline accomplished, we again gave the little craft plenty of slack, feeling this time quite sure that she would render a good account of herself. The disappointment that we necessarily feel over the reports of daily increasing crime and disorder is of a rather sobering sort. It compels us to face the question whether the course of events will not inevitably lead to annexation. As a territory of the United States for a time, and later on as a State, Cuba would become a safe and pleasant place of residence. There is no reasonable doubt of that. Left to govern herself in practical independence, Cuba will not live up to our standards of civic good behavior. Of that, too, there is no reasonable doubt.

The question that we have to answer is: To what extent should we tolerate crime, disorder, neglect of sanitary precautions, insecurity of property, ignorance and general indifference to "the opinions of mankind," rather than assume final and complete responsibility for Cuban civilization? If we could answer this question on grounds of reason and well-established expediency, it would still be difficult to decide just what we ought to do, and when we should begin to do it. The question is made immensely more difficult, however, by the circumstance that a majority of the voters of this nation certainly do not and will not look at the problem rationally. They range themselves on one or the other side of it, according to their prejudices and sympathies, influenced somewhat by business considerations. Capital would go in large quantities into Cuban opportunities if Uncle Sam assumed responsibility for its protection. But millions of Americans who have no business relations with the island, either present or prospective, shy at the proposition to "impose our yoke" upon "a free and sovereign people" under the pretext of doing our our neighbors good.

If we can manage to keep our heads and our tempers, we shall, on the whole, do wisely to let the Cubans try a rather long time to solve their own social and governmental problems. There are excellent grounds for such a policy. The Cubans are probably, on the whole, not less capable of self government than most of the Central and South American peo-

ples have been. It is not likely that Cuba will become more lawless than the Latin-American republics have been. If we had known more about South and Central American affairs, if we had had larger economic interests South and immediately North of the Isthmus, and if we had had revenue "to burn," we probably should have heard an "imperious demand" of the *vox populi* to clean up the streets and the morals of our Latin-American acquaintances. We had none of these prerequisites. They have been left to create civilization in their own way, and all trustworthy observers assure us that of late they have made and are now making a remarkable and substantial progress.

Perhaps it will be just as well if we are not in too much of a hurry to conclude that the Cuban experiment has failed.

The Task of Mr. Roosevelt

WE are specially interested in the suggestion made by Mr. Henry G. Granger in our issue of last week that a great task, which no living man could attempt so hopefully, be undertaken by Mr. Roosevelt. It is one that need interfere with no other energy or engagement of his, but which might yet be the grandest monument of his energetic history.

To Mr. Roosevelt while President of the United States was awarded the Nobel Peace Prize for his labors as intermediary in the negotiations between Russia and Japan. That successful achievement would pale before such a success as Mr. Granger believes would be possible. He would have the United States ask Great Britain, France, Germany and Japan to join with it in compelling and ensuring the peace of the world thru the Hague Conference. As the chief Commissioner, assigned to the task of securing such an agreement of the five nations, the five strongest nations in the world, he would have Mr. Roosevelt named. His best energy and his immense prestige would find in this effort the noblest object to be achieved for civilization.

We do not think such an attempt hopeless. The union of the nations at The Hague seemed impossible a dozen

years ago. We are making as rapid progress in public sentiment toward the establishment of a Parliament of the Nations as we are in the suicidal enlargement of our navies and armies. What with the latest scramble for Dreadnoughts, to be followed by a similar insane rivalry for war-fleets in the air, the financial ability even of the wealthiest nations approaches paralysis. The time is ripe for accomplishing the ultimate purpose of advocates of universal peaceful arbitration. There is needed chiefly a leader who will have the splendid enthusiasm, energy and faith which characterize Mr. Roosevelt.

Think of the purpose in view, nothing less than the assured end of all wars. If the United States, Great Britain and either one of the three other great Powers could be persuaded to unite in this plan, the two others would be bound to follow, and then all the rest of the world. Then the expenditures, thousands of millions of dollars annually by the nations for destructive war and waste, would be immediately reduced to the minor needs of police service, and would be partly devoted to the expansion of internal improvements, roads, waterways, education, improvement of the condition of the people, and mainly remitted to relieve the grinding taxation. Then government the world over might be for the benefit of the people, and not for the purposed injury of each other. There is no higher object that could be set before a statesman and a passionate lover of mankind; and we know of no man who could better attempt this not hopeless task than Theodore Roosevelt. The very thought of it as a possibility is enough to inflame the imagination, and that half ensures its achievement.

The Siege Perilous

THREE more American missionaries have been killed in the service of the people for whom they have literally given their lives, two of them, Mr. Rogers and Mr. Maurer, in Turkey, and one, Mr. Baskerville, in Persia. Their cases are typical of the purpose for which they chose a laborious and dangerous career.

Mr. Rogers and Mr. Maurer might

have been alive now if they had remained in the mission compound. They would not have been attacked there. Thousands of Christians have fled to the mission grounds for protection. But the houses had been set on fire by the fanatical Moslems, and these two young Americans led a little party to put out the fire of a house occupied by an aged Moslem woman. While engaged in this deed of mercy they were shot and killed. It was a brave death to die, and it may be that, like Samson, they have done more in their death than their life could have accomplished. A monument will be set up to them, and Moslems and Christians will revere their memory and be attracted to the religion of which they were examples.

Mr. Baskerville's case was different, but equally noble and tragic. He was charged with too much sympathy with the Constitutionalists who were defending Tabriz against the forces sent by the Shah, and he accordingly resigned his commission as a teacher in the mission school that he might freely express his sympathy. The city of Tabriz was invested and the people were starving. The only chance to get food was by a sortie thru the investing army. When the attempt was made his followers fell back, but he, with a very few others, made a desperate attempt and he was killed. He might have remained on the mission grounds and been safe. In all probability the mission had food enough for its own members. But they had not gone to Persia to save themselves. Mr. Baskerville was just out of college, and his young, manly courage was supported by his Christian faith and purpose, and he had been taught that he that would lose his life shall save it. When Persia is free from tyranny Moslem and Christian will erect a monument to the memory of the brave American who so loved the people that he was willing to die for them. Even Moslems will wail for him, as still they do every year for the martyrs Hassan and Hussein, sons of Ali.

It is for such examples as this when danger calls that missionaries and missionaries go to foreign lands. They teach Christianity, and all this is a part of Christianity. It was for this that Miss Shattuck stood in the door of the mission

grounds at Urfa and forbade the savage murderers to enter in to slay the thousands of Christians who had fled to her for protection. It was for this that American missionaries, men and women, suffered death at the time of the Boxer uprising in China; and when thousands fled to the British legation for safety, it was an American missionary who had the skill and wit to lay out the fortifications that saved them, while it was to the Catholic missionary and the Catholic Cathedral that other thousands of Christians fled for safety. Today in Turkey and Persia the mission grounds are crowded with these refugees. Where else can they go?

There is no business a man can engage in so richly paid as that of the foreign missionary, not in money, not often in fame, but in the noblest service for those most in need. His life may seem humdrum to those that look from a distance, and humble; but it carries Christian civilization, it creates nations. The beginning in Bulgaria and Japan was by missionaries. Hawaii and New Zealand are other examples where the missionary was pioneer and where the trader followed. In Turkey it is the missionary whose teaching these scores of years has given the inspiration for liberty. He goes into new fields, is leader and guide, and stands ready to meet opposition and fanaticism and death. But the blood of the martyrs is the seed of the Church; and sometimes it raises up armed men, and is the seed of national life and liberty.

Saint Joan of Arc

JOAN OF ARC, la Pucelle, is not yet quite a full-blown saint, but she is on the sure road to become one. She has been beatified, but will not be canonized for several years to come. In due course that honor will be bestowed upon her. We may understand that she has been a silent saint all these centuries, but evidence was required that would prove to us here on the earth that such has been the case. The evidence is holy character and miracles. That evidence has been thoroly sifted, with a "Devil's advocate" appointed to oppose her claims, and she has been approved worthy.

The attested miracles are these: Sis-

ter Teresa, a Benedictine nun, was attacked by acute pains in the stomach, with vomitings of blood in December, 1897, and was near death. A novena to Joan of Arc was begun July 30th, 1900. Up to the eighth day she was worse, but on that day she said she would be cured, and on the ninth day she arose from her bed well. The second miracle was of Sister Julie Gauthier, who suffered for fifteen years from cancer in the breast. She also made a novena to the Maid of Prayer for her recovery. She feared she would not be able to make the nine days, and so she had eight children of her class go together with her and say the prayers for her recovery at a single visit to the church. There the wound was closed and she returned from the church in full vigor. The third miracle was that of Marie Sagnier, a nun of the Holy Family. She had a tuberculous affection of the flesh and bones and had suffered for three months from ulcers and abscesses. She, too, made a novena. On the fifth day the inflammation had disappeared, the ulcers had healed, and she regained her former health.

It has been a long process to accomplish beatification. Petitions from 1869, but it was not till 1894 that the Pope allowed her case to be introduced. Ten years later Pius X signed the decree declaring the heroicity of her virtues. In December, 1908, the decree declaring the miracles to be authentic was promulgated, and then followed permission for her beatification, which was solemnly proceeded with on April 18th. Since that day it has been lawful for the faithful thruout the world to salute her as the Blessed Joan of Arc, and she becomes a titular protectress of France.

This is the grateful response which Rome gives to the faithful who have so deeply mourned the persecutions charged against infidel France. The churches have become the property of the nation, reserved by law for religious purposes, and movable property has much of it been confiscated for the purposes of mercy, but administered by the nation, and the teaching orders have been supprest and their members scattered. The beatification of the French heroine will be some assuagement of the grief of the Church.

Joan was born on Twelfth Night in the little village of Domremy, in 1412. She was a religious child, and she saw great lights and heard voices telling her at first to be good. Later she saw Saint Michael and other saints, and was told to deliver France from the English. At sixteen the voices became so insistent that she went with her uncle to the French commander, and told him that the Lord would help him at Lent. The rough soldier told her uncle to take her home and give her a good whipping. They tried to marry her, but she refused. When Lent came, on her seventeenth birthday, Orleans was invested and the French cause seemed lost. She again went to the French commander and was repulsed, but later persuaded him and was sent to the Dauphin, who was in despair. She promised him divine aid. She predicted that the English would be beaten and the siege of Orleans raised; that the Dauphin should be crowned at Rheims; that Paris should come back to the royal rule; and that the Duke of Orleans should return from his long captivity in England. These incredible prophecies were all fulfilled. She put on male attire, led the French armies, gained complete victories in battle and crowned the Dauphin King of France. But soon her fortune changed. That followed the breaking of her miraculous sword, with which, it is said, she had struck some common women in the camp. She was taken prisoner by the Burgundians and given over to the English. She was tried as a sorceress by the Bishop of Beauvais and an inquisitor and finally condemned and burned at the stake. But she has always been "La Pucelle," the Maid, the heroine, and now the Saint of France.

The Prohibition Party

It is a remarkable fact that we have had a Prohibition party these many years, but never once has it had a success in securing prohibition. Prohibition is successful, it covers nearly half the country, but it is not the Prohibition party that has achieved it. It has been accomplished by no party, but by the people of either party or both parties. The Prohibitionists have talked and voted and

have, doubtless, done their part to create sentiment, but not much more than their part. They have been outside of the great ranks of the foes of the saloon, just as the Garrisonian Abolitionists, in the days before the Civil War, talked loud and worked hard against slavery, but it was a question whether they gave more help than hindrance. The abolition of slavery came thru other forces.

Mr. John G. Woolley has been the chief accredited leader of the Prohibition party, and was its candidate for President. He has gone around the world in the interest of prohibition, and has lately made his residence in Hawaii, where he leads the fight against the saloon, and under the license law, which is, he says, the best license law in existence, and one that actually allows complete prohibition. But it is his present attitude towards the Prohibition party that now interests us. He says, in his speech of April 5th:

"On the evidence of the Presidential campaign alone, we have a right to take new heart of hope. The vote of the Prohibition party fell off, naturally and properly, and will continue to fall off, for the reason that the party has won a splendid victory in building so much better than it knew, that its recruiting, organizing power proved insignificant in comparison with its lifting power; so that it put the issue that it stood for so bravely and so mightily, beyond the vicissitudes of party politics and well to the top of the political program, while it itself fell back without a murmur, to the rear."

Mr. Woolley appears to us correctly to diagnose the situation. In the last Presidential election both parties would have been glad to corral the liquor vote, but neither dared ask for it. Doubtless Mr. Woolley gives too much credit to the "lifting power" of his party, but even so old so-called Abolitionists who cursed the Constitution and refused to vote, believed that it was their dynamite that blew up slavery. It is the people and no political party that are killing the saloons. It has been computed that saloons are dying at the rate of thirty a day, by the spread of "dry" territory under the local option laws, followed by State-wide prohibition. But the saloon is not on the run; it is fighting as it has never fought before, fighting for its existence, offering even to

reform itself if it may only survive. The people ought to meet fight with fight, to press the advantage persistently and mercilessly, to accept every chance to educate public sentiment and extend, town by town, or county by county, or State by State the area of closed saloons and purified homes; and for this end we are not unwilling that the Prohibition party should continue in its own way to sound its tocsin and marshal its brave, even if diminishing, hosts.

Concrete

No product of the twentieth century is more characteristic of our type of civilization and of our progress in the economic arts than concrete, a composition of the cheapest and commonest materials to create the most substantial structures. The use of concrete began in a very small way, for bridges and aqueducts. It has become the favorite material for small buildings, for sidewalks, and for pavements; and it begins to be seen that the concrete era has hardly begun. As a matter of economy we have to count in the indestructibility of the material, for it is almost imperishable if rightly made. It will outlast the best wooden structures by centuries. Fire cannot destroy it, and water wears it very slowly.

Of more importance to us, however, is the fact that in large sections of the country, in fact, nearly everywhere, the bulk of the composition is at the command of the user almost without cost. Where the soil is sandy the house builder digs his cellar, and builds his walls largely with what he has thrown out. With Portland cement a good sand can be combined in the ratio of four to one, or even five, or six, to one; that is, one of cement and the remainder the cheapest material known to the farmer and the builder. With a little practice a couple of boys, or, for that matter, even girls or women, can mix the cement and turn out the concrete blocks. They give a wall solid and beautiful. Any color can be secured or added, altho as a rule Nature attends to this affair. None of the sandstones of Missouri are more beautiful than the brown or slate artifi-

cial sandstone thus created. The most pretentious houses in our smaller cities of the West are now built of concrete. In the Southern States the use of this material is very rapidly spreading.

The ordinary laborer can often not only furnish the bulk of the material used out of his own soil, but with a cheap block machine can build his own walls and chimneys. The writer has recently seen a man with his two boys laying a concrete ground floor, and then erecting the walls and the chimneys of a modest cottage. There is nothing abstruse about the work, nor is a skilled mason necessary. Those who could not erect a wall of common brick can easily erect a plumb wall, with blocks eight by sixteen inches in diameter. There is a grand chance here, also, for the development of imagination and home-made taste, for the workman falls easily into the habit of ornamenting what he is doing. His porticos and porches will be chastely simple, and all the more beautiful. He will escape the tawdry ornamentation which is too often associated with houses of wood.

Edison's solid concrete house may yet be a reality, only his steel molds will be too costly to do the work on a small scale. His molds would cost more than his walls. It is not at all impossible, however, that before 1930, or less, we shall hear of towns voting for house-molds, just as now they vote for stone-crushers and for cement sidewalks. Why not, only that architecture would become monotonous, when fifty or one hundred buildings are molded in one pattern? Worse things might occur—provided the mold were well conceived and educative to the common people. It would do away with the monstrous and ludicrous in house building.

Some of the railroads are already testing cross-ties made of concrete, and it is prophesied that they will shortly displace those made of wood; while hollow concrete telegraph poles are already beginning to supplant those of spruce and cedar. It does not just now look as if the tens of millions of catalpa trees that have been recently planted will be called for by the railroads and telegraph companies. Fence posts are hereafter to be made, and not grown. The farmer can-

not complain of this, for, as a rule, the material will be far cheaper and more lasting. It will require no nails, and will be substantial.

Of course, the demand for timber is going to be greatly lessened. One of the engineering journals takes occasion to gibe at forestry and forest reserves as a fad and a folly. That does not follow at all, for our forests serve a vastly greater purpose than furnishing timber. It is not likely that we shall ever discover or invent any other way of modifying climate or equalizing moisture than by means of properly distributed forests. President Roosevelt has not been running a fad, nor McKinley and Cleveland before him. Every acre of forest withdrawn from needless destruction is a gift invaluable to the people. Forestry may go on safely and wisely; and the reservation of forest areas may advantageously be doubled. The demand for lumber will not decrease, at least for a good many years, while it is sure not to increase in proportion to the increase of population. While we are lessening our uses of lumber, we are increasing our uses of wood in other directions. No one of the fuel substitutes can take the place of coal, and coal is slowly but surely vanishing. We can safely continue the old advice to farmers to give ten acres out of one hundred acres to a good hard wood forest, while in our Southern States we can safely advise the reforestation with pines.

Engineering Contracting insists that our attitude is illogical, because most of the land reserved for forests can just as well be given to fruit raising. This is nonsense, so long as we hear from the fruit growers that the destruction of forests has made orange growing in Florida very precarious, while New England can no longer grow peaches where they were once universal. The Michigan crop is also diminishing for the same reason, while in Georgia and in Texas we cannot count on more than one good year out of three. The age of concrete is surely dawning, but forestry is not a useless art. We are not going back, or forward, to a stone age. The characteristic of our pioneering century was transitoriness; but that of the century ahead will be permanence.

The Cost of Sham Revision

It is well known that recovery from panic depression has been delayed by tariff revision. The upward movement was checked; business awaited the action of Congress with respect to tariff rates. This delay represents a considerable financial loss, together with hardship and suffering for many persons. There would be some compensation for all this in a real and just revision, even in one that should be in accord with the demand of the Republican platform for duties equal to the difference in labor costs, plus a reasonable profit for domestic industries. But the bill which, in all probability, is soon to be enacted will not be a real and just revision, nor will it be in harmony with that platform. The new tariff, so far as its provisions can be foreseen, will be a re-enactment of the old one, with the addition of increases—procured mainly by trick and device—to satisfy the greed of a few persons. If this could have been foreseen a few months ago, when impending revision began to retard industrial and commercial recovery, the American people could have gained something by buying off revision, paying large sums raised by public contribution to the protected manufacturers who have procured the insertion of "snakes" in Mr. Payne's bill and the bill of Mr. Aldrich, and stipulating that the present law should not be disturbed. Of course, there could have been no transaction of this kind, but we can now look back and see that if this special session, with its sham revision, had been prevented, the country would have gained several months in the forward movement toward a complete restoration of prosperity.

Bi-Partisan Boards

On matters that are not political—and there are such; education is one, and highways, insurance and immigration are others—it has been the growing custom to appoint representatives of both parties on a board or commission of authority, and often the law requires it. What Mr. Bryan thinks on this subject appears in an editorial in *The Commoner*, in which he attacks Secretary Dickinson, of the War Department, who has always

called himself a Democrat, but who did not believe in the free silver doctrine and did not vote for Mr. Bryan. Secretary Dickinson is assailed as no Democrat, as an aristocrat, as one who has been selected for the purpose of breaking up the Democratic party in the South. It is very natural that Mr. Bryan should regard no man as a true Democrat who preferred a gold Democrat to one of the free silver variety. But it is another point in his editorial that now concerns us. He says:

"There is a good deal of talk of bi-partisan boards, but as a rule where a man of one party appoints men of another party to a bi-partisan board, the man appointed has either betrayed his party or is expected to. This is not always the case, but this is the rule. In the case of Mr. Dickinson the appointment is given him because he is not in harmony with his party, and he is not expected to act in the interest of his party as a Cabinet officer."

Leaving aside the application to Mr. Dickinson, who says he cannot see how the direction of the War Department can involve partisanship, we see here the confession that Mr. Bryan is opposed to bi-partisan boards, and the likelihood that he would not have appointed them if President. His principle is the same as in the old rule that to the victors belong the spoils. It is this on which is based the opposition to the reform in the civil service.

The funded debt of the German Empire, on which interest is paid at from 3 to 3½ per cent., is about \$800,000,000, while that of Prussia is about \$1,850,000,000, at the same rate of interest. This seems crushing enough, but it is not enough. The Imperial Government plans to float another loan of \$80,000,000, and Prussia will call for a popular loan of \$122,000,000 at 3½ and 4 per cent. All this the people will have to pay in increased taxes; and these taxes are for increased military expenses, for larger army and more Dreadnoughts. How long will the people be willing to endure such exactions? Even the rich United States will have to borrow money because our income is not sufficient to pay our expenses, and chiefly for war in time of peace, for a bigger navy, and for pensions which seem never to be reduced.

It is amazing how patient the people can be under these burdens, and with what simplicity they believe that to be prepared for war is the best insurance for peace. The best insurance is a public sentiment which demands that all differences whatever between nations shall be settled by arbitration. We would have the United States press and insist on agreements between the nations; but first our own Senate should be taught the lesson, which is one that the National Peace Congress in Chicago next week is meant to advance.

The Farmer's Uplift

A farmer correspondent of THE INDEPENDENT, discussing the proposed uplifting of the farmer, wishes to know if the farmer himself has got anything to say about the matter. He thinks this uplifting will be very unpleasant if it is done entirely by outsiders. He is perfectly right, and his statement probably expresses the sentiment of nearly all the farmers that have considered the proposal of our ex-President. He is right farther in saying that the first thing to be done is to educate the farmer to see better and feel better and desire better, before he will be able to create beautiful homes, surrounded by beautiful things, and know how to provide better food with better cooking. If the farmer does not want these improvements no commission can bring about a change. Our correspondent very aptly hits the mark when he tells of a neighbor whose new house was furnished with a bathroom, but he kept his calves' milk in the bathtub. It is all well enough to talk to the average farmer about better drainage and cesspools and better sanitary surroundings every way, but if he is too poor to carry out your ideas he will only be annoyed and tortured by them. "The man whose whole time is spent kicking the wolf back thru the crack in the door does not have much time for art and culture." The only relief that we can see is more industrialism in our schools, and widening the influence of our agricultural colleges. This is being done very rapidly, far more rapidly than could have been hoped for ten years ago, and now the farmer must learn to take

his progress step by step and not jump by jump. Let him educate his boys in industrial knowledge, so that he can keep them at home on the farm. There certainly is no good reason why our back-of-the-times farmer shall not make a little improvement each year. He can put in a few berries and small fruits, and he can give his children a chance to cultivate flowers. He must comprehend and humor the tastes of his wife and daughters as well as his own. A little more intensive farming can be introduced anywhere. There is more money in it as well as more pleasure. On the whole we are inclined to think that the commission has done this good, that it has set the farmers talking about progress, and those that kick the hardest will not sleep the soundest. They will go to work with a little more zeal and enthusiasm for betterment. It will not be an uplifting from the outside, but a decided uplift from the heart of the home.

Revising the Prayer Book

There is a fair chance for some much needed revision of the Prayer Book of the Anglican Church. The English Prayer Book differs in some important points from the American. The Lower House of Convocation of Canterbury has had a committee of twenty-four at work on revision, and their report has been published. Most important of all is the amendment (six dissenting) that the repeating of the Athanasian Creed, with its damnable clauses, be no longer required. It is not in the American order of service. On the other hand, they allow the vari-colored "Eucharistic vestments," but declare that they are "not symbolic of any distinctively Roman doctrines." Some passages in the Psalms are retranslated, and such expressions as "our vile body," and the interpolated verse about "the three witnesses," are corrected. An entirely new alternative Burial Service is provided, which avoids the 90th Psalm, and makes the whole "comfortable" instead of painful. In all there are 128 clauses of recommendations, which involve a considerable revision, and will suggest these or other improvements to the American Protestant Episcopal Church.

The center of the Jewish world may one of these days, if the Zionists have their way, go back to Jerusalem, but at present it seems to be rapidly moving from Poland and Russia to this country. We observe that the leading Jewish quarterly in the English language is to be transferred from London to Philadelphia, where it will be edited by Dr. Cyrus Adler, who has been called from Washington to be president of the new Dropsie College. Moses Dropsie was a Jewish lawyer, who lately died at the age of eighty, leaving a million dollars to establish a Hebrew seminary, and leaving the execution of the project to Judge Meyer Sulzberger, who had studied law with him. We do not wonder that he declines the legation at Peking. Now, there is a Jewish theological seminary in this city and another in Cincinnati, and a third in Philadelphia is hardly needed; so this will be devoted to more pedagogic work and will educate Jewish teachers for religious work rather than rabbis. From the fact that Dr. Margolis, formerly of the Cincinnati Jewish seminary, has been called to its aid we judge that Dropsie College will not be hostile to Zionism.

The appointment at Rome of Dr. Farrelly as Bishop of Cleveland reminds us of Cardinal Newman. Father Farrelly is a convert, born in Virginia, who studied in Rome, and after ordination spent a year or so in Tennessee. During this time he wrote a paper in a Catholic weekly known as *Adam*, Memphis, in which he attacked the Catholic clergy of Andrew Jackson's State in a very bitter way. Father Walsh, of Chattanooga, answered him, and one sentence quoted by Newman has become classic. He said, "A man can never know the trials of a missionary till he has made his saddle-girths a sacristy." The meaning is, that a Tennessee priest must carry on his horse all his paraphernalia, and in consequence has little time to bother about rubrics and liturgy.

While Mr. Aldrich's committee is restoring the duty on hides and wood pulp, careful study of the committee's reported bill by experts is bringing to light many large increases which were hidden under new classifications or obscured by

the substitution of specific for the present ad valorem duties. For example, a committee of merchants sends to Senator Root a practical analysis of the cotton goods schedule, showing advances ranging from 25 to 77 per cent. upon a long list of fabrics. Silk merchants point out increases of about 60 per cent. in parts of the silk schedule. And numerous other additions have been unearthed. As samples may be mentioned the duties on razors, very nearly doubled, and a provision which would have the effect of doubling the duty on sardines. Senator Dolliver asserts that he has found one increase of 600 per cent. But the effect of many parts of the revision will not be known by the public until the new law has been enforced for a time.

It may interest readers to learn how the commission appointed by Pius X to secure a correct text of the Vulgate, which is Jerome's translation of the Bible into Latin, is going at its work. They have Pope Clement VIII's revised text of 1592, now the received text, set up, without punctuation or capitals, in narrow columns of about three words to a line. Four hundred copies are available for comparison with manuscripts, the object being to classify the manuscripts into families, much as Westcott and Hort have classified the manuscripts of the Greek Bible. Six Benedictines have been entrusted with the task, which is likely to be prolonged so that none of them may live to see the work done.

One of the most cheering signs as to conditions in the Southern States is the increased appropriations which the legislatures are giving to the State universities, agricultural and mechanical colleges and colleges for higher education of women. For buildings, support and equipment Virginia appropriated at the last last session \$336,000; North Carolina, \$260,000; South Carolina, \$388,000; Georgia, \$360,000; Florida, \$107,500; Kentucky, \$178,000; Tennessee, \$50,000; Virginia, \$300,000; Alabama, \$315,000; Mississippi, \$357,000; Louisiana, \$87,000; Arkansas, \$150,000, and Texas, \$323,000. To these amounts are to be added the receipts from the funds established by Congress for agricultural colleges and some other funds.

Superintendent Hotchkiss and the Dinner of Life Agents in New York

THE executive committee of the National Association of Life Underwriters met in New York City on April 16. The visitors were entertained at dinner at Martin's in the evening by the Life Underwriters' Association of New York. Something like 150 members of the association and their guests sat down to table. Notable addresses were made by Haley Fiske, vice-president of the Metropolitan Life Insurance Company; Superintendent of Insurance William Horace Hotchkiss, the Rev. Dr. Van De Water and Charles Jerome Edwards, of the Equitable Life Assurance Society of the United States. President D. G. C. Sinclair, of the association, acted as toastmaster. Superintendent Hotchkiss made an excellent impression on the assembled life insurance agents. He stated that it was his hope to be able to serve the people of the State and the business of insurance to good purpose. He pointed out the value of organization among insurance men and stated that its value had been demonstrated during the "late unpleasantness." He pleasantly called attention to the brevity of his incumbency of his office by remarking that "you would scarcely expect one of my age to speak in public at this stage." He said that while he had not sought the office of superintendent, he had, nevertheless, found, after two months of experience, that the office was very interesting and he wished to retain it with all of its responsibilities for the full term of three years. His announced purpose was to shape his administration in such a way as to make it possible for every one to have a hearing. Complaints and criticisms will be fairly investigated. Every problem and every proposition is to be given a judicial decision. He promised a square deal to the public, the companies and the agents. Further than this he was not now prepared to talk shop. There was, he said, more fun in the department at Albany than most peo-

ple suspected. Opinions had to be prepared on such questions as whether a slot machine is an insurance agent, requiring a license. A learned opinion had been submitted that an agent must be a person. The machine was not a person and could not put in any demand for a license, but every man, machinist or truckman, who had any duties in connection with the machine must be licensed under the certified agent act.

The superintendent, by his droll reading, caused much laughter in his presentation of the prospectus, under the emblem of the stork, of an insurance scheme to provide an endowment of \$500 for each baby born to a member of the fraternity or sorority. The requirements for membership were highly amusing. The insurance department had decided not to take charge of the cradle, and the application of this insurance concern for a license to transact business had been disposed of by the suggestion to the promoters that they refer themselves to the departments of health and public safety. Superintendent Hotchkiss said he expected to find opportunities to be serious during the next three years. It was his purpose to give his support to every proposition that is good for the people and the insurance business.

✱

THE Prudential Insurance Company of America, of which John F. Dryden is president, paid to policy-holders during 1908 over \$19,000,000 and had a dividend fund to the credit of participating policies on December 31st of nearly \$15,000,000. The gain in life insurance in force last year was over \$97,000,000, and the total payments to policy-holders since organization, plus the amount held at interest to their credit, is over \$313,000,000. The tax payments last year were nearly \$1,250,000, and over \$10,000,000 was loaned the last year to policy-holders on security of their policies. The number of policies now in force is 7,731,730, insuring \$1,434,551,347. All these figures are most gratifying and show the hold which life insurance has on the people of the United States.

Financial

New Checks for Travelers

IN our issue of last week we said that travelers then crossing the Atlantic were carrying the first issues of the American Bankers' Association's new "international money," or travelers' checks. The introduction of these checks, supported as they are by leading banks and bankers in all parts of the world, is a most commendable movement, which will promote the convenience of American travelers everywhere and be duly appreciated by foreign banking institutions that have been asked to cash checks from many sources in this country. Uniformity, absolute safety and worldwide co-operation make these checks time-savers for tourist and banker alike. The introduction of them and the management of the international system were undertaken by the Bankers' Trust Company, of 7 Wall street, this city (E. C. Converse, president), whose board of directors is composed of prominent officers of nearly a score of our leading banking institutions.

A great amount of preliminary work was required. This included correspondence with about 25,000 banks and bankers in this country and several thousand banks abroad. The results are shown in part in a book of 180 pages, issued by the Bankers' Trust Company, and containing a list of foreign correspondents who will cash the checks. These corre-

spondents (banks and bankers, including all of the first rank) are to be found wherever banking business is done, whether it be in Europe, Alaska, Hawaii, South America, Australia, Siam, Africa, Iceland, or the Fiji Islands. There must be 6,000 places named in the list, and more than 7,000 banks. Wherever a traveler goes, he may be sure that if he carries these checks he can get them cashed near at hand without delay or annoyance.

Plain instructions are given in print to all who use them, and they are to be issued in all of our cities. The Bankers' Trust Company is now filling banks' orders for them as fast as the work can be done by the American Banknote Company, whose resources are taxed by the demand. The checks (one of which is reproduced on this page) are printed upon paper scientifically protected to prevent counterfeiting. Tourists and bankers the world over will be grateful to those who devised this international money and have so admirably made provision for a wide use of it.

....The New York Legislature has past a bill prepared by the Attorney-General and designed to prevent further delay in the payment of special franchise taxes by public service corporations. These taxes are in arrears to the extent of \$27,000,000.

Survey of the World

The Government's Trust Policy

Attorney General Wickersham was the guest of the members of the bar of New York at a dinner in that city, on the 30th ult. The speech made by him on that occasion, concerning the policy of the Department of Justice with respect to the enforcement of the Anti-Trust law and certain other statutes, is regarded as one of much significance and weight. It is asserted that his statement had been approved in manuscript by President Taft and the Cabinet. He said:

"You all know that the attitude of a very large part of the business community toward some of the laws enacted by Congress was prior to six or seven years ago one of indifference when not of hostility. There was a prevailing impression that many of the laws dealing with economic subjects had been passed to be pointed to with pride rather than to be enforced.

"Then there came a rude awakening. The last Administration set to work with vigor, with energy, which was accompanied at times with newspaper clamor, to enforce these laws. Business men who eight years ago had not read the Sherman anti-trust law today know it by heart, and railroad men and shippers alike have an intimate personal acquaintance with the interstate commerce act. No American business man can today truthfully say that he does not know that it is a crime for a railroad to give or a shipper to accept a rebate from the established interstate rates.

"The work of the present Administration is none the less important than was that of the last in continuing to enforce the laws of the country and in endeavoring to effectuate the intent of the people speaking thru Congress, in preventing the things which the people have come to believe to be inconsistent with the welfare of the republic, but the methods which were necessary to awaken the business community to a recognition of the existence and vitality of these laws are no longer essential.

"It may be, it probably is, true that in the movement to impress upon the whole business world the meaning and force of certain laws

and the necessity of attention and obedience to them, some suits were instituted and some prosecutions commenced without sufficient consideration and without adequate cause. When such conditions are found to exist the present Administration will not hesitate to withdraw the suits or dismiss the prosecutions. Such action must not, however, be taken as any indication of an intention by the Administration to abandon in the slightest degree the vigorous, impartial enforcement of the law or to undo in any degree the splendid work of the last Administration."

We had heard frequently of late, he continued, from representatives of certain business interests cries of "Let us have peace!" and "Let us alone!" The price of peace was obedience to law. "Those who honestly try to keep the law need not fear prosecution." He was aware that there was uncertainty as to the precise scope and meaning of the Sherman Anti-Trust law:

"I should be the last to authorize the institution of a criminal proceeding against men who without intent to violate the law have nevertheless acted in technical contravention of an extreme and most drastic construction of that enactment. But certain of the principles underlying that law are assuredly now understood, and any attempt made at this time with the present construction of that law agreed-upon by all the higher courts to combine in the form of a trust or otherwise with the obvious intention of restraining commerce among the States or of creating a monopoly of an important part of that commerce would evidence such deliberate intention to break the law as to justify and compel the Government to use all or any of the remedies given by law adequate to prevent the accomplishment of such purpose and to punish the attempt."

It was to be hoped, he said in conclusion, that at an early day the Supreme Court would authoritatively define the full scope and effect of the Sherman act. If that court should give to it "a construction as far reaching as some of the Judges of the Court of Appeals in this

Circuit gave in the tobacco case, Congress may so amend the act as to except from its provisions the ordinary agreements which are the necessary result of healthy business conditions, while still effectively prohibiting the creation of those far-reaching monopolies which are believed to be incompatible with the wholesome growth and progress of the republic." The present Administration had the subject under consideration with a view of submitting to the next Congress proposed amendments to the act. —Joseph H. Choate presided at the dinner, and the remarks with which he introduced Mr. Wickersham were not regarded as complimentary to the latter's predecessor or to Mr. Roosevelt's Administration. Said he:

"Under Mr. Wickersham, justice will not be administered as a burlesque and a travesty. You will see no corporation fined \$29,000,000 as the result of an ill-advised demand, only to be reversed and to be regarded as a travesty. There will be no encroachment of the Executive upon the judiciary, no criticism of the one by the other at intervals. He will demonstrate once more that ours is a Government of laws and not of men. He will defend the Constitution. He has been a corporation lawyer, a defender of institutions which twelve months ago were everywhere condemned. It is quite time they had their innings."

Among those present were about fifty Judges of the Federal or State courts.

Restitution by the Sugar Trust

In a test suit brought by the Government, the American Sugar Refining Company (or Sugar Trust) was recently found guilty of defrauding the Treasury by a device attached to the scales which determined the weight of the company's imported raw sugar, on which duties are paid. The penalty fixed by the verdict in that suit was \$134,116. The Government at once set out to collect from the Sugar Trust about \$2,250,000 more, alleging that the Treasury had been defrauded of this sum, at least, by the false weighing of cargoes not involved in the suit which we have mentioned. On the 29th, the Sugar Trust voluntarily submitted the justice of the charge and settled with the Government by paying \$2,250,000 in cash, this sum including the \$134,116 awarded in the suit that was tried. The payment was made by advice of the Trust's counsel.

It appears from the statement of these attorneys that there was a prospect that the Government's claim would be raised to \$3,000,000, and that proceedings for forfeiture of the sugar fraudulently weighed would have increased greatly the sum to be paid. The Trust abandons its protest and gives up its right to appeal. This settlement has been approved by the Attorney-General and the Secretary of the Treasury. It does not, however, restrain the Government from prosecuting criminally the officers of the Trust, or the employees; who were guilty of these frauds. They will be prosecuted vigorously, it is asserted by attorneys representing the Government, and earnest efforts to bring them to justice will be made.—The same company, or Trust, has been sued by the City of New York for taking water from the public mains by means of pipes running into the refineries and having no meters attached. It has offered to settle by the payment of a sum which the city authorities will not accept. They demand \$230,000.—The fine of \$1,808,753 imposed upon the Waters-Pierce Oil Company in the suit of the State of Texas against that company for violation of the Anti-Trust law has been paid. Officers of the company carried the money in an automobile from a bank to the State Treasurer's office in Austin.

Tariff Rates in the Senate

The most interesting incident during last week's tariff debate in the Senate was the introduction, on Friday, of the Finance Committee's amendments relating to maximum rates, a customs court, and the employment of investigators by the President. In the early part of the week Mr. Bailey spoke for several hours in support of an income tax, urging that the weight of taxation should fall upon wealth rather than upon poverty, and asserting that a reduction of the tariff rates by one-third would leave enough to insure a legitimate profit to protected industries. He suggested that labor might be protected by restricting immigration. Mr. Overman offered an amendment increasing the head tax on immigrants to \$12. On the 28th, during a discussion of the duties

on lumber, the declaration of last year's Democratic platform (for free lumber, wood pulp and print paper) was repudiated by several Southern Democrats. Mr. Bacon, of Georgia, said the platform had been drafted over night by a few men and did not represent the sentiment of the party. Mr. Fletcher, of Florida, argued for the retention of the present duty on lumber. This was also the position of Mr. Simmons, of North Carolina. It is said that about one-half of the Democrats will vote for a lumber duty as high as the one now imposed. Mr. Nelson, of Minnesota, who severely criticised the Senate bill and preferred that lumber should be on the free list, was willing to compromise on a duty of \$1 per thousand feet.—The committee's plan for maximum rates provides for much higher duties than were indicated in the bill past by the House, which for convenience may be called the Payne bill, while the Senate committee's revision is commonly called the Aldrich bill. The Payne maximum was an addition of 20 per cent., or one-fifth, of the ordinary or minimum duty. But the Aldrich bill would add to the ordinary duty 25 per cent. *ad valorem*. This would multiply some of the ordinary rates by two, or even by three, for a 15 per cent. rate would be increased, not to 18 per cent. (as in the House bill), but to 40 per cent. Inspection of the Senate committee's table of average rates under the Aldrich bill shows that duties would be increased as follows: Chemicals, from 28.21 per cent. to 53.21; glassware, from 48.70 to 73.70; metals, from 31.08 to 56.08; sugar, 65.30 to 90.30; agricultural products and provisions, 32.25 to 57.25; cotton goods, 47.14 to 72.14; silk goods, 60.76 to 85.76. Of course, the rates so increased would in most cases be prohibitory. The reported amendment provides that these maximum rates shall go into effect upon imports from all countries automatically on March 31st, 1910, but the President is empowered to give, by proclamation, then or thereafter, the ordinary rates to any foreign country if he is satisfied that the country in question imposes no export duty on goods sent to the United States, and does not discriminate, directly or indirectly, against imports from the United States.

There is no provision for any concession on our part, of a rate lower than the ordinary Aldrich duty. It is also provided that in the application of maximum rates a duty of 10 cents a pound on tea, and one of 5 cents on coffee, may be imposed. The committee also proposes the establishment of a Customs Court of Appeals, composed of five judges (salary, \$10,000), which is to have exclusive appellate jurisdiction to review decisions of the Board of General Appraisers, and whose decisions are to be final. For this court there is to be appointed an Assistant Attorney-General, with a deputy and four attorneys. The committee was asked to provide for a permanent advisory tariff commission. Its amendment merely authorizes the President to secure information for his use and for Congress by employing such persons as may be required to make thoro investigation concerning domestic and foreign products.—Foreseeing the enactment of maximum and minimum rates, the State Department has given to the several foreign countries with which we have commercial agreements notice of our intention to terminate them.—Advocates of an income tax have ascertained, it is said, that a majority for such a tax cannot be obtained in the Senate. It is understood that Mr. Aldrich needs a few votes for the committee's bill. Some predict that they will be procured by certain concessions in rates. The number of Republican insurgents who demand revision downward is said to be about eighteen.

Labor Questions At the convention of anthracite coal miners, on the 28th ult., the agreement made by their representatives in conference with the mine owners was approved by unanimous vote, and on the 29th it was signed. The term of it is three years. It is identical with the agreement which expired on March 31st, except that the following provisions have been added:

(1.) The rates which shall be paid for new work shall not be less than the rates paid under the Strike Commission award for old work of a similar kind or character.

(2.) The arrangement and decisions of the conciliation board permitting the collection of dues on the company property and the posting

of which thereon shall continue during the life of this agreement.

(3.) An employee discharged for being a member of a union shall have a right to appeal his case to the conciliation board for final adjustment.

(4.) Any dispute arising at a colliery under the terms of this agreement must first be taken up with the mine foreman and superintendent by the employee, or committee of employees, directly interested, before it can be taken up with the conciliation board for final adjustment.

(5.) Employers shall issue pay statements designating the name of the company, the name of the employee, the colliery where employed, the amount of wages, and the class of work performed.

An impression prevailed among the miners that no further concessions could be obtained, and that renewal of the old agreement would probably prevent a reduction of wages. It is expected that there will be less work at the mines for some weeks to come, because the companies have about 10,000,000 tons of coal on hand.—The strike of employees in the carrying trade on the Great Lakes is now in force, and it involves about 30,000 men. The controversy began with the refusal of the marine engineers to sign contracts in which there was an open-shop clause.—In Pittsburg, the threatened strike of the street railroad employees has been averted. The demand for higher pay was withdrawn, and the company will make a more satisfactory arrangement of work hours.—Carpenters, bricklayers and painters in Montana are on strike for an increase of wages.

Politics in Newfoundland

An election is soon to take place in Newfoundland, and the canvass has been a lively one. Sir Robert Bond, formerly Premier, has been making addresses in villages along the coast. It was recently reported that he had been quietly negotiating with the Dominion Government to bring about confederation of the island with the Dominion. This report excited the sharp hostility of many voters. When Sir Robert, on the 20th ult., approached Western Bay in a small steamship, intending to make an address at that place, he was met by a party of residents, who came out in a boat and warned him not to land. He insisted, however, upon going ashore. He was permitted to ascend the steps leading up to the floor of the pier, but when he reached the top he was seized by

those who had assembled there, was kicked and was then thrown headlong into the sea, where he nearly drowned before rescuers lifted him into a small boat, which carried him back to the steamship. The campaign has been one of much bitterness. At Western Bay a majority of the residents are supporters of Sir Edward Morris, leader of the party in opposition to Sir Robert Bond.

The British Budget

Confronted with the necessity for meeting a deficit of \$80,000,000, caused chiefly by the adoption of old age pensions and the demand for a greater navy, the British Government has been obliged to seek out new sources of revenue. The new budget presented by the Chancellor of the Exchequer to the House of Commons on April 29th will arouse strong opposition from the moneyed classes, because it is devised to throw upon them the burden of the increased taxation. The budget speech by Mr. Lloyd-George occupied four and one-half hours. The sitting had to be suspended for half an hour in the midst of it for the Chancellor to recover his voice. Mr. Lloyd-George congratulated the country on the decrease of revenue from one of the sources, that is, the consumption of liquor due to the growth of temperance sentiment. On the naval question he admitted the necessity of greatly increased expenditures for defense, but stated the Government refused to incur the enormous expenditure advocated by the Opposition unless there was manifest need for it. "We cannot afford, great nation as we are, to build navies against nightmares." There must also be an extension of the old age pension system and a measure for state insurance against unemployment. The treasury would be called upon to contribute a million dollars to supplement the compulsory contributions of the working classes for this purpose. Legislation must be enacted for the encouragement of small agricultural holdings and the reclamation of waste land. A system of afforestation would be started by an appropriation of \$1,000,000. To provide for the increased expenditure, the amount appropriated for the sinking fund would be reduced by \$15,000,000. The income tax would be unchanged on earned incomes

below \$15,000. Fourteen pence to the pound would be imposed upon incomes above that. Persons whose incomes are less than \$2,500 a year would have an abatement of \$50 for each child under sixteen years of age. The super-tax of six pence in the pound, making a total of one shilling, would be placed on all incomes over \$25,000. Death duties would also be increased. Estates of £5,000 value would pay 4 per cent.; those of £20,000, 6 per cent.; £40,000, 7 per cent.; £70,000, 8 per cent.; £100,000, 9 per cent.; £150,000, 10 per cent.; £200,000, 11 per cent.; £400,000, 12 per cent.; £600,000, 13 per cent.; £800,000, 14 per cent.; and above £1,000,000, 15 per cent. The extra yield was expected to be \$63,850,000. Automobiles will be taxed for the maintenance of highways. A six horse-power motor car will pay two guineas and one of sixty horse-power or over forty guineas, with others in proportion. A tax of four cents a gallon is placed on gasoline, with a rebate for commercial motors. Doctors' cars would pay only half rates. The stamp duties on the transfer of real estate would be increased from one-half to 1 per cent. Stock exchange transactions and bonds would pay 1 per cent. Legacy and succession duties were to be raised from 3 to 5 per cent. when the beneficiary is a brother or sister, and to 10 per cent. where there is no relationship. The cost of liquor licenses would be increased to \$50 in small villages and to \$175 in London. A tax of three pence on the pound would be imposed upon all receipts from the sale of liquor. The tax on spirits would be increased, while that on beer would remain unchanged. Eight pence on a pound is added to the tax of manufactured tobacco. Tea and sugar, being accounted by Mr. Lloyd-George necessities of life, will bear no additional burden. The unearned incomes due to the increase of land values will be taxed 20 per cent. Labor exchanges would be established in England at a cost of \$500,000 to the Government.

Abdul Hamid Deposed The Young Turks have again met a perplexing crisis with promptness and decision. On April 27th, Abdul Hamid was dethroned and his younger brother, Mohammed Rechad, made Sultan. The deposition was duly effected

according to the forms of Moslem law by a fetwa or legal decision by the Sheik-ul-Islam in response to the following hypothetical question:

"What becomes of an Imam who has destroyed certain holy writings and who has seized property in contravention of the Sheri, who has committed cruelties and ordered the assassination or imprisonment of exiles without justification by the Sheri, who has squandered the public money; who, having sworn to govern according to the Sheriat, has violated his oath; who by gifts of money has provoked internecine bloodshed and civil war, and who is no longer recognized in the provinces?"

"Answer of the Sheik-ul-Islam: 'He must abdicate or be deposed.'"

The notification was conveyed to Abdul Hamid at 3 p. m. by a committee of two officials, two deputies and two senators.

ENVER BEY.
Leader of the Young Turks.

As they entered the Yildiz Kiosk they looked to their arms, fearing an outburst of murderous rage from the Sultan. He was brought out from the Harem carelessly dressed, pale and trembling. As soon as he was informed of the fetwa he begged for his life, and when assured that his life was not in danger he protested that he had deserved better treatment from the nation, that he had defended his country against the Greeks, that he had kept his oath to support the constitution, that he had refused to sign many death sentences, and even spared the life of his brother Mohammed and treated him well. "Any other Sultan," he said, "would have had him killed." Finding the committee reticent and in-

exorable, he said: "It is fate. I will do whatever you desire. Only protect me and my family and permit me to retire to the Cheraghan palace, where I was born." The Young Turk leaders, believing that it would be dangerous to allow the de-throned Sultan to live near Constantinople, sent him to the center of their power, Salonika, where he is lodged in the country house of a Jewish banker. He left by train on the following day with eleven of his wives, a son and two daughters and a few servants. It is uncertain whether he will be tried by court-martial or left undisturbed. That he was the instigator of the recent mutiny has become

The New Sultan

The fetwa of the Sheik-ul-Islam was laid before parliament about ten o'clock in the morning of April 27th, and within a few minutes the joint assembly of the two houses had declared the deposition of Abdul Hamid and selected Rechad Mehmed or Mohammed as his successor. The new Sultan arrived at the Ministry of War at 3.30 accompanied by Chefket Pasha, commandant of the victorious troops from Salonika; Said Pasha, President of the Senate; Ahmed Pasha, President of the Chamber of Deputies, and the Sheik-ul-Islam, in his purple robes and white turban. Rechad wore a black frock coat and red fez. His manner was unpretentious, and after taking the oath of office administered by the Sheik-ul-Islam, he received the homage and congratulations of the deputies and senators by shaking hands with them instead of requiring them to kiss his hands or robe. On Friday he drove thru the streets of Constantinople almost unprotected to official religious exercises, the Selamlik at the Mosque of St. Sophia. Very little is known of Rechad Effendi, who now becomes Sultan Mohammed V, for he has been kept in seclusion, practically imprisoned, by his brother thruout his reign, and many persons have been executed or exiled for attempting to communicate with him. He was born November 3, 1844, and is therefore two years younger than Abdul Hamid. He has two wives and several children. He is believed to be of a mild and gentle disposition, and to have acquired, during his imprisonment, some knowledge of modern life. He inaugurated his reign by granting the following interview to a correspondent of the *London Chronicle*:

"During my seclusion of thirty-three years my enemies have slandered me. They have said that I was a madman, bordering on imbecility, and shut me up for years. But Allah has so willed it that now in His merciful bounty He has been pleased to call me to fulfill my destiny and rule over Islam.

"My voice has been silent for thirty-three years, but the voice of true conscience has never been stilled. You ask me what I think of the situation in modern Turkey as I find it today after the political resuscitation of long years. I will tell you that tho shut up here I have contrived, feebly perhaps, to keep in touch with the march of progress of the outside world.

"The few partisans who have been loyal to me thru the dark days of adversity are aware

CHEFKET PASHA.

Commandant of the Turkish Army which recently threw the Sultan.

evident. Many of the soldiers and minor officers concerned in it were found when taken prisoners to be well supplied with gold coin. The mutineers are being tried by court-martial, and 250 of them have been found guilty and shot. Nadir Pasha, the second eunuch of the palace and favorite of the late Sultan, was hanged on the Galata bridge. He was a Nubian slave of gigantic stature and one of the three men on whom Abdul Hamid had relied for carrying out his secret orders and intrigues. He was active in planning the mutiny of April 13th, which, it is now believed, contemplated the massacre of the foreign residents of Constantinople. This was prevented by Chefket Pasha, who took possession of the city a day sooner than had been anticipated.

that from my earliest years, while faithful to the precepts and teachings of the Koran, I have been an advocate of a constitutional charter and parliamentary institutions. From this opinion I have never deviated. I hold it today as strongly as I did when a young man, seeking to imbibe the knowledge of Western civilization and its methods."

The Riots at Adana

There have been several outbreaks of fanaticism during the past week and the danger is not entirely over, but it is believed that there will be no more serious massacres. The reason why the riot was unchecked for many days was because the local authorities were uncertain of the outcome of the struggle in Constantinople and feared to take any decisive action, lest they should find themselves upon the wrong side. Accordingly they let Turks and Armenians fight it out among themselves. The few Turkish soldiers that were stationed to guard the mission buildings at Adana and Hadjin deserted, leaving the hundreds of girls in the mission schools unprotected. After the disorder had abated many of the girls were sent down to Mersina to avoid the pestilence which followed the massacres. There were 1,400 sick and wounded in Adana. Smallpox and other epidemic diseases have broken out. Great numbers have perished from starvation. A large part of Adana has been burned, including the Jesuit and Armenian churches and schools. The American Mission building, the Catholic Sisters' school and one Gregorian church have been saved. The bodies of the murdered Armenians are being gathered up in carts and dumped in the river. Rev. Mr. Gibbons, of Hartford, Conn., reports counting a dozen cartloads being carried to the river within half an hour on Saturday morning. Latakia is filled with refugees from the adjacent villages which have been destroyed by the Mohammedans. The number is estimated at 5,000, and the supply of food and medicine is altogether inadequate. The Government at Constantinople is doing what it can to check the disorders in Asia Minor. The Governor-General of Adana who was placed in power by Abdul Hamid has been removed and a new Governor-General sent to the province, with 3,000 reliable soldiers from Salonika. A military tribunal has been

organized to court-martial the leaders in the massacre. Parliament has appropriated \$100,000 for the relief of the sufferers in that region.

Foreign Notes

The birth of an heir to the Queen of the Netherlands on the morning of April 30th has relieved the people from the fear that their country would at her death devolve upon a German prince, Grand Duke William of Saxe-Weimar-Eisenach, as next of kin, and so lose its independence. Twice before they have been disappointed in their hopes, so now they are wild with joy, altho it is regretted that the infant is not a boy. The princess will receive the names of Juliana Louise Emma Marie Wilhelmina. Queen Wilhelmina was born in 1880, ascended the throne in 1890, and was married in 1901 to Prince Henry of Mecklenburg-Schwerin. — May Day past off in France much more quietly than was expected. There were no revolutionary manifestations in Paris except violent speeches, and the public services were not interrupted. The general strike which was threatened by the Federation of Labor as a demonstration of the power of "Syndicalism" has evidently been deferred to a more favorable moment, when the Government is less prepared. M. Lepine, Prefect of Police, had troops stationed at strategic points about the city with bicycle and automobile corps to keep them in communication, and all parades were prohibited. Seven postal employees have been summoned by the Government before the disciplinary council on charges of insubordination because of their anti-patriotic and revolutionary speeches. — The Russian troops under General Snarsky have arrived at Tabriz, Persia, and relieved that city from the state of siege. The foreign residents have been in danger of massacre and the people of starvation for months on account of the conflict between the Constitutionalists under Satar Khan, who were holding the city, and the Shah's troops, under Ain-ed-Dowleh, who were attacking it. Provisions have now been allowed to enter the city and order is restored. The Russian troops number 7,000 or 8,000 infantry, besides cavalry and artillery, and preparations have been made for staying at least a year.

The Navy from the Business Standpoint

BY REAR ADMIRAL CASPAR F. GOODRICH

[The following article is the substance of an address delivered last week, Thursday, before the Business Men's Association of Hartford, Conn. Admiral Goodrich is one of the most progressive and able officers of the Navy and what he says is of much importance.—EDITOR.]

THE naval appropriations have risen from comparatively insignificant beginnings until they have reached the not inconsiderable sum of 130 odd millions of dollars per annum. The only real and justifiable object of this large expenditure is the efficiency of the fleet, something which must appeal to every true American. It is, however, altogether right that our business men should insist upon knowing whether those sums are wisely and economically disbursed. In a general way I hope to satisfy your anxiety under this important head.

Speaking broadly, the naval appropriation covers three fields: First, the actual maintenance and operation of the fleet; second, the supplies for the fleet; third, the construction and repair of the fleet, including the installation of its armor, armament and equipment. There is a fourth field, to which I shall recur later.

As to the first, I think but little ground can be found for adverse criticism. The scale of pay and wages being higher in this country than abroad, each unit, whether ship or man, must and does cost more than the corresponding unit in foreign navies. An exception should be made in the case of the higher officers, who receive less pay and fewer allowances than is the case, for instance, in the British service. On the other hand, the junior officers are much more liberally compensated than those abroad. An-

other item of increased expense is the superior quality of our navy ration, a matter rather for congratulation than complaint. Ill-nourished troops are not good fighters. As Napoleon said, "An army marches on its belly." Ships of the same horse power burn practically the same amount of coal, no matter under what flag they move. Herein we are better off than our neighbors, whose fuel cannot be had on terms as favorable as our own.

The question involved in the second field, that of supplying the fleet with the thousands of items needed by the modern man-of-war, has been solved in a way which must compel the admiration of even the most critical man of affairs. At New York, for instance, our purchases amount to between twenty and thirty millions of dollars a year. In spite of a very rigid inspection and the holding of contractors to strict compliance with specifications, which almost, if not quite, represent the standard of excellence, I believe that it may be claimed that the navy buys as advantageously as and possibly more advantageously than any other concern in the market. One reason for this good standing is that supplies are inspected with the utmost promptness; miscellaneous articles which require no prolonged test are either accepted or rejected within twenty-four hours of delivery, and the public bills covering these purchases, made out at

once, are sent to the disbursing agent, who, without even the formality of a receipt, mails to the contractor the full face of his account in a check on the treasury of the United States. It is not in the least an uncommon occurrence for a business house to receive its cash in

Certain articles, such as cement, which has to undergo a rather long test, metals whose physical characteristics have to be determined, or tool steel, india rubber, cloth, etc., that have to be chemically analyzed, are necessarily subject to slower payment, but the fault, if fault there

ADMIRAL GOODRICH.

forty-eight hours after making delivery. The result of this system is that firms are only too anxious to quote their lowest figures. It is no small thing for a house to know that it can get its money almost by return mail. Can the same be said for the houses which you gentlemen represent?

be, lies in the nature of the things themselves and not in our business methods. It would abundantly repay any one to look in at the New York Navy Yard, go thru its great storehouse, handling the multitudinous variety of objects, ranging from a needle to an anchor, and including stationery, books, metals of all

linen, cordage, chinaware, etc., in short, practically everything except millinery. I think one would be amazed at their variety and at the magnitude of the operations of this great depot, from which emanate most of the goods past to our shops. He would also be struck by the excellent order and the evidence of rigid accountability at all points.

The third division of the allotment of public funds is one which has recently and justly attracted widespread public attention. Certain phases I may not touch upon, but in the main the wisdom of the policy inaugurated by our last Secretary of the Navy, Mr. Newberry, and continued by his successor, Mr. Meyer, cannot be denied. Mr. Newberry found a condition of affairs in our navy yards which was the result of methods in vogue many years, for which some justification was possible, but only when considered from an individual and perhaps selfish point of view.

To tell the whole story would absorb too much time. I shall only venture to sketch in a very hasty and imperfect manner some of the salient features.

We must hark back to the organization of the Navy Department when seeking the cause. By statute, the business of the navy is divided among certain offices, called bureaus, in such a manner as the Secretary may think desirable. Certain of these bureaus were intimately associated with work at navy yards. First, was the Bureau of Yards and Docks, whose province may be described as the real estate, comprising buildings, roads, wharves, dry docks, etc., for the care, maintenance and repair of which this bureau is allotted funds by Congress. It has its own corps of employees, some peculiar to itself, such as masons, bricklayers, teamsters, etc. Others, however, could be quite generally employed. Such were carpenters, joiners, painters, patternmakers, machinists, blacksmiths, etc. The next bureau is that of Construction and Repair, whose duties relate to the building and repairing of ships. It is not necessary to enlarge to such an audience as this upon the vast number of trades called upon in this varied and extensive duty. Peculiar to itself, of course, were the shipwrights, yet it too

had carpenters, joiners, plumbers, blacksmiths, painters, machinists, etc. The next bureau is that of Ordnance, charged with the construction of guns and carriages and the making of shell and battery accessories in its great gun shop at the Washington Navy Yard, inferior to none extant either in size of plant or in quality of production. This bureau had, at every navy yard, a certain number of machinists, blacksmiths, patternmakers, carpenters, etc., besides specially trained ordnancemen, who had to do with the handling and installing of things peculiar to ordnance. The fourth bureau, that of Steam Engineering, has for its domain the propelling machinery of vessels. With its variety of shops at each yard it, too, had carpenters, joiners, patternmakers, a foundry and blacksmith shop, machinists, painters, etc. The last is the Bureau of Equipment, which deals with many of the matters which go to the fitting out of ships, particularly the electric installation, so that it, too, had at the yard its own machine shops and foundry, its machinists, patternmakers, blacksmiths, carpenters, joiners, etc.

It thus appears that there was a great multiplication of plant and in many cases as many shops of one kind as there were bureaus. For example, at New York, we had five carpenter shops, five joiner shops, five blacksmith shops, five machine shops, five paint shops, etc., requiring an adequate staff at each to direct its operations. It was held by those who favored this plan that, as each bureau was responsible for the proper expenditure of its appropriation, it must exercise complete control of the necessary plant and personnel. The logic of this induction is open to question. Such a scheme does not exist, so far as I am aware, in any private industrial establishment. I am not alone in believing that, if such were the case, the corporation, when sought for, would be found in the hands of a receiver, and that it is due to the taxpayers of this country that the Government work should be conducted with the utmost economy.

In one respect, this last remark is subject to qualification. The navy yards are simply the instrumentality by which the fleet is kept in good order. For this

reason their plants must be extensive enough to meet the demands of a sudden emergency, which is but another way of saying that frequently many tools lie idle waiting for a call, and that for pure military reasons navy yards cannot compete with concerns which depend for financial success upon running as much as is humanly possible at full blast.

The condition I have briefly sketched was extremely repugnant to Mr. Newberry, who, as a manufacturer of large experience, could not approve a manifestly and unpardonably wasteful system. To put things on a better basis, he exercised his wide powers with a moral courage which should command universal admiration, and directed that shops of the same nature should be consolidated, and the whole mechanical work at the yards concentrated in a manufacturing department under one head, subject, of course, to the general and military control of the commandant, who is, as he ought to be, the representative on the spot of the Secretary of the Navy and the several bureau chiefs. This was taken in the face of the most powerful opposition. For example, the local politicians, however strenuous for economy elsewhere, could not but clamor for large disbursements in their own districts. Furthermore, the move diminished the prestige of the bureau chiefs, and, by eliminating many sinecures and by instituting keen competition side by side among employees of the same trade, with retention in slack times as the reward for the greatest skill and industry, the volume of discontent was notably increased.

The saving to the Government, or, better said, to the people, is as yet solely a matter of estimate. The new plan has been in operation too short a time to yield the figures necessary to a fair comparison. The gain in rapidity of work is self-evident. Where several sets of men, working independently, were formerly employed on parts of the same general job, often having to wait for each other to get out of the way, one central direction keeps only those men busy for whom there are space, time and material.

It would, I am confident, be quite

within the bounds of moderation to hope that the new order will give the navy a new battleship each year without calling for special appropriations.

The new administration at Washington is known to be determined to reduce its budget to the lowest practical figure and to hold its officials to a rigid economy. Its attitude toward the economics of the navy is shown in selecting, as Mr. Newberry's successor, a gentleman skilled in affairs, who has demonstrated his value in every post to which he has hitherto been summoned. At present he is wisely keeping his judgment in suspense, in order to be guided by facts and not by fancies. If navy yard reorganization cannot prove its worth by the event, then a return to the old *régime* will be in order. Personally, I have no doubt that, while making such changes in details as time shall show to be necessary, Mr. Meyer will be glad to adopt the present system in its broad outlines and to add to it features drawn from his own experience. In this heavy and important task I beg that he have the hearty support of such associations as yours, which do not begrudge so essential a branch of the Government as the navy the most liberal appropriations, but which deprecate the spending of a dollar except for full value received.

To fulfill my promise at the beginning of these remarks, I should invite your attention to the fact that the navy has to bear the blame for the spending of large sums of money from which it derives no benefit. The eight hour day, the granting of leave with pay for fifteen days a year to workmen, and Saturday half holidays on pay, calculated to cost hundreds of thousands of dollars annually, comprise a weighty handicap in the race with outsiders. If we also refer—in bated breath—to the navy yards and shore stations which in a business way are wholly unnecessary, we shall perceive abundant reason for saying that when the business men of this land insist upon having a naval establishment conducted on business principles, the navy, the real navy, will be relieved of the reproach sometimes urged, that it makes an extravagant and indefensible drain upon the public purse.

The Outlook in Turkey

BY GEORGE WASHBURN, D.D., LL.D.

[This article, written the day before the deposition of the Sultan, gives an inside view of the Turkish situation in the present crisis. Dr. Washburn, as our readers will remember, was president of Robert College, Constantinople, from 1877 to 1903 and is one of the world's recognized authorities on the politics of Southeastern Europe.—EDITOR.]

THE Turkish mind does not work as ours and it is very difficult, even for one who has lived in Constantinople for fifty years in close rela-

sacred in the name of the prophet—and this only a few months after the people of different races and religions all over the Empire had been embracing one another and rejoicing together over the proclamation of an era of liberty, justice, equality and fraternity.

The only thing that we can do in view of such anomalies is to try to understand, from our point of view, the

MEHMET REŞAD EFENDİ
(MOHAMMED V).

The new Sultan of Turkey.

tion with the people, to predict from one day to another what is likely to happen. It is generally the unexpected which happens. The bloodless revolution of last July was unique in the history of Turkey or of the world. The counter-revolution of April 13th was equally surprising, and nothing could have been more unexpected than to see a Turkish army once more besieging and capturing Constantinople, while the population turned out to see the battles as Americans would go to see a football game, while in another part of the Empire thousands of Christians were being mas-

ABDUL HAMID II.

The deposed Turkish Sultan.

causes of these events. We can see that the revolution of last July was a revolt of patriotic and enlightened Turks who could no longer endure the unmitigated tyranny of the Sultan and who, having won over the army in Macedonia, hoped to save the Empire from destruction by substituting for the autocracy of the

Sultan a liberal constitutional government. For some months it appeared to the outside world that they had not only carried the people with them, but that the Sultan himself had been transformed and was in sympathy with the new order of things. Then like a thunderbolt out of the clear sky came the counter revolution of April 13th, the reaction in Asia Minor and the terrible massacres there and in Syria. It seemed that the Sultan had regained all his power and that the Young Turks had utterly failed to establish any real control over the Government.

It is evident that, in some measure, they had failed, and that they had been overconfident of their power to surmount the obstacles which stood in their way. The chief obstacle was the Sultan, a past master in intrigue, having the sympathy and support of all the fanatical and reactionary forces and all the agents who had been his partners in the plunder of the Empire, surrounded by troops ready to die for him, and possessor of an enormous private fortune, with which he knew how to buy support. They could not have believed in his conversion, but they failed to discover his secret plotting against them. Until he is removed

from the scene they can never be secure.

Next to the Sultan himself the greatest obstacle in the way of the Young Turks and one which they fully appreciated, was the work which the Sultan had done in destroying the old-established civil hierarchy of the Empire—the administration of the government by the Grand Vizier, the Ministers and the officials appointed by and responsible to them—not a very perfect, but a trained and established civil service. He transferred the authority from the Porte to the Palace and gradually the officials in the provinces became simply the agents of the Palace Camarilla—the natural enemies of anything like constitutional government, and knowing no other law than the orders of the Palace. When the Young Turks came into power they could find good men to fill the highest offices in Constantinople, but it was impossible for them to replace the vast army of officials in the provinces and the government bureau in Constantinople by trustworthy men. Even when changes were made the new officials, who were bound to abandon the old arbitrary methods, had little influence. The people fancied that liberty meant the abolition of all government. The Young Turks

THE OLD SULTAN TAKING A CEREMONIAL DRIVE.

found themselves without tools to work with.

Another obstacle in their way was the foundation of an opposition party, which called itself the Liberal Union and professed to be more liberal and constitutional than the Committee of Union and Progress, the recognized leaders of the

Turks is the fact that many of the people of Turkey of different races and religions, each for reasons of its own, do not desire to see a strong centralized government at Constantinople. The Arabs, the Kurds, the Albanians, are Moslems, most of them, but they have thoughts of independence or autonomy, as have the

SERASKIERAT IN CONSTANTINOPLE.

At the time of writing it will result in the proclamation of Mohammed V as Sultan.

Young Turks. This new party was made up of a variety of elements, Moslem and Christian, and was patronized by Kiamil Pasha. It attacked the Committee of Union and Progress in its newspapers and in Parliament with a violence which almost exhausted the vituperative vocabulary of the Turkish language, and it played into the hands of the Sultan by so disturbing public opinion as to make his *coup de main* possible—a result which some of its members could not have foreseen or desired. The Greeks were especially active in this party and the *Levant Herald* was one of its organs.

A general difficulty for the Young

Greeks, Armenians and Bulgarians. Only one-fifth of the population is Turkish. The Young Turks hoped to conciliate all these conflicting interests by a liberal, constitutional form of government, where the rights of all would be equally respected. At first there seemed to be a general response to this promise in the more important parts of the Empire, but all the old race hatreds seem to have revived in full force from Albania to Arabia.

In view of all these obstacles to be overcome we cannot but ask what hope there is of the final success of the Young Turks. At the time of writing it is not certain what is to become of Sultan

Abdul Hamid. As long as he lives he will be a source of trouble, but it may be reduced to a minimum if he is shut up in the palace where he held his deposed brother a prisoner for twenty-five years. The new Sultan can never inherit his power. This obstacle out of the way, I think that the outlook for a constitutional government in Turkey is still hopeful, altho we may wait long before we see it firmly established. We cannot expect the Turks to do better than we did, and our record of the years from 1783 to 1789 is very humiliating, however proud we may be of the Constitution which came out of it.

The Young Turks are genuine patriots with unbounded faith in their principles. Many of them are men of high character and great ability. They have an army that can be depended upon. Their march on Constantinople and overthrow of the counter-revolution in eleven days after its apparent triumph was a military achievement as brilliant as anything in Turkish history, and the discipline of the army was marked in the perfect security of life and property in Constantinople. They have also succeeded in organizing a Parliament which seems capable of accomplishing its purposes. I see the Constantinople papers and have read the daily reports of the sessions from the beginning. The Chamber of Deputies represents all parts of the Em-

pire and all races, but the majority is Turkish and a still greater majority is Moslem. Among these are a large number of the *Ulema*, the religious functionaries. As in all parliaments, there has been too much oratory and some stormy debates, but on the whole it has shown a remarkable knowledge of the real needs of the Empire and the nature of free representative government as seen thru Turkish eyes. There have been frequent appeals to English and French precedents and certainly an honest effort to put an end to the autocracy and make the Parliament the real governing power. It compares very favorably with the parliaments of the neighboring states.

It is to be hoped that the party calling itself Liberal Union will profit by its experience and become nothing worse than a loyal, parliamentary opposition party, and when once the Sultan is out of the way it will be possible for the Young Turks to gradually organize an honest and capable civil service thruout the Empire and thus secure the protection of life and property. It will take long to restore the prosperity of the country, but as it comes it will do much to put an end to the more violent manifestations of race hatreds. So that, notwithstanding all that has happened and all the obstacles which still remain to be overcome, I am still hopeful for the future and still believe in the Young Turks.

BOSTON, MASS.

MUEZZIN OR TURKISH PRIEST, PROCLAIMING
THE HOUR OF PRAYER

UNIVERSITY of CALIFORNIA

by EDWIN E. SLOSSON

WHEN Dean Berkeley, disgusted at an age and clime barren of every glorious theme, set out for the new world to found the university which should inaugurate the Golden Age, he had fixed upon Bermuda as its site, apparently because its sunshine, beauty and tropical luxuriance attracted his imagination. Finding his dream, for which he had sacrificed his fortune, was impracticable, he did the next best thing, which, as often happens, proved to be very much better. He helped along other colleges. He had much to do with the founding of Columbia and the University of Pennsylvania, but Yale was his favorite. To it he gave his library and his land, and the roll of the Berkeleyan scholarship at Yale bears the names of twelve college presidents.

As the course of empire took its way westward it bore with it Berkeley's influence, and, what is unusual, his name.

On the hills overlooking the Golden Gate, where climate and scenery are most like those he had desired for his utopian university, the College of California was founded by Yale men whose ideals he had helped to form and who hoped that here his prophecy would find its nearest fulfilment.

Great individuals are apt to be the offspring of mixed parentage. So are great institutions. The University of California derives its origin from the union of a new England classical religious college and a Morrill Act school of agriculture and mechanic arts. It takes after both sides of the house, according to Galton's law. This combination of qualities that are quite diverse and often antagonistic gives the institution a unique attractiveness. I know of no other university which cultivates both mechanics and metaphysics with such equal success, or which looks so far

into space, and, at the same time, comes so close to the lives of the people; or which excavates the tombs of the Pharaohs and Incas while it is inventing new plants for the agriculture of the future.

It must not be assumed that this happy

so violent in the early years of the union that the friends of both parties urged a divorce, and if it had not been for the legal impediments it would have been accomplished. Those who are interested in the history of the strife, which indeed is not uninteresting, may find abundant

BENJAMIN IDE WHEELER.
President of the University of California.

marriage of dissimilar colleges was effected without trouble. Quarrels were

material in the reports of legislative investigation committees, and the crossfire

THE GREEK

of pamphlets, petitions and speeches. Some hint of it may be derived from reading an editorial in the *Atlantic Monthly* for July, 1874, which deplores the

"bold effort made openly and persistently by farmers' granges . . . that blacksmithing and carpentry as well as plowing should be taught." "Fortunately the danger has been averted."

"Many persons wonder why the friends of the University of California prefer State aid plus State interference, rather than private generosity minus State interference."

The University of California chose the better part, that is, both. In accepting State aid it has not forfeited private generosity, and, on the whole, it has not suffered more from State interference than rival institutions have from patronistic interference. Fortunately, the danger referred to was not averted. I wish that the writer of the *Atlantic* editorial could have been with me when I went thru the new granite palace constructed by private generosity at a cost of \$800,000, the Hearst Memorial Mining Building, and saw in it a room filled with models of timbering and another with forges and anvils. "A mining engineer would lose the respect of his men," said Professor Christy to me, "if he could not sharpen and temper a drill as well as any of them." That reminded me of another significant remark coming from the University of California. In the early days of agricultural research, which were not many years ago either, Professor Hilgard was under

fire in some convention because he advocated the usefulness of soil analysis which he was one of the first to employ. "Why," exclaimed one of his critics, "a farmer can pick up a lump of earth and by squeezing it and smelling of it tell more about what it will grow than an agricultural chemist can find out with his test tubes." "Possibly," retorted Professor Hilgard, "but is a man entitled to be called an *agricultural* chemist if he cannot tell at least as much about a lump of earth by squeezing and smelling as any farmer can?"

In 1877, ten years before the Hatch Act had established experiment stations in all the other States, Professor Hilgard reported the beginning of the scientific development of the agricultural resources of California. If the millions that the Government has paid out for such investigations had all been as wisely spent as his first appropriation of \$250, the United States would have been many times richer than it is. All of the important lines of work that have been developed since are represented in this report of nearly a generation ago, lectures, institutes, correspondence, experimental farms, seed introduction and analysis of water, fertilizers, alkali and soils, the last including a feature whose value the world was slow to recognize, the physical analysis according to the size of the soil particles. Last year the agricultural department published 70,000,000 pages of literature for the instruction of the farmers of the State and wrote 15,000

THEATER.

personal letters in answer to their inquiries.

Looking back on the fight of forty years ago we can see that both parties were right in their fundamental contentions, and we can rejoice that both have succeeded in realizing their aims, with a completeness that they could not anticipate, in the present University of California. The classical party had reason to charge the grangers with being prejudiced against literary studies and narrow in their ideas of education. On the other hand, the grangers were right in insisting that the State ought to provide a different kind of training from either the old-fashioned college or sort of agricultural college which had been conceded to them. They refused to be satisfied with an agricultural education which took agriculturists and turned them into teachers and lawyers and clerks, which lowered the standing of the occupation it was intended to elevate by continually drawing the brightest boys from the farms and preparing them for the city.

An indignant member of the Board of Regents in a hearing before an investigating committee of the Legislature at that time demanded of his agricultural opponents "Do you wish us to teach your sons to plow and harrow, to peg shoes or set up steam engines?"

This has been answered, as rhetorical questions are apt to be, in a way unanticipated by the querist. I do not find any Professor of Shoe-pegging in the faculty list, tho possibly that subject is

taught in the affiliated Wilmerding School of Industrial Arts, but the students not only set up steam-engines, but design and make them, and a 750-acre farm has recently been purchased at Davis in order to give them a chance to plow and harrow.

So much for the junior partner of the firm, the Morrill Act college of agriculture and mechanic arts. How about the senior partner, the College of California, whose prestige and property were generously, tho with many misgivings, turned over to the State in 1869. Fearful, and not without reasons, lest the College they had labored so hard to create should be swamped in a polytechnic institution of low grade the authorities of the College had it stipulated in the charter that their classical course should be taken over and maintained unbroken as the "College of Letters" of the new State university. They neglected, however, to provide any legal assurance that the supply of students for that course should be kept up. If the University should cease to give courses in Latin and Greek leading to the degree of A.B. it would be in danger of forfeiting its site on the Berkeleyn hills, now immensely valuable, but what would happen if there should be no candidates for the A.B. degree not even a lawyer can tell. Of such a catastrophe there is no danger altho the number of classical students is falling off both relatively and absolutely. The College of Letters in 1900-1 had 13.55 per cent. of the undergraduate body; in 1907-8 it had 5.05 per

cent. The explanation commonly given me, that "the boys are being crowded out by the girls," will not apply here, if it does anywhere, for the classical departments are losing girls faster than they are losing boys. In the five years 1903-4 *et seq.* the number of classical young men fell off 42 per cent. and the number of young women 44 per cent. And since in Harvard, Yale and Princeton a similar falling off among the Greeks is observable in spite of vigorous efforts to check it, I think it would be just as well if the classicists should lay aside the argument of feminine encroachment to be used only in emergencies, and direct their attention to the more real causes of the decline, with a view to finding out how they can extend the influence of the thought and spirit of ancient Greece to a generation which has an unconquerable aversion toward its language.

The course of empire cannot be checked or diverted by faculty action. In the latest presidential report I see that Professor Ferguson had 10 students in the History of Athenian Democracy, while Professor Moses had 44 in Latin-American History. Professor Allen's class in the Iliad numbered 31; Professor Fryer's in the Chinese Language numbered 54. Ten students were beginning Thucydides under Dr. Linforth and fifteen were beginning Japanese under Mr. Kuno. The class in Sanskrit was small, four students, only one more than in Herodotus, but a boom in Sanskrit may be expected when Pacific transportation improves.

The University of California has thus inherited only the good traits of both parents, and eliminated their bad ones. It has escaped from the bonds of the traditional curriculum which some would have imposed upon it and has found outside a larger humanism than they dreamed of. It has become something far different from the congeries of trade schools, which others wanted, and has developed new forms of vocational training, both more practical and more theoretical than they thought possible. The majority of the undergraduates are now in neither the classical nor vocational groups, but in the social science courses leading to the degree of B. L., and in the natural science courses leading to B. S. Both these colleges remain rather stable

in proportional size, the former comprising about 42 per cent. of the undergraduate body and the latter about 8.5 per cent. This large middle class keeps the institution from separating into two camps as at Yale. Then at the head of this whole university of sixteen colleges there is a philologist who has outgrown philology, who has done his share of root digging, but has not been made near-sighted by it, who is "Greek minded" in the true sense of the word, not merely because he knows more than the ancient Greeks did about their language, but because he is a man of the world and a politician (also in the true sense of the word). The fact that he was two years ago asked to become president of the Massachusetts Institute of Technology, which has nothing Greek about it except its name, is not only a compliment to him, but an indication of a better feeling than used to prevail between the rival educational movements.

At the University of California I found several things that seemed to me signs of a coming together of the right and left wings of the faculty. In mechanical, mining, civil and chemical engineering courses of four as well as five years are given, requiring, respectively, 144 and 160 units of work, the extension of time being made to permit the inclusion of more cultural studies. It shows how little importance is nowadays attached to degrees, that the same degree, B. S., is given for five as for four years' work. Professor Gayley repeats his inspiring course on the great books of the world for the benefit of the engineering students. The Greek department does not disdain to let some light shine upon the barbarians. Dr. Linforth gives a popular course on Greek literature in translation, as Professor Murray does at Stanford.

It seemed to me that there was in the University of California more unity than was to be expected in so large, complex and diversified an institution, that there was in the faculty an unusual degree of harmony, or at least of mutual comprehension and respect for each other's ideals. I may be altogether wrong in this, for such chance impressions are unreliable, but I hope I am not, and I have sufficient confidence in its correct-

ness to suggest two possible causes of it, two factors which have always been rather prominent in California, but conspicuously lacking in most State universities. I refer to the artistic and to the philosophical tendencies of the institution. The former chiefly find expression now in the musical and dramatic activities connected with the Greek theater, and in the architectural scheme of the campus. As an indication of the literary impulse it is suffi-

stead of securing him an appointment, and if they had been handed in as Sophomore themes they would have come back marked "D minus" on account of their numerous barbarisms, solecisms and improprieties.

For the philosophical impulse the university owes much to Prof. Joseph Le Conte, one of the original faculty, occupying the settee of "Geology, Natural History and Botany." His devotion to his specialty, geology, did not prevent

SENIOR SEAT, NORTH HALL.

cient to say that in 1870 Bret Harte was elected "Professor of Recent Literature and Curator of the Library and Museum" at the highest salary paid, on the strength of having written "The Luck of Roaring Camp" and "The Heathen Chinee." He did not accept, preferring New York and London. One wonders what effect it would have had on his work if he had. I mention it merely because the production of these two little masterpieces would have debarred him from most universities in-

him from considering the human and popular aspects of the science. He frankly championed the cause of Darwinism when that was perilous to a professor, but instead of meeting intolerance with contempt he provided in his "Evolution and Religious Thought" a *modus vivendi* very much needed in this great crisis of the nineteenth century.

There are two organizations of instructors and advanced students in the university devoted to the discussion of philosophical questions, and this year

they have practically exchanged subjects. The Philosophical Union, composed chiefly of professional philosophers and humanists, is taking up the sciences, and in successive meetings calling before it representatives of each science to explain its fundamental concepts. The Kosmos Club, largely men of science, is devoting the year to the study of pragmatism, which, if not a philosophy, is nearer to being one than any that scientists have hitherto been willing to accept.

President Jordan says "the pressure

of higher education to the square inch is greater in California than in any other State." Perhaps the unit is wrongly chosen, for California is a large State, but otherwise the statement is probably correct. The same might be said of literary activity. I understand that the offer of a prize by a New York magazine for the best story brings more manuscripts from California than from any other State, even Indiana.

If California is to live up to its scenery and its climate it must develop its own characteristic art form, adapted to a new environment. We should expect it to be something grandiose and spectacular, a larger and more comprehensive combination of all the fine arts. It seems to me that California is most likely to produce a school of open-air dramatists. The sunlight has recently come into our paintings, but it is still shut out of the theater. This art would, I imagine, be a development of the pageant in which the poet and the musician and the colorist would have a better opportunity for the display of their powers than ever before, but the choragus would be greater than them all. It would be suited to the Western spirit, for it would be a more democratic form of art than any we have now in a double sense, for it could be seen, heard and comprehended by more persons, and in the performance masses of people would play the parts formerly assigned to individuals, to gods first, heroes next and stars now.

The development of the "High Jinks," of one of the San Francisco clubs, into an open-air opera, with the mountains and sky for backdrop, giant redwoods and granite rocks for properties, and all outdoors for spectacular effects, is an indication of the direction of the Californian artistic impulse. At the University there are many manifestations of the same tendency. The annual pajama parade is sloughing off its vulgarity and becoming more elaborate year by year, without losing its carnival spirit. In the student plays at the Greek theater the chief feature has come to be the "mob," and this is drilled with the greatest care and costumed without regard to expense. The enthusiasm and effectiveness shown by the students who form this mob or chorus suggest that it has

been a mistake to leave to mercenary "supes" so important a part. When the first Sanskrit play seen in America was produced here the students at their own initiative brought up an elephant from San Francisco, to walk twice across the stage of the Greek theater in the pro-

THE NUMBER OF STUDENTS IN THE UNIVERSITY OF CALIFORNIA FOR THE LAST TWENTY YEARS.

cession. This year Professor Van Dyke's poetical drama, "The House of Rimmon," was staged with like elaborateness, under the direction of a professor who had studied Assyriology in Berlin and taken his advanced work in Semitics in an Arabian tent. It might have been expected that the Princeton boys would have been the first to bring out "The House of Rimmon," but the Triangle Club prefers comic operas like "The

DISTRIBUTION OF STUDENTS AT THE UNIVERSITY OF CALIFORNIA, 1907-08.

Duchess of Bluffshire" as better fitted to their tastes and talents.

In all the universities I visited there is a strong dramatic movement, but in no other does it take so wide a range in time and space as at the University of California. Here is the record of the student activities in the last year or two: "The Little Clay Cart," a Sanskrit drama; Aeschylus's "Eumenides"; "Samson," a spectacular Biblical play; "Abraham and Isaac," a fourteenth century mystery; "Thersites," a sixteenth century drama; "The Merry Wives of Windsor"; Ben Jonson's "Hue and Cry after Cupid"; Pinero's "Trelawney of the Wells"; the Junior farce and the Senior extravaganza; not to specify the plays given by the German, French and Spanish clubs.

The women students take an active part in university dramatics, both as authors and actors. The Junior farce and part of the Senior extravaganza mentioned above were contributed by women in open competition. The co-educational universities have in this field a great advantage over institutions like Princeton, Pennsylvania and Yale. The Yale Dramatic Association, for example, is ambitious and conscientious, but cannot hope to achieve artistic success so long as it is hampered by the conventions of the Elizabethan and Japanese stage. Boys may do very well in such rôles as Rosalind and Viola, but to at-

tempt the impersonation of the modern women of Ibsen, Pinero and Shaw puts too much of a strain upon their histrionic genius. The marvel is not that they do it well, but that they can do it at all. The action of the Harvard Dramatic Club this year in introducing Radcliffe students into their plays shows a commendable disposition to break with traditionalism.

The building of the Greek theater has done much to promote the musical and dramatic interests of the University of California. It is the largest of its kind in the world, seating seven or eight thousand, every one of whom can see and hear perfectly. What this means can be appreciated by those universities which have auditoriums of inadequate size or of impossible audition on account of the echo. The Greek theater is built of concrete, at a cost of \$50,000, the gift of William Randolph Hearst. It is located in a wooded, semicircular dell, reached by a steep and winding path, and is most effective at night, when the scena is lighted by the reflected glow of the electrics, the tall, dark trees rise around like pillars supporting a lofty dark blue dome. But sometimes the roof leaks.

Once a year interclass games are held in the classical style. Each of the four men who represent a class contest in all events, running, jumping and throwing, and the prize is a laurel wreath. This is good so far as it goes, but it is too purely imitative. What we need in art and athletics is a renaissance, not a revival. I suggested last month that the love of the beautiful and the love of the strong which in this age of specialization are rarely cultivated together, might be united, especially in California, in some new form of out-door sport which should be both spectacular and competitive. I was convinced of the need of such a revolution when I went into the Harmon gymnasium and saw several hundred young men, standing as closely as possible in a hot, steamy, sweaty, carbonated atmosphere, simultaneously going thru a long series of muscular exercises, right biceps contracted so many times, left ditto, right sartorius flexed, etc., etc., monotonous, mechanical, stupefying drudgery, when just out of doors were

hills and plains bathed in California sunlight and swept by Pacific winds. No doubt the system of muscular exercises was ingeniously devised to bring into use in due turn every one of the four hundred, but I know that most of them are employed in a quick climb up to the big C on the crest of the hill. I tried it.

California, isolated from the other States, can control its own athletic policy, and the two universities by mutual agreement have adopted the Rugby form of football in place of the American game. There is great diversity of opinion as to the respective merits of the two games. The students of Stanford are now quite reconciled to the change. The students of the State University would prefer the old football. Perhaps the fact that Stanford has usually beaten the State University may have something to do with the feeling. The Stanford boys have beaten the British at their own game, holding the championship of the Pacific Coast by defeating the Vancouver fifteen, and they are now ambitious to compete with England and Australia. The Rugby is a more open and spectacular game, using a wider field and giving more chance for individual initiative, but it has little advantage in respect to roughness. Injuries are just about as frequent as in the old game, but are less apt to be serious.

Military drill is required of all male students in the Freshman and Sophomore years at the University of California, as at all State universities which receive the national grants. About the value of this opinions also vary. The anti-militarists object to it, of course, on principle, others think it takes up too much time and attention with little benefit to the student or advantage as a training for martial service. But, on the other hand, it gives an out-door physical exercise, tho not of the best kind, and the two years' training in spruceness, conformity and swift obedience is good for the somewhat crude and undisciplined material received by the State universities. More important yet, perhaps it strengthens the feeling of obligation, of duty owed to the community, which is the most striking difference in the atmosphere of the State and endowed universities.

In California it has another advantage in bringing together, shoulder to shoulder, students of many different nationalities. On the parade ground I saw a Japanese putting another of the same race thru the manual of arms, and I took a snapshot of four Chinese cadets who may in the future take an important part in the regeneration of their country. I was told a pleasant incident of a Chinese student who had risen to the rank of lieutenant, altho he was afterward reduced for some trivial mistake. One day as he was drilling his company of American cadets he had a visit from his family, his mother in full Oriental costume of embroidered silk and his two sisters in fashionable American attire. Without any embarrassment or affectation he gave his company "place rest" while he turned away to pay his respects to his mother and greet his sisters, and then returned to his drilling. At Harvard a young instructor told me that it was a great mistake to let the Chinese come to the university, that we were giving them arms to use against us. I did not hear such sentiments in the University of California or in Stanford, tho no doubt I might have. Considering the intensity of race prejudice on the Coast, it seems to me rather remarkable that the two universities should show comparatively little of it. Anti-Sinicism does not appear to be any stronger in the Californian universities than anti-Semitism in Princeton, Pennsylvania and Columbia. It is an indication of good feeling that a Japanese millionaire, the potting of California, recently sent in a check to pay for fitting up a room in the students' infirmary. There were registered last year in the University of California ten students from China, as many from Japan and fourteen from India.

I do not mean to convey the impression that there is no prejudice against Asiatics in the University. Intolerance is the common failing of young people everywhere, and the Californian students are not free from this form of it. It has even given rise to disorders on the campus. The Asiatics are contemptuously referred to as "Skibbies," and are subjected to various slights which will not give them a favorable opinion of

American standards of democracy and equality. There is a Cosmopolitan Club at Stanford, but none at the State university.

The treatment they receive from both their instructors and their fellow-students is, on the whole, better than might be expected under the circumstances. Every effort should be made to keep the University free from racial discrimination and antagonism, for its future very largely depends upon close relations with Asia. Here will be found the commercial, industrial and educational opportunities for usefulness and profit, and the University of California is in the best position to take part in it, to buckle the belt of civilized nations around the globe. If, by any untoward event, it should lose its hold on the East or the West, the duty would fall on other universities. As the universities most likely to become formidable competitors of California in this new field I would suggest Chicago, Harvard, Cornell and Illinois.

But it is misleading to speak of "competition" between universities when they are merely rivals for a nominal or numerical priority. As well say that two fishermen are competing when they are angling from the same dock. There are just as good fish in the sea as ever were caught, and plenty of them. The best instance of this is California. No other State offers such opportunities for higher education, two first-class universities open to both sexes without any tuition fee. It is no wonder that the friends of the State University felt some apprehension of the effect of the founding of Stanford. Here was a limited field, for it is hard to draw students westward, even from Detroit to Ann Arbor, from Omaha to Lincoln, or from Kansas City to Lawrence. Here was a university, receiving insufficient support from the State, forced to do much work of high-school grade, having only a few hundred students, with its buildings getting old and shabby and little prospect of getting better ones. Query, what would be the effect of opening within thirty-five miles of it another free university with new and beautiful buildings and an endowment of unprecedented magnitude? Whatever the effect may have been, the University of California has now four

times as many students, and of higher grade; it is well supported by the State, and receives generous gifts from private sources and has started on a more ambitious building program than any other university in the country. It would be absurd to say that this is altogether due to Stanford. The university would in any case have grown and prospered, as all the other State universities have done. But it is safe to say that its normal growth and prosperity have been very materially accelerated by the presence of its so-called rival, and that in no respect has it been injured or impeded.

The University of California has had a hard struggle to provide room and instructors for the students who have crowded to it in such rapidly increasing numbers. The end of the struggle is not yet in sight. An additional building affords no more relief than another subway in New York. The new architectural scheme is designed to accommodate five thousand students, but there are likely to be ten thousand before it is completed. The old buildings cannot be torn down, as the new ones are put up, for they are as indispensable as before. The chemistry building, for example, proliferates in vain; the added cells are at once filled to overflowing. The old carved black-walnut desks are still in use and new desks are put around the open court between the buildings, not a bad arrangement in a mild climate, and in a study where draftiness is good for the health. The instructors are as overworked as laboratories are overcrowded. One man, with a part-time assistant, has charge of sixty students in quantitative analysis.

Like Stanford and the State universities in general, the University of California places little dependence upon entrance examinations, but admits by certificates from accredited schools. Only about eight students a year are admitted *wholly by examination*. At the end of the half year students who have failed to make satisfactory grades in half their work are "flunked out." There are now *117 secondary schools in the accredited list, and these are treated as factories are judged, by the character of their product*. The average grade of the first term's work of entering students for a

series of years serves as a basis of comparison for the different preparatory schools. Tested in this way the private schools, which supply about 11 per cent. of the total number of students, make a very poor showing compared with the public schools. For the last seven years the percentage of students from the public high schools doing work of first and second grades—there are five grades—was 51.52, while the corresponding percentage for the private schools was 37.83. Of the students from the public schools, 13.84 per cent. failed in their first term's work. Of the students from the private schools, 25.07 per cent. failed. The records of examination and class work in Harvard, Yale, Princeton and Pennsylvania show that the same is true in the East, where the private schools have been long established and held in high esteem. Since there are so many conspicuous examples of governmental inefficiency and wastefulness it is worth while calling attention to the fact that in the field of secondary education public management has proved to be more efficient and economical than private enterprise. It is sometimes argued in behalf of the private schools that they receive an inferior grade of material and therefore are not able to turn out so good a product in spite of greater expenditure per individual and more personal attention. I do not know how much weight to give this plea, but whatever the cause it is evident that a university which would get the highest quality of students must keep a close connection with the public high schools.

Michigan was the first to conceive the idea that the public school system of a State should be a unit, with no decided break in the educational ladder from the primary grade to the graduate school of the university, but California adopted and extended the plan. Each accredited secondary school, public and private, was visited every year by university professors representing different departments. This practice was an important factor in the development of the excellent high school system of the State, and the reflex influence on the university was not less beneficial. As the number of high schools increased at the rate of more than five a year for the last twenty-five

years, the visitations became a heavy expense to the university and a burden to the faculty, so President Wheeler has abandoned the system. This may be necessary, but it is unfortunate. The university needs it, if the high schools do not. A single examiner, however efficient and well qualified, cannot do so much good as the various professors, for the inspection and accrediting, which were the ostensible occasion of the visits, were less valuable than the mutual understanding and spirit of co-operation resulting from the acquaintance between men working in the same department in the secondary school and the university. No averaging of grades can take the place of this personal knowledge of each other's difficulties and ideals. Just as the chief purpose of the examination system in the university is not to find out how much the students have learned, but to make them learn more, so the chief purpose of the inspection system is not to find out whether the secondary school is worthy of the privilege of sending stu-

dents to the university, but to make the university more worthy to receive them.

But the statistical study of grades made by the Examiner of Schools* for the purpose of keeping a check on the work of the preparatory schools brings many other interesting points. One is that there has been no falling off in the average grade of scholarship in the entering students for the last seven years. In several other universities I heard the complaint: "The high schools are sending us poorer material every year of late." It seems that in California at least this is not the case.

The examiner finds that the average grade of the first year students in the College of Letters (classical course) is higher than in the College of Social Science (main liberal arts department), and that in the Technical Colleges it is lower than in either of the others. The examiner assumes that this indicates that poorer work is done in the technical col-

*Biennial Report of the President, November, 1908, pp. 118-141.

CHINESE CADETS IN THE UNIVERSITY OF CALIFORNIA.

leges than in the others, and he suggests the following reasons: That the work of these colleges may be intrinsically much more difficult than in the Colleges of Letters and Social Science; that the pupils from the high schools are too immature or are not properly prepared; that the recent popularity of technical careers has drawn many lacking the natural ability for such work; lastly, that the large percentage of women, who, as a rule, make better marks than men, may have

That women students do as a rule get superior grades is undeniable, but I am inclined to believe that this is due more to their faithfulness to daily duties than to any superiority in natural ability. This, however, may be due to masculine prejudice on my part. They are certainly less apt to indulge excessively in outside activities, or, if they do, they do not allow them to interfere with their class work. Another point often overlooked is that college women as a rule enjoy

FRESHMEN CADETS DRILLING BEFORE CALIFORNIA HALL.

raised the average for the other colleges "to an abnormal high."

University catalogs and annual reports make very entertaining reading on account of the delightful naiveté of some of their expressions, such, for example, as the word "abnormal" in the above sentence. I have often heard male students express the opinion that the scholarship and industry manifested by their feminine competitors were abnormal, but I did not expect to find this view of it officially endorsed.

better health than college men. This is brought out by the infirmary statistics in this same California report. During the year 40 per cent. of the men and 35 per cent. of the women were excused from classes on account of illness during the year 1907-08. The male students lost on the average 4.8 days apiece from illness and the female students 2.0 days apiece.

A marked line of distinction is being drawn at the University of California between the first and last halves of the college course. All work in the Lower

Division must be completed before the student passes into the Upper Division, and the Junior Certificate, which is granted at that point, is required for admission to the four years' medical course. Eventually much of this Lower Division work will probably be done in the high schools or small colleges. The graduate school has been strengthened by the new State law which requires all high school teachers to have taken a year or more of graduate work in a university belonging to the Association of American Universities, or at least a half-year of such work in addition to a half-year of advanced study in a normal school. Stanford and the State University are the only institutions on the Coast belonging to the Association, and the nearest eligible institution outside the State is the University of Minnesota, 1,500 miles to the East. This law brings to both universities a desirable class of students, earnest and practical, altho not necessarily candidates for higher degrees.

Altho the California universities are ambitious to develop their graduate schools, yet it is common for the professors to advise their students to go to the Atlantic universities for their advanced work, in order to get a broader education. The Harvard and Yale alumni associations of California provide scholarships of two or three hundred dollars for graduates of Stanford or the State University who wish to study in these institutions. These are very generously printed in the University catalog. The universities of the East might well reciprocate and send some of their students to the universities of the Pacific Coast, both for broadening their views and for special lines of work, such as Oriental and Spanish-American history and biological and anthropological research, in which they offer unique opportunities. One of the reforms most needed in our collegiate system is greater freedom of migration, and the University of California has already shown a disposition to go more than half-way in facilitating this. At present the percentage of undergraduate intrants born in the State is about 58 and slowly increasing, with the rise in the proportion of the native born population and in the local prestige of the University.

Altho it takes only a few minutes more to go to Palo Alto than to Berkeley from San Francisco, yet the State University draws its students much more largely from the metropolis, and altho Palo Alto is less than thirty-five miles south of Berkeley as the aeroplane flies, the young people from the southern part of California show a preference for Stanford. This in itself makes a certain difference in the character of the student body. It may be necessary to remind the Eastern reader that the people of northern and southern California regard themselves as distinct in their physical, psychical, social and religious characteristics as do the people of Connecticut and South Carolina or of England and Italy; and with as good right, too, for they are as many miles apart. The existence and importance of this difference are frequently impressed upon the stranger, but it would be rash in him to attempt to characterize it, lest in trying to be fair to each he should offend both. Stanford has a much larger number of students from the eastern part of the United States than the State University.

The University of California is to be classed with the metropolitan universities like Chicago, Columbia, Pennsylvania and Harvard, and thus takes on a different character from Yale, Princeton and Stanford. A sail across the bay and a trolley ride up the hill, running up to about forty minutes, brings the student from San Francisco to the campus. At present about 7 per cent. of the undergraduates doing work at Berkeley come over daily from the city, but this element tends to increase. Of the rest of the students about 80 per cent. live in Berkeley and 10 per cent. in the contiguous suburb of Oakland. The University, like most of the State universities, maintains no dormitories; consequently the fraternity system has developed to supply the need of student homes. There are 21 Greek letter fraternities and 9 sororities, beside 14 house clubs for men and 6 for women. The house clubs differ from the fraternities chiefly in being non-secret and less permanent. In many cases they develop into fraternities by applying to one of the national organizations for a charter when they get a congenial lot of fellows together.

Being practically in a city, the University of California is in some degree relieved of the responsibility for the behavior of students, which, as we saw last month, has been the cause of considerable difficulty at Stanford, where there is not even a village organization. Beside this, an efficient and smoothly running system of student control has been developed within the last few years at Berkeley, and has accomplished some much needed reforms. The faculty Committee of Student Affairs boasts of its idleness. It meets once or twice a year, apparently more for the purpose of maintaining its statutory existence than for any more serious object.

The center and symbol of this undergraduate self-government is Senior Hall. This is to be found hidden away in Strawberry Canyon, which is the bed of a traditional creek running all the way down thru the campus in order to provide opportunity for several picturesque bridges. Passing over one of these and under a Shinto torii, and dodging the limbs of the live oaks that look dead in the daylight, but jostle you most rudely in the dark, you see a cabin made of redwood logs, and if it is Thursday evening you will hear the Senior Sing. Here are discussed and settled, not merely the problems of the universe at large, but also, what is more important, of the University in particular.

The inner circle is the Society of the Golden Bear, composed of twelve men elected at the end of their Junior year, who add to their number, when they become Seniors, three or more of their own class. There are also several honorary faculty members, including the president, elected for life. The aim is to include in the Golden Bear representatives of various departments, and the leaders in all branches of student activity, athletics, journalism, debating, dramatics, even scholarship. This society is secret, keeps no record of its conclusions, and takes no official action in university affairs, but is able from the character of its membership to initiate movements and to mold public opinion without the extent of its influence being fully realized by the students generally. It is not, however, under an ostentatious taboo, like the Yale Senior societies.

The official body having charge of undergraduate discipline is the Student Control Committee, composed of Seniors and, by something more than a coincidence, chiefly of members of the Golden Bear. This committee is appointed by the President of the Associated Students, of which body all students, men and women, paying the annual dues of one dollar, are members. The women have a similar organization devoted to their own affairs. A movement to disfranchise them from the general association on the ground that they had a separate organization was defeated by a heavy vote. The offices, in the Associated Students, are in practice confined to men.

It would be easy, of course, to bring theoretical objections against the system of self-government in California. One might doubt the wisdom of putting one class in control of the other three and of granting extensive and indefinable powers over their fellow students to a secret and irresponsible society. One might question what would happen if the faculty, president and trustees found it necessary to take some action in decided opposition to undergraduate opinion, such, for example, as the abolition of intercollegiate athletic contests. One might venture to predict that there will come in California, as there has in other universities, a time when public spirit and the sense of responsibility will decline, and the Student Control Committee come to be composed of men of no character or of bad character instead of the capable and representative students who have hitherto composed it. But this is only another way of saying that California has not discovered any automatic safety device that will insure student self-government against the evils that beset self-government outside universities. The only superiority I can see in the Californian system over those in some other universities is that it works. This, however, is an advantage of sufficient importance to outweigh any theoretical objections. The students in authority seem to have followed a policy of conservative reform rather than of radical idealism. They have not adopted the honor system of examinations, but have materially curtailed the amount of cheating. Estab-

SENIOR HALL.

lished customs of disorder, such as hazing, rough-housing and rushing, have been abolished or reduced to comparatively innocuous forms. In place of hazing, a certain mild penance is imposed on Freshmen, such as serving refreshments, moving the grand stand, etc. The class rush, formerly rather a brutal affair, has been done away with, and as the sign of its abolition and the seal of the perpetual treaty of peace between the warring classes a gigantic "C" has been laid in concrete on the highest hill of the campus, visible across the bay and for miles down the valley. The University of Utah boys have put a "U" that is still bigger on a mountain near Salt Lake, but it does not mean any more. Every year the Sophomores with great ceremony turn over the guardianship of the C to the Freshmen, who keep vigil over it around a camp fire all night and pledge themselves to protect it against all comers, especially against Stanford students armed with an ax and a can of cardinal paint.

A Californian custom that could be

adopted by many other universities, much to the improvement of their looks, is Labor Day, when all the students turn out to beautify the campus. It is like a scene from a utopian romance, the wageless workers, ready to do anything useful, each according to his ability, all duly co-ordinated and directed by volunteer experts; the civil engineers superintending the grading of roads and cutting of new paths; the arboriculturists the planting and trimming of trees and shrubbery; a season of general cleaning up, clearing out and putting to rights; a working day of socialistic brevity, for shortly after noon the boys are called from their labors to a bean feast prepared by the girls in the gymnasium, and the afternoon and evening are spent in sports and merrymaking. The value of the work done last Labor Day is estimated at \$2,800, but the greater gain to the university in the development of an interest in the looks of the campus cannot be calculated in dollars. The only fault to be found with Labor Day as an institution is that it has been placed on

a most unfortunate date, the most unfortunate date, February 29th.

The University of California has been rather backward in the development of its professional schools. There are five of these located in San Francisco; The Institute of Art, the Hasting College of the Law, the College of Medicine, the College of Dentistry, and the California College of Pharmacy. They are still in the transitional stage, loosely affiliated, chiefly supported by fees and not largely attended. The plan for the future seems to be to establish gradually at Berkeley

those who ought not to be deprived of all chance of professional training because they cannot give six or eight or ten years to it. Of this dilemma California takes both horns, sticking one in Berkeley and the other in San Francisco.

The first two years of the medical course have now been transferred to Berkeley, giving an opportunity to establish a university hospital at San Francisco. The new Boalt Memorial Hall of Law will be built on the Berkeley campus.

Another movement that should be

THE HEARST MEMORIAL MINING BUILDING.

schools of medicine, law, architecture, etc., of a thoroly university character, keeping the San Francisco institutions as auxiliary schools, carrying one or two years of the course or giving instruction adapted to students living in the city who are not able to take a long and advanced course. That is, California is confronted like the other State universities, with the dilemma of raising its standards to meet the modern demands for a wider culture and more thoro training in the professions, and at the same time of providing for the needs of

mentioned here, altho it is independent of the university, is the development of centers of religious thought at Berkeley. The Roman Catholics have founded there Newman Hall, an admirable students' club and much more than that. The lecture courses given in it on religion and philosophy are of as high character as those of the university. The various Protestant denominations are establishing theological seminaries at Berkeley in co-operation with each other, avoiding as much as possible the duplication of chairs and utilizing the instruction of the

State University for the secular branches, including Latin, Greek and Hebrew. Similar movements are on foot in other States. The old days of rivalry, antagonism and distrust between the denominations and the State universities have evidently gone by, and we are entering upon a new era of mutual helpfulness, whose possibilities we can only dimly foresee.

The belief is still prevalent in certain sections of the country that the State universities while they may do excellent work in utilitarian lines, can never do anything in the higher branches of scholarship and scientific research. The University of California shows how far this view is from the truth. The branch of science for which it is most distinguished is the least utilitarian of them all, astronomy. For its practical purposes astronomy requires no more apparatus than a three-inch telescope and a clock. Even a 36-inch objective like that of the Lick Observatory discovers nothing likely to be of the least practical benefit to this planet. James Lick bequeathed \$700,000 to provide the University of California with the biggest telescope in the world, located on Mount Hamilton, about fifty miles south of San Francisco, but this sum was not sufficient for an adequate endowment of its work so the State has to provide about \$20,000 a year for running expenses and improvements. Besides this, the University keeps up an observatory at Berkeley equipped for research as well as instruction.

The list of the publications of the University of California shows how far they are from being confined to utilitarian subjects. Among them are six volumes in American archeology and ethnology, three in botany, one in classical philology, one in economics, one in entomology, two in education, four in geology, one in pathology, one in philosophy, three in physiology, two in Semitic philology, four in zoology, three in Græco-Roman archeology, one in Egyptian archeology, and twelve in astronomy.

Of course, only a minor part of the work of the faculty is published directly by the University, most of it appearing in the usual periodicals. In the last biennial report about fifty-three per cent. of the faculty are reported as having

contributed to the literature of their respective departments. From this list one would judge that about thirty-three per cent. of the faculty were engaged in research in natural science and ten per cent. in philological or other humanistic lines. The proportion of productive scholars, therefore, seems to be about twice as great as in the faculties of Yale and Stanford. Of course, I am necessarily leaving out of consideration the all-important question of the relative quality of the contributions to knowledge.

It used to be thought that State universities could not expect private benefactions of any considerable value, but this also has been disproved, first and most conspicuously by California, which, it used to be said not long ago, had received more gifts than all the other State universities put together. This statement is doubtful now for the Universities of Vermont and Virginia, as well as many others, have been generously treated of late, and when the University of Wisconsin comes into the Vilas bequest it will rival California in endowed wealth. Philanthropists everywhere are coming to realize that donations to public institutions are likely to be more permanent, more widely useful and more generally appreciated than private foundations, and the town libraries, city museums and art galleries, and State universities are beginning to benefit by this realization.

Of the benefactions received by the University of California those of Mrs. Phoebe A. Hearst, a member of the Board of Regents, have been most varied and continuous. Besides supporting many scientific and archeological researches, she has furnished the funds for the architectural plans of the University and for two of its first buildings. Ten years ago the Regents invited the architects of the world to compete in designing a harmonious building scheme providing for the future development of the University, without regard to the existing buildings on the campus. The total cost of the competition was about \$160,000, and the first prize was won by M. Emile Bénard, of Paris.

This international architectural competition was worth all it cost, perhaps not for the actual value of the Bénard plans in

themselves, but for the publicity it gave to the ambitious ideals of the University and for the impulse it gave to the movement for harmonious collegiate architecture all over the country. The portfolio of prize designs was distributed freely to other universities, and on many a campus we find indications, sometimes amusingly or pathetically futile, of an attempt to realize its grand conceptions. Even to the campus of California the plans of M. Bénard were not very closely adapted and by the time they are put into stone there will not be much left of them except the general scheme of arrangement. Notwithstanding that a plaster relief map of the campus was sent to Paris and the winning architect later came in person to locate the buildings, the plans do not fit the ground, and the axis of the whole has had to be shifted. Not even the second building, the new mining building, could be placed where he had designated, for it would have involved a fill of sixty-five feet on one corner. It shows how American universities look to European eyes that the dominant note of the scheme which M. Bénard elaborated in detail was a spectacular dome intended as a sort of Hall of Triumph to the greater glory of athletics. It would have done very well as a Hotel de Ville at Lyons, or a Palace of Peace at The Hague, but no one would have suspected it of being a university or of belonging in America, least of all in California. The supervising architect, Professor Howard has abandoned this feature altogether, putting a drill ground in its place, and in drawing the plans for the other buildings has given them some touches of originality and indigeneness in varying degrees. Thus tho the new law and library buildings will adhere rather closely to classical lines, California Hall, which is used for classrooms and administrative offices is somewhat less conventional, the new Hearst Mining Building shows still greater individuality and the future Agricultural Building will be decidedly novel as befits the State. The three buildings of the Greater University, so far constructed are here illustrated so the reader may judge them for himself. I liked the design of the Mining Building best, except for some

details. It is handsome from all sides and cleverly adapted to its peculiar purposes, as in the treatment of the central hall, sixty-four feet high, with a five-ton traveling crane running its entire length of 120 feet, and in the rows of tall chimneys for the furnaces; but I must confess, altho it may expose my ignorance or lack of taste, that I do not see any artistic or utilitarian justification for the two columns and entablature that are stuck in the large windows.

The new library, of which we present on the cover an original drawing made from the architect's sketch for it is not yet completed, will cost over a million dollars, half paid by the State and half from the bequest of Charles F. Doe. It is much needed for the present building is painfully inadequate for 200,000 volumes and those who want to read them. The latest important addition to the library is the unique collection of Herbert Hume Bancroft on Western and Spanish-American history. This contains about 50,000 books and twice as many manuscripts, and was recently purchased by the University for \$150,000. Whatever may have been Bancroft's deficiencies as a historian he performed an invaluable service to history in getting hold of the letters and journals of the pioneers of California, and of the records of the Spanish whom they displaced. There are sixteen students now working over this rich material.

The most interesting building to me was not one of the new million dollar palaces, but a chalet of rough pine boards just across Strawberry Canyon, for this is the laboratory of Professor Jacques Loeb, one of the few scientists that the outside world is not willing to let alone. But such unheard of things as hatching sea-urchins that have a fatty acid for a father will get into the papers, however carefully concealed "in the obscurity of a learned tongue" such as German or technical English. I found Professor Loeb happier than in Hull Court at the University of Chicago, for here he has fewer reporters and an ocean full of experimental material. He wants no marble or granite palace; he wants only room and salt water, with partitions movable to suit the exigencies of the experiment, for his physiology is not a

static subject. He showed me an experiment. It looked easy. I could have done it myself if I had thought of it. Into a glass of sea water he put some minute marine animals and then sensitized them to light by a dash of carbonated water from a siphon. As promptly as at a word of command they all headed toward the electric bulb like a herd of cattle toward a watering trough. I wondered whether some reagent could not be discovered that would induce such photo-tropism, such an eagerness for the light, in a crowd of human beings. Carbon dioxid does not seem to work that way on people in a lecture room. I merely mention the matter here to reserve the field for future investigation.

Leaving the physiological laboratory I went on up the hill, past a building full of clattering machinery, the realm of "the scholar in overalls," on up the steep winding path thru the tall trees to the barren brow of the hill whereon is the big C. Here I was 900 feet above the ocean and could look over the tops of the trees and the two cities of Oakland and Berkeley, out across the bay where lies the city of San Francisco. To the left I could see far down the valley hemmed in by mountains, among them Mount Hamilton, the site of the Observatory. Straight in front was the Golden Gate, ever open and inviting westward toward the Far East.

I was reminded that the Gate opened in as well as out when I saw a young man sitting in the glare of the afternoon sun on the bare and dusty hillside. I thought he was asleep, but as I came closer I found he was reading a Sanskrit book; Vedantic philosophy, he courteously informed me. I squatted at his feet like a disciple before his guru, while he gave me a first lesson in yoga practices, drawing diagrams in the sand with a broken twig to illustrate the theory of the four selves and to show how all paths led to absorption in the All. It was surprising to find the Absolute here established, serene and unshaken, asserting its old time prerogatives of unity and infinity just as if Prof. William James had not visited the campus only a few months before.

I inquired if he were not homesick.

The philosopher is equally at home in all lands, he replied, also demonstrating it geometrically. He was obstinately uncomplaining, still I gathered the impression from the conversation that there were times when self-denial ceased to be a virtue and became a painful necessity; that when the crops in India failed and the ryots could not pay their penny or two a year to the Swadeshi fund, the Hindus in America had to practice more abstinence than yoga required. The Indian students are mostly sent to this country by the Scientific Industrial As-

A HINDU STUDENT ON THE HILLSIDE.

sociation of Calcutta to study agriculture and manufacturing in order that they may achieve the economic independence of their country. There also seems to be a desire to get them out of British influence and into a more democratic atmosphere. Every campus, as I have said, thinks it has the most democratic atmosphere in the world. I wonder what the Orientals think about it. It is worth considering now that they are looking to us for help in the development of their civilization. There is a new form of university coming, which is foreshadowed in California. Greater and more influential than a State or a national university will be the international university of the future.

NEW YORK CITY.

RELIEF MAP OF THE COMPLETED CANAL,
Showing the line of the canal, the Panama Railroad, the locks and the artificial lake.

The Construction of the Canal

BY GARDNER RICHARDSON

[This is the third article in our series on the Panama Canal written by our special representative. The first appeared in our issue of April 15th, the second on April 22d, and a fourth will follow next week.—EDITOR.]

A LOCK canal across the Isthmus of Panama is promised by January 1st, 1915, thirty-one years after the French first broke ground and eleven years since the American occupation. The first plan of the French called for a sea-level canal, and it was only after the enormous difficulty and expense of the undertaking became apparent that a change to a tentative lock plan was made in 1887. When the first French company failed in 1889, a total of \$265,000,000 had been spent. The New French Company excavated in a desultory way for fifteen years, confining their work largely to the Culebra Cut, and making their excavation serviceable for either a lock or sea-level canal. The New French Company removed a total of only about 7,000,000 cubic yards, an amount which the Americans now take out in two average months.

The rate of excavation has increased enormously since the Americans began. In one month the amount of earth now removed is double the amount taken out during the entire year of 1905. "All Records Broken" is a frequent headline in the *Canal Record*, the official organ of the Canal Commission. The issue for April 7th, 1909, announces the excavation for March as 3,880,000 cubic yards, establishing a new high record. Of this amount 2,353,000 cubic yards

were removed by steam shovels, and 1,527,000 by dredges. The excavation made for outside construction work, and not directly in the Canal prism is not included in these figures. If this work were added, the total for March would be over 4,000,000 cubic yards. March is one of the most favorable months for establishing a record, as the rainfall is then at the minimum. It has been said, however, that there are two seasons in Panama, one the rainy season, and the other the wet. At all events, during a supposedly dry month we witnessed a tropical rain-storm that would have been designated as a cloudburst in the United States.

The following table gives the figures for the total excavation up to the present time:

AMOUNT OF EXCAVATION IN CUBIC YARDS ON THE PANAMA CANAL.	
Excavation by French companies . . .	81,548,000
Excavation by Americans:	
May 4 to Dec. 31, 1904 . . .	243,472
Jan. 1 to Dec. 31, 1905 . . .	1,700,227
Jan. 1 to Dec. 31, 1906 . . .	4,948,497
Jan. 1 to Dec. 31, 1907 . . .	15,705,200
Jan. 1 to Dec. 31, 1908 . . .	37,070,887
Jan. 1 to March 31, 1909 . . .	9,953,767
	<hr/> 60,781,140
Total excavation	151,329,140

President Taft has expressed the wish that the Panama Canal be completed by March 4th, 1913. The members of the Isthmian Canal Commission feel that the tentative date of January 1st, 1915, can be bettered, but the completion of the Canal during President Taft's present administration will be a difficult task. The excavation can be finished unless unforeseen difficulties arise. The present state of this branch of the work is shown in the following table:

AMOUNT OF EXCAVATION IN CUBIC YARDS NECESSARY TO COMPLETE THE CANAL.

Estimate of excavation to be done	
by Americans	174,666,595
Excavation made to March 31, 1909.	69,781,140
Amount remaining.....	104,885,455

At the present rate, not taking account of the steady increase in the monthly records, the actual work of excavation can be finished in the three years. The determining feature in the completion

THE OLD FORTRESS AT PORTO BELLO.

This was an important town in early Spanish days, but was destroyed by Henry Morgan, the privateer.

date is the construction of the locks and dams at Gatun.

This is a gigantic project, and figures alone do not convey the change that must be brought about to build what is practically an artificial mountain, a mile and a half long and a third of a mile wide at the base. This great barrier will form a lake 110 square miles in area, and 80 feet deep in a considerable portion. The area to be flooded contains several villages, that are to be transported bodily to higher ground. The building of the locks will require 3,500,000 cubic yards of concrete, the largest piece of masonry constructed in modern times.

The rock taken from the Canal prism is not of a suitable quality to be used in the concrete work. Most of the rock is an argillaceous sandstone, and the small amount obtainable of harder formation would be expensive to sort out and transport by rail from Culebra to Gatun, a distance of almost thirty miles. This situation has led to one of the most interesting supplementary pieces of work undertaken by the Commission.

About twenty miles from the Cristobal entrance of the Canal, on the Atlantic Coast, is situated the historic town of Porto Bello. The old fortresses, captured by Henry Morgan, and the Spanish

THE SINKING OF AN EMBANKMENT AT GATUN.

It was this settling at Gatun that caused some unfounded alarm. The depression has been filled in, with no further sinking.

THE SITE OF THE LOCKS AT GATUN.

The excavation has been completed and the masonry work will soon be started. Each lock is 1,000 feet long

convent still stand, overgrown by weeds and surrounded by the squalid thatched huts of the native village. Porto Bello is the best natural harbor in that section of the Caribbean Sea, and has a depth of from five to fifteen fathoms. At the entrance of the harbor two natural buttresses rise sheer up from the water's edge, and it is from these that 2,000,000 cubic yards of crushed stone will be brought to Gatun. The rock here, a massive andesite, is well suited for concrete, while the quantity is practically unlimited; enough, in fact, not only for the work at Gatun, but also for a breakwater at the Atlantic entrance of the Canal. This breakwater will be constructed of large squares of rock, transported from Porto Bello in barges and sunk in Limon Bay. An exploration by means of borings justifies an estimate of 20,000,000 cubic yards of good rock available at the quarry. Other considerations in selecting Porto Bello were that the rock could be sent from the quarry

to the crusher and from the crusher to the barges by gravity.

An expensive machine shop is also being installed, and it is hinted unauthoritatively that the United States will retain possession of Porto Bello permanently as a coaling and naval station. If this plan is in view rare foresight is shown, for the harbor is unexcelled, and is in a region where suitable harbors are a rarity.

From an engineering point of view, by far the most interesting section of the work is at Gatun. In the construction of the great dam, three features are prominent—the building of the rock toes, the placing of the impermeable core or hydraulic fill, and the construction of the spillway. The rock toes have been laid to furnish a solid foundation and prevent any possible slipping. The core of the dam will not be made of loose material excavated from the Canal prism, as the seepage in that case would be considerable. The material will be chiefly

a mixture of clay and sand pumped in by hydraulic machinery. The laying of the concrete in the spillway has been started. The work to be done is the lining of the channel that runs from the point where the regulating works will be built to the north toe of the dam, a dis-

large to accommodate a considerable fleet, and docks and warehouses will doubtless be built along the new water front. What was formerly a tropical jungle will become a thriving seaport, where the goods of all nations will be handled.

The work at Culebra, which is the

IN THE DAYS OF THE FRENCH.

This photograph was taken on February 1, 1880, and shows a group of French engineers enjoying a day in Panama.

tance of 1,200 feet. Thru this channel, which will be 285 feet wide and ten feet above sea level, the Chagres River will be diverted within a year. The Gatun Lake will then be allowed to rise and take its place in the world's geography.

Gatun will undoubtedly be the most important place on the Canal line, after the completion of the work. In addition to the necessity of a permanent force to operate the locks, there will probably be a harbor of some importance at this point. In preference to docking at Colon, ocean vessels will go thru the locks and dock in fresh water at Gatun. The fresh water destroys the bromelias and sea weed that gather with great rapidity on all vessels in tropical waters. There will be an anchorage at Gatun sufficiently

backbone of the Isthmus, is progressing satisfactorily. In round numbers 29,000,000 cubic yards had been taken out by the Americans up to April 1st, 1909, and there are still 47,000,000 cubic yards remaining. The following table gives the complete figures for the amount of excavation still to be done in the different divisions:

RECORD OF EXCAVATION IN CUBIC YARDS ON THE PANAMA CANAL.

	Amount excavated.	Amount remaining.
Atlantic Division	17,041,711	25,135,000
Central Division		
Culebra	20,724,280	47,068,015
Other points	6,445,153	6,557,045
Pacific Division	15,069,996	26,124,795
Grand total	69,281,140	104,885,455

Two of the locks on the Pacific side are to be located at Pedro Miguel. At this point in the valley of the Rio Grande, the Canal will drop from the 85-foot level of Gatun Lake to the 55-foot level, the first step of the descent to sea level that will be completed at Miraflores, where twin locks are to be built between the converging hills. The final plan on which the French worked included a lock at Pedro Miguel, and some excavating was done at this point, but the American plan involves an additional excavation of 1,200,000 cubic yards. Compared with the great barrier at Gatun, the Pedro

While the breakwater on the Atlantic side will be constructed of specially procured rock, an extensive system of breakwaters will be built on the Pacific side of material taken from the Canal prism. The proximity of La Boca to Culebra admits the transportation of material to tidewater at small expense. The channel runs out from the mainland into Panama Bay, a distance of five miles, and to lessen the silting up of this channel, a breakwater is being built from La Boca to Naos Island, a distance of two and one-half miles. This breakwater is a long embankment of earth and rock ex-

ANOTHER PHOTOGRAPH TWENTY YEARS OLD.

This was taken on October 15, 1888, and shows the stage of the work reached by the French at Culebra.

Miguel dam is small, but it involves a fill of over a quarter of a million cubic yards, and is being constructed as carefully as the Gatun Dam itself. Instead of the hydraulic fill that will form the impermeable portion of the Gatun Dam, a dry-clay core is being placed in the dam at Pedro Miguel. Over 20,000 cubic yards of this fine, yellow clay will be carefully packed in the center.

cavated from the Culebra Cut, and dumped from a trestle that reaches out toward the island in advance of the rapidly lengthening fill. The tide sweeps along the coast with great force, and in addition to preventing the channel from silting up, the breakwater may in the course of time become enlarged to a considerable peninsula. At all events, a railroad will be built on the embankment to

connect Naos Island with La Boca, and docks can be located along the breakwater if the facilities at La Boca prove inadequate.

In addition to the breakwaters, a large area at La Boca, which is three feet under water at high tide and a mud flat at low tide, is being filled in to a height of fifteen feet above the high-tide mark. This improves the health and appearance of the locality, and what is more important furnishes valuable land for terminal and warehouse purposes where it is most needed.

The question of the relative merits of

essential details. The final choice between a sea-level and an 85-foot-level lock canal was made in 1906. The deciding advantages of the lock canal were the decreased cost and the shorter time required. The advocates of the sea-level canal fear the possible destruction of the locks by earthquake, accident or the dynamite of an enemy. The objections to a sea-level canal are the difficulty of controlling the Chagres, and the fact that locks cannot entirely be avoided in any case, as the difference in tides between the Atlantic and Pacific would necessitate a tidal lock in a canal built at sea-

THE NORTHERN END OF THE CULEBRA CUT.

Viewing the future lock (marked in this section). There is still a distance of about ninety feet to go.

a lock and sea-level canal has occupied the minds of the world's most expert engineers, and so many as eighty different plans have been presented, all varying in

level. The total cost to the Americans to complete the present lock canal is estimated at \$297,766,000. The estimate for a sea-level canal is \$477,601,000.

These figures do not in either case include the \$40,000,000 paid to the French company and \$10,000,000 paid to the Republic of Panama.

The present Commission is using

prism. It was raised again last November and was repaired, with plates dug out of the mud at San Pablo, and fitted with machinery from an old dredge at Gorgona, left on the banks of the

A LIDGERWOOD UNLOADER AT WORK.

The advantage of unloading a train of cars by this steam plow over manual labor is enormous.

every effort to economize. The cost of material and labor is worked out in the most careful detail and published in the *Canal Record*. The French machinery is used to the utmost extent. As an illustration, the floating of the old French ladder dredge "Marmot" is an interesting example. The hull of the dredge had been erected by the French and anchored at La Boca. Before the machinery was installed work was suspended and the hull abandoned. Early in the American occupation it was sunk in the old French Canal, to get it out of the way. A change in plans made it necessary to raise the hull and sink it again outside the Canal

Chagres by the French. Within a month it will be at work in the Pacific entrance of the Canal, doing the excavation, for which it was designed twenty-five years ago.

One thousand pounds of old French scrap iron have been forwarded to the Director of Mints at Philadelphia to be used in making medals for employees who have a record of two years' consecutive service on the Isthmus. Up to January 1st, 1909, about 2,400 medals had been earned and it is estimated that the number of medals to be earned in the future will aggregate about 500 a year. Medals earned by employees who have died sub

sequently will be delivered to their heirs. These medals will be prized more than the public at large might believe, for to many men they represent two years of hard work, under trying conditions, and a share in an enterprise of international importance. The awarding of these medals reminds one of the erection of the statue of Columbus at Cristobal, as a tribute to de Lesseps and the French thru the efforts of Empress Eugenie, who was then an exile in England.

Many of the facts and figures in this article are taken from the *Canal Record*, and, in this connection, it is well to say a word of praise for this publication. It has been the object of repeated attacks and criticisms by the Senate and the House, who claim it is an expensive luxury and an improper Government activity.

The *Canal Record*, however, binds the forces at Panama together in a manner otherwise impossible, and is accountable in a large measure for the *esprit de corps* among the employees. The report on the work of the individual steam shovels and dredges causes a friendly rivalry among the crews. The publication of

social notes, baseball league standings and letters from employees are all of interest and of assistance in keeping the different points on the line in touch with each other. The monthly report in detail of the progress of excavation, showing a steady advance, is encouraging to the men and shows them they are not working on a task whose margin fades forever when they move.

President Taft, speaking at New Orleans on February 12th, said there were many who favored a sea-level canal and many who favored a lock canal, and neither faction would give up their views after a decision had been made. But it was necessary to build some sort of a canal, and build it at once. If a continual change of plans were made, there never would be any canal at all. President Taft is right. Nothing is more discouraging than a fire in the rear, and the men at Panama are working with their whole hearts and souls to accomplish the greatest engineering enterprise of centuries. If the men now in charge are left unhampered and undisturbed ships will be crossing from the Atlantic to the Pacific in five years.

Glove and Hand

BY MARY A. P. STANSBURY

TEARS, dearest, here within my arms!
What ill-winged shape has fluttered nigh
To vex your heart with vague alarms?
You "fear lest one of us may die!"

But listen! Here's your glove, a bit
Of silk-mesh sweet with breath of you,
Creased daintily the flesh to fit,
Where slipped the slender fingers thru,—

Yet, when you came to me today,
And I would kiss your hand—like this—
You drew the glove off, smiling—"Stay,"
You said, "let the hand feel the kiss!"

Sweet, do you read my riddle right?
Lo, this fair body, a live web
Of netted tissues, rose and white
As the free pulses flow and ebb

In brodered veins,—with sinuous swell
Of muscles strong and fine, with grace
Of motion, and all charms that dwell
Within the blossom-tinted face,—

What is it but a glove upon
The hand—the spirit—by so much
Defrauding insight of its own,
And subtly dulling touch on touch?

And still your dream of fleeting breath
Shake the calm patience of that love
Which waits—beyond the door of death—
The touch of hands—without the glove?

ARMED. WIS.

Literature

Cyclopedia of American Agriculture

IF the farmer should attempt to keep up with the literature of his occupation as the doctor, minister and lawyer are supposed to he would not get enough outdoor exercise to keep him in good health. In the new volume of Bailey's *Cyclopedia of American Agriculture** there is a list of 437 agricultural periodicals now published in the United States. Every State, territory and insular possession has one or more experiment stations, each of which must publish at least four bulletins a year and usually

er, has been sifted by experts and brought into compact form, without, however, making it so condensed as to be dull reading. It is bulky enough as it is. Each of the four volumes contains 600 to 700 pages, measuring $7\frac{1}{2}$ inches by 10. But it is well arranged and divided into chapters, sections and paragraphs, with separate heads so one can turn directly to the subject he is interested in without even reference to the index. The cuts, of which there are more than two thousand, are just where they are wanted, little line drawings stuck in the text, illustrating just one point apiece and no more. Besides these,

APPEARANCE OF AN IRRIGATION DITCH WHEN FIRST COMPLETED.

AN IRRIGATION DITCH TEN YEARS AFTER COMPLETION.

From Bailey's "Cyclopedia of American Agriculture."

publishes two or three times that number. Then there are the voluminous publications of the national Department of Agriculture, besides State reports, proceedings of conventions, farm notes in the country papers, and books. No wonder most farmers protect themselves against this flood of printed pages by refusing to read at all.

Here is where the usefulness of the present work comes in. This immense mass of material, wherein what is really original and valuable is hard to discover

there are a hundred full page halftones. The only improvement one would suggest in the way of illustration would be a few color plates where they are really needed, and the free use of diagrams and other graphical methods of presenting statistics.

The list of contributors is practically a roll of the leading American investigators. It is hard to think of a prominent name that is missing. About 150 men have collaborated and as many more assisted in the preparation of each volume. Their contributions have been welded together with such skill that there is comparatively little repetition or conflict, but the cross references should be more numerous.

*CYCLOPEDIA OF AMERICAN AGRICULTURE. A popular survey of agricultural conditions, practices and ideals in the United States and Canada. Edited by L. H. Bailey. Vol. I, Regions, soils, farm, plans and atmosphere. Vol. II, Crops. Vol. III, Animals. Vol. IV, Farm and community. New York: The Macmillan Co. Per vol., \$5.00.

The work follows the evolutionary order, minerals, plants, animals, man, beginning with the farm and ending with the farmer. The last volume deals with the economics and sociology of farm life, with such questions as why there are thousands of abandoned farms in New England, how much commission the middleman has a right to, in how far cooperation is practical, within what limits is intensive farming a paying proposition, and how to keep farm accounts. Considerable space is devoted to agricultural education and to the elevation of country life thru traveling libraries, reading courses, telephones, and free delivery. The volume concludes with 250 brief biographies of leading American agriculturists of the past.

This cyclopedia should be put at the head of the list of books to be bought by every public library having a farming constituency. The smaller the library the more important that it should have it, for it would require many other volumes to take its place. It also is a useful reference work for school libraries in town and country.

Crawford's Last Novel

IN these days when everybody writes whether they know how or not it gives one a pleasurable sense of relief to come upon the work of a practised hand. We may not understand the cause of the difference but we feel it just as we feel the difference when an experienced motorman replaces a green hand on a trolley car. Marion Crawford wrote forty volumes and yet the world sorrows because it can have no more from his pen. Of what other novelist could this be said? Since 1882, when "Mr. Isaacs" appeared, the taste of the public has changed several times. Schools of fiction have come and gone, but Crawford always remained in favor. There are two reasons for his continued popularity: he always had a story to tell and he knew how to tell. He was a born story-teller, and, what is more rare, a trained one. He takes an open, naive delight in his power. In *The White Sister**, for example, at the end of the fifth chapter the clouds seemed to be

clearing away and Angela and Giovanni were likely to marry and live

"happily for many years, because they were suited to each other in all ways and were possessed of excellent constitutions. If all this had happened, their story would have little interest except for themselves, or as an example for young couples; and it is a deplorable fact that there is hardly anything so dull and tiresome in the world as a good example."

After this little explanation to the reader why he cannot let the course of true love run smooth the author proceeds to put the couple thru thirteen chapters more of separation and torture, mental, moral and physical, before bringing them together at the last. The story is the thing

E. MARION CRAWFORD.

Author of "The White Sister." Born August 2, 1834.
Died April 9, 1909.

and he is not going to allow it to be spoiled for anybody's happiness.

Another characteristic of Crawford's style is his extreme clarity and simplicity of diction. He has been accused of being melodramatic, and so he is if that means the use of dramatic coincidences and violent catastrophes. In this novel a man is killed by an automobile, two more are shot, a dynamite magazine is blown up, a will is stolen, and the theft confessed in delirium, the heroine is in turn a princess and heiress, an outcast and a foundling, a nun and a wife; the hero is a slave five years in Africa and has his arm amputated; all this and much more of the kind happens that we

**The White Sister*, by E. Marion Crawford. (New York: The Macmillan Co. \$1.00.)

must not disclose, yet it has not the faults of melodrama. The characters are not wooden, but very lifelike and spontaneous in their actions, and the language is never theatrical. In the most dramatic moments the style is as plain, straightforward and unpretentious as ever. He just tells what happened. In *The White Sister* he defends his objective method indirectly by a criticism of the psychological novelists. Possibly he had in mind George Moore's "Sister Teresa."

"An accomplished psychologist would easily fill a volume with the history of Angela's soul from the day on which she learned the bad news till the morning when she made her profession and took the final vows of her order in the little convent church. But one great objection to psychological analysis in novels seems to be that the writer never gets beyond analyzing what he believes he himself would have felt if placed in the 'situation' he has invented for his hero or heroine. Thus analyzed Angela Chiaromonte would not have known herself, any more than those who knew her best, such as Madame Bernard and her aunt the Princess, would have recognized her. I shall not try to 'factorise' the result represented by her state of mind from time to time; still less shall I employ a mathematical process to prove that the ratio of dx to dy is twice x , the change in Angela at any moment of her normal growth. What has happened must be logical, just because it has happened; if we do not understand the logic, that may or may not be the worse for us, but the facts remain."

The Story of My Life. By Ellen Terry.
New York: Doubleday, Page & Co.
\$3.50.

Miss Ellen Terry is to be congratulated upon the vivacity of her recollections; they possess a rare quality of varying mood that is charming because temperament finds itself so closely allied with intellect. These are more than reminiscences; they are likewise reflections—upon people, upon acting, upon the artist's life in general. Since 1856 Miss Terry has been intimate with the stage, and her life connects the era of Tom Taylor and Charles Reade with that of Ibsen and Bernard Shaw; her remembrances of Charles Kean, of her meeting with Henry Irving in December, 1867, of the Lyceum days, have the advantage over a mere chronicle in the fact that her observation is of no casual order. There are lights and shadows in this "autobiography"—a very human account that is

surprisingly free from prejudices, considering the life with which it deals; it is poetically vivid, sometimes incisively so. It is whole-souled and frank, especially when it sounds the note of self-criticism; it is interesting reading, altho it is rambling, which means that it is formless. Miss Terry is sound in her criticisms, altho she overestimates the inevitableness of Irving's interpretations; her comparisons, for instance, of Duse and Bernhardt are little short of excellent criticism; they are impressionistic. On all matters relating to the world behind the curtain she is eminently safe to follow, more so than any recent "raconteur" of the stage. In fact, this book, with its adequate illustrations, if rightly read, would awaken many a stage-struck girl, altho in no respect does it forsake devotion to the theater. Miss Terry has had her literary associations, and she has not lost the value of knowing such men as Tennyson, Rossetti and Burne-Jones, in the flattery of the moment. Her experiences have left their personal mark; they have this advantage over those of Clara Morris, published several years ago, that whereas the former have real substance the latter are largely fiction in their total effect.

The Standard of Living Among Workingmen's Families in New York City. By Robert Coit Chapin, Ph. D. New York: Charities Publication Committee. \$2.00.

There is a growing study in this country of the cost of living. New York City has been made the basis of two detailed studies within recent years. Mrs. L. B. Bolard, two years ago, published a volume based on two hundred family budgets of families in the neighborhood of Greenwich Village, in the Southwestern section of New York City. The present volume is based on 391 families living in various parts of Greater New York. Professor Chapin has done a most thoro piece of work, and he deserves the commendation of students of the subject for the very careful workmanship he has shown in putting together in readable, compact, accessible shape the mass of data gathered by his investigators. The work is the result of an investigation pursued under the auspices of a committee of the New York State Conference of Charities and Corrections, Professor Chapin act-

ing as secretary of the Committee. It was subsidized by the Russell Sage Foundation. The attempt was made to find families of "normal composition and moderate size." The incomes of the greater part were between \$600 and \$1,100, but there were included some as low as \$400 and some over \$1,100. "An income of \$900 or over probably permits the maintenance of a normal standard, at least so far as the physical man is concerned." This is Professor Chapin's conclusion as to an average family for New York City. A family falling below that is liable to suffer deterioration. He says "almost every family in the \$600 and \$700 groups shows some manifest de-

light on a matter most important to our social welfare. There is attached a report on the standard of living among workingmen's families in Buffalo by John R. Howard, Jr., based on an investigation of 100 families.

Siena. *The Story of a Medieval Commune.* By Ferdinand Schevill. New York: Charles Scribner's Sons. \$2.50.

In spite of the unceasing and overwhelming flood of literature on Italy there is room for such a book as this, which is neither a volume of snap-shot impressions nor a dry compilation of archeological monographs, but a well-digested, well-balanced and well-written

"GUALFREDO DA TOLENTINO,"
By Michele Cini. Palazzo Pitti. From Schevill's "Siena."

ficiency." Assistant Professor Frank P. Underhill, of Yale, calculated the food values of food materials purchased by the families, a number of the schedules having been submitted to him. His conclusion was that twenty-two cents per day was the lowest sum which could be expended for an adult man in order to give him full normal sustenance. Professor Chapin points out that one-third of the \$600 families spent less than this sum, and must, therefore, be underfed, if the calculation as to the sustaining power of the food materials is correct. There is some difference of opinion as to this. Nevertheless, such a study throws great

light on a matter most important to our social welfare. There is attached a report on the standard of living among workingmen's families in Buffalo by John R. Howard, Jr., based on an investigation of 100 families.

story of the city from its origin to its overthrow in the sixteenth century. The author seems equally at home in discussing the religious spirit which found its highest expression in St. Catherine, the civic spirit which brought a commune out of factional groups of nobles, clergy, merchants and artisans, and the artistic spirit which adorned the medieval skyscrapers and striped churches. Altho Mr. Schevill has sufficient enthusiasm for his city to do it justice yet he does not fall into the common error of exaggerating its achievements or of insisting upon the admiration for every obscure artist or author.

Literary Notes

.... Within its modest limits, Mr. Jesse Lynch Williams' *Mr. Cleveland: A Personal Impression* is a welcome, a useful, and an informing little volume, giving a suggestive glimpse of the man behind the President. (Dodd, Mead, 50 cents).

.... The edition of *The Works of James Buchanan*, comprising his speeches, state papers, and private correspondence, collected and edited by John Bassett Moore, reaches, in Vols. V and VI, recently issued, the years 1841-46. (Lippincott, \$5.00).

.... A sizable volume of some 500 pages contains a new edition of *The Life and Letters of Lord Macaulay*, first issued in this country by its present publishers in 1875, in two volumes, and printed, it would appear, from the original plates. (Harper's, \$1.50).

.... One of the latest contributions to a library of amazing proportions in many languages is Edward L. Andrew's *Napoleon and America*, an "outline of the relations of the United States to the career and downfall of Napoleon Bonaparte." Mr. Andrews believes that American disregard of the Continental blockade was the proximate cause of the Russian campaign and Napoleon's downfall, a somewhat bold theory. (Mitchell Kennerley, \$2.00).

.... The progress which wireless telegraphy has made in the last few years is traced in a new edition of A. E. Kennelly's book on the subject, which we welcomed in 1906. The author has brought this new issue entirely up to date, adding to it whatever is worth saying at the present moment on the subject of still another service of science to practical life, wireless telephony. The new book is therefore called *Wireless Telegraphy and Wireless Telephony*. For the benefit of those unfamiliar with the series of "Present Day Primers" to which it belongs, it may be said that the book is written for the general reader as well as for the technical student. (Moffat, Yard, \$1.00).

.... The Lincoln centenary has left in its wake some minor publications that call for but brief comment. First of these is Ida M. Tarbell's *Father Abraham*, told in the homely style that has become so intimately associated in our imagination with the great President, and, be it added, told admirably well. The spirit of the popular memory of Lincoln is reflected in this little book, which is good reading for the young. (Moffat, Yard, \$1.25). Mr. James Creelman's *Why We Love Lincoln* fills acceptably its mission as a brief centenary survey of his life and career. It sounds the proper note, and does it with conviction. (Outing, \$1.25). A lecture on *Abraham Lincoln*, by Brevet Brig.-Gen. Benjamin Rush Cowen, an appreciation rather than recollections by the official in charge of the Lincoln funeral cortege, who, moreover, in the course of his career, had been in personal contact with him, has been put between covers. (Cincinnati: Robert Clarke Co., \$1.00). An *Anthology of the Epigrams and Sayings of Abraham Lincoln*, edited by Francis

D. Tandy, contains all the winged words that have become familiar to us, and many more, **less well known, but well worthy of being made thus readily accessible.** (New York: Francis D. Tandy Co., 75 cents.)

Pebbles

MATRIMONIAL advertisements are not the exclusive privilege of the emancipated Western woman. The newest civilization of Japan has also assimilated them, with improvements. Here is a specimen:

"I am a very pretty girl. My hair is as wavy as a cloud. My complexion has the brilliancy and softness of a flower. My expression is as noble as the leaf of the weeping willow. My brown eyes are like two crescents of the moon.

"I have enough worldly goods to pass happily thru life with my husband, hand in hand, gazing at the flowers by day and the moon by night. If this should meet the eye of a man who is intelligent, amiable and of good address, I will be his for life, and repose with him later in a tomb of red marble."—*Dundee Advertiser*.

THE popular after-dinner speaker rose to respond to a toast.

"Gentlemen," he said, "the unexpectedly flattering manner in which your toastmaster has introduced me this evening reminds me of a story which strikes me as being appropriate to the occasion. By the way, how many of you have heard the story of the Pennsylvania farmer and the young wolf he bought for a 'coon dog'? Will those who are familiar with it from having listened to it half a dozen times or more please raise their hands?"

An overwhelming majority of his auditors raised their hands.

"Thanks, gentlemen," he said. I shall not inflict it upon you."

With their rapturous applause still ringing in his ears, he sat down.

He made the hit of the evening.—*Chicago Tribune*.

He was a naughty little brother, but little brothers very often are naughty on such occasions.

His sister's suitor was awaiting patiently in the drawing-room, and Tommy, who was entertaining him, opened fire with:

"Are you going to propose to my sister tonight?"

"Why, I—er—. —er— what do you mean?" asked the young man uneasily.

"Oh, nothing," was the reply. "Only if you are, don't think you are going to surprise her. At dinner just now she gave me and my little brother a quarter each to go to bed at half-past seven. She's hung four Cupid pictures on the parlor wall, moved the sofa over in the darkest corner, got ma and pa to go calling next door, shut the dog in the cellar, and been practising 'Because I Love You' on the piano all the afternoon. You'll get her all right, but if she tries anything on about it's being so sudden, just tell her it's all bunkum!"—*Washington Post*.

Trusts and the Government

MR. TAFT, with the aid of the learned attorneys in his Cabinet, will strive to improve the machinery by which the laws against combinations and rebating are enforced, and to prepare needed amendments to the Anti-Trust law which Congress and the people will accept. To improve the machinery, a new distribution of the duties of the Interstate Commerce Commission and of parts of two Departments is required. This is not an easy task, but amendment of the Sherman act is a much more difficult one. That law should be modified, but public opinion opposes any relaxation of its severity.

The influence of the prevailing public sentiment upon Congress was shown by the report of the Senate Judiciary Committee last winter, that the statute ought not to be changed. That report is hostile to the recommendations which, in all probability, the President will submit for the amendment of the law. It is not realized by a majority of our people that

strict and universal enforcement of the Sherman act, as it has been interpreted and applied by the courts, would profoundly disturb the legitimate business

of the country, subjecting to prosecution and punishment a great number of persons whose operations have been beneficial rather than harmful.

In his remarks at a dinner in New York last week, Attorney General Wickersham spoke of the President's purpose, and of the need of amendments which would "except from the provisions of the law the ordinary agreements which are the necessary result of healthy business conditions." In that address, Mr. Wickersham, defining the policy of the Administration, did not propose any retreat from the position taken by Mr. Roosevelt:

"The work of the present Administration is none the less important than was that of the last in continuing to enforce the laws of the country and in endeavoring to effectuate the intent of the people, speaking thru Congress, in preventing the things which the people have come to believe to be inconsistent with the welfare of the Republic; but the methods which were necessary to awaken the business community to a recognition of the existence and vitality of these laws are no longer essential."

He did say, however, that some "suits were instituted and some prosecutions commenced without sufficient consideration and without adequate cause," and he gave notice that proceedings in such cases would be discontinued. He found it necessary to be frank, altho he might appear to be criticising his predecessor and Mr. Roosevelt. Perhaps it would have been better to withhold that criticism and to permit the statement of reasons to accompany and explain the action to be taken. He gave notice that he should not authorize the criminal prosecution of men who, without intent to violate the Sherman act, have taken a course technically at variance with an extreme and most drastic construction of the statute. If the men in question do not wrong the public by such technical violation of the law, the public will not condemn his policy.

Some who have read the report of Mr. Wickersham's remarks in connection with the accompanying report of what was said by the gentleman who presided at the dinner, may have been unconsciously led by the speech of that gentleman (Mr. Joseph H. Choate), who introduced and eulogized the Attorney-General, to ascribe to the latter's address a reactionary tendency which it really

did not exhibit. Mr. Choate's unfavorable opinion of President Roosevelt's policy and of the course pursued by Attorney-General Bonaparte was quite plainly—perhaps too plainly—expressed, and we do not see how the expression of it could have been enjoyed by Mr. Bonaparte's successor.

Mr. Choate pointed out that Mr. Wickersham had been "a corporation lawyer, a defender of institutions which twelve months ago were everywhere condemned," and he added that "it was quite time that they [the corporations] had their innings." It is true, as Mr. Choate also said, that corporation lawyers are deservedly eminent in their profession, but the corporations which engage the Attorney-General's attention are those which violate the laws. On the day before this dinner Mr. Wickersham had approved a settlement by which the Sugar Trust restored to the Government more than \$2,000,000 which had virtually been stolen by means of fraudulent weighing machines. Mr. Choate recently appeared in court for the defense in a suit in which this Trust, or corporation, and a railroad company were prosecuted by the Government for rebating, and his defense was not successful. We are confident that he does not think such corporations are now to "have their innings" because Mr. Wickersham is at the head of the Department of Justice.

The Humanists and the Scientists

IN the article on the University of California in this issue, as well as in previous articles of the series, attention is called to the tendency of the rival factions of college faculties to come together and forget their traditional rivalry. There is arising a new spirit of mutual toleration and comprehension and a disposition on both sides to moderate exclusive and exaggerated claims and to join forces for the promotion of modern education.

The old warfare between science and classics is practically over. The old weapons are still flourished occasionally but merely from habit. The former pugnacious zeal and dogmatism is lacking. This is not so much because the classi-

cists have been defeated as it is because the scientists have been triumphant. There is widely prevalent in technological as well as in literary departments, a feeling of disappointment at the results of a generation of scientific training, a feeling that science has had its chance now and has not "made good." Spencer's tract on "Education," and Huxley's simile of life as a chess game played against Nature, are as unanswerable as ever but they are not so convincing as formerly. The men now coming out of our laboratories and shops, do not, to say the least, stand head and shoulders above their mates in the humanistic departments. They are not so distinguished by their broadmindedness, tolerance, practicality, truthfulness, logical power and freedom from superstition and like infirmities, as to demonstrate the intrinsic superiority of scientific training.

Whether or not it has been proved that the advantages to be gained by the study of science are the same as, or equal to, those derived from the study of the classics, it has been undeniably demonstrated that the evils resulting from poor teaching of the sciences are the same and quite as great as those produced by poor teaching of the classics. That is, the subject matter of science does not in itself have any magic power to make it practical, to prevent the student from falling a victim to an instructor's dullness or laziness. All the ancient evils which the advocates of the new learning so vigorously criticised in the old are to be found too often in classes devoted to the most novel and utilitarian of subjects, that is the aloofness from life, the memorizing instead of thinking, and the cheating the pupil into the belief that he is gaining valuable information when he is only learning new words.

Of course, it is not fair to expect reformers to keep their promises. They never can "deliver the goods." It is doubtful if any reform would be zealously enough propagated to carry it thru or strenuously enough opposed to prevent it if advocates and opponents were not deluded into the belief that it would make more of a change in human affairs than it ever does. It may also be argued that science has not had a fair chance because

its teachers have not had the real scientific spirit. That is true but beside the question. Everybody will agree that zoölogy, as taught by an Agassiz or Huxley, is an inspiring and profitable study, but the question is whether zoölogy as taught by the ordinary high school teacher is better than Latin as taught by a man of the same caliber.

The humanists must not interpret the dissatisfaction with the results of scientific training as indicating that they are to be reinstated in their ancient rights and privileges. A restoration of the Bourbons, if they have forgotten nothing and learned nothing, would be followed by another revolution. But they may find in it an opportunity to co-operate with their disillusionized colleagues of the opposite wing of the faculty in founding a new education which shall have the advantages of both.

The humanists were eternally right in maintaining that the proper study of mankind is man. They lost ground when they departed from this principle and acted upon the idea that the proper study of mankind is words. The scientists won their cause by showing that a study is not necessarily devoid of educational value because it has a practical bearing on modern life. We are disappointed in them when they desert their winning colors and act upon the assumption that the ultimate ideal of humanity is a mathematical formula. If the two parties can be kept to their respective ideals there would be little conflict between them and a few mutual concessions would bring them together. The classicists should concede that the human race extends beyond the Mediterranean basin and that there are other avenues of approach to it than half a dozen books in Greek and Latin. The astronomer should be required to teach that man is the center of the universe and that the sun, stars and comets really revolve around our earth, however convenient it may be for him to adopt temporarily an extra-terrene standpoint for the purpose of calculating their orbits. The zoölogist may devote his life to the anatomy of the South Sea urchin but he should be able to tell why he is doing it. The editor of a scientific series should do as the editor of a daily does, hand back the manuscripts to their

authors marked "H. I." with a blue pencil, this meaning to a reporter "run human interest into your story."

Oliver Wendell Holmes

THE Wonderful Year gives us now another centennial, that of the birth of our own Dr. Holmes. He is one of that marvelous company of poets that, as professors, made Harvard College famous fifty years ago. Nowhere have we the like of them in this degenerate day. But why should we call this degenerate which fills the literary gap with astronomers and engineers and inventors? Emerson's squirrel replied well to the mountain who had called him "little prig":

"You no doubt are very big,
But I count it no disgrace
To occupy my place.
If I'm not a leg as you
You are not as small as I, and not half so spry
I'll not deny you make
A very pretty squirrel-track.
Talents differ: things are well and wisely put.
If I cannot carry forests on my back
Neither can you crack a nut."
Surely so: Emerson and Longfellow and Holmes and Lowell could not build a Brooklyn Bridge or a Gatun Dam, or invent the telephone or the electric light. Those were too hard nuts for them to crack.

The Harvard trinity were all very human men, every one lovable, flawless in their thoughts and sweetened by the affections that make life beautiful. They differed, nevertheless. Longfellow was so like other men, with no special quality, except, as each sentiment and feeling was developed or idealized, men called him commonplace, because sentiment and feeling are common, and need only to find some one who can express them. Lowell added sparkling humor; and Holmes bubbling wit. They were all, as became college professors of their day, thoro scholars, but scholars in the way of their day, which could all be extracted from or put into books, words, thoughts; nothing concrete, brick or stone or steel.

But Holmes's department was not literature but medicine, which in his day was one of the three exclusively learned professions. He earned his salary by teaching a physically useful art; but

he won his fame by what he was not paid for, by breaking into literature, and particularly by his shrewd wit, which became extravagant in some of his poems, but was tempered often by a tender touch of mirthful sympathy and sometimes by a philosophical or even scientific flavor which, as in the "Professor at the Breakfast Table," added a new variety to authorship. Who of the elder generation can forget the delight with which in 1858 he read the eagerly awaited numbers of the new *Atlantic Monthly*—no pictures then needed to float it—containing these serial papers, which were the articles first devoured, even before those by Lowell and Longfellow in prose or verse? And it is on these that Holmes's fame will chiefly rest. Nobody reads his learned medical papers now; but his table-talks are a permanent addition to English literature.

But before that he had delighted the children as well as their parents with his poems, apparently so easily dashed off, and yet so choicely worded, and so funny! Even still they cling to memory—such as "The Kaytidd":

"Did Katy love a naughty man,
Or kiss more cheeks than one?
I warrant Katy did no more
Than many a Kate has done."

Or the "One Hoss Shay":

"How it went to pieces all at once,
All at once and nothing first,
Just as bubbles do when they burst.
End of the wonderful one-hoss shay.
Logic is logic—that's all I say."

Or "The Last Leaf":

"I know it is a sin
For me to sit and grin
At him here,
But the old three-cornered hat,
And the breeches and all that
Are so queer.

"And if I should live to be
The last leaf upon the tree
In the spring,
Let them smile as I do now
At the old forsaken bough
Where I cling."

And he gave the same measure of fun to the "dear unmarried aunt" who would

"Curl her wintry locks
In such a springlike way."

And yet the most famous of all his poems, one spouted on every school platform, had in it not a tone of wit, only

the passion of patriotism. We can yet repeat "Old Ironsides":

"Ay, tear her tattered ensign down!
Long has it waved on high.
And many an eye has danced to see
That banner in the sky;
Beneath it rung the battle shout,
And burst the cannon's roar;—
The meteor of the ocean air
Shall sweep the clouds no more

"Oh, better that her shattered hulk
Should sink beneath the wave;
Her thunders shook the mighty deep,
And there should be her grave.
Nail to the mast her holy flag,
Set every threadbare sail,
And give her to the god of storms,
The lightning and the gale."

When another century shall have past, not then will these three Cambridge poets have ceased to be remembered and repeated. Yes, and we will also save a niche in our memory for our Bells and Edisons, for we have not quite forgotten Morse and Henry.

A Good Man

WE have occasion many times a year to make the obituary mention of great men and women. This is fitting and due, altho we would prefer to write of living men and issues. If ever it is desirable, however, to take space to eulogize the dead, it is surely so in the case of Samuel J. Barrows, whose death from pneumonia occurred in this city a week ago.

Here was a man who, for more than forty years of active life, has fought on the firing line of progress, asking only how he might serve his fellowmen, seeking no social approbation or personal gain, simply a modest, efficient, great-hearted American devoted to the common good. Born and brought up on the East Side of New York City, he was a living refutation of the proposition that a modern city cannot produce a great man. After returning from the Civil War he prepared himself to become a Unitarian minister. After a brief term in the pastorate he was called to the editorship of the chief organ of his denomination, *The Christian Register* which he controlled with fidelity and ability for nearly twenty years. It was during a vacation in Europe that he was nominated without his knowledge for Congress. As soon as he was notified by cable he

returned to Boston and entered so enthusiastically into the campaign that contrary to general expectation he was elected.

While he was in Congress he was the special Washington correspondent of THE INDEPENDENT, and he used to send us weekly letters signed "Floor Correspondent." Even till the time of his death he was a frequent contributor to our columns, often in the editorial pages. President McKinley was greatly impressed with his ability and nominated him for Librarian of Congress when his term in the House was about to expire. Before the nomination had been confirmed by the Senate, however, Mr. Barrows wrote a semi-humorous interview with himself in his Washington letter, telling what he would do if made Librarian. This gave a handle to a few of the little minds in the Senate and they held up his confirmation until Congress adjourned without action. The next Washington letter Mr. Barrows sent us was signed "Floored Correspondent."

He was quickly engaged by the New York Prison Association as its Secretary, which office he held till his death. He represented the Government officially on several occasions at prison congresses and he was especially interested in the great international prison congress that is to be held in this country soon, and was planning to spend the summer in South America in its behalf. Mr. Barrows was one of the leading penologists in this country, and he has probably done more than any other American to promote the probation system and indeterminate sentence, and, in general, to change our prisons from brutalizing dungeons to great reformatory institutions.

He was the first man in this country to join the Interparliamentary Union, and the first to know just the value of the cause of international peace second to that of no other Americans. He was a master of a dozen languages, some of which he studied after he was sixty years old. He once learned Hungarian simply to make a public address in Budapest. He was one of the few who made it their business to learn the languages of the nations with which we had to do. He had but two children of their own, their home was the only one known to many a plane. It was no un-

common thing in their family for children of the white, yellow, red, brown and black races to sit down to dinner together. Mr. Barrows had no race, class, sex or religious prejudice. One of his last articles in THE INDEPENDENT told how he wished the churches were so broad that he could join them all, Catholic, Jew, Presbyterian, Unitarian, Episcopal, etc. He belonged to all the more important philanthropic and charitable societies of New York. Why should he be expected to hold fellowship in only one church?

Perhaps the saddest thing about Mr. Barrows's death was that his devoted wife was in Russia at the time on an errand of mercy—no less an undertaking than to attempt to prevail on the autocracy to liberate from jail that noble prisoner, Madame Breshkovsky. Their home life was ideal. They married first and got their education afterward, tho they are the kind of people who never cease learning. When Mrs. Barrows wanted to take a course in medicine in Europe Mr. Barrows earned the money for both. When Mr. Barrows went thru the theological seminary Mrs. Barrows supported him with her pen. For nearly fifty years this devoted pair have worked with and for each other, ever cheerful, ever fresh for new service, ever the inspiration and despair of their fellow workers. They have had no time to make money, no inclination for the conventional social pleasures, when so much was waiting to be done. But when the Russian revolution and famine came they were the ones who first stretched the hand of brotherhood across the ocean from America. And many a heartsick prisoner and motherless boy whom they have befriended are praying for them these days.

No prettier story can be told than that when Mr. Barrows was in Congress and the tariff bill was up for discussion. A high duty was about to be put on a product manufactured in a certain little European town. The whole town was engaged in the manufacture of this product, which was its sole means of livelihood. Mr. Barrows recounted his experiences in that little town on his vacation during the previous summer, showing how happy and prosperous all the people were as a result of their ability to

sell their goods in the American market. He begged Congress not to bring ruin and desolation on them, even if it would enable some infant industry in America to compete with them. His eloquence won the day and the duty was cut off.

Not a famous man, as fame goes, not a rich man as riches are counted, yet Samuel J. Barrows was on the whole the best type of man it has been our privilege to know.

Safeguarding Opportunity

IT takes a startling bit of news, like the publication of the new British budget, to make the average intelligent man in the United States realize how far behind some of the countries of Europe our own nation is in the evolution of politico-economic policy. An exceptionally well informed minority of students, publicists and journalists of course understand the situation, and voters of less than average intelligence are satisfied to go on believing that ever since the fourth of July, 1776, this country has achieved the only progress on this planet worth talking about. The multitude, of average intelligence and information, hold the balance of power, and it is a good thing that now and then something compels them to "sit up and take notice" of the rest of the world.

We do not wish to intimate that a certain backwardness of the United States in matters of public policy is discreditable to us as a nation. European nations are trying experiments which to us seem radical because the increasing economic pressure upon the middle and working classes compels their governments to do something. In America the pressure is increasing, but it has not yet reached the European degree of intensity. We still have an enormous amount of cheap land, and the occupation of the farmer is on the whole more profitable than it was twenty-five years ago, while the farmer's life is being made, if not as agreeable as it was seventy-five years ago, at least more attractive than it was a generation ago.

The underlying question governing both American and European public policy is the question of opportunity. So long as nature and freedom provide and

safeguard opportunity, we have little demand for public or other collective action for relieving distress, "elevating the masses," or assisting the average man to find employment or to provide for his old age. The demand for these things comes when population has become dense and society has become complex, and when corporate organizations control natural resources and the industrial opportunities. Then the question arises: How shall the average man be protected? Shall we take our chances under merely restrictive legislation, and multiply the laws and ordinances forbidding the captains of business to do this and do that? Shall we try the socialistic experiment, and convert the dominant means of production into collective property subject to collective control? Or shall we take a middle course, and thru governmental agency provide such protective measures for the masses as insurance against sickness and unemployment and pensions for old age, and supplement these measures by generously planned schemes for a national development of agricultural lands, forests, waterways and so on?

It is possible that these three policies are broadly correlated with three stages of development, and that some day or other the great nations of the world will work out a successful scheme of commonwealth co-operation, the details of which seem to us, in this present age, both vague and difficult. That possibility we consign to our posterity. For the time being, it does seem to be in a general way true that the policy of restrictive control which we are trying to work out in the United States, and the policy of safeguarding economic life and opportunity which Germany, Belgium, France and now England are committed to, are respectively the policies of nations that, on the one hand, have not, and on the other hand have, arrived at experiences of the more intense degrees of economic pressure. If this is true, we may expect to see American policy in the course of time follow along the lines that are now being blazed by such experiments as the new British budget.

The feature of such policies that perhaps will prove to be best worth watching is the broad application of the insurance idea. Insurance is perhaps the sim-

plest and most easily managed method of creating a collective guarantee for the benefit of an individual. All human life is contingent upon a certain compromise between the communistic and the individualistic principles. The public safety, for instance, is based upon a communistic give and take. Every individual, in exchange for his own security, takes his chance of being called upon to risk his life for the general defense. Insurance is an application of this communistic principle, subject to luck. The insured contribute to the general fund from which those individuals upon whom bad luck falls are reimbursed. That this principle should be taken up by a commonwealth or nation, and so broadened out as to make the entire community safeguard each individual against the more intolerable calamities of life, such as ruinous loss by illness or accident, unemployment and a pauper old age, is theoretically quite as reasonable as that the entire community should, in like manner, guarantee the safety of each individual on a communistic or insurance basis against domestic disorder, or invasion by a foreign foe.

Is the policy practically workable as well as theoretically reasonable? The American people will watch with a good deal of interest the English experiment to determine this point.

Dreadnoughts and Airships

AUSTRIA proposed to build four Dreadnoughts. That affrighted Great Britain, for it seemed equivalent to adding so many Dreadnoughts to the German navy, and would require Great Britain to build four additional and then one more. Now we have the report of the decision of the Austrian Government to build seven Dreadnoughts, which will probably require Great Britain to add nine to her program, or give up her rule that her navy must more than match the combined navies of any two Powers, excepting the United States.

This burden is intolerable, not for Great Britain only, but also for all the other nations, us included, that are taking part in this ruinous competition. So

that can be employed for military purposes.

For there is a fair likelihood that airships will make war so horrible that it will cease to be possible. Let us consider what military airships could do.

Remember that when once perfected an airship will be not very expensive. For five or ten thousand dollars one could be equipt that would carry half a dozen men, and travel fifty miles an hour. A thousand could be built for the expense of one Dreadnought. Now let us suppose a fleet of them, starting off one night from the French coast, 150 miles, for London, or from the English coast for Paris, with the purpose of dropping dynamite bombs on the city, or on the military camp of the enemy. It would be utterly impossible to prevent it, and it would be perfectly possible for the attacking party to escape. No defending fleet of airships could intercept them.

The only relief would be a "gentlemen's agreement," a treaty of war, between the two nations at war, that they would not use airships to drop explosives, but only for scouting purposes. But in war everything is fair, and The Hague laws of war are meant to relieve the mere atrocities that are of minor concern. If airships could give success they would be used. To drop an explosive from an airship on a camp or a cruiser is no worse than to shoot a bomb from a cannon. We are making cannon bigger and battleships huger just so that they can do more damage, the more devilish the better. As the game is being played out to its limit, we may see the time come when that limit is reached, and the very excess of destructiveness will defeat its own purpose.

We do not yet know what the age of aerodromics will bring forth. Just as the steamboat and the locomotive have utterly changed our conditions of civilization, so the airship may create a new era. It may even break down the economic line of division between the Republican and the Democratic party by making it well nigh impossible to collect tariff duties either for protection or revenue. At least smuggling would be vastly easier and its prevention very dif-

ficult, except for heavy and bulky goods. We presume the time will come in a very few years when any well-to-do family can have its airship as it now has its horse and carriage or its automobile. The automobile may become as obsolete as the old chaise and the cariole are becoming.

We move fast in these days. The whole revolution, which includes the railroad, the telegraph, the telephone, the bicycle, the automobile, the wireless telegraph, and now the airship, has come within the lifetime of a man of seventy. This last invention will have its own achievements; and if one of them is the suppression of war, and the driving of nations to arbitration, it will be the greatest of all the inventions of a century. Thus science, even against its intention, serves the ideal purpose toward which humanity blindly or consciously moves.

Mohammed V

LAST week we were able to record with great satisfaction the end of the counter-revolution in Turkey and the overthrow of Abdul Hamid. This week we report the removal of Abdul Hamid by force to Salonika, where he will be tried by court-martial and probably condemned to death, the crowning of his successor as Mohammed V, and the end of the massacres in the Cilician region.

While more than two hundred of the conspirators who created the counter-revolution have been executed summarily, we doubt very much if it is the purpose to put the late Sultan to death. There are present uses for him alive.

It is surprising that he did not escape while he could. He had his private yacht at the dock behind his palace, and he could have fled to a foreign vessel. That he did not do it we lay less to his courage than to his cowardice. He could not make up his mind to the effort. His long habit of waiting, which has given him the reputation of astute political skill, failed this time to succeed.

The deposed Sultan is believed to have deposited many millions of wealth in Europe. Whatever lands or other private property he has acquired in Turkey can be confiscated to the State, and there

is said to be much of it; but what is hidden away in Berlin or Paris or London cannot be reached. This the present Government wants and needs. He is said to have offered an immense sum for the privilege of his choice of residence. We take it that this court-martial and threat of death is meant as a means to squeeze his money out of him rather than his blood. He will thus be deprived of his resources for financing another revolution, and be practically imprisoned for the rest of his life in a comfortable but secure palace, where he can grieve and mope like Bonaparte at Saint Helena and have plenty of time allowed to review his life and repent of his sins. Meanwhile the wealth which he disgorges can be in part expended in alleviating the distresses of those made widows and orphans by the massacres in the region of Adana.

And this directs attention to the obligation of the new Turkish rulers, of Mohammed V and his advisers, as also of the other more civilized Powers, to see to it that this massacre be the last which the Christian people of Turkey shall suffer from the hands of fanatical Turks. We believe that the Young Turkish *régime* has the best will in the world to prevent the recurrence of these outrages; and the Christian Powers also have the right and duty to put pressure on the Porte to see that this is done. We of the United States have under the law of nations no right of interference in the domestic concerns of Turkey; but this does not mean that we have no right of protest and pressure. Indeed, we have more right. Had we a naval force in the neighborhood, and had a massacre occurred within reach of our men or our guns, we would have had the right which the law of mercy imposes, to interfere by way of protection, just as for a less cause we have interfered in the affairs of our neighbors nearer home, and as we interfered a few years ago in Peking. But in this case the nearer nations have the nearer duty. We would have the President make it known at Constantinople that those who have instigated the late atrocities must be punished. That is the best insurance against repetition. The negligent vali at Adana, the commander of the troops, and those chiefly guilty of inciting the massa-

crimes should be punished as severely and summarily as were those guilty at Constantinople.

And now what must be done for the sufferers left destitute by the death of their husbands and fathers and the destruction of all their property? For the present they must be cared for by charity. We in this country have before this cared for many hundreds of Armenian orphans. There are two channels thru which such aid can be given, and these are one. They are the International Red Cross and the American Board and its allied agencies, such as the orphan relief society under the care of Miss Wheeler, at Worcester, Mass. But whatever the agency receiving the money, those who are entrusted to expend it will be the missionaries of the American Board on the field. There may be jealousies between Armenians and Protestants in Turkey, but when danger comes, by the thousands they all flock to the missions for protection. There they are with friends and feel safe. And there will be found the honest administration of relief. To be sure, the Turkish Government ought to assume this burden, but it has an empty treasury and no credit, and its first duty is to secure safety and punish the guilty. If later it can give relief, that should be entrusted not to native agents, Turkish or Armenian but to the Red Cross, with which, we believe, Turkey is officially allied.

In an article in this issue of THE INDEPENDENT, President Washburn gives his hopeful comments on the late situation. He anticipates a regenerated Turkey under Mohammed V. With a settled and progressive government there may be expected a phenomenal change in Turkey. The sick man of Europe will be cured. The nations will no longer be hovering like vultures around his bed, ready to tear the carcase. Millions of wealth will seek investment. The facilities of agriculture, manufacture and transportation will speedily develop. Turkey may well become one of the most flourishing as it is one of the most beautiful and by nature most highly gifted of lands. Its future will be glorious, and we all behold it. The world does its welcome to Mohammed V and its hope that with him begins a new era for Turkey and for Islam.

British Finance

It is not at all unlikely that the end of the present Liberal British Government is near at hand. It will fall not on Welsh disestablishment, or educational reform, or an Irish Parliament, but on the budget. With the present appearance of things, when it appeals to the people it will be beaten and free trade will go too. The trouble is that this Government is too honest. It wants to make its income meet the national expenses, and not pile up a war debt in time of peace. The people would have old-age pensions, and the Government yielded, and always the pensions cost more than was expected. We have learnt that lesson. Then the people will have a procession of Dreadnoughts as playthings, and Dreadnoughts are fearfully expensive. These must be paid for in taxes, and taxes are proposed. But the people don't want to be taxed any more. They don't want to pay the piper. Mr. Asquith gives them their toys—and taxes, very heavy taxes on incomes and graduated death duties. To be sure, it is the rich men that will pay the taxes, or their estates will, but that is what they don't like. They are making a fearful noise about it now, and some of our American papers evidently have Tory correspondents who make the worst of it. When Mr. Balfour comes into power again we shall see the end we fear, of the great free trade policy under which Great Britain has been most prosperous and has increased wonderfully her manufactures and commerce. It will not be because Great Britain is tired of free trade, but because she is tired of seeing her taxes. She will want to pay them unwittingly, and the rich men will persuade the poor men that the latter must pay their share, and they will listen and obey; for Carlyle says that those south of the Tweed are mostly fools. Then we shall have the whole world separated into camps surrounded each by tariff walls. And each can be taxed without seeing it. Will it be better?

A Turn About of the Index

In 1875, a work published at Perugia under the name of Carlo Paoletti, advocating the cult of Mary's Pure Blood, was put upon the Index. It is an open secret that the nom de plume is that

of Cardinal Pecci, afterward Leo XIII. As Pope he bothered not his head about removing the book from the Index. He had the works of Galileo and a few more taken off, but his own remained and is still on the Index of Pius X, published in 1907. The book was over-devout. Just lately two books of another zealot have been banned. They are the writings of the Jesuit Barbier, who, since the expulsion of the religious orders, styles himself "L'Abbé." He is among the most devoted and prolific defenders of Ultramontaniam in France. He is more papal than the Pope. But he overshot the mark in singling out for his attacks Mons. Piou, the wealthy founder of the *Action Libérale Populaire*—a still-born Catholic party. It was this gentleman who went to Rome and persuaded Pius X and Cardinal Del Val that the Catholics, under his banner, would win in the general elections which followed the dissolution after separation. He proved a prophet lacking inspiration and if himself elected he sits in the Chamber of Deputies as the representative of the most illiterate department of France. Now L'Abbé Barbier never wearies of nagging Piou. His first two attacks, "*Cas de Conscience*" and "*Rome et l'Action Libérale Populaire*," are purely political writings, to which Rome gave no heed. It would not do for the Index to blacklist nowadays French books exclusively political. The Abbé just overshot the mark when he wrote "*Le Progres du Liberalisme Catholique en France sous le Pape Leon XIII*" and "*Les Democratés chrétiens et le Modernisme*." Here he ventured into fields partly historic, partly political, partly philosophic; and the Index put both under the ban. He is over-orthodox. Nevertheless, his writings are thoro, well documented, and give an enlarging inner view of the ups and downs of political Catholicism in France. "Save me from my friends, and I will take care of mine enemies," L'Abbé Barbier may well exclaim.

There is trouble in the Disciple camp. A pastor of distinction in Chicago has proved to be a believer in the higher criticism, and he does not believe that every word in the Bible is historically true. He is not sure of Jonah or the Flood, so

there are those who want to turn him out. But how can it be done? The Disciples have grown to be over a million and a quarter of communicants, with no machinery of ecclesiastical courts and no creed. They have no standard but the Bible, and no articles by which to interpret it. Their very principles of conglomeration which brought many Ishmaelite fragments of other bodies together was liberty of interpretation. It is a courageous principle, which allows truth and error to wrestle, with no fear that truth will be worsted in the struggle. We presume that room will be kept for historical criticism and those who accept it.

Very curious is the sociological phenomenon we now see in France of employees of the public service in France leaders in strikes against the nation which employs them. It raises serious questions as to how docile workers would be in a socialistic state. Would we have just as many strikes if the nation controlled all sources of production, and by its chosen leaders assigned to each his work and his wages? Would they be any better satisfied, or would the strikes and boycotts be just as bitter as they now are, or as the disturbances have been in France, where the cities were lately in darkness and the mails stayed undistributed?

The proposal of Mississippi to put the name and portrait of Jefferson Davis on the silver presented to the battleship which bears the name of the State is not only in bad taste, but to do it would be an insult to the officers who would use it. We may properly bury the past and fraternize most amicably, but it is not amicable to flaunt secession in a Union ship of war. Such a service should not be accepted.

Sabotage is one of those new foreign words that have not yet got into the dictionaries. It is the reverse of the strike: it is staying in and injuring the product or the machinery. The last French example is that of the postal clerks, who have sent to Tokyo the personal mail of their hated M. Simyan, Under-Secretary of Posts.

FINANCIAL

The New Rock Island President

WILLIAM A. JACKSON has been elected president of the Rock Island Company, the corporation which controls the roads of the Rock Island railway system, to succeed Robert Mather, who recently retired from this office to become chairman of the board of the Westinghouse Electric and Manufacturing Company. Mr. Jackson is fifty years old, and was born at Richmond, Ind. He was educated in the Richmond public schools, at Earlham College, and at the University of Virginia, having been graduated at this university in 1879, with the degree of LL. B. For several years he was prosecuting attorney of Wayne County, Ind. In 1902 he became connected with the Rock Island system, and since 1904 he has been general solicitor and first vice-president of the Chicago, Rock Island & Pacific Railway Company, having succeeded Mr. Mather in those offices, as he now succeeds him in the presidency of the controlling corporation.

WILLIAM A. JACKSON

Trade and Industry

Signs of improvement were seen last week in the condition of the steel trade. Prices are now turning upward. On the 27th, the Corporation added \$1 per ton to its prices for bars, plates, and structural shapes. On the 28th the most powerful of its competitors followed suit. In both cases this action was due to large orders. This is the first upward move-

ment in the steel trade since an open market was declared, with a sharp cutting of prices, in the middle of February. The Corporation's report (published on the 27th) for the March quarter was much better than had been expected. Net earnings (\$22,921,000) were below those of the preceding quarter, of course, but were still much above those of the first and second quarters of 1908.

and steady progress by months was shown, altho the open market was declared in the middle of the quarter. March earnings exceeded those of February by \$320,000, despite the cutting. An impression prevails that in this important industry the corner has been turned. Recent imports of crude materials for manufacturers have been very large. Postal receipts for March in fifty large cities exceeded those of March a year ago by 14½ per cent. Capital incorporations for April were \$181,000,000, against \$105,000,000 in March. Severe and unseasonable weather has

delayed seeding and restrained retail trade, but the prevailing sentiment is optimistic, and marked improvement after settlement of the tariff controversy is generally expected.

....The Merchants' National Bank, whose capital stock is \$2,000,000, now has a surplus and undivided profits amounting to \$1,665,181, an increase since February 5th of \$76,997. The deposits, which on February 5th were \$26,921,070, are now \$31,060,587, an increase of \$4,139,517.

Survey of the World

Tariff Votes In the Senate

Little progress in the way of action upon provisions of the pending bill was made last week during the tariff debate in the Senate, altho two or three votes appear to indicate that the Republican opposition will be overcome. The first trial of strength took place on the 5th, when an amendment proposed by the committee, increasing the duty on orange mineral (a lead product used in making paint) from $2\frac{7}{8}$ cents a pound (in the House bill) to $3\frac{3}{8}$ cents, was adopted by a vote of 41 to 36. Ten Republicans—Bristow and Curtis, of Kansas; Cummins and Dolliver, of Iowa; Brown and Burkett, of Nebraska; Crawford, of South Dakota; Johnson, of North Dakota; La Follette, of Wisconsin; and Nelson, of Minnesota—were counted with the Democrats in the negative. Several other Republicans who had been classed with these supported the increase. As five or six Republicans who were absent will vote with Mr. Aldrich, it is thought that he can rely upon a clear majority. Moreover, it is known that several of the Republican insurgents intend to vote for the completed bill, after making vigorous effort to amend it. On the 7th, there was a vote of 53 to 19 in support of a duty of $1\frac{1}{2}$ cents a pound upon the lead in lead ore, this being the Dingley and the Payne rate. There were no negative votes on the Republican side and two Democrats joined the majority. Mr. La Follette said he would not vote, because he owned a tract of lead-bearing land. This directed attention to Senator Guggenheim, who is largely interested in what has been called the Smelting Trust. Mr. La Follette read recent dispatches from Europe which assert that a world combination of lead producers is

about to be formed, for an advance of prices, and that the adhesion of the Guggenheim interests has been obtained. Mr. Guggenheim was in his seat, but he said nothing. Mr. Stone, of Missouri, a State in which much lead is produced, argued that a lower duty would be sufficient for protection. Others spoke against the proposed rate upon the ground that it would enrich a combination or Trust.

Speeches in the Debate

In the early part of the week, Mr. Borah spoke at length in advocacy of an income tax. Mr. Root, who said he was not arguing against such a tax, remarked that the people should not be led to think that property here did not bear a substantial part of the tax burden. He pointed out that the State, county and municipal taxes in 1902 upon \$97,810,000,000 worth of property were $74/100$ of 1 per cent., which was equivalent to an income tax of 15 per cent., upon the assumption that the net income from this property was 5 per cent. Mr. Borah warned reactionaries that only by supporting the Roosevelt policies could the Republican party retain its power:

"No man is politically so shortsighted or politically so blind as the man who thinks that the steamer 'Hamburg' carried away the policies and principles, the public interest, the aroused public conscience, and the surging public concern which this remarkable man bequeathed to his countrymen."

The speeches of Mr. Dolliver and Mr. Cummins excited much interest. Both were long. Mr. Dolliver very sharply criticised the Aldrich bill, attacking mainly the duties on cotton goods and woollens, and denouncing what he called the tricks and misleading language by

which increases of rates were obscured. He charged that the cotton schedules had been written by two New England manufacturers, whom he named. This was denied by Mr. Aldrich. There were several sharp passages between the two Senators. Mr. Dolliver pointed to large increases of the cutlery, silk and other rates. He favored the creation of a tariff commission to prevent the chicanery and check the greed shown by tariff beneficiaries who were permitted to write the rates affecting their own goods. He predicted that if the bill should be past in its present form, tariff agitation would begin immediately after its enactment. It should be understood, however, that Mr. DeCuir in his criticism of the rates on cottons and woollens was merely attacking the Aldrich increases, for he gave notice of an amendment of his own, providing for the duties of the present tariff. Mr. Aldrich remarked that an assault upon the cotton and wool schedules was an assault upon the very citadel of protection. Mr. Cummins, at the beginning of his speech, said this was the most intolerant sentence he had ever heard uttered in a legislative body. He severely criticised the pending bill, saying, however, that probably he should vote for it because, as he hoped, it would be a slight improvement upon the present law. But the bill, as it stood, would not, he said, be accepted by those who asked for revision as either a fulfilment of the party's pledge or as a settlement of the controversy. He predicted that a campaign for lower duties would begin immediately after the close of the session, and would continue "until the judgment entered in the court of the public conscience is also entered in the journals of Congress." While he was speaking of the steel rates, Mr. Depew asked what would happen if a reduction of these rates should ruin the independents and leave the people at the mercy of the Steel Corporation. He replied that if the people should be subjected to industrial slavery by any giant corporation, the lampposts would still remain. Mr. Newlands asked him whether the sixteen or twenty "progressive Republicans" had any plan to submit to the thirty-one Democrats for concerted action with respect to the bill. Mr. Cummins questioned his ability to speak for

the thirty-one Democrats, saying that the most ardent protectionist speeches had been made on the Democratic side and that he did not believe the Democrats could be united for action on the tariff. Mr. Clapp, of Minnesota, in a brief address, characterized the proceedings as a farce, and predicted that if downward revision were not given to the people now, they would demand it two years hence, when a revision might be made by the enemies of protection.—Very little was said, last week, about Mr. Taft's attitude toward the bill. Some reported that he hoped for improvement in conference. In a published statement which appeared to be authoritative, no reference was made to his views about rates, but it was said that he hoped the bill would provide sufficient revenue, and that, if more revenue should be needed, he would prefer an inheritance tax or a tax on corporation dividends to a tax on incomes.

Seven Sentenced in Pittsburg

The seven men recently convicted in Pittsburg, as the result of an investigation concerning the corrupt action of councilmen and others in that city, were sentenced, on the 5th inst., as follows:

W. W. Ramsey, formerly president of the German National Bank, one year and six months in prison, with a fine of \$1,000; John F. Klein, councilman, imprisonment for three years and six months and \$1,500; William Brand, councilman, one year and six months, with a fine of \$500; Joseph C. Wasson, councilman, one year and six months, and \$500; Henry M. Bulger, hotel keeper, two years and \$500; John Colbert and Charles Colbert, each two years and \$500.

Upon appeal, all except the Colberts were released on bail. There are seven indicted men yet to be tried. Ramsey had entered the service of the bank in his boyhood and had risen to be president. He bribed the councilmen with \$17,000 in order that his bank might be made a depository for city funds. Klein was the head of a group that received and distributed the bribe money. Bulger was a go-between. The Colberts attempted to corrupt the jury at the trial of Ramsey. The latter pleaded for clemency and submitted a petition signed by 1,500 business men of Pittsburg. Judge Frazer said he had taken into ac-

count the fact that Ramsey had not committed perjury in his testimony. A. A. Vilsack, formerly cashier of Ramsey's bank, has not been sentenced. He admitted his guilt, testified for the prosecution, and will be a witness at future trials.

Railroad and Trust Cases The controversy in Missouri between the Federal courts and the State authorities concerning railroad rates has been prolonged by action taken last week at Jefferson City and Washington. Missouri's Attorney-General has begun quo warranto proceedings against sixteen railroad companies, asking that their charters be forfeited because, as alleged, they have conspired to fix passenger rates and have combined to maintain freight rates, in violation of the anti-Trust law. In the House, at Washington, Mr. Murphy, of Missouri, has given notice that he will present formal charges against Federal District Judges Phillips and McPherson, whose decrees and decisions have been prominent in the controversy. He alleges that they improperly yielded to the influence of the railroad companies' attorneys and officers.—The decision of the Supreme Court concerning the commodities clause of the Railroad Rate law was announced last week. We refer to it in our editorial pages.—As a result of the exposure of fraud in the weighing of imported sugar on the docks of the American Sugar Refining Company (or Sugar Trust), seven of the company's employees have been indicted in New York. The most prominent of them is Oliver Spitzer, superintendent at the docks, and an employee for thirty years. The pay of each of the six indicted with him was \$13 a week. At the recent trial testimony was introduced to show that while this sum was indicated by figures on each weekly envelope, \$5 more was found inside, the inference being that the added money was pay for the fraudulent weighing.

Cuba Mr. Helm, of Kentucky, recently introduced in the House, at Washington, a resolution designed to promote the annexation of Cuba, whenever a majority of Cuba's voters should

ask for it. The new Cuban Minister at Washington, General Carlos Garcia Velez, has addressed to Mr. Helm a letter, in which he says:

"The Cuban people do not wish for the annexation of the island to the United States or to any other country. We feel that a half century of almost constant struggle for independence and sovereignty entitles us to enjoy the blessings of our Government or even the mistakes that inexperience may bring during the infant period of our nationality. We are desirous of developing closer commercial relations with the American people; we hope that these relations will never interfere with the political status of both countries, and we will look forward, in all times, to a better understanding of the character, conditions and aims of both peoples. There are many other reasons less important to us than those of sentiment (which are unmistakably the principal ones for us), viz.: Competition of products, difference of language, race, etc., that would be sufficient to make impossible the annexation of Cuba to the United States. I earnestly hope that you will take these remarks of mine as a true expression of the wishes of the Cuban people and trust that you will not take exception to them, inasmuch as I have answered you with the same good feeling and frankness with which you were prompted to introduce your resolution."

Venezuela and Central America Castro, formerly President of Venezuela, went from Paris to Spain, last week, and he says he intends to go to Ecuador, there to await events which will permit his return to Venezuela. It is his purpose, the dispatches say, to sue the French Government for damages, asking \$2,000,000 because of his forcible expulsion from Martinique.—Diplomatic relations between Venezuela and the United States were re-established on the 4th, when President Taft received the new Venezuelan Minister, Señor Rojas, who presented his credentials, saying:

"From the time Venezuela declared her independence as a nation—and I might as properly say even before that time, when the idea of emancipation began to stir in the breast of the old colony—the Venezuelan people have always felt a deep sentiment of appreciation and just admiration for the great republic of the north. We looked up to her as a sister who had preceded us on the road to liberty and whose example has always been one of encouragement to us, because of the success attained in the practice of her wise institutions and the methods so judiciously selected to make of her a wonder of progress and a constant source of happiness to her sons."

Replying, the President said that the

feeling of sympathy and fraternity which had existed between Venezuela and the United States since the independence of Latin America called for close intimacy and friendship. He added:

"With the noble aspirations of the great Bolivar as the incentive for the principles of freedom and self government of your nation, it is fitting that your country and mine should clasp hands in fellowship, united in all that tends to strengthen the bonds of reciprocal intercourse, commerce and good understanding."

—An American named Payne, who recently escaped from prison in Venezuela, asserts that the captain and ten sailors of the Massachusetts whaling schooner "Carrie D. Knowles" (heretofore believed to have been lost in 1904, with all on board) are in a Venezuelan prison, having been seized and placed there by Castro five years ago, when the schooner, in distress, called at a port in that country.—Dr. Manuel Amador, the first President of Panama, died on the 2d, at the age of seventy-five years.

The British Budget

The budget or appropriation bill presented to the House of Commons by the Chancellor of the Exchequer, April 29th, was past in the House of Commons on May 4th, by the application of the closure. The Government majority on this test vote was reduced to 107. The budget bill is one of the most remarkable fiscal measures of recent years, for it is not merely a scheme of taxation, but it has as one of its fundamental purposes the reduction of inequalities in the distribution of wealth. Mr. Lloyd-George in the concluding paragraph of his budget speech met the charge that no Chancellor of the Exchequer has ever before been called upon to impose such heavy taxes in time of peace by the declaration:

"This is a war budget! It is a budget for a time of war, when the nation is in poverty, and I cannot help hoping and believing that before this generation has past away we shall have made a great advance toward the goal time when you will see the world in a new and better light. The budget which always follow in its camp, will be as remote from the people of this country as the wolves which are howling at the door." Ex-Premier Balfour, leader of the Opposition, declared that the measure would "fringe away capital, and what the coun-

try now suffered from was not too many rich men, but too many poor men. Premier Asquith met this objection by inquiring:

"Where is it going to fly to? It may traverse the whole civilized world, but wherever it goes it will find itself confronted by a finance minister as necessitous as Mr. Lloyd-George. It would not find rest in Germany, France or the United States. In the last named country they are engaged in rigging up a new tariff and have a deficit far more formidable than anything we have to face here. The truth is there is not a civilized country in the world which does not find itself at this moment under stress of taking its place in the race of armaments, in providing for social reform, in developing new resources and discovering new means of taxation. There is no country in the world where, when all the proposals of this budget have been carried into law, capital will be less exposed to chances of spoliation or insecurity than in this free trade country."

The Land Clauses

The new budget bill incorporates more radical and novel ideas than can be here mentioned. Perhaps it will be of most interest and importance to quote Mr. Lloyd-George's argument for the taxation of the unearned increment in the land values, approaching Henry George's plan of the single tax. After giving a number of instances where the landlords had received millions of pounds from the ground rents of land that had increased in value from the growth of cities and the development of mines, he says:

And yet, altho the landlord without any exertion of his own is now in these cases in receipt of an income ten or even a hundredfold of what he was in the habit of receiving when these properties were purely agricultural in their character; and, altho he is in addition to that released from all the heavy financial obligations which are attached to the ownership of this land as agricultural property, still he does not contribute a penny out of his income toward the local expenditure of the community which has thus made his wealth, in the words of John Stuart Mill, "whilst he was slumbering." Is it too much, is it unfair, is it inequitable that Parliament should demand a special contribution from these fortunate owners toward the defense of the country and the social needs of the unfortunate in the community whose efforts have so materially contributed to the opulence which they are enjoying? I have dwelt upon the fundamental difference in the demeanor of landowners toward their urban tenants and that which, under the inspiration of more high minded and public spirited principles, guide their conduct toward their agricultural tenants. There is no doubt that the spirit of greed is unconsciously much more dominant and unrestrained in the former case. One dis-

astrous result of this is that land which is essential to the free and healthy development of towns is being kept out of the market in order to enhance its value, and that towns are cramped and people become overcrowded in dwellings which are costly without being comfortable. . . . It is to the interest of the landlords to crowd as much bricks and mortar on every square yard of land there as the law will allow. And yet outside are square miles of land unoccupied, or at least unbuilt upon; while land in the town seems to let by the grain as if it were radium. Not merely towns, but villages—and by villages and towns I mean the people who dwell in them—suffer extremely from the difficulty which is experienced in obtaining land and by the niggardliness with which sites are measured out. You cannot help feeling how much healthier and happier the community could have been made in these towns and villages if they had been planned on more spacious and rational principles, with a reasonable allowance of garden for every tenant which would serve as a playground and as a vegetable and flower garden for the workman and his family, and would even, in many a district, help materially to solve the problem of unemployment. I think the same observations apply to the case of mineral royalties. There all the expenditure is incurred by a prospector, who runs the risk of losing it. The capitalist risks his capital, the miners risk life; and I do not think it is too much to ask the royalty owner, who has contributed no capital and who runs no risk in the matter, to contribute in this emergency toward relieving the heavy burden which has come upon us in this country and to furnish a sum of money to make provision for the social needs of those who have been engaged in digging up mining royalties all their lives. My present proposals are proposals both for taxation and for valuation. Altho very moderate in character they will produce an appreciable revenue in the present year and a growing revenue in future years. The proposals are three in number. First, it is proposed to levy a tax on the increment of value accruing to land from the enterprise of the community or the landowner's neighbors. We do not propose to make this tax retrospective. It is to apply to future appreciation in value only, and will not touch any increment already accrued. We begin, therefore, with a valuation of all land at the price which it may be expected to realize at the present time, and we propose to charge the duty only upon the additional value which the land may hereafter acquire. The valuations upon the difference between which the tax will be chargeable will be valuations of the land itself, apart from buildings and other improvements; and of this difference—the strictly unearned increment—we propose to take one-fifth or 20 per cent. to the State. . . . We value the land at its present value and count increment from that point. You get at the increment upon two bases. You get at it when the land is sold. Then will be discovered what the actual increment is. We propose to charge 20 per cent. upon what the landowner receives, by comparing what he receives with the valuation made immediately upon this bill. The tax will also be paid on the

passing of property at death, so that there will be an increment estate duty. The property will be valued on the death of its owner, and if the increment is not due to expenditure made by him, if it is not attributable to him, but to the growth of population or some other cause, then the same charge will be made on that increment in favor of the community. Corporations, which do not die, will pay upon property owned by them at stated intervals of years, and will be allowed the option of spreading the payment of the duty upon the increment accruing in one period over the following period by annual instalments. . . . The second proposal relating to land is the imposition of a tax upon the capital value of all land which is not used to the best advantage. The owner of valuable land which is required or likely in the near future to be required for building purposes, who contents himself with an income therefrom wholly incommensurate with the capital value of the land in the hope of recouping himself ultimately in the shape of an increased price, is in a similar position to the investor in securities who reinvests the greater part of his dividends, but while the latter is required to pay income tax both upon the portion of the dividends enjoyed and also upon the portion reinvested, the former escapes taxation upon his accumulating capital altogether, and this altho the latter by his self denial is increasing the wealth of the community, while the former, by withholding from the market land which is required for housing or industry, is creating a speculative inflation of values which is socially mischievous. We propose to redress this anomaly by charging an annual duty of $\frac{1}{2}$ d. in the pound on the capital value of undeveloped land. The same principle applies to ungotten minerals, which we propose similarly to tax at $\frac{1}{2}$ d. in the pound, calculated upon the price which the mining rights might be expected to realize if sold in open market at the date of valuation. . . . Under these provisions all land having a purely agricultural value will be exempt. Further exemptions will be made in favor of gardens and pleasure grounds not exceeding an acre in extent, and parks, gardens, and open spaces which are open to the public. My third proposal under the head of land is a 10 per cent. reversion duty upon any benefit accruing to a lessor from the determination of a lease, the value of the benefit to be taken to be the amount, if any, by which the total value of the land at the time the lease falls in exceeds the value of the consideration for the grant of the lease, due regard being had, however, to the case of the reversioner whose interest is less than a freehold. The reversion at the end of a long building lease, having no appreciable market value at the time the lease is granted, is, when the lease falls in, of the nature of a windfall and can be made to bear a reasonable tax without hardship.

The Turkish Situation

Tewfik Pasha, who became Grand Vizier as a result of the mutiny against the rule of the Young Turks, has resigned his position and Hilmi Pasha takes his place.

at the head of the Government, as formerly. The new Cabinet consists chiefly of members of the Young Turk party and a liberal Moslem theologian is made Sheik-ul-Islam. The ringleaders of the mutiny are being searched out, tried by court-martial and executed. The sergeant of the Fourth Battalion of Salonikan Chasseurs, Hamdi Ben Yechar, who for a few days was in command of the mutinous troops and *de facto* ruler of Constantinople, was hanged in front of the Parliament House with eleven of his fellow conspirators. Major Yussuf, who killed the Syrian deputy, and others guilty of similar murders met with the same punishment, some of them remaining all day on the gibbets of the Galata Bridge in sight of the crowds crossing from Stambul to Pera. The effect of these public executions on the people was not quite what was intended by the authorities. Many of the people regarded the victims as martyrs to the faith and manifested a disposition to regard the Young Turks as cruel and revengeful. The new Sultan is also reported to have protested against these continued and public executions without his authorization, and to have expressed his disapproval of the failure of the ministry to issue the usual proclamation of amnesty on his accession. Whatever the motive may have been the authorities seem to have changed their policy, and the further punishment of the mutineers and of the tools of Abdul Hamid has been postponed. The Yildiz Kiosk and its grounds are being thoroughly searched for the treasure of the former Sultan. One of his chief eunuchs, Nadir Aga, has been pardoned on condition that he reveal the secret hiding places of his valuables. It is reported that \$5,000,000 in securities and \$2,500,000 in cash have been discovered, besides jewelry of great value. There is also said to be \$15,000,000 or more on deposit in the name of the deposed Sultan in the banks of Germany, France, England and America. The Government claims this as State property, but it is uncertain how it can be obtained unless pressure can be brought to bear in some way on the royal government to make him have it paid into the public treasury. Most of the secret records of the Yildiz Kiosk were destroyed during the last days before the

Sultan surrendered, but the files of the telegraph office are intact and will explain much of the hidden history of the late régime. Documents are said to have been discovered proving that the Sultan had planned or authorized a military revolt on April 24th and a massacre of all the foreigners in Constantinople, including the diplomatic representatives, and that the attack on the Christians in the Adana district had been arranged to coincide with the rising in the capital. But the mutiny broke out in the capital eleven days ahead of time, and was there comparatively harmless and ineffective. The ladies of the imperial harem, more than a hundred in number, have been taken from the Yildiz Kiosk and distributed among various palaces in the vicinity. The new Sultan has announced to Parliament a reduction of 20 per cent. in the civil list. On May 9th Mohammed V formally assumed the Sultanate by ceremonies of girding on the sword at the Ayub Mosque and kissing the robe of the Prophet at the Top Kapu palace.

The Adana Massacres The distress region about the Gulf of Alexandretta is reported to be quieter, altho the exact condition cannot be announced until the censorship of the Turkish authorities is raised. The accession of Mohammed V and the demonstration of the power of the Young Turks have tended to quell the spirit of fanaticism. Apparently the Government is doing what it can to restore order and to bring to justice the leaders of the anti-Christian outbreak. A military commission has been dispatched from Constantinople to investigate the disturbance and will reach Adana May 13th. This commission selected by Chefket Pasha is composed of eight reliable army officers, with Kenan Pasha as its head. They will have power to try by court martial and to inflict capital punishment subject to the confirmation of the Sultan. Some 6,000 troops have been sent to the Adana district to replace the soldiers who proved so cowardly and insufficient in the recent crisis. The Agricultural Bank, by authority of the Government, will loan \$75,000 without interest to the farmers of the region. The Armenians

of Constantinople have presented the following petitions to the Grand Vizier: First, that the murderers of Christians be punished; second, that stolen property be returned and indemnities be paid for property destroyed; third, that the women and girls who were stolen be returned, and also that men and women who were compelled forcibly to adopt Mohammedanism be allowed to resume their former worship; fourth, that the investigation conducted under the chairmanship of the Governor-General be suspended and that a new investigation of the disorders from their beginning be made by a military commission; fifth, that Christians be permitted to participate in the local police establishment, and, sixth, that Armenians be allowed to share in defraying the cost of erecting a monument to those who have fallen in the army of liberty. From the fuller accounts now being received it is evident that the rioting was more serious than was at first supposed. Conservative authorities estimate the number of persons killed at twenty to twenty-five thousand. As many more are homeless and in danger of starvation. For the care of the wounded and destitute and the checking of pestilence a thousand dollars a day is needed at the present time. Funds may be sent thru the Red Cross Society of Washington. The value of the mission buildings burned and other property destroyed is calculated at nine thousand dollars. Hadjin, near Adana, was relieved by troops from Mersina, under Loufti Bey, and the fanatical peasants who had been besieging the city were driven away. The atrocities committed by the Moslem soldiery and populace are indescribable. Whole villages were destroyed and crops devastated. Men, women and children were killed or carried away as slaves. Armenian girls were sold with other loot from the village houses, or traded for guns and horses.

Paris Postmen Form a Union The employees of the Bureau of Posts and Telegraphs have placed themselves in open opposition to the Government which employs them by organizing as a syndicate or labor union.

The General Association of Postal Telegraph and Telephone Employees has deposited a copy of its by-laws at the Prefecture of the Seine, in accordance with the law of 1884 for the formation of unions. If they are allowed to organize in this way they will have the same legal right to strike as other trades unions and may affiliate with the General Federation of Labor, which is avowedly intent upon a revolution, both political and industrial, in favor of the working classes. Premier Clemenceau has held that it was improper and illegal for state employees to organize militant unions and strike for higher wages or redress of grievances. The Government has already begun proceedings with the Tribunal of the Seine for the dissolution of the new syndicate on the ground that the law of 1884 limits unions to professions and trades engaged in "competitive industry." The document filed by the syndicate is in legal form, declaring the purpose of the organization to defend economic interests and to give moral and material support to members having differences with the administration, and to promote the passage of beneficial legislation. It is preceded by the following declaration:

"Inasmuch as the employees of the public administrations have with the State, their employer, the same relations that private workmen have with their employers, and as the postal employees are not, in the legal sense of the word, functionaries exercising public authority, they invoke the benefit of the law of 1884."

The Government has disciplined many of the employees who were guilty of violence in the recent strike and has summoned seven of the leaders before the Council on the charge of making violent and revolutionary speeches at the meetings. If the postal employees are not permitted to organize such a union as they desire, or if their leaders are punished, a strike will probably result, in which the men in other governmental departments will participate and perhaps all of the unions connected with the General Federation. The Government is making preparations to meet such a condition by drilling soldiers in the handling of mail and the assembling of army electricians at Paris.

Trinity Church in the City of New York

BY ARTHUR LOWNDES, D.D.

[In our issue of February 18th Rev. Dr. John P. Peters wrote an article, entitled "The Tale of Trinity," in which he sharply criticized the wealthiest church in America. As is our custom in controversial questions, we asked Dr. Manning, the rector of Trinity, to give our readers Trinity's side of the case. Dr. Manning, however, preferred to have Dr. Lowndes write the article. Dr. Lowndes was the co-laborateur with Dr. Dix in the "History of Trinity Parish." He is the author of the "Vindication of Anglican Orders," the "History of the New York Bible and Common Prayer Book Society" and was editor of the *Church Advocate* from 1851 to 1858.]

THE earliest official movement for a parish is found in the petition to purchase ground for an English church in New York, addressed to Governor Fletcher. This is signed by ten men who solicit a license to purchase "a small piece of Land Lyeing without the North gate of the said City betwixt the King's Garden and the burying Place and to hold the same in mortmain and thereon to build the said Church as also to take and Receive all Voluntary Contributions and to do all other Lawful acts and things for the Effecting the same."

On July 23d, 1696, the Governor granted his license to collect funds for the completion of the church. All this seems strange to us nowadays, but it was the legal mode of procedure in those days. The English went through the same formalities which the Dutch had just gone thru in the building of their church in Garden street and collecting subscriptions therefor.

On May 6th, 1697, the English asked for a charter just the same as the Dutch had already done.

"The petition of the Managers of the English Protestant Church called Trinity Church was read and granted: Ordered a warrant issue for the drawing of their Charter of incorporation the quit rent to be one pepper corne as desired."

The title of a corporator does not necessarily reveal who the corporators are. "The Butchers and Drovers Bank" does not necessarily mean that only butchers and drovers can be depositors; nor does the "Society of Engineers" necessarily mean that only engineers can belong to it. The title of a company has nothing to do with the legal status of the members of that corporation. It is the contents of the charter or act which

specifies who shall be members of the company or corporation.

By the constitution of the State of New York in 1777, grants made by the Crown after October 14th, 1775, were declared null and void, but all grants and charters previous to that date were continued in full effect and force.

By the Act of April 17, 1784, those parts of the charter requiring induction of the rector by the royal governor and acknowledgement of the Episcopal authority of the Bishop of London were abrogated. The provisions of the Ministry Act of 1793 were annulled as inconsistent with the constitution of the State which established religious equality. The act validated the proceedings under the charter from 1775 to 1784 and those under authority of the "Council." It also confirmed the election of wardens and vestrymen on Easter Tuesday, 1784.

It provided that all those who "hold, occupy or enjoy a pew or seat in said church, and shall regularly pay to the support of the said church," should be considered as members of the body corporate and politic under the charter. It defines as a communicant one who received the Holy Communion at least once a year, being inhabitants of the city and county of New York.

In all other respects the charter remained in full force and effect.

At the session of the Legislature in the winter of 1787-88, another act was passed on March 10th, 1788, by which the legal style of the corporation was changed from "The Rector and Inhabitants of the City of New York in Communion of the Church of England, as by law established" to "The Rector and In-

habitants of the City of New York, in Communion of the Protestant Episcopal Church in the State of New York."

The circumstance under which a second parish came into existence was the result of differences of opinion concern-

his associates, who formed a parish under the name of Christ Church, for which a building was erected on the north side of Ann street, between William and Nassau. Organized early in 1793, Dr. Pilmore became the rector and

WILLIAM THOMAS MANNING.

Rector of Trinity parish. Dr. Manning was born in England in 1866 and ordained to the Protestant Episcopal ministry in 1891. He has been associated first as assistant rector and now as rector in charge of Trinity since 1904.

ing a new assistant for Trinity Parish. The vestry were in favor of Mr. Bissett, while many of the parishioners preferred Mr. Pilmore. The vestry finally called Mr. Bissett. This led to an open rupture, and the withdrawal of Mr. Post and

served until his death in 1804. The parish applied for admission to the convention in 1793, which was refused by a decisive vote, but without giving any explanation of its action.

That after the separation any bitter-

TRINITY CHURCH, AT THE HEAD OF WALL STREET.

ness was shown her by the mother parish is disproved by the gifts of four lots in Barclay street, of communion plate, and an annual allowance to the rector for thirty-five years, besides other gifts and allowances. The Rev. Dr. Thomas Lyell, its second rector, was the trusted friend and associate of Bishop Moore and Bishop Hobart in all their efforts for the advancement of the Church in the State and city.

The gift of Mr. Peter Stuyvesant, a member of the vestry of Trinity Church, of a plot of ground on his ancestral "bouwerie" and a sum of money, led to the building of St. Mark's Church. It was to be the spiritual home of those living near the Harlem road and the families who had summer homes in the neighborhood. For its building, in addition to £800 from Mr. Stuyvesant, more than £5,000 was expended by Trinity Church. Before its incorporation as a separate parish, the legal opinion of eminent counsellors—Alexander Hamilton, Robert Troup and Richard Harrison—was sought, who showed the manner in which it could be effected and the form of

release to be given to the corporation of Trinity Church when twenty-eight lots were given for its endowment.

The contested election of 1812, when some members of independent parishes, of which there were then nine in the city, offered their votes at the election of wardens and vestrymen in Trinity Parish was one reason for the Act of 1814.

The passage of the Act of 1814 removed all ambiguity and confirmed the title of the several parishes to the property they held. The whole case had been debated before the Legislature, and the individuals heard for and against the bill, in the winter and spring of 1813. The bill was past before Colonel Troup wrote his pamphlet. His arguments were

addressed to the Council of Revision, who voted in favor of the bill in January, 1814.

Contemporary documents prove that the opposition to Trinity had been well organized. Every member of the Legislature had been personally interviewed. The opposition consisted of the friends of the Rev. Cave Jones. Every member was supplied with a copy of the resolutions at Mechanic Hall, and of Judge Jay's "Letter." The Legislature knew fully the interpretation sought to be put upon the word "inhabitant," and, therefore, when they acted, it was only after full knowledge and deliberation.

Some acquaintance with the list of gifts made between 1814 and 1860 will show that there was no withdrawal of

ST. JOHN'S CHAPEL IN VARICK STREET.

vent the property from reverting to secular purposes. That this is the true interpretation of these mortgages is proved by the fact that the bishops of New York have never considered them as liens debarring the church from being consecrated. Trinity has been time and again thanked by rectors and vestrymen that it has refused to release these mortgages, as, if it had done so, ignorant and unscrupulous vestries would have parted with the property. The mortgage is but a carrying out of its trust, that land or moneys given for specific objects should be kept inviolate for all time.

The corporation of Trinity Church is alone singled out for an accounting of its revenues or for a communistic subdivision of its property. Why?

There are other religious bodies that have large endowments. I hope they all can show as faithful a spirit of trusteeship as Trinity. The Dutch Reformed Church obtained a charter from the Crown. If the charter of the Dutch church and that of Trinity be compared, it is a revelation to see how identical the wording is in both documents.

DUTCH CHARTER.

"To the use and behalf of the members of the said Dutch Church inhabitants from time to time inhabiting and to inhabit within our said city of New Yorke."

TRINITY CHARTER.

"For the use and behalf of the inhabitants from time to time inhabiting, and to inhabit within our said City of New York, in communion with our said Protestant Church of England as now established by our laws; and to no other purpose whatsoever, etc."

It is well to remember that other parishes besides that of Trinity were granted charters under the same title of "Rector and Inhabitants." St. Peter's, Albany, for one. Yet I have never heard that the parishes set off in Albany claimed as a right from St. Peter's Church, a share in its endowments, nor that the Bishop of Albany has been appealed to demand of St. Peter's that every "inhabitant" of the city of Albany be allowed to vote at the election of wardens and vestrymen.

Exactly similar titles exist in the cases of the churches at Fishkill, Poughkeepsie and Jamaica.

The statement is sometimes made that the property of Trinity Church was originally granted to the community at large. There is absolutely no foundation in fact for this amazing statement.

Some contend that the Corporation of Trinity Church was intended to hold all its endowments in trust for every Episcopalian then or at any time thereafter to be an inhabitant of the City of New York. If this contention is legally correct, then it must also legally follow that every such Episcopalian "inhabitant" is under the jurisdiction of the Parish of Trinity Church. A trust for some one must necessarily imply on the part of the person for whom the trust is held certain obligations. It has, so far as I know, never been admitted that every such "inhabitant" is under any obligation to the corporation as trustees. In fact, this conception has been scorned.

The claim advanced has been purely a one-sided one. You hold endowments. I am an "inhabitant," and ergo, I want my share of the trust. Is not this pure communism? Who is to decide what the share of each "inhabitant" is? Has every "inhabitant" a right to go to Trinity and say, "I want my share"? If the contention of the opponents is right, then Episcopalians have that right as individuals only. Legally, I do not think that a church or congregation can ask any share of the endowments. No such privilege is granted in the charter. In fact, the words "sole and only use, benefit and behoof of them" would seem to disbar any such appropriation of the funds.

The question would arise as to what constituted the limits of the city. Are the limits those at the time the charter was signed? Can the limits be stretched indefinitely and forever? Has every "inhabitant" of the present greater city a right to his share? If so, if Newark and other parts of New Jersey are taken into the City of New York, and the limits are further extended up the river and along the Sound, as has been proposed, will all the inhabitants of these sections have a legal right to a share?

What constitutes an "inhabitant"? A man, woman or child who says, "I belong to the Protestant Episcopal Church," or must they be "communicants"?

If it is argued that since 1814 the corporation is trustee for congregations and not individuals, then again the question

right to say to Trinity, "I want so much as my share"?

It has to be remembered that very un-

of relative and mutual obligation enters in also. Who is to decide which congregation has the right to a share, and if so, what share? Has any congregation the

fortunately for Trinity, it was for the greater part of its history considered not only as having obligations to the parish, but also to the diocese. Her rectors

were, up till October, 1830, both rectors and bishops. They were perpetually asking the parish to help them in their diocesan work. To such an extent was this done that the corporation actually borrowed money to lend it to congregations in the diocese, at the earnest solicitation of Bishop Hobart. When the bishopric went elsewhere, then Trinity was able, by economy and a return to the right use of its endowments, to maintain its chapels and to give out of its yearly income large sums of money to congregations and institutions that, in its opinion, were worthy of the benefaction.

No parish, not only in New York, but in the country, has published returns, statements and accountings so fully as Trinity Parish.

It has published two histories of its parish, a valuable and concise one by Dr. Berrian; another, extended and very full one, by Dr. Dix, giving the story of the parish from its earliest days to the death of Dr. Berrian. It has in preparation at the present moment its history to the close of Dr. Dix's rectorship. It has searched high and low for documents of all kinds. It has published everything that is of interest in its own records. Trinity Parish has, without a break, published since 1874 a Year Book, giving details of its work.

No religious body in New York has, to my knowledge, issued any full financial statement, showing its grants to other congregations and institutions. No religious body has issued any statement in full, as Dr. Berrian did in his History of Trinity Church.

In the reports of the Diocesan Convention I do not find that there are returns from any parish in the diocese that are fuller and more complete than those of Trinity Parish, and very few as full and detailed.

The recent agitation in regard to the consolidation of St. John's and St. Luke's chapels, tho natural, has been unfortunate. It was natural in that no body or organization likes to be merged; each clings to its own individuality. It was unfortunate in that the aggrieved did not confine themselves to the proper and legitimate method provided by the Episcopal Church for regulating grievances within a parish—the use of the ballot box at the annual meeting of parishioners. The appeal to the secular courts was a mistake. Even if St. John's Chapel had been closed, the voters could not have been disfranchised.

Differences of opinion arise in every corporation or body of men, but it speaks eloquently for the administration of Trinity Parish that there should have been so little difference of opinion or friction during its existence of over two hundred years. As we read the long history of the parish one fact is remarkable—the self-effacement with which some of the most distinguished citizens of New York have from 1697 to the present day served on its vestry. They have at all times, quietly and unobtrusively, thru good report and evil report, served this great parish, this great mother of churches.

NEW YORK CITY.

Ave Maria

Luke I, 28

BY HENRY B. TIERNEY

HAIL, virgin mother of a King
Whose throne thou art;
O daughter of thy Son divine,
Whose sacred heart
Its precious life blood drew from thee,
Hail, full of grace!

Thy soul doth magnify the Lord
Who is with thee;
Plant courage in this heart o' mine,
O pray for me;
God's angel's word I bring to thee,
"Hail, full of grace!"

A Spanish Painter's View

BY JOAQUIN SOROLLA Y BASTIDA

[Señor Sorolla, the great Spanish painter, whose exhibition of his paintings has been the artistic sensation of the season, is one of the most genial and courteous of mortals and the interview which he granted recently to a representative of THE INDEPENDENT was for the latter an extremely pleasant experience. Señor E. de Cruzat Zanetti most kindly and efficiently acted as interpreter, Señor Sorolla speaking in Spanish. Editor.]

AMERICA has made many impressions upon me. It interests me extremely. On every side I see something striking, something new, something different.

What impresses me most? Well, per-

haps your workmen, your mechanics. Their rapidity, dexterity, resourcefulness. They are astonishing and a source of perpetual surprise and admiration. The carpenters, for instance. I have seen carpenters in Spain, Italy, France, Lon-

HER MAJESTY VICTORIA EUGENIA CRISTINA, QUEEN OF SPAIN

From the painting by Joaquin Sorolla y Bastida

The American mechanic is so intelligent. He is king in his sphere.

No, I was not shocked or astounded by the great buildings and bridges, nor do I find the architectural aspects of New York barbarous. For the great

visiting Rome, my imagination resulting from my reading, had discounted the wonders. The Coliseum was not quite so vast as I had imagined it, nor were New York's "skyscrapers" quite so cloud-piercing.

HIS ROYAL HIGHNESS THE PRINCE OF ASTURIAS
 From the painting by Joaquín Sorolla y Bastida.

As to "barbarous aspect," far from it. The palaces of trade have their own beauty. They are so fit for their purpose and their lines are so good, the proportions so perfect. In domestic architecture America leads Europe.

I have also been greatly impressed by what I have seen at exhibitions of the industrial arts here. America certainly has made great progress in them, presaging, almost infallibly, preeminence in the high arts to be attained in the not far distant future.

Great art subjects here abound. What this country lacks in the way of historical monuments, scenes and associations, is more than made up to her by nature.

Niagara, for instance. What a theme for the greatest painter that ever lived! To catch and preserve on canvas even

one small detail of falls, rapids or whirlpool, what a supreme world-triumph for an artist!

My whole being cries out for me to paint or try to paint some of the many tempting subjects I find here, and if I return I will, I certainly will. But not now; I cannot. I am overstaying my original intention. I am playing truant and many engagements call upon me to hurry home to Spain.

I came here at the invitation of the Hispanic Society of America to attend their exhibition, which I have done; and I had intended to return to my own country in April. As it is now, I find that friendly compulsion will keep me here till the first of June—beyond that I must not delay.

But in Spain I know that America and

its art subjects will haunt me. So many temptations challenge. There is the harbor with its lights, seen perhaps from Governor's Island or one of the bridges.

There are the great buildings at night seen from the street level. To me, when I saw them first at night, it seemed as if the heavens had windows.

The Spain of Gil Blas? Ah, that has gone forever. We have the modern Spain now, with its railroads and wireless telegraph. We are very modern in Spain today and our leader, the young King, is the most modern of all with a keen eye fixed on the future and a full acceptance of the new paths on which our feet are set.

There is much about the young King, his independence, his daring, his determination to see and understand things himself, that reminds one of the youth of Frederick the Great of Prussia. Even in regard to youthful pranks there is a strong similarity; but much more so his regard for national progress and welfare. He is greatly interested in mechanics, industry, agriculture, and art.

Spain, having lost her colonies, must now develop her own great resources and compete in the markets of the world. In order to do that successfully she must promote agricultural and industrial education. She must understand and apply the best known methods, she must have the best machinery. All this the King thoroly understands. He is modern, he sees clearly, he leads safely and is tireless in leading and encouraging. So we have great hopes for the new Spain.

As to the old Spain—the Spain of Gil Blas, of 300 years ago—men who have business with it will no doubt find it still in sheltered nooks of Mexico and Peru, and when I come again I may seek it out.

But many pictures have been made of bits of old Spain, and, perhaps, virgin fields for art effort may prove more alluring—the great lakes, the canyons of Colorado, bits of the Yellowstone Valley, of the Rocky Mountains—no lack of subjects. Nature here issues many challenges.

There are two periods in art—the pe-

riod of youth, virile, daring, aspiring; the period of maturity and perfect work. American art is full of high promise and prophecy, but it all belongs to the period of youth, with the single exception of the work of Whistler. Whistler was a great artist. He had reached maturity. All his work is good. The world of art rejected and warred upon him while he was yet alive. It worships him now.

Had the old masters secrets which we do not understand? No, far from it. Their theme field was very narrow, ours is as broad as Nature herself. We have better opportunities, and it is our own fault if we do not turn out better pictures.

We have no Velasquez, no Rembrandt today, but who shall say that we will not have them tomorrow. All the materials are still on earth. Only the men to make the best use of them are still lacking, and the near future may bring us the men.

The chief obstacle to high art progress in Spain, as in all Europe, is the official art schools. You, in America, are happy that you have none of them. In the official art schools the teacher is not at all dependent on his pupils—on his success in training them. Consequently, incapable teachers persist thru many years in deforming student minds, teaching wrong methods, doing much mischief. Students go to the school and do the work put before them, and at the end of a fixed time graduate and receive a diploma to the effect that they are artists, but when they come to a trial with nature it is seen that their methods are wrong. They do not understand, they cannot truthfully portray; the teaching they have received in the school was worse than useless.

I recently asked the principal of a great school whether out of all the three hundred students studying in his institution there would be produced an artist. He said that that was asking too much. These official schools stamp out originality, individuality, and substitute the false, the conventional. The students whom they are sending forth turn out pictures which are no works of art at all. They are factory goods. It makes no difference to the official teacher whether his students do well or ill. His salary runs

on just the same. So he makes no effort to differentiate, to encourage the promising and send the hopeless home to useful work that he may be able to do.

I left art school when I was twenty years of age. I am forty-six now, and all those twenty-six years in which I have been practising my profession I have been endeavoring to recover from the evil influence of the art school. I find it doing me harm even yet.

For instance, in the sketching class we were taught not to sketch things as we saw them, but as the artist Calame saw them. So deeply was this mischievous teaching grounded into me that even today I cannot use a pencil without sketching according to Calame. I must work first with charcoal or the brush.

I understand that America is much better off than Europe in this respect. The teachers here, as I understand it, depend on their success with pupils for their livelihood. If the students don't make good progress they can stimulate the teacher by leaving him—a much healthier state of affairs.

Yet I hear that even in this happy land conditions are not perfect. That is very bad, if true. It seems to be the rule of our life, however much we may deplore it, that to advance one step in progress there must be many victims.

My idea of art education is to give a solid and impersonal education in the elementary schools, to prepare every one for art, for there is no reason why one should be taught to write and not to draw. The chosen ones, those who believe they feel the compelling call of art, should then enter into a common life with the masters. This is what was done by the great artists of the Renaissance. In a word, a great and solid preparation during the first years—a general knowledge of all the applications of art. So that the youth before entering fully into his specialty shall know, even if only superficially, the manifold applications of art. This I have seen indicated in the Buffalo Fine Arts Academy, to my very great satisfaction.

And yet, even in that sort of teaching there is difficulty and danger. The teacher must not attempt to reproduce himself in his pupils. Individualities are so different. Gears has so many forms,

The wise teacher will stand by and observe, advise, but not quite direct, far less command. It may be that the blossom coming will be quite different from any he has known or anticipated. He must be very delicate, very careful, to respect originality. At best he can only

aid. The young man with real ability, firmly grounded in the elementals and confronted with the problems of his profession will make his own way after his own fashion—perhaps one quite new to the schools and the world—and none the worse on that account.

NEW YORK CITY.

International Unions

BY PAUL S. REINSCH, Ph.D.

PROFESSOR OF POLITICAL SCIENCE IN THE UNIVERSITY OF WISCONSIN.

DURING the last few decades there has been growing up a movement which even in our day and age bids fair to become one of the cardinal factors in modern civilization. As we read from time to time of an international convention or congress, these isolated notices fail to impress the mind with the extent and sweep of the movement in its entirety. It is certainly not overstating facts to say that nearly every material, economic or intellectual interest in the civilized world has at the present time been given some kind of international organization. This is mostly the work of individual initiative. During the year 1907 alone over one hundred and sixty international congresses of various kinds were held. In the one field of sanitation and medicine there are at least twenty separate international organizations. Not only the general sciences and interests, but individual aspects or branches of them, are organized in this manner, so that even some ultra-specialized pursuits of mankind have their universal congresses, such as the international committee on the Anatomy of the Brain, Physiotherapy, Radiology and Ionization, Construction of Cheap Dwelling Houses, etc. These congresses are by no means small gatherings of a few enthusiasts, but, on the contrary, they are attended by hundreds of specialists. Representative scientists and men of action from all parts of the world thus from time to time come together for the purpose of exchanging their experiences, of discussing methods, and of

passing resolutions in which the basis of common action is outlined and defined. In some of these activities practically every civilized country is represented by delegates, and the amount of international co-operation already obtained is of the greatest value.

But the movement has already taken a far more definite character than that represented by these private organizations. The governments themselves have become alive to the importance of these agencies, and they have given their authoritative sanction to a large number of international unions. These unions are composed of states. At their conferences the representatives of governments meet together for discussion and action; their administrative bodies and regulations affect directly the governmental procedure in the individual states. A brief review of the general interests which have been thus publicly organized on a worldwide basis will convey some idea of the extent of the movement.

As has often been said, the world at present stands in the sign of communication. The most essential concern of material civilization is the purpose to render accessible all the parts of the world and to make intercommunication between them rapid and constant. Communication is essentially an international affair, because *per se* it involves relations between state and state. It is not surprising, therefore, that the most prominent international unions of a public nature are concerned with the interests of transportation and verbal intercourse.

The oldest organization of this kind is the Telegraphic Union, which was founded in 1868. The International Telegraphic Bureau, situated at Bern, has operated since 1869. The entire telegraphic service of the world has been profoundly influenced and its operations facilitated by this organization. The problems which have arisen with respect to wireless telegraphy illustrate perfectly the need for international action and organization. When the process of wireless telegraphy had become recognized as commercially useful, Great Britain and Italy made contracts with the Marconi Company by which a monopoly was granted the latter. The maritime importance of Great Britain would have rendered a national monopoly of this kind most irksome to other states, who would have been excluded from using their own systems in communicating with the countries in question. In order to avoid such a situation, there were only two alternatives open—either the Marconi monopoly would have to be expanded into a world monopoly, or by international agreement the acceptance of telegrams sent by any system would have to be rendered obligatory. The latter solution is evidently in accordance with the general principles of freedom of communication which are considered essential to civilization, and in the conference on wireless telegraphy, held at Berlin in 1906, a convention was finally agreed upon in which the principles of free communication are established.

The most all-embracing union dealing with communication is the Universal Postal Union, the operations of which extend literally over the entire world. In 1890 there was founded the International Union of Railway Freight Transportation which comprises most of the Continental European states, and which has unified the European international freight traffic by the creation of a code by which *shipping contracts* and the relations of responsibility are regulated. A code of this kind constitutes a very decided achievement in international administration. It does away with great impediments to the development of commerce in that it assures uniformity and a definite *understanding* with respect to the legal relations between shipper and rail-

way administration. Forty-six governments are interested also in the International Association of Railway Congresses, the seventh session of which was held at Washington in 1905. The object of these congresses is by discussion on a broad plane to foster progress along the lines of technical achievement and economic science related to railway transportation. There is a similar association of navigation congresses, in which twenty-five states are represented; and there moreover exists an International Maritime Committee which has met annually since 1896, and which is working toward the unification of the principle of maritime law for the entire world. It is unnecessary to dwell upon the importance and value of these organizations and the efforts which they represent. Communication and transportation can be made to work effectively only if the experience of the entire world is taken into account, and if by international agreement unnecessary local divergences of law are done away with and a general system of world communication is established.

A large number of general economic interests have also been made the subject of international organization. We may refer in the first place to the metric union, which was founded at Paris in 1875. Differences in standards of weights and measures are a most serious drawback to international trade. The central commission and bureau at Sèvres fixes the absolute accuracy of standards, which it supplies to any of the member states; and the organization favors also the establishment of a uniform system of weights and measures thruout the world.

The protection of industrial, literary and artistic property is particularly dependent upon international agreement. No state can by its own law protect the intellectual property of its citizens beyond the borders of its territory. As international relations increase, intellectual property acquires more and more value if properly protected. In order that this end might be achieved, two unions, one for industrial, the other for literary and artistic property, have been created. States which are members of these unions secure for their citizens advan-

tages of patent and copyright in all the other member states. The affairs of the union are administered by a central bureau situated at Bern.

The regulation of the conditions of labor is plainly an international interest. Labor itself, as well as the scientific study of labor conditions, has long been organized on an international basis. But there are certain specific facts which prove that the regulation of labor conditions must proceed upon a basis broader than that of the national state. It is practically impossible for any state individually to create an efficient system of labor legislation. If it should attempt adequately to protect its labor forces against exploitation, it would run the risk of crippling the success of its national industries unless it could be assured that similar laws were to be enforced in competing industrial states. The influences which favor protective labor legislation have therefore been most insistent upon international agreements in this matter. Altho a number of public congresses had taken place, beginning with the Conference of Berlin in 1890, it was only in 1905 that a general international treaty was formulated in which certain requirements for national labor legislation were laid down. This treaty forbids the use of white phosphorus in the industries and regulates the hours of night work for women. This may be looked upon as a small beginning in a most important work.

The international organ which has been given the most positive powers is the Sugar Commission, located at Brussels. The national protective policy under which bounties were paid to sugar manufacturers finally led to an impossible condition in the sugar industry. It was recognized that an international agreement by which bounties would be absolutely forbidden and import duties limited, had become necessary. Consequently, in 1902, a treaty of this kind was concluded among nine European Powers. By 1908 the membership of the union had increased to fourteen states. The commission of the union makes determinations of fact as to the existence of sugar bounties and the general conditions of the sugar industry. In accordance with these determinations, it is em-

powered to demand the levying of certain compensatory duties by the member states, and it can also authorize the latter to levy a certain small protective duty on sugar. In this manner the entire fiscal administration of the member states with respect to sugar import duties has come under the supervision and control of an international organization. These powers were not created for theoretical reasons, but because the states saw themselves confronted with a problem which could not be solved in any other manner.

No interest would appear to be more completely national than that of agriculture. Still even this pursuit has international aspects, and has therefore been organized upon an international basis, not only by private initiative, but by the action of states. The factors which render international action with respect to agriculture necessary may be summarized as follows: In order that agricultural producers should be enabled to take advantage of market conditions the world over, and to protect themselves against the action of natural causes—diseases, climate and atmospheric conditions—it is desirable that there should be established international meteorological and statistical services. A large part of the produce of agriculture seeks its market outside of the confines of the national state in which it is raised. The producer is therefore dependent upon conditions over which his own government has no control, about which, however, he should be informed in order that he may take advantage of favorable opportunities. Moreover, international legislation may be necessary in order to prevent the exploitation of the agricultural industry by combinations existing in an individual state. Agricultural labor, as industrial labor, is very largely international. Labor forces migrate from state to state, and must be controlled by international action, both with respect to labor contracts and to the relations of mutual responsibility. In order to create a center for deliberation on these interests, there was established in 1905 the International Institute of Agriculture, in which thus far thirty-four states have acquired a membership. The institute is located at Rome, and has for its object the collec-

tion of information upon agricultural industries, the giving of notice of new plant diseases which may appear in any part of the world, and the making of proposals with respect to agricultural co-operation, insurance, credit and labor supply. The King of Italy has taken a direct personal interest in this organization, and has supported it liberally from his own private funds. Its general support is, as in all the other unions, provided by the member states.

The protection of health and the maintenance of sanitary conditions is also a purpose which no state can completely and successfully achieve by its own isolated endeavors. Protection against epidemics especially can be secured only thru international agreement. A number of treaties have been made with respect to this matter, and there has been established a special international sanitary control of the Turkish dominions, thru which disease is so apt to be imported from Asia into Europe. There exist international councils of health, both at Constantinople and Alexandria; and in 1905 there was also established an international office of hygiene, located at Paris, which will form the connecting link between the sanitary administrations of the member states, enabling them to compare results and to take advantage of the most recent developments of sanitary science.

Just as sanitation has become an international matter, so police administration can no longer be carried on upon a narrow national basis. Crime has become organized internationally. Not only anarchism but other criminal activities are organized in such a way as to have their ramifications in various parts of the world. Activities of this kind can be met only thru an international preventive police. It is not sufficient that the criminal should be extradited after the event, but the efficiency of the police service can be secured only thru active co-operation between the administrations of various countries. Moreover, certain crimes are international in their very essence, in that the different parts of the crime are committed in various countries. None of the countries can therefore charge a completed crime unless on the basis of an international agreement. This is illustrated by the very dangerous traffic

known as the white slave trade. The organizers of this nefarious business are careful not to commit a distinct crime in any one jurisdiction. They, therefore, can be reached only by international administrations. Moreover, their acts are of such a nature that only thru co-operation will nations be able to protect themselves against this type of criminals. The London bureau for the repression of the white slave trade has recently been constituted as the central administrative organ of the union. Other police activities which have been organized on an international basis are the suppression of African slave trade and liquor traffic, the protection of submarine cables, and the fisheries police in the North Sea.

The international scientific congresses which meet in the course of a year will ordinarily be more than a hundred in number. Every branch of science has received its international organization. In some cases the states themselves have formed public unions for scientific purposes. Such unions exist in geodesy, seismology, the determination of the formulæ of potent drugs, the exploration of the sea, and the catalog of natural sciences. The International Institute of Statistics, too, has some of the aspects of a public institution, and governmental delegates participate in many of the international scientific congresses. In all these cases it has become apparent that real progress is dependent upon international co-operation. Where particular sciences are of direct importance to the governments, public unions have been created in order that the work might be given adequate support.

In addition to these unions which have more general purposes, a number of international institutions exist for the achievement of objects confined to a small number of states or to a certain locality. Of this nature are the international commissions which deal with the navigation of the lower Danube. A similar commission was instituted for the Kongo in 1885. On account of the diplomacy of Belgium, this commission has thus far not been organized. Its organization would restore the international character of the Kongo Free State, and has therefore always been opposed by Belgium. The Egyptian commission for financial affairs (*Caisse de la Dette*),

which was instituted in 1880, is still in control of the fiscal system of Egypt in behalf of the creditor nations. The Latin Monetary Union, formed in 1865 and comprising France, Belgium, Italy, Switzerland and Greece, is a very important example of international organization confined to a more limited number of states. The most important union of this kind is the International Union of American Republics, which has already met in three conferences, the last being held in Rio de Janeiro in 1906. The membership of this union is limited geographically, but in its purposes it comprises all the common interests of the American states upon which international co-operation is possible. It has dealt with extradition, sanitation, patents and copyrights, admission to the liberal professions, the development of commerce and industry, private and public international law, as well as the broader political problems of the American hemisphere.

In this brief review we have mentioned only the most important of the public unions. There are altogether over thirty unions composed of a membership of states. In all of these unions periodical conferences are held for the purpose of revising original conventions, of discussing policies, and issuing administrative regulations. Most of these unions are also provided with a permanent central office or bureau. The functions of these central organs are largely informational. It is their chief business to keep the governments and individuals informed as to the legislation and administrative rules with respect to the interest in question. But in many cases further administrative functions have been attributed to the central office. Thus the Postal, as well as the Railway, bureau acts as a final clearing house between the administrations of the member states. Many of the bureaus have the right to make definite proposals with respect to new treaties or administrative arrangements. The Patent Bureau acts as an international office for the registry of trademarks. Some of the bureaus are given an arbitral function in that they are empowered to give advice in controversial questions. The Bureau of the Railway Freight Union acts constantly as an arbitrator between the various administrations. The expenses of these unions are paid by the member

states; and in some instances special gifts have been made, such as the endowment of the building fund of the Bureau of American Republics by Mr. Carnegie, and the endowment of the Agricultural Institute by the King of Italy.

The development which we have been reviewing suggests some general considerations. It is evident that we are witnessing the practical development of the cosmopolitan organization of the various cultural and natural interests of the world. This is a different thing from the older abstract cosmopolitanism. According to the older ideals, the individual was supposed to be inspired by a vague and general enthusiasm for humanity. The world was to be his country, and no narrower allegiances were to be tolerated. The cosmopolitanism of today is attempting to fill up the void which the older theory left between the individual and humanity. It is creating living institutions in which the unity of world-wide interests is politically represented. It works through the states, and just as internationalism is necessary to the individual, so is the state necessary to internationalism. All the public unions of which we have spoken have been created by states and are maintained by them. The action which they represent is co-operation upon a basis of unanimity. When it has become absolutely plain that an interest is so important that common action upon it is necessary, the states organize a union of this kind. There is, of course, a certain compulsion inherent in this movement. A state cannot afford to exclude itself from some of these unions, such as the Postal Union or the Sanitary Union, without courting great losses to itself and its citizens. From all this it is plain that our civilization transcends the national boundaries, and that the citizen is entitled to many advantages which are a part of the general civilization of the world. These advantages the state itself is powerless to afford from its own individual resources. To secure them it is obliged to co-operate with other states. This international movement has some of the compulsion of natural force. It is, however, a compulsion which threatens no one, which operates only in so far as men come to realize the unity of their interests.

We may also note that thru the effec-

tive organization of all these international interests there will be created a large number of bonds between the nations which will make war more and more difficult. To tear up all these ties, to interrupt all these normal activities, will seem, as they go on increasing in number and in power, an unnatural and intolerable proceeding. The danger of frequent and reckless warfare can be most effectively averted in this manner. War is not an *entity* of evil purpose, and is not to be put down and inhibited by a purely negative opposition. It is simply the resultant of conditions. We cannot free ourselves from the danger of unnecessary wars until these conditions have been changed, until there have been created positive bonds of interest and of feeling which will so strongly bind humanity together thruout the various states that war will appear as foolish as

the ruthless devastation of a garden or farm.

As in the field of national life we have outlived the era of boundless competition, negative and destructive in its results, and are now concentrating our efforts upon the creation of constructive organizations, even so in international life, the inadequacy of purely national aims and ambitions is beginning to reveal itself. Diplomacy also is changing its tenor. In the past its actions often had the character of a shrewd and underhand scheming for fleeting advantages; it is coming to be the steady effort to discover and secure the rational basis for co-operation between states. Their common interests are becoming more clearly defined, and there is emerging from the confusion of national strife a clearer conception of the positive contents of the general interest of humanity.

MADISON, WIS.

Events in the Westminster Recess

BY JUSTIN MCCARTHY

THE Easter recess of Parliament has set in. The Lords and Commons have left Westminster Palace and given it over to the charge of cleaners and redecorators, and all of London that can afford to enjoy the Easter holidays is rushing out of town while an immense number of country visitors is streaming in. We have had a change in the weather which, if the atmosphere were made up of political elements, might well be described as revolutionary. Until comparatively quite lately we had winter lingering in and chilling or even freezing the lap of spring, and lately, all of a sudden, we have had glowing summer weather such as we should hardly expect to see around London in the opening days of July. Parliament cannot be said to have accomplished much thus far. Even now when the recess has recently begun we do not yet exactly know on what day after the reassembling of the House of Commons Mr. Lloyd George intends to bring in his Budget. It really seems that long-promised Budget has not been much

put out of consideration owing to the alarm, the panic, caused by the anticipated German invasion of England.

I cannot call to mind during the course of my recollection any such season of sudden national alarm and even panic as that which was brought about by the widespread conviction that Germany had made up her mind to attempt the invasion and the conquest of England. For weeks we heard of nothing but the plans of the Kaiser and his generals and his admirals, the projected movements of his navy and his army, and even the anticipated descent of his air-ships from the skies. Now absurd as all this may or must have looked to observers in foreign countries. I may say in all sincerity that it looked even far more absurd to a large proportion of observers here at home. Our friends or our enemies on the European Continent may well have believed for the time that the whole English people was going out of its senses, but there were certainly some millions here at home who never for a moment shared in the panic or did

anything to encourage it. The statesmen who make up the present administration kept their wits about them very composedly all the time, and indeed exposed themselves to much mistrust and even to much vituperation because they would not give in to what seemed to be almost universal panic. Many newspapers wrote all the time with composure and with reasonable argument in discouragement and condemnation of the alarmist movement. When at last the extremists of the Opposition side of the representative chamber compelled their leaders to bring forward a vote of censure on the Government for not having provided the country with a navy adequate to the national defense against German invasion, the attempt only ended in a complete and even a ridiculous failure. Mr. Balfour had found himself for a time compelled by the immediate necessities of the occasion to give notice of a motion which amounted practically to a vote of censure on the Government for not having provided a naval force adequate to the encounter with the fleets of Germany. Now, I can hardly picture to myself any man less likely to become the captive of such an outburst of mere panic than the leader of the Conservative party is intellectually fashioned to be. He is a statesman of a remarkably clear and cool-headed order, with a keen occasional inclination to turn the eyes of a satirist upon demonstrations of such a kind as those which we have been lately compelled to observe in this country. He was prevailed upon, however, to give formal notice of the motion in his own name, but before many days had past he suddenly found it impossible for him to take his place in the House of Commons at the time appointed for the motion and he prevailed upon one of his friends and followers, who was probably delighted with the opportunity, to undertake the introduction of the motion. Then, as my American readers already know, when the time came for the vote of censure to be formally proposed by Mr. Balfour's deputed colleague, the great bulk of the Opposition party had taken fright at the probable consequences of exposing England to the charge of being divided against herself in presence of a threatened invasion, the motion was disavowed by many Con-

servatives and was defeated on a division by an immense majority. Since that event we have been hearing less and less of the threatened invasion by the aerial war-ships and of the Englishman's home.

There still seems every reason to believe that the present year will not see that great struggle between the House of Lords and the House of Commons which is expected to be the most important historical event of the present Parliament. It is understood that the Government have some important measures not affecting the actual constitution of the realm which could be carried to success during the present session and thus made part of established legislation. Whenever the great issue between the hereditary and the representative chamber comes to be brought to a vote in each house of Parliament it will have to be dealt with immediately by an appeal to the voice of the whole kingdom at a general election. Therefore the Government appear to be anxious to get some practical work of a less vital character fully accomplished before undertaking the great struggle for the enfranchisement of the legislative chamber. We hear all sorts of rumors meanwhile about serious differences of opinion in the Liberal Cabinet itself, but I do not believe that any such differences of opinion would be likely to affect in any way the course of action to be taken by Mr. Asquith and his colleagues on any really serious constitutional question.

The death of Algernon Charles Swinburne has just produced a sensation thruout England which will send its thrill as far and fast thruout the world of culture everywhere as human science can bear it. Mr. Swinburne was only ill for a few days and had been struck down by a sudden attack of influenza. During one of our recent cold and windy days he had taken a long walk and had not, it is now believed, clad himself warmly enough for such weather and thus laid himself open to the attack which has just had its fatal termination. The poet had been for many years withdrawn almost altogether personally from the observation of the metropolis. He was living in close and constant companionship with his dear friend, and as I may say, his devoted protector, Theodore Watts-Dunton, himself a poet, essayist

and critic of no common order. Swinburne had just reached his seventy-second birthday and was still receiving the congratulations of his friends and admirers when this stroke of illness came upon him and brought his great career to an end. The fame, however, had been won years and years before the career had even been threatened with a close. Swinburne was beyond all question one of the great poets of his time. The age of Victoria may be said to have had at least a trio of them—Tennyson, Browning and Swinburne. I shall not attempt any analysis of the qualities which have made Swinburne's finest poems immortal, nor shall I enter into any consideration of his occasional failures as a poet or of his eccentricities as a man. His genius is beyond dispute and it belongs to his country and to all time. Many of my American readers must have already enshrined in their memory the beautiful lines which he devoted to the Republic of the United States in a poem of his written to censure the then British administration for having proceeded, as he considered, too severely in

the punishment of Irish Fenian rebels at a time when all further danger from the Fenian movement had past away. The poet makes an appeal to England and he says:

Lo! how fair from afar,
Taintless of tyranny, stands
Thy mighty daughter, for years
Who trod the wine-press of war.
Shines with immaculate hands,
Slays not, a foe neither fears,
Stands not peace with a scar!"

This poem, I should say, made its appearance in the London *Morning Star*, the daily paper which was for many years the organ of the great political movements led by Cobden and Bright. With Algernon Charles Swinburne has past away the last of the leading members of that famous and very numerous group of poets, painters and other artists generally known as the Pre-Raphaelites. George Meredith indeed still lives and has sent a most touching tribute to the genius of Swinburne, and I trust may yet remain among us for some time, but he can hardly be reckoned as one of what I may call the proclaimed Pre-Raphaelite school. Of Algernon Swinburne it is not too much to say that the best and some of the earliest of his poems will live as long as the language in which they were written.

The death of Francis Marion Crawford, the novelist, would have created a far greater sensation thruout England if its announcement had not come almost simultaneously with that of Algernon Swinburne. Mr. Crawford died in Italy, where indeed he was born, of American parents, some fifty-five years ago. He had lived in many lands and won success in many literary departments. Some of his boyhood's years were past in the United States, as were indeed many of his maturer years also, and he was for a time a familiar figure in English literary society. At Rome he studied Sanskrit and followed up his study of the language and of other Oriental tongues as well by settling for a time in India, where he actually became the editor of the *Allahabad Herald*, a daily newspaper. At Simla he met the original of his afterward highly popular "Mr. Isaacs," about whom he created the novel which during his residence in England he sold to Messrs. Macmillan, of London. The success of this novel in-

ALGERNON SWINBURNE

duced Mr. Aldrich, the editor of the *Atlantic Monthly*, to prevail upon him to contribute a story, "The Roman Singer," to the pages of that most influential magazine. Mr. Crawford was a most prolific writer, and produced some plays as well as his many novels. All this, however, must be known as well to my American readers as to the London reading public, with which he was very popular.

Much interest and indeed much anxiety has been created by the dispute and serious disagreement at the meetings of the Independent Labor Conference lately held at Edinburgh, which ended in the resignation of some leading members of the party, among whom was the well-known and very energetic Mr. Keir Hardie. The dispute will no doubt come to a peaceful settlement after much debate and disturbance, but it invites public attention very emphatically to the fact that almost every order of operatives, and indeed of trades and organizations of all kinds, has now its regularly elected representative body for the management of its own affairs and the maintenance of its own interests. We seem therefore to have arrived or to be arriving at that systematic organization of labor which was the dream of advanced Socialistic agitators and thinkers many years ago. I use the word Socialistic now not in the sense usually assigned to it, that of a sort of conspiracy to despoil the wealthy in order to divide their

A. J. BALFOUR.

wealth among the poor, altho such a meaning might undoubtedly be applied to many of the doctrines still openly and frankly preached by many prominent and influential men in this country as well as in most others.

LONDON, ENGLAND

American Influence in the Villages of South China

BY THE REV. CHARLES BONE

[The author of the following article has been a missionary in South China for the past thirty years, speaks Chinese like a native and is considered one of the best informed of living Europeans in Chinese affairs.—EDITOR.]

THE general reader will be inclined to think that "American influence in Chinese villages" is something mythical, and some may doubt whether it exists at all. Those who know the facts, however, know that this influence is great and increasing. This life-like

sketch of village life in China is intended to illustrate this fact.

The Chinese are known as a race of agriculturists. Agriculture stands second in the list of "professions" open to the people. The scholar alone stands on a higher rung of the social ladder than

the farmer. Altho the Chinese are a race of farmers, there are, strictly speaking, few farmhouses. In England and America farmhouses dot the country-side and add a pleasant charm to the landscape. In China hardly such a thing as a solitary farmhouse exists. In fact, notwithstanding the much vaunted civilization of this old land, it would not be safe for a family to reside alone for a single night. Robbers would as assuredly attempt to steal every shred of clothing, and every cent of cash, as a panther would rend a kid that fell into its jaws. Farmers, therefore, live together in villages, to ensure their own safety, and the safety of their property. Hence farmsteads there are none; villages there are innumerable.

A village in the interior of China is as wonderful a structure, in its way, as the skyscrapers of New York. American influence has not yet modified these and perhaps never will. They have been built to accommodate as many beings as possible. Self-preservation has been the architect. They are built in the form of a parallelogram. One-storied houses are built on the four sides. These stand with their backs to the four quarters of the globe—that is toward the open country, air and light. In the back walls are small holes which accidentally serve as windows, but whose real purpose is to furnish loopholes for ancient muskets, with which from time to time the inhabitants repulse the attacks of prowling bandits or opposing clans.

It may be supposed that the center of this parallelogram is an open space in which trees flourish, flowers bloom, and children play. By no means. Here is built the most substantial structure of the whole, which is the general dumping ground for every kind of thing, useful and useless, contemporary and obsolete; as well as of creeping things, quadruped and biped—and others not a few. There is, of course, a "street" between this central building and the houses which form the outside square. One entrance admits to this enclosure, which can be closed at any time. This is a strong door. It is always closed at sundown, after which all the people are prisoners until the following morning. Each house, too, is a veritable "curiosity shop." I have looked into them. It generally comprises two rooms on the ground floor, the inner of

which is separated from the other by a half wall. In the outer—it is evening—there will be a cow and a calf, three pigs, seven hens and a rooster. The porkers will be sniffing about among the straw between the cow's legs, with the hens perched upon their backs. At night, probably, the cow and her offspring will have first choice of lodgings; the pigs will take what room is left; the hens and their lord will perch upon the horns of the cow. Verily a happy family!

The inner room—thru the outer—accommodates a family of two or three generations. There are therein two wooden beds, and piles of useless and some useful furniture. Here young men mature and brides come; infants are born and old folk die; children squeal and witch-like grandmothers soothe them. Yet the villagers are not unhappy. "They know to know no more." It is quite interesting to watch the woman returning from the fields at evening—for the women are farmers as well as the men, and there is no "woman's question" in China. Across her back will be strapt her last child asleep. In her hand she will be carrying a coop full of hens, which she took into the field in the morning to fatten upon the grubs. Across her shoulder will be the usual carrying pole, on one end of which hangs a bundle of firewood, and on the other the cooking utensils with which she cooked the midday meal. Verily she is a beast of burden!

The people here, as will be seen, live a hard life. Pleasing, well-favored girls are old at thirty; they are wizened at fifty; at seventy, should they be fortunate enough to escape the many diseases that threaten them, they are as hideous as the witches in Shakespeare's "Macbeth." Yet, I repeat it, they are a happy, kindly race.

But tho American influence has not yet penetrated these upland villages, whose inhabitants rarely travel beyond their own farms, thruout the lower plains of Kwangtung, and in the rich delta of the Canton River, this influence is very great. Originally the structure of the villages thruout this lower district is very different from those previously mentioned, and suggests a greater sense of security. It is true, strategic positions are often selected; walls protect the houses, and a gate the entrance; cannon, with gaping

mouths, face the traveler as he approaches. But the population is denser, and therefore the villages cluster more thickly. Moreover, poverty is less prevalent, and therefore there are fewer robbers.

Any traveler nowadays who visits these villages—and I have visited hundreds of them—will be struck by the marked difference between the new and the old. The contrast is great, as great in fact as between a mail coach and a mail train; between a wooden frigate and a steel ironclad. The houses of the older parts of these villages are often built of adobe, and are low, small and filthy. Each has two rooms, either of which is large enough to house comfortably a pet parrot.

Nowadays, in contrast with these older buildings, there are streets of good brick houses, in some cases two stories high. Occasionally a substantial mansion is seen. These houses are, indeed, well built. They have windows; their front walls are decorated with the deer, the unicorn and the phenix, all of which figure in Chinese ancient mythology. Within will be found cleanliness, air and light.

The most important edifice in Chinese villages is the Ancestral Hall. Dr. Henry, a very capable American missionary, has said:

"The Ancestral Hall is the most important sacred edifice in the land. In it are the tablets of the deceased fathers of the clan, in which their spirits reside."

As ancestral worship is the oldest and most sacred cult of the Chinese, it may be assumed that these sacred edifices are very ancient.

The Ancestral Hall is the recognized rendezvous of the spirits of the departed, who are supposed to revisit their old haunts, and especially to gather therein on anniversary days, when the living offer them homage and sacrifices. The inner room of these halls is indeed regarded as a veritable holy of holies. A Chinese with a sympathetic imagination, who gazes thoughtfully upon the hundreds of gilded wooden tablets standing in rows tier above tier, until, in the center top row, stands the tablet of the original ancestor of the clan, feels like an Anglo-Saxon who is privileged to linger in the aisle of Westminster Abbey, and

gaze upon the statues of the great departed. Every village of importance has its Westminster Abbey.

But the village Ancestral Hall is more than this. It is the recognized rendezvous of the clan life of the village. The village school is held therein, for it is said that the presence of the spirits of the departed will both assist the youths in their acquirement of knowledge and inspire a reverence in them for the honor of the clan. Alas, however, "familiarity breeds contempt."

In the Ancestral Hall, moreover, the several head men of the village gather to discuss municipal affairs, and arrange internal quarrels. Chinese family life is, to a foreigner, a tangled mystery, and he invariably loses himself in its confused mazes. The delicate degrees of mutual responsibility, to which each member stands to the other, quite unknown in Western lands, offer many opportunities for disagreement and quarrels; moreover, the way in which certain funds and the income of certain clan lands is divided at specified times presents colossal stumbling blocks to internal harmony.

Further, these "sacred edifices" are always open, and pigs roam therein by day, and beggars sleep therein by night. Prisoners are at times chained to the pillars till it is convenient to march them off to the district magistrate's prison, and I have seen a wife sold by auction to the highest bidder and the auction conducted in the Ancestral Hall.

The Ancestral Hall in the villages described in the first part of this article is a corner of the building in the center of the parallelogram. Many of the tablets stand as tho they were drunk or fatally wounded, while some have disappeared altogether, and the people are too poor, or too ignorant, and perhaps too indifferent to replace them.

Altho in the villages in the plains many of the older halls are poor, many new ones are now being erected commodious and beautiful, resplendent in gilt and carving, with decorated roofs and carved pillars. The best granite from far off quarries, the hardest teak from the forests of Burmah are not considered too good nor too expensive to be dedicated to the structure of these new sacred edi-

fices. Lacs of dollars are being expended upon these buildings.

Whence, then, come the funds for these buildings, domestic and sacred, conspicuous among so much that is decaying and tottering? The answer is simple and conclusive. The money is either sent or brought back by Chinese who are now or have been resident in America or Australia, who for a number of years have spent their days in orchards and gardens, and their nights over washtubs. Those who cannot be present, as is their duty, at the yearly worship and sacrifices of their deceased ancestors send home their money to build them new and resplendent halls, and in this way propitiate the manes of the departed, and at the same time enthrone themselves in the affections of their living relatives. Those who return to China at once set about building a family mansion, which will provide them with some of the comforts they have left in the land of their pilgrimage, and, by so doing, mark themselves out as men of wealth and influence among their fellows. In this way it is easily understood that the influence of America upon Chinese villages is great and ever-increasing.

Many villages are almost composed of these new and attractive residences. The more roomy interior gives a chance of getting some order and sweetness. Many little things conducive to comfort have been introduced from America. Pictures of Washington and Garfield adorn the walls of the houses. Large mirrors give a man an opportunity of seeing himself, and this encourages cleanliness. Few can remain quite uninfluenced under such conditions, and a gentler type of life prevails. Indeed those who have not visited the Eldorado, but who spend their days up to the knees in mud planting paddy, and their nights in low, damp warrens, look with wonder at the results of a few years' labor in another land, and the ~~location of which country is guaranteed~~ by the results seen on every side. No very great effort of the mind is necessary to understand the tremendous influence which all this has upon the people generally. Seneca remarks, "Men trust rather to their eyes than to their ears."

In many of these villages a number of Chinese can speak a kind of English, tho' certainly not that of Emerson or Pres-

cott. Still, they know a good deal, and when one travels thru their villages, and mixes with the people, one finds one's Chinese discounted, and English at a premium. Accounts occasionally reach us that, at times, the Chinese know rough experiences at the hands of a section of the working classes in California. I am not wishful to enter into that subject. It may be affirmed, however, without fear of contradiction, that the vast majority of Chinese whom I have met never refer to anything of the kind, but look back on their sojourn in America with pleasure, and recount their experiences with delight. There appear to be but two nations to which foreigners can belong. If he is not an Englishman, he is an American. The Chinese know only from practical experience Australia and America.

An elementary knowledge of the free institutions of the American Republic, which the Chinese have acquired by residence therein, have left a deep and lasting impression upon the minds of those who have returned, to renew their acquaintance with the harsher and even cruel Government of China. "Freedom" is a new word among the Chinese, but they have learnt it well. The blessings of self-government are at least partially understood and thoroughly appreciated, and there is a strong desire on the part of many of the Chinese, and not least among those who have resided abroad, to live under such a Government. It is true, that the masses are not yet sufficiently educated to be entrusted with such a precious privilege, and such a heavy responsibility. They are still too suspicious of one another, and, in many cases, have good reason to be, to work heartily together. Their youths have not been trained in the school of experience so as to understand the full meaning of the word "freedom." In spite of all this, however, the great ideal has fascinated many who have never left their own land, but have confined their minds to reading what is going on in other parts of the world, and has a great charm for those who have been abroad, and seen what it means where it is established and enjoyed. The leaven is in the meal is at work, and will never again be extracted therefrom.

HONGKONG, CHINA.

Literature

A Pluralistic Universe

PRAGMATISM has been reproached with failure when tested by its own principle, that of practical results. It has been, say its opponents, so much occupied in trying to define itself and in representing the misconceptions of its critics, that it has done little to justify its existence. That it has stirred up a commotion and made a sharp attack on prevailing systems is not enough, for all the previous philosophical movements which it condemns as logomachies have done the same. In reply to this charge it may be said that the constructive work of modern science has been done by the pragmatic method, tho rarely so designated, and further that the extension of the method into philosophic fields is beginning to show constructive tendencies. As examples may be cited Dewey and Tufts' remarkable textbook of ethics, and Professor James's new volume.* The former, tho revolutionary, is not at all polemical; the latter, tho polemical, yet shows that the author has something more than criticism in mind. In it Professor James shows rather clearly whither his line of thought is leading him. Ideas that appeared as footnotes in his "Varieties of Religious Experience" have developed since into fundamental principles, and we may surmise that some of the incidental remarks in this new volume may in the future prove to have more importance than their present position indicates.

Professor James wastes no time in tilting at dead philosophies like the old materialism and scholastic dualism, but directs his attack at the type of metaphysics dominant today in church and college, that is monism, pantheism and absolute idealism, particularly as expounded by Green, Royce and Bradley. He protests that the conception of the absolute, which seems to them of fundamental importance, serves no useful purpose, religious or intellectual, but in-

volves the thinker in fictitious difficulties and logical contradictions. He prefers a universe in the making, pliable, indeterminate and multiplex, to a static infinite oneness, with purely negative attributes. He claims further that his conception of a finite God, closely in touch and sympathy with human beings, is really more orthodox than an unapproachable and inconceivable absolute, for the former has been the God loved by the devout in all ages, altho the latter may have been in their creeds. Fechner's idea of a world-soul to which all living beings contribute and from which certain gifted individuals may at times draw inspiration, has a strange fascination for Professor James.

The most interesting chapter in the book to many will be that which introduces to the non-professional reader the French philosopher, Henri Bergson, the author of *l'Evolution créatrice* and the leading pragmatist of France if we do not count Poincaré. He would break the chain of intellectualism by a direct denial of the absolute validity of logical concepts. Platonic ideas do not take us nearer to reality, but further away from it. Concepts have a limited use in practical affairs, but cannot be used to establish fundamental theories. They are necessarily limited and inadequate, and therefore lead to logical contradictions, such as the impossibility of motion of which Achilles and the tortoise is the classical illustration. In his "skepticism of the instrument" Bergson rivals H. G. Wells.

Professor James does not in this new volume make an appeal to the people, as he did in his "Pragmatism." It is composed of the Hibbert Lectures, given at Manchester College, Oxford, and addressed to students of the subject. Much of it will therefore be found difficult to follow by those who are not well read in modern philosophy and familiar with the language of the various schools. But Professor James's unconventional manner and touches of personal experience

*A PLURALISTIC UNIVERSE. By William James. New York: Longmans, Green & Co. \$1.50.

render anything he writes of interest to a wide audience. His natural distrust of capitalized words—nobody knows what hidden meaning they may carry into the citadel of thought—shows itself in a strict adherence to lower case for everything except proper nouns. Even proper adjectives are reduced to the ranks. This is in line with the modern movement against capitals, but it looks a little queer to see "bergsonian philosophy," "hegelian method" and "german history."

A Prince of Dreamers. By Flora Annie Steel. New York: Doubleday, Page & Co. \$1.25.

Readers have grown exacting of Mrs. Steel. Her novels of Indian life, among which "On the Face of the Waters" stands easily first, have been so rich in imagination and insight, of so rare a quality, that we expect much of a new novel from a writer of her well-earned reputation. *A Prince of Dreamers* will not add to it. The story of court intrigue about a great diamond in the turban of Akbar, Emperor of India in Queen Elizabeth's time, is too slight a plot to compare with the greatest novel of the mutiny. Yet Akbar is an interesting figure, and the people of his court move in stately procession thru the pages of the book, loving, hating, intriguing, fighting, with Oriental passion, and fatalism. Mrs. Steel has a richness of diction, an affluence of colorful images, not often equaled. One American writer of short stories, Harriet Prescott Spofford, has the same gift of opulent description. Mrs. Steel has taken few liberties with her historical materials in her story of Akbar, the greatest Asiatic monarch of modern times; and her sympathetic presentment will make his reign a more real possession in the mind of the reader and student of the history of Hindustan. Akbar anticipated many of the English reforms such as the abolition of *suttee*, and was so far in advance of his age as to merit the title "Prince of Dreamers." Able, resourceful, and ardent, he is one of the most fascinating characters of Indian history, and of that wonderful sixteenth century which created "the great company of dreamers, Shakespeare, Ra-

phael, Drake, Michaelangelo, Galileo, Cervantes," and, in India, the noblest of the Moguls, and the one most worthy of the title "Great." And tho the wailing line,

"May the gods pity us, dreamers who dream of their godhead,"

runs insistently like a black thread thru the Oriental splendor of the fabric, we feel that the ones whom the gods should pity are not the dreamers, but the baser sort incapable of dreams.

The Delafield Affair. By Florence Finch Kelly. Chicago: A. C. McClurg & Co.

Mrs. Kelly knows her Southwest. The gray-green plateau of New Mexico, with its desert distances and the sense of quivering heat, which she has chosen as the scene of her novel, *The Delafield Affair*, is drawn from first hand acquaintance. It is a land, not of languor, but of fiery activity, for the heat is dry and stimulating instead of enervating, as it would be in a humid air; and the people of these parched plains are moved by fierce passions; they love and hate with equal intensity. Long nourished revenge and attempts at the murder of an enemy by respectable ranchmen and bankers do not seem so palpably incredible as they would in a more sophisticated society. The story moves with the rush of a reckless ride across the *mesa* to its inevitable end. It is told with animation, and its subject is the long and relentless hunt for a criminal who had found refuge and respectability in New Mexico. The reader should have been kept in suspense longer as to his identity for the keenest effect; however, it is not a novel of mystery, but frankly one of love and adventure.

Roses and Rose Growing. By Rose G. Kingsley. With a chapter on "How to Grow Roses for Exhibition," by Rev. Page Roberts, Vice President National Rose Society. New York: The Macmillan Company. \$2.00.

All garden lovers may welcome this instructive and charming book. It must be kept in mind while reading it that directions are given for an English, not an American, climate. It begins with rules for planting a rose garden and for

pruning roses. Directions are then given for propagating roses by budding, cuttings and layerings. The history and pedigree of roses has almost the interest of a story. First we have the Provence or Cabbage rose, brought to England in 1596, and the long list is brought down to the latest and rarest newcomers. The parentage of each is carefully given, with credit to the florist who offered them to the public. There is a chapter on Rose Pests, with receipts and directions how to destroy them. The colored illustrations of choice roses and the lists of graded colors for rosebeds are helpful and suggestive.

Camps and Cruises of an Ornithologist.

250 Photographs from Nature. By Frank M. Chapman. New York: D. Appleton & Co. \$3.00.

With seven years devoted to birds at their nursery period, and to their habits of nesting, the rest of the year being given to the preparation of those "Habitat Groups" so dear to visitors in the Natural History Museum, in New York, Mr. Frank M. Chapman, Curator of Ornithology in the museum, adds one more to his valuable books on birds. The work done in *Camps and Cruises of an Ornithologist* is of the best in quality and in general interest, being most enticing to the general reader and most suggestive to the special student of birds. Avoiding both Scylla and Charybdis as a skipper in the straits of the naturalist, he pitches his tent, or his "blind," where the most near-sighted bird may acquaint itself with the outside of the camera habitation and lets the instrument, as far as possible, do its work. He finds it unsafe to "endow" the bird with "the mind of man entire." It is "merely a matter of human ingenuity or the imagination," he says, "to seek the explanation of their every act" by using "the human parallel." The result is often interesting, but quite as often misleading; good pictures but poor natural history. The general trend of his conclusions is evident enough to one who follows the fascinating account of his many visits to the nesting places of the less common birds—to Gardiner's Island of 4,000 acres, purchased all for "ten coats of trading

cloath" in 1637; an island where there are no rats, no cats, no foxes, minks, weasels, opossums, red squirrels, and chipmunks, and where all the hawks but the fish-lovers depart with the spring; to Cobb's Island, off the Virginia coast, where the milliner had done her perfect work on some varieties, but had not been attracted by all equally; among many others, the homely Black Skimmer was left; to the Cuthbert Rookery, in the Bahama Islands, with their wonderfully well-pictured congregations of flamingoes, that stared suspiciously at the ornithological "blind" erected in their "city by the sea," but, having no detectives of the Sherlock Holmes variety, failed to discover the "taking" ways of a modern camera. These visits extended across the Western prairies to the Rockies, and down the Pacific islands, affording studies of birds not easily accessible to the ornithologist unprovided with a man-of-war. The naturalist will find here the most careful work; the amateur will get valuable suggestion as to methods of securing interviews with the mother and the handsome and musical father birds. Everything that the nature lover wants to know is here supplied. With good paper and type and the best illustrations, and a more careful proof-reading in the next edition to clear the numerous blemishes in small details of punctuation, which follows often no known rules, the work of Mr. Chapman is a most notable addition to the good books of the kind.

Letters of Mrs. James G. Blaine. Edited by Harriet S. Blaine Beale. Two Vols. New York: Duffield & Co. \$4.00.

Miss Harriet Bailey Stanwood met her "fate," as it is sometimes called, and became Mrs. James G. Blaine in the year 1850. The two young people had been teaching in the same State, Kentucky, but indifferent towns—the one at Millersburg, in a girls' school; the other in a military institute in Georgetown. They went back to Augusta, Maine, the birth-place of the wife, the next year, and settled in the old Stanwood house. The wife was then twenty-two. Thirty-six years later, when her husband had just

given a house party to the whole body of the Maine Legislature, she writes: "I have just discovered that the representatives have left the marks of their heads all along our old shabby wall paper." During that interval of thirty-six years America had been remade. The Civil War had occurred, slavery had been abolished. Four billions of money had been spent and pretty much all recouped. Mr. Blaine had served with great skill and success as Speaker of the House of Representatives in Washington, as Senator, Secretary of State, and twice had been candidate of a large section of his party for the Presidency. His prudent and practical wife, merging her life in his, in the way wives do, had followed his fortunes in both halls of Congress and in the Cabinet, had taken her share in her husband's brilliant career, amid hosts of enthusiastic friends—for he had the knack of making friends everywhere, whether dealing out bait for the furtive trout in the streams of Maine, or handling the lines that served bait for the human pike at the national capital—had wept in secret when he was keeping a brave face over the famous Mulligan Letters; and had dried her eyes in genuine sorrow when Garfield's death at the hands of the assassin, Guiteau, threw her husband out of one Cabinet, where he was honored, into one in which he soon found himself not at home. Her letters are chiefly to members of the family, and two-thirds of the contents are such as all the mothers are always writing, hardly expecting that their words will win the honors of type. A shrewd characterization now and then shows the humor of the writer. When, for instance, she visits her newly-married daughter in her military home, she writes: "The limitations and uniformity of a military post make those who belong to it seem custom made." She goes to a dinner in the Executive Mansion in Washington, but finds President Grant "so heavy in everything but feeding—there he is very light. He talks incessantly about himself. I have a certain sympathy with him, for I think him an honest man and indeed too frequently assailed." In the early days of the residence in Washington Mrs. Blaine was troubled to know

how far her two dresses would carry her in a winter at the great capital. At one time she felt that she had "nothing to wear," but before she got away from a certain house she discovered that "Mrs. Boutwell's bows were worn exactly where the Pinkey sisters wear theirs; also that the skirt of the black silk dress had evidently felt the deadly pressure of an iron, and as one touch of human nature makes the whole world kin, I felt *en rapport* at once." After this no trouble came about the dresses. Very naturally they multiplied; but they always robed a sensible woman from Maine, and in Maine they live about as near the center of the globe as they do in the land of the hidalgos.

The Gorgeous Borgia. By Justin Huntly McCarthy. New York: Harper & Bros. \$1.50.

Cæsar Borgia, if not the worst and most unscrupulous of his nefarious race, was, at least, the strongest of them all. Such admiration as we can grudgingly give to talent, however misdirected, and to power, however perverted, we are compelled to grant him. In *The Gorgeous Borgia*, Mr. McCarthy has told an exciting tale of Cæsar's ruthless rise to power and his tragic downfall. By a slight perversion of fact, his death is made to occur in the castle of Sant' Angelo, as the stage of the closing scene of his cruel career, whereas, in sober truth, Cæsar escaped from the castle of Medina Del Campo, in Spain, where he had been imprisoned for two years, to the King of Navarre, whom he followed in the war against Castile, and was killed on March 12th, 1507, by a missile from the castle of Bianco. But the manner of his taking off is of less importance than the vivid picture of Rome in his day, and of his strong and somewhat perplexing personality. Mr. McCarthy depicts him as rejoicing in evil for its own sake, rather than merely using it as a tool for the furtherance of his plans. Perhaps the latter is the baser type of villainy, as it sins against greater light. The sobriety, energy, eloquence and ability of Cæsar Borgia were delineated by Machiavelli in his "Principe." Mr. McCarthy gives the reverse of the medal.

Literary Notes

....Baedeker's *Central Rome and Italy* appears in a fifteenth edition, revised with the customary thoroughness of its publisher. What would Italy—what would all the world be without Herr Karl Baedeker? An unfamiliar world, indeed, full of pitfalls for the innocent abroad. (Scribner's, \$2.25).

....That useful reference book, the parent of many others, the English *Who's Who?* has made its appearance for 1909. Who's whoness grows with what it feeds upon, part of its food being the increase of population and of publications for the rapid manufacture of new who's. An advertisement in this new volume suggests the possibility of similar volumes for blooded stock, race horses, and thorobred dogs. (Macmillan, \$2.50).

....A revised edition of *Practical Golf*, by Walter J. Travis, issued by Harper's (\$2.00), contains the necessary changes in rules and play, brought about by the introduction of rubber cored balls and aluminum clubs. The book will be found helpful to the beginner, and also of value to the secretary of a golf club, in giving him the regulations and etiquet of the game. Numerous photographs and diagrams illustrate the text.

....*Beverages Past and Present*, by Edward R. Emerson, who appears to make a specialty of this subject, at least one other book dealing with it already bearing his name, must certainly be accepted as the definitive authority on drinking, drinking customs, and beverages, cheering all, some innocent, more potent, the world over, from the dark backward and abysm of time down to the present year of the prohibition wave. (Putnam's, 2 vols., \$5.00).

....A volume of lectures by the late Regius Professor of Modern History at Oxford, Bishop Stubbs, completes his history of Germany in the Middle Ages, to which an earlier volume of his had already been devoted. This new work, *Germany in the Later Middle Ages, 1200-1500*, takes the Germans from the days of Barbarossa onward, one people, recognized as such by foreign nations, and growing ever more aware of their racial unity, chiefly under the influence of the universities. The book has been edited by Mr. Arthur Hassall, M. A. (Longmans, Green, \$2.25).

....Taking advantage of the popularity of the Hungarian play, "The Devil," the Arcadia Press has brought out a translation of Imre Madach's great dramatic poem, *The Tragedy of Man*, by William N. Loew; 204 pages; price, \$1.50. This will put into the hands of the student who does not read Hungarian a faithful translation of the great classic, so far as its argument is concerned, but as for reproducing it in English as a poem, the work of Mr. Loew is a failure. In some ways it would seem better to leave the work untouched until some poet of sufficient inspiration should come along. Certainly, under the circumstances, it would have been much better to attempt only a prose translation. The poem in its argument suggests Milton's "Paradise Lost" in the beginning, then Goethe's "Faust,"

and again, at times, Byron's "Cain." Adam, after his fall, is taken by Satan and allowed to see, in a prophetic historical vision, the future Tragedy of Man. He himself appears in the form of various historic heroes, and Eve also figures in the picture, sometimes as a slave, sometimes as a wronged woman, sometimes as a humble drudge, the wife of a savage. There is hope, however, in the end, for the Lord returns, after the vision, and Adam comes to his own.

Pebbles

D. BROKE, '12—Send a dozen roses to this address.

Salesman—Yes, sir.

D. B.—Will you trust me?

S.—Certainly.

D. B.—Then make it two dozen.—*Harvard Lampoon*.

A LITTLE boy in Trenton, who has but recently mastered his Catechism, confest his disappointment therein in the following terms:

"Say, dad, I obey the fifth commandment and honor my father and mother, yet my days are not a bit longer in the land, for I'm put to bed every night at 7 o'clock just the same."—*Lippincott's*.

THE other day an important looking gentleman took a seat beside a quiet man in a Western railway car and began a conversation.

"I'm going to the capital," he said, "to get a pardon for a convicted thief. I'm not personally acquainted with the Governor, but he can't afford to refuse me."

"Is the fellow guilty?" asked the man.

"Of course he is; but that makes no difference. His friends have agreed to give me \$500 if I get him out, and the thermometer is very low when I can't put up a good talk. Where are you traveling?"

"Going to the capital, too."

"Do you live there?"

"Yes."

"Perhaps you might be of some service to me. What business are you in?"

"I'm the Governor."—*The Standard*.

A FEW days ago one of Philadelphia's prominent society women told her butler to tell all visitors that she was not at home.

At night, when enumerating the persons who had called during the day, he mentioned the lady's sister, when his mistress exclaimed: "I told you, man, that I was always at home for my sister! You ought to have shown her in."

Next day the lady went out to make a few calls, and during her absence her sister came to the house.

"Is your mistress at home?" she asked the butler.

"Yes, madam," was the reply.

The lady went upstairs and looked everywhere for her sister. On coming downstairs she said to the butler: "My sister must have gone out, for I cannot find her."

"Yes, madam, she has gone out; but she told me last night that she was always at home to you."—*Philadelphia Record*.

The Independent

Entered at New York Post Office as Second Class Matter
Postmaster, Clarence W. Bowen
149 Fourth Street New York

A WEEKLY MAGAZINE FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

SINGLE COPIES FOR SIX MONTHS, 25 CENTS. Postage to any foreign country in the Universal Postal Union, \$1.75 a year; outside of Europe, \$1.00 extra. Subscriptions will be received for better periods, and clubbing rates will be granted as low as offered by any responsible publisher.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is published free of compilation. Next binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume be returned to us postpaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve their own copies.

Advertising rates will be furnished on application.

Broader Arbitration Treaties

THE following circular letter has just been addressed by the president of the International Peace Bureau at Berne to the various members of the Bureau in the different countries; and this translation of it is placed in our hands by one of the American members of the Bureau. It touches a matter of cardinal importance and its recommendation should everywhere be acted upon.

When France and England, sometime after the first Hague Conference, concluded their famous arbitration treaty, they unfortunately reserved from its application what they chose to call "questions of honor" and "vital interest." The great mass of treaties which have followed have copied this form. While thus covering all cases ever really likely to arise between the parties to the several treaties, they have still left room for the critics, with all their arguments that great arrangements cannot be kept up as before for possible issues of "honor" and "vital interest."

Denmark and Holland—and the same was true in the treaties between Denmark and Portugal, Denmark and Italy, and practically between Norway and

Sweden, Chile and Argentina, and the five Central American States,—clearly appreciated the situation, and fully met it in their treaty, referring to arbitration every difference whatever that may arise between them not settled by regular diplomatic negotiation. This is the only sensible procedure. Our own Geneva arbitration with England proved that there can be no possible point of "honor" or "vital interest" so grave that two great and self-respecting nations cannot afford to settle it peaceably rather than go to war about it.

The Olney-Pauncefote treaty of 1897, whose ratification was defeated in the Senate, it will be remembered, by the six votes from three Western States with a total population less than that of Chicago, was of almost precisely the same character as the Denmark-Holland treaty here properly commended for universal imitation.

Our great International Arbitration Conferences at Washington in 1896 and 1904, under the presidency of Senator Edmunds and Hon. John W. Foster, unanimously recommended this form of treaty. It was a distinct misfortune and mistake that the other form, following the Anglo-French model, was commonly adopted. The tenth anniversary of the meeting of the first Hague Conference is a good time for all of us to unite in a movement for treaties of the right scope.

Secretary Root has negotiated treaties with twenty-three of our fifty-eight sister nations within the past two years. There are twenty-five nations remaining. The new treaties that Secretary Knox will presumably negotiate should go much farther than Mr. Root's—at least as far as our treaty and agreement with Japan. The Berne Bureau does well to prompt such a movement. Its address to its members is as follows:

"On the evening 18th of May, the tenth anniversary of the meeting of the first Peace Congress at The Hague, there will be an opportunity for a decisive step for the cause of international arbitration. The pacifists and the peace societies of the different countries should address themselves to this end either by a written address or by a deputation to the governments of their countries, asking them to adopt with other countries the form of the treaty of arbitration concluded between Denmark and Holland, a treaty by which these

two countries have agreed to submit to arbitration *all* the differences which may arise between them.

"The members of the bureau, consulted by correspondence, have given their full assent to this proposition. We therefore beg you to undertake as far as possible the desired steps to this end. Perhaps there will be an opportunity in different countries to surround the proceeding with a certain dignity and to organize public meetings on the occasion. The bureau naturally leaves to the national association all latitude as to the carrying out of the commended proposition and the work of adapting it to the circumstances peculiar to their countries."

A New Islam

IT is not to be expected that the conquest of Christianity over Mohammedanism and the more cultured paganisms is all to be by acknowledged acceptance and submission. A very large part of it is to be expected in the partial Christianization of the old religions. There is a national and religious loyalty and pride which to a great extent will hold the old names and terms while discarding glaring superstitions and infusing new ideas, thus attempting to spiritualize the old faith under such designations as the New Brahmanism or the New Buddhism, or the New Islam. Thus, under the influence of education and Christianity the old religious organizations are broken up, for the new wine bursts the old wine-skins, and we have a forest of sects which prove the waking up of thought, vastly better, with its contentions, than the dulness of the old dead conformity.

Islam is an example of this process. Lord Cromer was wrong when he said that Islam cannot be reformed. It is being changed and reformed all the time. It is the new light, the new education, that is creating the New Islam in Turkey. The Sheikh ul-Islam tells us that Christians are not infidels, that they may be regarded as brothers; and we have seen Moslem preachers embracing Christian preachers even in Christian churches, and both together proclaiming liberty and fraternity. That is not the old and original Mohammedanism of the Koran. It is the Koran reinterpreted and explained away to fit it to the times. We have seen hundreds of Moslem women attending public meetings unveiled, and demanding escape from the

restrictions of the harem. This is a new Islam.

Not in Turkey alone, but in Egypt, in Algeria, in Persia, and in India especially, the new ferment is working. Often there is as much conflict between Moslem sects as between Moslems and Christians or pagans. Not long ago the Moslems of India refused to seek Western education; but that time has past. There are said to be one hundred and fifty Moslem sects, some very conservative, like the Wahabis, while others, like the Sufis, are almost pantheistic. Other sects have proclaimed mediators, as Mahdis, while still others may be said to be rationalistic. It is not easy for all Mohammedans to cling to the belief that the Koran was written in heaven on a table and preserved there from all eternity. The new Islam holds that one may neglect the obsolete rules and forms of the original religion, but must preserve its spirit; and that "spirit" will be the best that the moral and religious sense will discover no matter where. Every religion, even Christianity, drops its accretions, and even its original excrescences. We do not now feel it necessary to believe in the early story of the creation of Adam and Eve, and we hold to a higher idea of God as Father, than that which looked on him rather as ruler and king.

Much that is of the best can thus be common to the New Islam, the New Brahminism, the new Buddhism, and Christianity. They all hold to only one God, a spirit, and that God our Heavenly Father who loves us and in whose love we trust. They all teach the love of our neighbor as well as the love of God, and so are approaching a common unity. To be sure the spiritual reformers are not yet powerful; the religions are not yet Christianized, if they ever will be. The teachers are not all like Chunder Sen or Syed Ahmed, both of whom have a considerable following in India; and there is all the more need for pushing the influence of Christian missions out of which these reformers have sprung, as a sort of counter-reformation, such as arose after Luther in the Catholic Church. All the greater is the need to support such schools as Robert College and the Girls College in Constantinople, and the Syrian Protestant College in

Barnum, and dozens of similar institutions in India, China and Japan. In all this work American institutions have a leading part.

Hobbies and Health

As every one knows, there has been a marked reduction in the death rate and a prolongation of the life of each generation in the last half century. This has, however, affected the death rate mainly among children and has increased the average length of life by reduction of child mortality. The question that now interests physicians is the prolongation of life at the other end. Not only must life be prolonged, however, but its ills must be lessened, so that old age, or at least the period beyond three score, may be made less liable to disease and to the tissue deterioration which so often characterizes this period. More than ever do we realize now that a man is as old as his arteries and that these precious living tubes which are of such important assistance to the heart must be kept as young as possible. This is found rather difficult in our strenuous life. Hard work is done not figuratively but literally at high pressure. When we occupy ourselves intensely with any subject blood pressure rises, and whether this intense preoccupation be physical or mental, there is a strain put upon arteries that is of the greatest significance, making against the probability of long life if it is kept up for any length of time. Physicians have been studying how to secure in the best way thoro relaxation of arteries, such as will rest them and prevent degeneration.

Every one knows that the supposed occupations at which we take rest are likely to be disturbed by thoughts of business unless there is some strong interest associated with them. To read the newspaper, for instance, does not afford rest for a man, since his business cares and thoughts constantly intrude themselves. To go to the theater and be entertained is not restful very often because one cannot put away business thoughts unless one becomes seriously occupied with some other subject. It is impossible for the human mind to do

nothing, it must occupy itself with something. If it is very much interested in business and in nothing else, then it will constantly revert to business thoughts and cares. If there is some other intense interest, then it may forget its business worries in the midst of it. If there is a hobby to which the mind will turn quite naturally, then the interest in this gives a complete rest to the other portions of the brain and complete relaxation of cell energy and of arterial tension in that portion results. Evidently this is the secret of the long life of men with hobbies, for tho they seem to do more work, the difference in their work really gives them periods of thoro rest when they pass from one thing to another.

Most of the men who in recent years have lived far beyond the ordinary term of human life have been noted for their hobbies; that is, besides their ordinary occupation, whatever it may be, they have had one or more supremely intellectual interests to which they have turned for refreshment during most of their lives, and which have evidently proved not an expenditure of energy, but a recreation in the etymological sense of that word, as providing an opportunity for other portions of their brain to thoroly relax themselves. Gladstone turning from politics to Greek for a rest is of course a typical example of this; Cardinal Newman, with his varied interests, is another; Pope Leo XIII devoting himself to Latin poetry in the intervals of an extremely busy life up to ninety-three is a third. Long liveders usually have not devoted themselves to one thing, but to many, and have accomplished noteworthy work in several departments. Virchow, the great German pathologist, who was in his time also the greatest of living anthropologists, is only one striking proof of this out of many that might be adduced. He lived well beyond eighty and then was killed by an accident on a trolley car. It is evident that a hobby, by which is meant an intellectual interest very different from the ordinary occupation, which takes the blood away from that portion of the brain usually occupied with business cares and by transferring it to another

set of cells gives the first set a thoro opportunity to rest, is what every man needs who hopes to live long in the land in strength of mind and capacity for work.

Ordinarily it would seem to be quite easy enough to secure relaxation of mind. Any one who has ever tried, however, to persuade a business man who has for a long time devoted himself solely to his business and that at high pressure, to let up on it, will have some idea of how difficult a task a physician has before him in securing relaxation for his patients. Some time between fifty and sixty at the present time a great many business men come to their physicians showing the signs of beginning arterial degeneration, tho as yet there are only a few neurotic symptoms, a little disturbance of digestion, a little tendency to insomnia, a growing irritability and a lack of self-control in little things, as the external indices of this change. The one thing is to get the man to let up on his work. If, however, he is asked to give up his work, almost immediately a worse state of affairs will develop. He now has nothing to occupy his mind, he worries as to his condition, which he considers must be very serious, since his physician has advised him to give up work, and worry proceeds to set up a higher tension of arteries than work did before. Ordinarily if a busy man is compelled to stop work at this period he gets short circuited on himself and expends just as much energy wrongfully in thought about his health as he did before in thought about his business. As a rule he will live longer by letting him go on with his business, tho it is perfectly clear that that is doing him harm. There is a question of two evils, and his business is apparently the lesser evil.

As a rule, these men have no material need to go on with their business. They are often so situated that they could live quite well on the incomes derived from what they have earned in the past. There is just one reason why they must be permitted to go on, and that is that a man must have something to do or his human machine will work out its energy on him. It is in these cases that the possession of a hobby would be one of the most precious of therapeutic aids for the physician. Unfortunately, a hobby that

is of any use in these circumstances cannot be acquired at command when one is nearly sixty years of age. It must have been worked up during the preceding thirty or forty years to be of real value for relaxation purposes. If there is something that a man can turn to with supreme interest so as to occupy himself with it to the exclusion of business thoughts at least for a good portion of the day, then there is every hope of securing that lack of tension in arteries that will save them from further deterioration. It would indeed be worth the while for men, just as they try to keep themselves in good physical health by indulging in exercise when they are young, to provide for their mental health, and, above all, their need for relaxation when older, by training themselves to indulge in some hobby that may become a precious interest in life.

This is the therapeutic value of a hobby. The physicians of the present time would be very glad, indeed, to have the aid of such a secondary occupation when their patients, in whom the first signs of senescence have just come, present themselves for treatment. If a man can be advised to decrease his attention to business and gradually increase his attention to his hobby, then the future is very hopeful. Business may be a grind, while his hobby is usually much more than a passing interest, and he may even gradually learn to occupy himself with it almost completely. At least, he does not get short circuited on himself. The physician of the present day then is prone to say to every one, Acquire hobbies when you are young. If he is interested in the present status of education he is very likely to say, Be sure you get a liberal education for that gives you ever so much more chance of having a real hobby, a profound intellectual occupation with some great subject apart from practical life. The physician who sees many of these cases will surely re-echo what President Wilson said not long ago: "Let us stop specializing the student, and now let us generalize him." Such generalization makes for health of body and mind and even constitutes an important factor in the prolongation of life because of the variety of interests which it encourages. This factor grows all the more important as accidental causes of disease are

brought more and more under control. It is indeed the secret of a longer, healthier, above all happier life for those who escape the accidents that shorten life in early years.

Railroad Companies' Coal Property

UNDER the decision of the Supreme Court concerning what is called the commodities clause of the new Railroad Rate law, the coal railroad companies, at which that clause was aimed, may lawfully retain their control of coal mines, but the door has been opened for Congress to enforce the purpose of the clause by more carefully prepared legislation, if it shall choose to do so. The substance of this important decision is that a company may carry coal that was mined or produced by it, provided that it has parted with the coal, by sale, before transportation; also, that it may carry coal produced by another corporation in which it has a stockholder's interest, even if that interest be a controlling one. That is to say, the court holds, in conformity with previous decisions, that such a stock interest is not a legal interest in the commodity.

The clause forbids a railroad company to carry (in interstate traffic) "any commodity manufactured, mined or produced by it or under its authority, or which it may own in whole or in part, or in which it may have an interest, direct or indirect." To the average lay mind this seemed sufficiently comprehensive. A majority of the coal railroad companies conduct their mining business thru the agency of subsidiary coal companies which they control by ownership of stock. The court holds that such an interest is not a "legal interest" in the commodity itself, and therefore is not prohibited by the words of the clause. But the power of Congress to cover such an interest by a more exact prohibition is, as we understand it, affirmed.

As we have said, a coal railroad company may avoid the prohibition of the clause by selling its coal before beginning to transport it, or by the use of subsidiary corporations, which is the prevailing practice. Congress may amend the statute, to enforce its original purpose, and

it is reported that Mr. Taft and his Cabinet are preparing an amendment that will be effective.

That original purpose was to confine railroad companies to the transportation business, and to prevent them from controlling and monopolizing the mining as well as the transportation of coal. Exposure of serious abuses and of most unjust discrimination against independent owners of coal mines caused the enactment of this commodities clause. The facts brought to light by official investigation have not been forgotten. A railroad company whose lines traverse a coal district has power to obtain control of the tributary mining industry if it seeks such control. In the anthracite field that control was acquired some time ago. A majority of the complaints which led to the enactment of the clause came from coal districts where the work of getting control was going on and was far from completion.

Discrimination against independent operators was practised in various ways, all of them calculated to discourage investment in independent mines and to drive out of business those who had invested. Congress undertook to prevent such injustice. It sought to compel the railroad companies to sell their mines, or nearly all of them. The Supreme Court's decision shows that it had power to do this, but its statute was not properly written.

If the intention of Congress had been carried out, if the view of Congress and of the Government as to the legal effect of the commodities clause had been accepted by the court, and if the clause had been strictly enforced, there would have been a financial disturbance of some magnitude. During many years past, bonds have been issued which rest in part upon the great coal properties of railroads. Probably a funded debt of a billion of dollars has those properties as security in part. It would be a difficult task to make a financial separation. The shares of many railroad companies derive a part of their value from the coal holdings. To dispose of these great coal properties at forced sale without heavy loss would test the ability of our most capable financiers. We are speaking of an actual sale, of strict compliance with what Congress and the Government believed to be the spirit and the letter of

the statute. While it has seemed to us that the railway business should be separated from the mining industry, and that the railway companies should be required to devote their energies and capital exclusively to transportation, we have thought that the new law's method of causing the desired separation was not one of ideal excellence, involving, as it must, a widespread financial disturbance and probably much loss to bondholders and others. If there is to be a separation, the movement toward it should be a gradual one.

We believe that there should be a separation. The railroad companies, which have a respite now, will discover that a large majority of the American people are of this opinion. A railroad company should not be interested financially in an outside business or industry which makes it a competitor, in the general market, of those for whom it acts as a common carrier. When it has such an interest, the temptation to discriminate in favor of itself and against competitors who must use its lines is very strong, so strong, experience shows, that by many railroad officers it cannot be successfully resisted. The combination of railway and coal interests, however, has been a growth of many years. So far as it has come about without violation of law, it deserves to be treated with some consideration in a movement for the dissolution of it. Time should be given for such action as will not subject those directly involved to serious loss. When the bonds and other securities of what are called coal railroad companies are taken into account, it will be seen that a great many persons are interested, and that a vast majority of them are in no way responsible for the abuses and evils which suggested the enactment of the commodities clause of the Rate law.

Educational Crisis in Beirut

THE Syrian Protestant College in Beirut is one of the greatest influences for enlightenment in all the nearer East. It is an American institution, and it has 876 students, of whom 128 are Moslems and 88 Jews. It is a Christian college, definitely so, and the resident students have been required to attend daily pray-

ers and Sunday services. The political ferment stirred up the Moslem students, and they asked the faculty to relieve them of the obligation to attend these Christian exercises, on the ground that the requirement was an infringement of religious liberty. It was not sufficient to tell them that this was a Christian college, and that they had come of their own free will, knowing the requirements, in order that they might get educational advantages not to be found elsewhere.

The faculty declined to grant the request, and the excitement grew hot and spread all thru the region, and even to Constantinople and Egypt, where the Moslem newspapers made the most of it and demanded relief. Things went so far that there were threats of violence that would break up the college and destroy its buildings.

Meanwhile President Howard I. Bliss was in this country in the interest of the college when the disturbance occurred, and he hastened back to be in charge. He found that there was a strike of the Moslem and Jewish students, who had refused to attend any religious exercises, altho careful to obey all other regulations. The faculty have thought it wise to yield somewhat temporarily. The following decision, with a suitable preface, was sent to the parents of all these students:

"(1) The faculty will treat the striking students in the spirit of indulgence, and will thus excuse them from attendance during the times of worship and will occupy them during those times with something useful to them. This exemption comprehends the present academic year only.

"(2) If desired, the faculty will offer the students a study in the science of religion which will not take the place of the Bible study but will be in addition to it.

"(3) The faculty will take up this question which has been the cause of the present difficulty, will consider it, and will then submit it to the board of trustees in New York for their final decision. They cannot, however, make any promise or hold out any hopes as to the outcome.

"As to the students, they will be required:

"(1) To disclaim everything that suggests the spirit of disloyalty or disobedience or conspiracy against the authority of the college.

"(2) To undertake in a special manner a strict observance of the regulations of the college as a sign of the above mentioned disavowal and their sincerity in making it.

"(3) To resume attendance at the regular Bible classes.

"We send you this letter that you may know clearly what has happened. It remains for us to say that beginning with Monday, March 22nd, this decision will go into effect. If there is any parent, however, who would prefer to withdraw his son from the college he can do so, and the college will make the necessary settlement with regard to the second installment of fees he has recently paid."

Parents and students accepted the decision and only eight students withdrew. The crisis ended, at least for the present. The question now goes to the trustees here in New York. It was for the present crisis that this compromise was yielded, for the exigency was very serious. The Moslem students had appealed to their religious superiors and were supported by them, as well as by the almost unanimous urgency of the press, which opposed compulsory worship, and even by those who had been the warmest friends of the college, including many Christians. It is a very serious question that comes before the trustees. The college was founded for a double purpose, for its Christian influence no less than for intellectual enlightenment. It will be very easy to say that we gave the money and we make the rules, and you need not come unless you choose to obey those rules. On the other hand it is a question how much good it does to require people to attend a religious exercise which offends their conscience. Religious liberty is a prime principle in these days, even in Turkey, and it is not easy to show that liberty to lose the advantages of education is true religious liberty. Now that the faculty have once yielded it may not be easy to restore the rule; but on the other hand, the delay allows time for passion to cool, and with the requirement of attendance at religious exercises insisted upon, those who cannot accept it will not return at the beginning of another year. There will simply be the loss of a certain number of students and of their tuition fees. We are by no means clear that the trustees will do well to reverse the action of the faculty. The purpose in view is the best enlightenment of the students, and to secure the greatest influence in the Turkish Empire. The old fable of the dispute between the sun and the north wind as to which could pull off the countryman's cloak has its lesson.

Communicating with Mars

THAT Mars is coming nearer is evident from its effects upon us earth people. First, there is the revival of militarism, for we may assume, in the absence of exact information on this point, that the malign influence of the warlike planet increases as the square of distance diminishes. The German navy is growing miraculously, the Englishman's home is disturbed, new Dreadnoughts are being constructed to defend the coast of Bohemia, and our own peaceful continent is joining in the rivalry. Second, the newspapers are agitating the question of communicating with our nearest neighbor on the suburban side of the solar system. Professor Pickering, of Harvard, suggests \$2,000,000 would be sufficient to construct a heliograph capable of sending flashes to Mars. Texas has offered to donate as many square miles of land as anybody will cover with mirrors. Other ingenious methods appear in the papers every day, or at least every Sunday, such as the proposal to carpet a county with black cambric curtains, rolling up suddenly on the ammonia principle, or to plant crops on the great plains in the form of letters of the alphabet, spelling out a message in successive seasons.

Now, we would urge the advisability of deliberation in this matter. Ten million dollars is a great deal of money, even if it is not raised. It would be enough to lay the keel of another battleship, or, if the reader thinks it a lesser evil, the foundation of another university. Besides, there is the question of etiquette to be considered. We do not want to spoil our chances of future friendship with the Martians by appearing to presume. If they are of the same way of thinking as we—and the idea of communicating with them is based on this assumption—it would be impolite for us to call on them first, because they are the older inhabitants of this region of space. Their planet being on the outside was flung off first, and being much smaller cooled down quicker. This is according to the nebular hypothesis. We are aware that Professor Chamberlin thinks that he has overthrown the nebular hypothesis, but he does not real-

ize how firmly it is enshrined in the hearts of the people. To adopt his planetesimal theory would throw everything into chaos again, and we should not know which planet came first or whether we are getting hotter or colder, or whether we are solid, liquid or gaseous in our midst. Scientific men may take up the new theory, but the mass of the people will always oppose it, because we see an illustration of the formation of the planets and their satellites, according to Laplace, whenever the automobile wheel runs thru a mud puddle, but nobody ever saw a lot of planetesimals getting together and crowding so they melted each other up into a plastic mass hurtling thru space with enormous rapidity. The nearest approach to it is the six o'clock rush on a New York subway train.

Waiving the question of propriety, is it not wisest to leave the initiative to the Martians, who are presumably many million years older than we, and consequently as much wiser than we as ten thousand years, the length of our own civilization, is contained in the number of years they are older. We must consider the possibility that they have long had accurate telescopic or telepathic knowledge of us, that they watched us moving in, and have made up their minds that we are not desirable acquaintances.

But on the other hand, there is the possibility to be considered that they may have been trying to get into communication with us. That network of canals may be some kind of cuneiform inscriptions in the Martian language, perhaps sending C. Q. D. signals out into space from a freezing world. Has any decipherer of ancient languages been sent to the Flagstaff Observatory? Or the Martians may have been calling us up via wireless and we have never answered. Did not Nikola Tesla announce some time ago that he observed mysterious perturbations of his apparatus that he ascribed to the Martians? Professor Todd, of Amherst, is said to be planning to go up in a balloon as high as possible in order to catch any electrical signals that may be sent from neighboring planets.

But rather than to keep Professor Todd in the upper atmosphere until he hears from Mars or to spend much

money on mirrors, curtains or crop alphabets, it would be better to try another method of communication which seems to us quite as promising and less bothersome. We allude to the mediumistic. The Martians, if they are as advanced in their development as they are supposed to be, have doubtless long since abandoned such crude methods of communication as letters and electric vibrations and are using thought-waves. Mediums are cheaper than mirrors and they could do nothing more profitable than to devote their whole time to getting the coherers of their psychic centers in tune with the Martians. Professor Flournoy, of Geneva, has published a volume of the revelations of the lady whom he conceals by the alias of Mlle. Smith, giving full details of Martian life and language. Professor Hyslop in this country has given Mrs. Smead's account of the same people, also illustrated by drawings. The two descriptions do not agree at all in architecture, costume and language, but there is nothing in that to discourage a psychic researcher. The two mediums may have been seeing different parts of the planet. A Martian medium studying Timbuctu would get an entirely different impression from one studying Boston. Both Schiaparelli and Lowell are students of the occult, the former a believer in the supernatural powers of Eusapio Paladino and the latter an authority on psychic Japan before he took up astronomy. Is it chance that these two men have been able to see more in Mars than other astronomers? May it not be that their sight or insight has been aided we know not how? There are more things in heaven and earth than are dreamed of in our philosophy. This includes the Martians.

The Chicago Peace Conference

The modern peace movement has as its aim the substitution of law for war. Almost all the notable speeches at the Chicago Peace Congress last week elaborated this idea. Diatribes against the wickedness and horror of war—which would have consumed most of the time of a Peace Congress a generation ago—gave way to such more practical and promising topics as Obiga-

tory Arbitration, International Courts and "The Federation of the World." Professor Hyde, of Northwestern University, showed in an admirable paper that legal questions affecting honor and vital interests not only could and should be, but actually have been time and time again settled by arbitration, and therefore little excuse can be found for reserving them for settlement by war in our arbitration treaties. It is these reservations of honor and vital interests that give our Navy Leagues their chief argument these days for increased armaments. President Jordan gave his admirable lecture showing that war leads to the survival of the unfit and therefore is biologically indefensible. He also made the novel suggestion that "instead of building a Dreadnought we insure in the insurance companies of England, Germany and France all our seaboard towns for what a Dreadnought would cost. And if these towns were paid for in Europe certainly Europe would let us alone." Secretary Ballinger, who represented President Taft, said universal peace was not a Utopian idea at all, and he added:

"The peace of the world would seem to be dependent, first, upon the citizenship of the nations being of that character which would insure the creation of just laws and their enforcement, and, second, upon a type of international citizenship which would insure the creation of just international laws and a substantial tribunal for their enforcement."

Imagine a Cabinet officer in any nation in the world before the twentieth century suggesting that peace is practicable! The resolutions of the Congress, however, were the most significant fruits of the week's deliberations. In these days of specious pleadings for great navies on the ground that thus peace is best insured, the Congress, composed of the leading statesmen, clergymen, socialists, labor leaders, financiers, university professors, etc., of the Middle West, courageously resolved that

"the prevailing rivalry in armaments, both on land and sea, which imposes such exhausting burdens of taxation on the people, and is the fruitful source of suspicion, bitter feeling, and war alarms, is wholly unworthy of enlightened modern nations, is a lamentable failure as a basis of enduring peace; and ought to be arrested by agreement of the Powers without delay."

As a preliminary step to this end the Congress called upon President Taft to appoint an eminent commission to study the whole question of armaments whose report "shall serve as a basis for the action of our delegates at the Third Hague Conference." This was advocated in THE INDEPENDENT a month ago when we reminded Mr. Taft that both the First and Second Hague Conferences had referred this question back to the governments for further study and asked him to appoint a committee consisting among others of an army and navy officer, a peace advocate, a historian, an international lawyer and several statesmen to consider the matter. If President Taft acts and our delegates go to the Third Hague Conference with a practical plan for the limitation of armaments the present administration will be immortal. Before the conference closed it was announced that John R. Lindgren, a prominent Chicago banker, had given Northwestern University \$25,000 for peace propaganda and lectures, and that a Chicago peace society would be founded with a permanent office and secretary, to take its place with the active societies in Boston, New York, Philadelphia, etc. The first National Peace and Arbitration Congress of the United States was held in New York two years ago. Chicago has now concluded the second. One should be held at least every two years hereafter, so that all the great cities of the land will have one.

Our Legations Abroad

It is announced that Mr. Straus as Ambassador is to go for the third time to Constantinople and Mr. Rockhill is to be transferred from Peking to St. Petersburg, the latter being a promotion to an Ambassadorship. For these appointments only satisfaction can be expressed. Mr. Straus has abundant experience for his post, and is well acquainted with its duties, and is in most kindly touch with the American interests and institutions in Turkey. He will have more satisfaction in dealing with Mohammed V than with Abdul Hamid, whose promises could not be depended on, while as Ambassador he will have rights which he did not have as Minister. The present Government of

Turkey will welcome all agencies which develop education and civilization, and those are our chief American interests there. Mr. Rockhill will be missed in China, but his profound knowledge of Chinese conditions will be of great value to him in St. Petersburg, for what we are concerned with in China is the open door in Manchuria, and it is Russia and perhaps Japan against which we must guard to protect it. Now we hope that for Peking there may be found not a mere politician out of a job, but an experienced diplomat. To fill Mr. Rockhill's position will be very difficult. We lately express regret that Mr. Rockhill was to be replaced, but the public were not then informed that he was to be transferred to an equally important post, and one regarded as involving a promotion. These announcements give us reason to believe that President Taft is giving his best attention to securing creditable assignments to diplomatic positions.

A Canadian Insult The Pacific Coast of Canada is worse behaved than our own Pacific Coast. Badly as California acted toward the Japanese in the school matter there has been no lack of courtesy thus far toward the Japanese cruisers that are making a return visit. The courtesy of Japan to our fleet, and later to representatives of the business of California, could not but ensure a generous response. But Vancouver is Canadian, and Canada is British, and even more, owing to the treaty between Great Britain and Japan, Canada ought to show all courtesy to the Japanese vessels. But Vancouver refuses to appropriate a paltry one thousand dollars for a military parade, and the Trades and Labor Council decided that no labor organizations should join in any parade. One of the aldermen declared that it would be better to show the Japanese how well they are prepared to shoot them. And all this altho the mayor and the military protested warmly that it was the duty of the city to recognize the Imperial relations. Such lack of hospitality to a kindly guest, and especially to the representatives of the nation which is bound by treaty to help Great Britain in case of war in Asia, is most reprehensible and surpasses in heinousness the

offense which President Roosevelt so effectively rebuked. The visit of the two cruisers is slated for next Monday, and we hope that before that time the better sense of the people of Vancouver will correct this wrong.

Ask any confessed Socialist what are the principal societies now in existence, and he will mention one or two decaying phalansteries, and he will forget to mention the largest and most influential. The Jesuit Father Bernard Vaughan, in a lecture again Socialism, thus described the order of which he is a member, and what he says applies to other orders in the Church:

"As a Jesuit I have lived for fifty years under a state of things which is the nearest approach to Socialism that has yet been seen on this planet. We Jesuits have to go where we are told, to do what we are told, to live under the superior we are told, and for as long as we are told, being switched to and fro and off and on like any poor gas light. Furthermore, we may be given things, but they must go to the community. We have the use of clothes, of food, of lodging, and when money for traveling or what not is needed we get it from the common purse, into which we drop back again what has not been needed for personal consumption. We may not buy, sell, invest, or in other ways build up capital. This, surely, is a state of things not altogether unlike some phases of Socialism."

We have been fearing that the Society for the Prevention of Cruelty to Animals would have to take up the matter of the protection of snakes in India and the adjacent islands, where it has been the custom of the snake-catchers to skin the snake alive, so as to secure the skin in such perfect shape as will please the ladies who use the tanned skin for wallets and belts. Why not protect snakes as well as egrets? We have never heard that they get used to it, the way that eels are said to be so used to being skinned alive that they do not feel it. But another less cruel method has come in use in India to get a perfect skin of the cobra. The snake-catcher gets the cobra alive, forces its mouth open, and introduces a small pinch of snuff. The effect is extraordinary, death being almost instantaneous and the skin undamaged. Let the reader observe how poisonous tobacco is: the cobra can stand its own deadly poison, but not the poison of the weed.

In an article "by a New York teacher," Anna Pearl MacVey gives in the *Educational Review* an account of her visits to several dozen schools in England for the purpose of learning how they teach the classical languages. We quote:

"I found Sophocles's 'Antigone' read in the Dulwich High School for Girls, where I had previously witnessed the same play in English charmingly rendered by the pupils. In the Perse School, Cambridge, I listened to boys reading the 'Ædipus Tyrannus' of Sophocles, all questions and replies being given in Greek, the translation only being in English."

Can that be matched in this country? Nothing fits the occasion but Thomas Hood's enquiry:

"What do you think of that, my cat?
What do you think of that, my dog?"

We did not expect that members of the Prohibition party would like the quotation we excerpted from a long address by Mr. Woolley, now in Hawaii, and formerly the Prohibition candidate for President. We expected replies and protests, and even attempts to deny its authenticity, and we have them. One correspondent, after admitting a falling off in the presidential vote, says:

The party is in excellent condition at present, and with such national leaders as Charles R. Jones, Wm. P. F. Ferguson, Eugene Chafin, Aaron S. Watkins, Oliver W. Stewart, Clinton N. Howard, Chas. Newlin, Messrs. Vibbert, Sheen, Dickie, Swallow, McWhirter, and scores of others, is assured of success. Even should all of these fall by the way (but no fear of that till death calls them home), there are hundreds of young men in training ready to fill the vacancies.

The tariff fight now before Congress has some amusing as well as serious phases. The House bill put a heavier protective duty on women's knit hose, and we would have thought that all the women in the country, in their women's clubs, had made so effective a protest that the Senate was sure to reduce it. But now the manufacturers of this "infant industry" have sent to Washington a delegation of girl operatives, to tell Senator Aldrich that they want the big duty for their benefit, and the committee is between two bundles of hay, if they do not rather feel that there are between two beautiful children.

Turkey was autocratic; it took a constitution; then it lost it and now it has regained it. Persia, a more backward state, was utterly autocratic; it took a constitution; it then lost it and a long conflict followed; now the Shah save his throne perhaps by again granting the constitution. The parallel is fairly complete, but we still are left in doubt how much a constitution can mean in Teheran or Tabriz. In both cases the ecclesiastical authorities are with the constitution.

We sent each one of our subscribers a letter last week, making them a special offer on long-term subscriptions. Many have availed themselves of the opportunity we extended, but the usual number, in sending their money, have given no clue to their identity. We have sent a receipt to all who gave their names. Subscribers who did not get a receipt should write us, and possibly locate some of the uncredited money.

They have the "Recall" provision in the Des Moines, Iowa, charter. The Alpena Chamber of Commerce sent a committee to Des Moines to see how it works. They report most favorably, because where politicians rather than business men are in office they dare not do any crooked thing for fear they will be removed by the "recall." As *La Follette's* says, it "has a better moral effect on politicians than a religious revival."

It appears from the evidence for the defense in the Hains case that insanity does not disqualify an army officer; that a man may have been unsound in mind and body from childhood and given to irrational outbreaks so pronounced that his incapacity is notorious among his relatives, associates and servants, yet he may be entered, retained and promoted in the service of the United States.

Here is a Catholic priest in Cleveland who has failed for \$1,506,041. We doubt if any Protestant minister in the country could accomplish so magnificent a failure.

Insurance

Mr. Ide's Pamphlet

GEORGE E. IDE, president of the Home Life Insurance Company, contributes something to the present insurance discussion in a pamphlet entitled "Effects of the New York State Insurance Law." The pamphlet opens with reference to recent newspaper articles which purported to show that the insured have been benefited by the new statutes. Mr. Ide suggests, however, that the conclusions reached have been arrived at from a superficial study of existing facts and that the trend of affairs in the insurance world is injurious to the interests of policyholders. In this pamphlet he views with well-founded alarm the noticeable increase in loans on policies that in the old days were only contemplated as a last resort, and even then the original design of such loans was to provide for the continued payments of premiums. Owing to the operation of the present New York State insurance law the amount of insurance in force has shown an ever increasing tendency toward decreasing in volume.

The following table shows the amount of insurance in force in the New York Life, the Mutual Life, and the Equitable at the close of each of the last six years. Also the death claims paid during the last six years:

NEW YORK LIFE.

	Insurance in force.	Death claims.
December 31, 1903.....	\$1,743,312,899	\$16,860,082
December 31, 1904.....	1,928,609,308	19,731,245
December 31, 1905.....	2,061,593,886	20,822,968
December 31, 1906.....	2,029,605,718	21,525,407
December 31, 1907.....	2,005,341,184	22,761,595
December 31, 1908.....	1,993,559,001	22,131,291

MUTUAL LIFE.

December 31, 1903.....	\$1,445,228,681	\$18,946,053
December 31, 1904.....	1,547,611,660	21,100,227
December 31, 1905.....	1,589,549,468	20,926,068
December 31, 1906.....	1,517,257,180	21,034,051
December 31, 1907.....	1,452,752,408	23,294,033
December 31, 1908.....	1,438,399,803	21,664,820

EQUITABLE LIFE.

December 31, 1903.....	\$1,409,918,742	\$18,318,483
December 31, 1904.....	1,495,542,892	18,049,539
December 31, 1905.....	1,465,123,436	18,646,359
December 31, 1906.....	1,376,676,369	18,695,395
December 31, 1907.....	1,340,126,354	18,992,080
December 31, 1908.....	1,326,478,540	20,324,003

It is evident, therefore, that in these three representative companies the

amount of insurance in force is decreasing, and that the ratio of infusion of new life has, likewise, been steadily decreasing. With this condition prevailing, one result, and one only, must follow: that is, the mortality ratio must eventually increase, and probably that increase is already being felt.

As Mr. Ide has well set forth, it is not by any means an encouraging sign to observe also policy loans increasing as they have during the last six years by reason of the great publicity which has been given to this privilege and by reason of the fact that the attention of the policyholder has been called to a privilege of which, in many instances, he was previously ignorant. The figures are certainly astonishing! In the New York Life, since 1903, the loans to policyholders have increased from \$31,600,000 to \$87,000,000; in the Mutual from \$19,000,000 to \$63,000,000, and in the Equitable from \$19,000,000 to \$57,000,000, and obviously the protection under the policies in these companies has been decreased by these amounts.

Policyholders may well pay the most careful heed to the ringing words of Mr. Ide, and they should, after the warning signs that are observable by the sides of rural grade crossings, "Stop, look and listen!"

SENATOR MEAD's bill to allow savings banks in New York State to open life insurance departments was killed in the Senate last month. Superintendent Hotchkiss advised this in order to await the result of the workings of the Massachusetts experiment along this line.

THE United States Branch of the North British and Mercantile Insurance Company of London and Edinburgh, in commemoration of its 100th anniversary, has issued a centennial policy. The net surplus of the United States Branch is \$2,692,781.98. The losses paid by the company since organization have been over \$150,000,000.

Winter Wheat Report

BECAUSE of the recent high prices and of the expected influence of the crops upon a general recovery from depression, the Government's May wheat report (published on the 7th) was awaited with much interest. This report, which relates to winter-sown wheat, cannot be called favorable, altho the condition of the growing plants improved during April from 82.2 to 83.5. But this condition of 83.5 on May 1st must be compared with 89 a year ago, and with an average of 86 for the last ten years. Moreover, it appears that the sown area abandoned or winter killed is 2,163,000 acres. This leaves a total less by 2,478,000, or about 8 per cent., than the harvest area in 1908. Last year's crop of winter wheat was 437,908,000 bushels. This year's will probably be in the neighborhood of 400,000,000. Evidently, this report does not suggest a reduction of prices. But, taken with the prices now prevailing, it must stimulate the planting of spring wheat, of which there will probably be a large crop. Recent reports point to a considerable increase of spring wheat acreage in our Northwestern States and to a large increase in the Northwestern Provinces of Canada.

....It is said that capitalists of England and France are about to invest \$50,000,000 in iron and steel works in Mexico.

....The State Comptroller of New York sold \$10,000,000 of 3 per cent. canal improvement bonds a few days ago. Bids amounted to \$48,295,000. The entire issue was awarded to Fisk & Robinson, of this city, at 101.139.

....Increasing demand in the steel trade last week caused a further advance of prices for structural shapes by the Corporation and several independent concerns. The price of light rails, which has been as low as \$22, was raised to \$26. The St. Paul road ordered 60,000 tons of standard rails at the old price of \$28. The expenditure of \$5,700,000 on the New York Canal, and of \$2,500,000 on

the Lake Shore, for improvements, has been authorized. More loaded cars were moved on the Central in April than in any preceding April, except in 1907.

....Speyer & Co. offer for sale \$10,000,000 of general lien, 15 to 20 years, 5 per cent. gold bonds of the St. Louis & San Francisco Railroad Company, at 91 and accrued interest, at which price they will yield, if held to maturity, about 5½ per cent. per annum. These bonds are a direct obligation of the company, secured by a mortgage covering all its property. On June 1st next they will become a first mortgage upon 665 miles of road of the St. Louis, Memphis & Southeastern, and eventually they will be secured by 5,330 miles of road, as well as by equipment costing originally \$19,000,000. The company's average annual surplus for the last four years, after the payment of all fixt charges, has been \$1,987,728. It is understood that a large part of the issue has already been disposed of by private sale.

....In a brief and forcible address at the Peace Congress in Chicago, George E. Roberts, president of the Commercial National Bank, of that city, set forth the economic argument against war:

"An indispensable factor in economic and social progress is capital. In the economy of communities and of nations, as in the economy of individuals and families, it is the dollar left over, the dollar that becomes capital, that counts for progress. There is independence and power, there is leisure and culture and hope in the dollar left over. The accumulations of society at best are slowly and painfully made. When from the annual earnings of a community are taken the consumption and waste and deterioration of the year, the actual gain is small, estimated at 3 per cent. of the total, and it is out of this possible margin, narrow and meager as it is, that this war tax must be paid."

It was neither unpatriotic nor sordid, he continued, to urge that this painfully acquired surplus be saved and socially invested. It was the broadest statesmanship to conserve and utilize it, and this statesmanship must be exercised steadily in times of peace, because "the cost of war itself is not so great as the cost of continuous and increasing preparations for war."

The Independent

VOL. LXVI

NEW YORK, THURSDAY, MAY 20, 1909

No. 3155

Survey of the World

The Senate Tariff Bill Sustained

Votes in the Senate,
last week, upon tariff
rates showed that

Mr. Aldrich and his committee controlled the situation, having the support of nearly four-fifths of the Republicans and, at times, of several Democrats. The first of these votes was taken on the 10th. In the Aldrich bill the duty on pig lead is $2\frac{1}{8}$ cents a pound. Mr. Cummins moved to make it $1\frac{7}{8}$, and this motion was lost, 35 to 44. Eleven Republicans (Messrs. Beveridge, Burkett, Brown, Bristow, Clapp, Crawford, Cummins, Dolliver, Gamble, La Follette, and Nelson) voted for the reduction, and two Democrats (Messrs. McEnery and Hughes) were counted with 42 Republicans for the committee. Mr. Beveridge's motion to make the rate 2 cents was then defeated, 37 to 45. On the following day, when glass and crockery were the subjects of discussion, Mr. Bacon moved to reduce the bill's rate on earthen and stone ware from 60 to 35 per cent. Mr. Dolliver, a severe critic of certain other parts of the bill, spoke earnestly for the high duty in this case. It was understood, moreover, that President Taft opposed any reduction in the pottery schedule. The motion was lost, 25 to 54, Mr. La Follette being the only Republican to vote with the Democrats for it. In this instance the committee had the support of nearly all of the so-called insurgents on the Republican side. Three of them, however, voted for Mr. Bacon's second motion (to reduce the bill's rate on undecorated china from 55 to 40 per cent.), which, of course, was defeated. When the iron and steel schedule was taken up, on the 13th, an interesting record was made with respect to iron ore. The present duty is 40 cents a ton. The House put this

ore on the free list, but the Senate committee moved that the duty be 25 cents. It was easily successful, as the vote was 61 to 24 in its favor. To the 11 Republican insurgents heretofore named were added 3 (Messrs. Borah, Curtis and Du Pont), but 18 Democrats stood with 43 Republicans for Mr. Aldrich and the committee. They were Messrs. Bacon, Bailey, Bankhead, Chamberlain, Clay, Daniel, Fletcher, Foster, Frazier, Johnston, McEnery, Martin, Paynter, Simmons, Stone, Taliaferro, Taylor and Tillman. Among those who opposed the duty was Mr. Nelson, of Minnesota, in whose State more than one-half of the iron ore output of the United States is produced. The original 11 Republican insurgents supported Mr. Cummins's motion to reduce the rate on bar iron (lost, 35 to 42), but none of them favored a motion to put agricultural implements on the free list. Mr. Aldrich consented reluctantly to a reduction of the bill's duty on certain forms of structural steel, and a demand for a concession in the rate on barbed wire was forestalled when a considerable reduction was proposed by the committee. At the committee's suggestion, many items of importance have been laid aside temporarily, the inference being that the committee intends to modify them. Some critics say that this delay is designed to facilitate the conciliation of certain Democrats or Republican insurgents by concessions. Mr. Aldrich predicts that not more than four Republicans will be counted against the bill when the final vote in the Senate is taken. At the end of last week an impression prevailed in Congress and in administration circles that adjournment would not be reached before August 1st.

Incidents in the Debate During the last two or three weeks, Mr. Aldrich and his committee have repeatedly been criticised by Republican insurgents and Democrats for failing to give information, such as statements of difference in labor costs, etc., as to facts and estimates upon which the proposed rates were based. Mr. Beveridge, one of these critics, provoked a sarcastic reply on the 10th from Mr. Aldrich, whose words permitted the inference that he had been impressed by evidence of the Indiana Senator's self-esteem. When Mr. Root, on the 11th, asked for information from the committee about the rate on window-glass, saying that need of it was shown by Mr. Cummins's criticism, the insurgents began to regard the New York Senator as an ally. On the following day there were reports in the press that Mr. Root represented a protest from the White House, and that Mr. Aldrich had decided upon a change of policy, consenting to make many considerable reductions. At the end of the week, however, there had been no action to confirm these reports, and Mr. Root had come to be regarded as a supporter of the committee. On the 14th, replying to the criticism of Mr. La Follette and others, he vigorously defended the committee, warmly praised Mr. Aldrich and protested against tariff orations prepared for home consumption. This aroused Mr. La Follette, who responded sharply. Mr. Mooney attacked Mr. Root for lecturing the Senate when he was "barely warm in his seat." The Senate, he said, did not want this advice from one who had never before served in a legislative body. Mr. Root was then defended by Mr. Lodge.—Mr. Nelson, of Minnesota, saying he would not oppose a removal of the duty on iron ore, or a reduction of the duties on wheat and other products of his State, remarked that tariff legislation was like a river and harbor bill. "You tickle me, and I'll tickle you." As for the information that was demanded, he would seek to procure it from Senators who were personally interested in protected industries. If he wanted information about the Smelter Trust, for example, he would go in the occupation of the seat in front of his own. [This is the seat of Senator Guggenheim.] Mr.

Borah said there was a Lead Trust, but tariff rates would not affect it because it had large interests on both sides of the Mexican boundary. While Mr. Oliver was arguing that the proposed duty on structural steel was needed because of the much lower cost of production abroad, he was asked to explain last year's exports of \$7,000,000. He could not explain, he said, unless the fact was that the manufacturers sold abroad at a loss to keep their factories running. After Mr. Paynter's attack upon the Tobacco Trust, Mr. Culberson quoted from Attorney-General Wickersham's recent address in New York, remarking that the suggestion for amendment of the Sherman Act (on account of a recent decision in the Tobacco Trust case) indicated that Trusts would not be pursued by the present Administration. Mr. Bailey asserted that the Steel Corporation should be prosecuted for violating the law.—Mr. Flint and Mr. Scott said that the profits of protected manufacturers were small, while those of retailers and wholesalers were very large. Figures were produced to show that the gains of retailers were enormous and that for this reason consumers were misled as to the gains of manufacturers. Whereupon Mr. Gore took the side of the retailers, declaring that in many instances their selling prices were made by manufacturers' contracts, and pointing to the large dividends of certain manufacturing corporations.—It is said that the committee will propose a duty of 25 per cent. on crude petroleum, having been convinced that it is needed by the independent producers, and that removal of the duty would injure them, while it would serve the interests of the Standard Oil Company.

8

Discipline for Porto Rico President Taft sent to Congress last week a long message relating to the controversy in Porto Rico, where the House of Delegates refused, both at the regular session and at a special session, to pass the annual appropriation bill, because the Executive Council (which acts as a Senate and is composed of six heads of departments and five natives, all appointed) had rejected several House bills. The most important of these bills

were designed to take away much of the Governor's power. They provided that mayors (now appointed) should be elected, that the number of elective judges in municipalities should be increased from twenty-six to sixty-six, and that the selection of assessors should be controlled by the largest taxpayers in each municipal district. Mr. Taft shows why these and other objectionable House bills were rejected. The election of twenty-six municipal judges, he says, has already interfered with the impartial administration of justice, as all of these judges are of one political faith and "mere political instruments in the hands of the central committee of the Unionist or dominant party." Having pointed out that the House, ever since it was created, has uniformly held up appropriation bills to the last minute, seeking thus to compel the Council to accept bills of various kinds, he says:

"The facts recited demonstrate the willingness of the representatives of the people in the House of Delegates to subvert the Government in order to secure the passage of certain legislation. The question whether the proposed legislation should be enacted into law was left by the fundamental act to the joint action of the Executive Council and the House of Delegates as the Legislative Assembly. The House of Delegates proposes itself to secure this legislation without respect to the opposition of the Executive Council or else to pull down the whole Government. This spirit, which has been growing from year to year in Porto Rico, shows that too great power has been vested in the House of Delegates and that its members are not sufficiently alive to their oath-taken responsibility for the maintenance of the Government to justify Congress in further reposing in them absolute power to withhold appropriations necessary for the Government's life."

Therefore he recommends that Congress shall provide for a duplication of the appropriations of the year immediately preceding whenever the Porto Rican House declines to act. It appears that when he suggested to a committee of the House (now in Washington) that the House should yield, pending an investigation to be made by an agent selected by himself, the reply (in writing) was that the price of such submission must be acceptance of the rejected bills concerning judges and mayors. Porto Rico, he says, has been the favored daughter of the United States. All customs and internal revenue taxes are turned into

the insular treasury, while the United States pays the cost of the local regiment, lighthouse service, coast surveys, harbor improvements and agricultural experiment stations. Since the end of Spanish rule the number of school pupils has increased from 21,000 to 87,000, the annual expenditure for public education from \$35,000 to \$1,000,000, and the value of exports and imports from \$22,000,000 to \$56,000,000, a trade balance of \$12,500,000 against the island having given way to one of \$2,500,000 in its favor. Mr. Taft cites other evidence of great improvement, and then says:

"In the desire of certain of their leaders for political power, Porto Ricans have forgotten the generosity of the United States in its dealings with them. This should not be an occasion for surprise, nor in dealing with a whole people can it be made the basis of a charge of ingratitude. When we with the consent of the people of Porto Rico assumed guardianship over them and the guidance of their destinies we must have been conscious that a people that had enjoyed so little opportunity for education could not be expected safely for themselves to exercise the full power of self-government; and the present development is only an indication that we have gone somewhat too fast in the extension of political power to them for their own good."

A bill providing for the recommended duplication of appropriations has been reported favorably in the House. In Porto Rico, Dr. Barbosa, leader of the Republican party and a member of the Executive Council, says the message is unjust in treating all Porto Ricans alike, while those who deserve censure are Unionist politicians who "obtained their influence by the open support of Americans who control the insular Government." Munoz Rivera, Unionist leader, says "the words of the President are insults heaped upon a weak people that cannot reply."

Philippine Islands

The Legislative Assembly has elected Benito Legarda and Manuel Quezon to be resident Commissioners at Washington. Señor Legarda is now a Commissioner. Señor Quezon takes the place of Pablo Ocampo. He is a lawyer and was an officer under Aguinaldo during the insurrection.—Owing to a controversy about tariff legislation, ten members of the Progressive minority in the Assembly went on strike and were absent for

a month. On the 9th inst. they returned to their seats.—In his annual report, Mr. Harbord, director of the constabulary, remarks that office-seeking diverts many bright young Filipinos from something better. He also says:

"The froth and effervescence of office seeking and of radical newspapers in Manila are not to be taken as indicative of the sentiment of the mass of the Filipinos, who, above all things, desire peace and a return of economic prosperity. Differences of religion seem to be losing their political importance. There are indications of the waning of the Aglipay cult and a return of its adherents to the oldtime faith. Protestant missionaries in nearly all provinces have gathered little flocks, actuated by one motive or another, but show no material increase. The Colorum, Guardia de Honor, and Santa Iglesia, if these may be mentioned among religious faiths, show no material change. Their membership is all fanatical, ready to follow or to forsake under the leadership of plausible but unscrupulous scoundrels who exploit the poor, ignorant, and superstitious for pleasure or commercial profit."

—Gunboats and land forces have been pursuing a Moro bandit named Jikiri, who recently attacked the Parang pearl fisheries and several settlements. On the 12th, the cavalry overtook his band of outlaws and killed five of them.—Two natives were hanged in Manila, on the 14th, for the murder of Anna Hahn, a school teacher, in Batangas, a little more than a year ago.

The French Postal Strike

The threatened strike of the Government employees in the postal and telegraph service was ordered on the evening of May 11th, but so far has not proved a very serious affair. The Government has maintained a firm stand and has ample parliamentary support. As soon as the strike was announced most of the outgoing mail was stopped, but the telegraph service was kept up by operators from the army who were in readiness. The dockers at St. Nazaire, out of sympathy with the strike, refused to load the mail for Central America and the West Indies for the Transatlantic Steamship Company, and the five hundred mail bags were returned to Paris. This is all the support so far received by the postal employees from their promised allies of the working classes, and the announcement of it was received with cheer by the postal employees assembled in the Hippodrome. At this

meeting M. Pauron, one of the dismissed postmen, denounced the Government for its tyranny in endeavoring to suppress freedom of speech and freedom of association on the part of its employees, and urged them not to resume work until their rights were secured. He stated that Secretary Pataud, of the Electricians' Union, would find a way to interfere with the wireless system of communication which the Government has provided for use in the emergency. Premier Clemenceau was denounced in the most violent language and a caricature of him brought into the hall was hooted. Succeeding meetings in the Hippodrome were increasingly revolutionary in tone. The "Internationale," the song of revolt, was sung by the whole body of men and women, many of them in their official uniform. A new secret committee was appointed and walking delegates sent into the provinces to organize the movement thruout the country. The leaders urged the strikers to avoid violence and the destruction of property. Notwithstanding the fervor of the Hippodrome meetings the strike was not general, altho it is impossible to state how many have stopt work. According to M. Barthou, Minister of Public Works, Posts and Telegraphs, only 2,367 out of 24,215 employees in Paris were out, but the leaders of the strike claimed 8,538. Those who remained at work were not molested by the strikers, and almost the only damage to property was the cutting of telegraph wires around Paris. The postal, telephone and telegraph service was not nearly so badly crippled as in the first strike last month, because the number of employees participating in the strike this time was fewer and because the Government was thoroly prepared for it. The hotels sent their foreign mail to Brussels by their own agents, and the Paris Bourse had arranged an automobile service connecting it with the other stock exchanges of the country, but this was not necessary. Outside of Paris the strike was insignificant. The Cabinet decided to exercise the right conferred upon it last month to dismiss immediately civil servants who co-operate in quitting work. Accordingly 313 employees were dismissed on the 15th, including 17 telephone girls, 17 linemen, 102 carriers and 34 provincial employees.

MOHAMMED V, THE NEW SULTAN OF TURKEY, BEING DRIVEN TO THE PARLIAMENT HOUSE TO TAKE THE OATH OF OFFICE.

Of the seven postal employees brought in the usual way before the Council of Discipline for pernicious activity in the former strike, two were dismissed, one transferred and the other cases are held over. Nine telegraphers were cited to appear before the Council for singing the "Internationale" in the central office on May Day. Seven of these were dismissed and two reduced in rank. It appears to be the purpose of the Government to get rid of all the 800 who attempted to form a syndicate or trade union of civil servants. On the 13th the Chamber of Deputies took action and passed a vote of confidence in the Government. M. Barthou declared: "The movement we have to face is really a revolutionary movement. The questions of the right of Government employees to form unions and to affiliate with the workmen of private employers are mere pretexts." Premier Clemenceau announced that "so long as we remain ministers the dismissals will be maintained." On the ques-

tion of the refusal of the Government to allow its employees to form a militant union, the Chamber supported the position of the Government by a vote of 454 to 69. The session was turbulent and at one time the president of the Chamber had to put on his hat as a sign of adjournment owing to the impossibility of keeping order. The Extreme Left stood up and sang the "Internationale" and the other deputies tried to drown them out with the "Marseillaise," then all joined in a general *melée*, in which missiles were thrown and blows struck. After half an hour of this the session was resumed.

The Turkish Situation

Both in European and Asiatic Turkey conditions have been comparatively peaceable and orderly. Chefket Pasha, who led the Fourth Army Corps from Salonika to Constantinople, is the man of the hour. Both foreigners and Ottomans look upon him as the strongest

force in the Government, altho he modestly declines any authority except that of his military office, and seems to be devoid of all the personal ambition which his unique position might be expected to arouse in him. He has paid calls upon all the ambassadors and ministers in Constantinople, explaining that the army is entirely subordinate to Parliament, and that he is in harmony with the Grand Vizier Hilmi Pasha. He is opposed to the monopoly of the army by Mohammedans, and it is expected that his recommendation of the admission of 25 per cent. of Christians will be adopted. At a secret session of the Chamber of Deputies, on May 13th, at which all of the ministers were present, the Turko-Bulgarian protocol acknowledging the independence of Bulgaria was adopted by a vote of 121 to 24. At Erzerum, in Asiatic Turkey, the soldiers refused obedience to the Young Turk officers and threatened a rising in defense of the faith. Under orders of Chefket Pasha, forty-five of the mutineers at Erzerum

were put under arrest. In Constantinople courts-martial continue to be held on the mutineers, and the people are given ocular proof of the power of the Young Turk Government. Of the men and subordinate officers on board the battleship "Assar-i-Tewfik," who murdered their commander in the recent rising, twenty-four were found guilty and hanged in various parts of the city, eight of them in front of the Admiralty Building. Burhan-ed-Din, the fourth and favorite son of Abdul Hamid, has been arrested and is reported to have been tried by court-martial for connivance in the mutiny, altho it is not yet known whether he will be kept in prison or not. The cash and securities found in the Yildiz Kiosk, amounting to about \$7,500,000, have been placed in the national treasury and will be drawn upon for the payment of the expenses of the capture of the capital by the troops of Chefket Pasha. Talaat Bey, vice-president of the Chamber of Deputies, was sent to Salonika to induce the

CHEFKET PASHA AND OTHER YOUNG TURK OFFICERS FROM SALONIKA ENTERING CONSTANTINOPLE

deposed Sultan to transfer the funds which he has in foreign banks to the national coffers, and it is reported that he succeeded in securing the necessary authorization. The amount of money held in the Sultan's name in foreign banks—largely, it is said, in New York—is estimated at \$15,000,000. The Chamber of Deputies has appointed two of its members, a Mohammedan and a Christian, to go to Adana to investigate the recent massacres. The Sultan has accepted the honorary presidency of the Armenian Relief Committee. It seems certain that it was the intention of Abdul Hamid to start a general rising against the Christians in Asiatic Turkey simultaneously with the mutiny in Constantinople. At Adana 22,000 refugees are being fed, of whom 4,000 are ill. At the American and other hospitals 300 wounded persons are being cared for. Red Cross funds have been received to the amount of \$11,000 and as much more from other American organizations. The American cruisers "North Carolina" and "Montana," from Guantanamo, Cuba, have arrived in the Gulf of Alexandretta, and Captain Marshall, commander of the former, is at Adana investigating conditions.

Foreign Notes

The Redmond bill for the removal of Roman Catholic disabilities was past by the House of Commons on its second reading by a vote of 133 to 123. A petition containing the names of 300,000 protesting against the bill was presented before the voting. Similar bills have been introduced many times before, but this is the first time that one has past its second reading. There is slight probability of its enactment, however, because it is not a Government bill, altho Premier Asquith gave it his hearty support. He declared that the exclusion of Roman Catholics from office was quite unjustifiable by either logic or policy, and that the language of the coronation oath was very objectionable and should be changed. The bill removes the disqualification of Catholics for the offices of Lord Chancellor of Great Britain and Lord Lieutenant of Ireland, and abol-

ishes all the old laws in regard to restricting residence and property rights and in other ways discriminating against Catholics. The question came to a crisis last year when, in accordance with the old statutes, the Catholics were prevented from having a religious procession in the streets of London. The declaration required of British sovereigns at their accession declaring Catholic religious customs to be superstitious and idolatrous would be abolished or ameliorated by the proposed law.—Premier Stolypin has scored a victory for constitutional government by insisting upon the Emperor's endorsement of the naval bill in the form past by the Duma. The question at issue was a clause attached in the Duma declaring a naval staff established. This was of small importance in itself, but was insisted upon by the Stolypin Cabinet because the reactionary element had concentrated its attack upon this point and felt confident of overthrowing the Premier. Two reactionary papers have been fined \$1,500 each for attacks on Premier Stolypin. The agrarian bill, for the purpose of breaking up the *mirs* or communes and distributing the land among the peasants had past its third reading in the Duma. Over a million peasants have declared their intention of withdrawing from the communes and 600,000 have already obtained title deeds to individual holdings. What is called the "Fourth Partition" of Poland is the object of a bill introduced into the Duma establishing Chelm Province. This will take away from the former Kingdom of Poland one-third of the Provinces of Lublin and Siedlce, which contains a large proportion of orthodox Russians.—The Emperor and Empress of Germany, arriving at Vienna on the morning of May 14th, were received by Emperor Franz Josef and other members of the imperial family at the Southern Railroad Station. The welcome given to Emperor William by the people of Austria was unusually fervent and enthusiastic on account of the valuable support which he gave Austria in the recent difficulty with Turkey. A joint telegram of friendship was sent by the two emperors to their ally, King Victor Emanuel of Italy.

WOMAN SUFFRAGE

An Experience
Meeting

Woman Suffrage

[In our issue of March 11th we appealed to those of our readers who have had any opportunity to become acquainted with the workings of woman suffrage to send us brief notes of their experiences and observations, for we believe that a little of such personal testimony is worth more than much theoretical argumentation. As we said then, there are two questions of special importance now before the American people, woman suffrage and prohibition. Like most political movements, these have followed the lines of the weather maps, the storm centers originating in the West and sweeping over the country eastward. Both subjects are now actively discussed in almost every State, but the discussion is too abstract. We hear people asking, "Would woman suffrage (or prohibition) work?" They should ask rather, "How does it work?" For whatever may be said of these two policies they are certainly not novelties or experiments. Both have been for more than a generation in complete operation in some of our States and in partial or local operation in most of them. Talk is cheap. Experience is dear. We want to get the more valuable of the two for *THE INDEPENDENT*. Our readers responded willingly. We have given more space to the letters than we wished to, yet we have been obliged to reject many more than we have used and to have cut down almost all the letters here published. Next we should like to get similar personal testimony on the practical workings of prohibition, letters of two or three hundred words, not only from prohibition States, but from places where local option, license and other alternative methods of controlling the liquor traffic prevail. Send them in before July 1st.—EDITOR.]

The Need of Women for the Ballot.

Important as definite information on the working of existing women suffrage laws is, these laws have been in operation so short a time and to so limited an extent, that results are not as significant as they appear. Back of these laws are the social and economic conditions affecting women, produced by their exclusion from suffrage in a democracy which has diverted and perverted their natural activities. For some time to come women may be prevented from showing their full useful

ness as voting citizens, owing to the unnatural conditions which exclusion from the ballot has forced upon them. Where so-called universal suffrage does not prevail or did not in the past, the position of women was at least normal and natural in so far as it existed at all. But the peculiar hardship to women in living under a democracy where everything is free to them except the ballot and its discipline and responsibility is that it has made of them a leisure class and has forced them into an unnatural position. Under the stimulating and invigorating influences of a democracy,

in an age when scientific and mechanical inventions have made living easy, prosperous women of all classes have been free to choose any kind of life except the normal one of working along the recognized lines of organized public work. The result is the production of a clever, abnormal, useless, and in many cases inefficient class of women. The society woman abroad is on the whole superior to the American society woman, who is constantly accused of being the most extravagant, idle, luxurious creature living.

Serious-minded women have been forced into the invention of all sorts of elaborate organizations, to enable them to approach indirectly the central impulses which underlie a representative government; and while some good and much happiness have resulted from this co-operation, there is an enormous waste of good material which is turned back on itself for lack of union with the recognized channels which a popular government must eventually monopolize. Thus segregated, masses of women, both socially and economically, suffer in character and development, and are becoming more and more at a disadvantage under a government whose theory is, that whatever is best for the people must be decided and carried out by the people. Deprived of this means of influence, whenever their own domain of pure food, municipal cleanliness, protection and education of children, municipal care of the sick, and many other hitherto individual feminine responsibilities are yearly being absorbed into the body politic, there is nothing left them but the unsatisfactory effort of personal influence, or the formation of more or less inefficient organizations, or a healthy revolt into an unproductive and idle life. Habits and characteristics have been formed under these conditions which must be changed before women can fully show what they can do as voters.

It is for the growth of woman's character that the ballot is needed primarily, and the more adverse and indifferent women are, the more its need is evident to break up the frivolity, wastefulness of time and money, social struggles and imitation of luxury into which they are driven from lack of occupation. When once the normal balance is gained, and under a government which claims that it represents the people one half its citizens can be represented, the first results will be in the strengthening of female character and the nation will receive the benefit of much moral and mental activity now largely wasted.

ELIZABETH KING ELLICOTT,

President of the Equal Suffrage League of Baltimore.

ROLAND PARK, BALTIMORE.

As a Young Man Regards It.

The writer is a recent graduate of an old boys' college; he lays no claim to much worldly experience and has not enjoyed suffrage long himself. But I do know something about the rising generation of voters, their own capability as electors, and will venture an opin-

ion on the younger men's view of woman's suffrage.

The hoary traditions of my college, I think, coincide with the views of young men in shop and office on the subject of women. We assume an amiable smile, consider girls sweet, want them to be amenable to our judgments, and withal, hold to the ancient doctrine that they make adorable sweethearts and indispensable nurses. This we do from instinct. Like Jewish patriarchs, medieval lords, or domineering Puritans, we monopolize the leading role. But it is with secret misgiving we young men meet the eyes, circumspect and scrutinizing of our sisters and their friends. Sometimes the glance is scornful and we quail. Bachelor schools proudly avoid discomforting contrasts in scholarship, while our less fortified brothers in coed institutions go down alarmingly before their fair classmates. In offices, behind counters, and on platforms, women are proving stubborn competitors. In short, young men when they stop to observe see girls everywhere their potential equals.

Of course, every one of us from the urchin to the complacent paterfamilias is instinctively loath to share his kaisardom; to see men pet, clothe, then curtly suppress them is to infer that the child-bearing portion of our kind has scarcely been raised by evolution. We have been pleased to "emancipate" woman in many ways. First, we granted them souls, then minds, and now we are wondering whether they should be permitted to use their minds. Yes, statutes are past enfranchising them economically; now why do we stop short at the divine circle of politics? Here crops out. I honestly believe, a bit of ancient innate male bearishness. The very word, politics, sounds repugnant in connection with women. But note please that *this incompatibility we shrink from is due to politics, not to women*. Men know that the political arena is dirty, and the chivalry within us (as well as our Ottoman tendencies) makes us recoil from admitting women into such a stamping-ground. This is the crux of the problem—with a knowledge of things as they are, is it best at present to put a soiled piece of work into the clean hands of our women? The young men of America, I believe, would say "yes." Frankly, we have great faith in our sisters' ability to clean up things. The slums of the world in their material filth and heathenism in its spiritual rottenness have been cleaned away by women as far as they have been cleaned. These two trying tasks have been faced by them and by them mainly. London wives and daughters descended into the Whitechapel district without contamination, why may not American women register a vote at our polls by machine without damage? I think they can, and I think city halls, street commissioners' closets and Legislature ante-rooms would shortly receive a rinsing.

Women have one paramount faculty which men by familiar contact with the wrong in the world lose, that is, a *direct and simple discrimination between right and wrong*. For example, I told a judge the other day—a man revered in this city for his integrity—of a re-

cent city contract whereby three men got about five thousand dollars each—the steal was not unusually large, but noticeably bold. The judge said, "It was a shame" with about as much indignation as he would have shown had I said that a comet had carried off Saturn's outer ring. One of the grafters is an effective Republican; the judge and I both "deplore his conduct" but will dutifully vote for him and his confreres next fall. The wife of the judge heard my story. She looked up quickly and said, "Mr. So and So has changed his political residence once already; you men will have to hasten him forth again by that primary election law you talk so much about." *We men* will do nothing of the kind; knowing this I felt queer for a moment and had to slowly recoup myself with reflections on our splendid party machine. The case is plain: men see public affairs obliquely; except in an awful pinch we *lack the simple discrimination between right and wrong and we lack courage to act*. When confronted with dishonesty we mumble: "Circumstances extenuate," "party policy supersedes," "graft is of course incident"—we talk much in the manner of Continental diplomats.

As a possible participator in politics for the next half century, I will gladly welcome the bright, wise women, and the good foolish ones into politics. Men can surely not hurt politics by so doing; and the women are not likely to hurt themselves. Besides the action is in time unavoidable.

C. M. D.

INDIANA.

A Woman on the Supreme Bench!

The Woman Suffragists, the New Woman and the woman of today have many characteristics in common. They are seeking to enter the business and political world upon an equal footing with man. They have already made great advance in this direction. Woman is holding public office; she is the lawyer's trusty amanuensis; she is crowding elbows with the men in the shop and counting room; she is at work over the barber's chair. Her gentlemen friends meet her upon the street with, "Hello, Sall!" or "Why, Kate, where have you been for the last week?" and similar expressions of familiarity, which attract no attention, and excite no resentment because of their common occurrence. All this is in sharp contrast to the woman of story and song, to whom our grandfathers paid courtesy, respect and homage. The majority of the women of today are not seeking as a matter of choice to enter these new fields of labor and activity, as is evinced by their reluctance to improve their opportunity, granted in the State of New York, for voting on many tax and school problems. She does not aspire to do men's work nor to ape his customs, as many of her sisters do, who belong to this movement of woman's suffrage. Is woman to surrender her superior legal rights, when she comes to an equality with man before the law, as a voting unit? It would seem so, else she would have his privileges without assuming his responsibilities, a position in which we could not for

a moment think of her. It would be a contradiction of the very principle for which she stands.

Would the advocate of woman's suffrage approve with complacency the fact that her daughter might occupy a seat on the Supreme Court Bench of the State to try the issue of fact between the State and such monsters of humanity as are brought before it for trial on charges of murder, or for divorce, prompted by all the lower passions of human nature? What effect does this movement have upon women? Are they better individuals, better wives and mothers? Do they have as much time to devote to the social, moral and philanthropic interests of the community as the women who are not engaged in politics and business?

L. C. LINCOLN.

CANANDAIGUA, N. Y.

Treated Worse Than a Yellow Dog.

In accordance with your request I give you a few instances of conditions in Texas, where women are allowed no vote of any kind.

Mrs. Neal, the mother of three children, became a widow. In order to remove to a better educational city she wished to sell her—their—home. Having aided by her work and self-denial to pay for the same she thought it was hers. But no. Considerable expense attended necessary (?) legal procedure before she had the right to dispose of the property. This rendered her both hurt and angry, but was as nothing when she found that legally she did not own her children. A slender woman and struggling to support her family it was no small hardship to accumulate the funds to pay for some man to say that she might be the guardian of her own boys and girl. Professor Simpkins, of the law department of Texas University, says "Texas laws treat a woman worse than an old yellow dog."

It is only two years since a law was past compelling a married man to support his family. No married woman may control her own property save by the courtesy of her husband. One woman, a teacher, had paid for a home. She married a man of no property. Calling up the tax collector to ask the amount of her taxes she was surprised to learn that she owned nothing. There was a house assessed to Mr. Blank. On her marriage it had been set over to him. Are you surprised that this woman is now a suffragist?

Just one other case. Being a nurse I was called to a woman who was violently ill. Tho needing constant attention she was alone in the house with an aged father, himself needing care. I mention all this to show how necessary was the attention she received. At the time of her marriage she owned two houses. In one they lived and Mr. W. collected the rent for the other. When I came to leave she could not get money to pay her nurse, tho she tried repeatedly. She positively could not command one dollar of her own money. She was obliged to get her butcher to let her have it and charge it on the bills. Mr. W. had a good business and plenty of money and would

pay his regular bills. Now is there a State where women vote in which such things can occur?

HELEN JARVIS KENYON.

AUSTIN, TEXAS.

✱

Not Until the Women Reform.

Votes placed in women's hands only add to the quantity. The world is full of illiterate, unthinking women and girls whose chief aim is a good time at the dance hall, card table and vaudeville show. The young men they mingle with are of the same class. They vote for rum and all its attendant vices, and the young women also would, many of them, and their number is increasing, like beer and other

set of weaklings. They have no personal renown, no high level of character and solid quality of moral and spiritual being, "She looketh well to the ways of her household and eateth not the bread of idleness" is not their condition. They look well to the ways of bridge whist and eat the frappé of the dance hall. Married women leave their houses and children to Bridget while they attend the vaudeville. America is yearly raising indolent, idle girls whose sole idea is entrapping some man with money so they will not have to work. Am I wrong? Look about you and see. Can you find ten women, young or old, who would inform themselves on the topics of the day and be intelligent in voting. Look at their bare

THE HEARING ON THE SUFFRAGE BILL IN ASSEMBLY CHAMBER AT ALBANY

drink. Married women will vote as their husbands do, either from intimidation or choice. Women are already *too bold*, and their number far exceeds the modest, educated, refined, who would vote for righteousness. In our little town where 275 girls are employed in a shirt factory, at the March meeting a very large majority of them express their desire that licenses might be granted, as any town was dead without saloons and could they have voted the majority would have been 214 instead of 14. Again, can anything be more fatal to all decency than the inmates of brothels and street walkers casting their votes for sin and iniquity of every form. American women have deteriorated and are becoming a

heads, betokening cheap familiarity or the other extreme of hats, that will not go thru the common space of entrance. Women can do more for temperance and civic righteousness than any other factor known. The cheap up-to-date girls and women make profligate, dissolute men. Do not let them vote till they reform.

MRS. C. F. BLANK.

POULTNEY, VT.

Thirty Years' Experience.

In the legislative debate over school suffrage for women in the year when it was granted in Massachusetts (1879), Senator Wynne, of Franklin, said: "If we make this innovation

we shall destroy the race, which will be blasted by Almighty God!" During these thirty years I have seen all such expectations utterly die out. The most ultra "Anti" would not say that now.

I have seen school suffrage grow greatly in popularity. During the first nine years after it was granted, the women's vote in Boston averaged less than 1,000. During the past twenty-one years it has never fallen below 4,000. At the last election, tho the Republicans and Democrats had united on the same school ticket, and the result was a foregone conclusion, more than 4,000 women went to the polls.

During these thirty years I have repeatedly seen the women's vote turn the scale at a school election. Sometimes it was at an election over which feeling ran hot and high. Never once have the defeated candidates and their friends tried to overturn the result of the election by force—a thing which we have been told must surely happen if the majority of men should vote one way and the majority of women the other. School suffrage in Boston has proved this particular objection to be a libel on American manhood.

ALICE STONE BLACKWELL.

BOSTON, MASS.

They Forced Out An Infidel.

I learned something about the actual workings of woman suffrage in Kansas, first when women obtained the right to vote in school elections and afterward when they were given the right of suffrage in municipal elections.

The beneficial effects were immediate, for by their votes the women extended the length of school terms. In one town an infidel was forced out of his position as superintendent by women voters.

L. T. RICHESLLE.

LAGRANGE, N. C.

No Demand for Woman Suffrage.

My observation is that there is little or no demand for woman suffrage among the rank and file of women.

In the South, where I served as normal training teacher for four years, such a demand would be unpopular because woman suffrage would increase the negro vote.

The laws of Ohio extend the right to women to vote for school boards, but my observation in that State, covering a period of seven years, was that the privilege was exercised very little, excepting on one occasion. That occasion involved the election of a superintendent of schools. The issue had been raised that the man who was seventy-six years old and had been the superintendent for forty-odd years, was too old and too weak to lead the times, so that the school board had to be elected with sufficient efficiency. And the women, the mothers and grandmothers whom the venerable superintendent had helped, raised, and educated, declared in large numbers that he had been good enough for them and was, therefore, good enough for their children. Besides, they

said, being old, he could not get a position elsewhere, and he needed the salary. On these sentimental grounds the women made their campaign, got out the vote even by using carriages, and a board of education was elected whose members were pledged to make no change. The women won, but the old superintendent died before the end of the ensuing school year. After that they lapsed into their custom of not voting.

In Indiana, where I was born and am now living, women do not have the right to vote in any capacity. But the saloons are rapidly being voted out of business, and the victories of the "dry" are in large part due to the influence of our wives and mothers.

WILLIAM E. ASHCROFT.

SOUTH WINDY, IND.

From a Defeated Candidate for Mayor.

The women of Kansas have had municipal suffrage since 1887. I gathered the press comments of the whole State after the first election and have watched with care the voting of the women ever since. Since 1887 there has never been any disorder at a voting precinct in Lawrence to my knowledge. Women often take an active part in electioneering, but I have never known a woman to lose control of her temper at the polls. No one in Lawrence thinks of objecting to women's suffrage. All parties court their participation. When issues are at all clear they can be depended upon to support the candidate who stands for law and order. I believe that the municipal suffrage has deepened the interest of women in the affairs of their communities. I have never heard it claimed in Kansas that Kansas women had been injured in any way by voting.

W. H. CARRUTH,

Vice Chancellor of the University of Kansas
LAWRENCE, KAN.

Won't Tell Their Ages.

In this State women can vote at all city elections and on school questions at any election. I have been on the election board many times and have in my own family two women voters and have, I believe, a pretty good idea of the cause of the very light woman vote in this city at least. Not more than 10 per cent. of the women will register, which they are required to do, mainly because they must give their age. This they regard as an unwarranted impudence; nearly all women, after they pass the age of twenty-five, regard their age and their bank account as their own private business. Many men have the same feeling but in smaller proportion. We hope to see the law changed so that all that will be required will be a simple statement that the voter is of legal age.

As for voting defeminizing the voters or in any way interfering with home ties and duties I regard as the merest bosh which no sensible man believes.

F. E. BARBER.

MCPHERSON, KANSAS.

In Our Town.

"If he is to be elected, the women must do it," said a gray-haired politician of the better sort to me a few days before an election in which the storm center was the school board vacancy.

These be the facts. A politician, a good citizen and a wobbler made up our school board. In June the good citizen had mentally kidnapped the wobbler long enough to dismiss a young masculine teacher whose kindly intimacy with the cigaret and the "stein on the table" had not commended him to the "plain people." But complications set in. The inconsiderate youth married himself to a maiden who was the niece of a State official and the daughter of a county magnate, and the town awoke, in the melancholy autumn, to the fact that the "ring" was mustering its forces to defeat the good citizen, who was up for reelection. The "ring" had a candidate (not in the family, strange to say!), but he played a very statuesque part in the campaign.

Now, there were men in both parties who did not believe in electing a man solely to recall the objectionable combination—son and nephew. But the town is constantly, soggly Democratic. By this I mean that Cleveland, Parker and Bryan all looked alike to it. I think nothing would shake its allegiance—unless possibly the rooster were taken off the ticket. So the few Democrats who honestly meant to stand by the good citizen's record found they could not reverse their own machine. Hence the appeal to the women.

It was a campaign so quiet that some of the brethren thought the sisters weren't working; so, before the election, the politician, who had been parading cautiously in the rear of the opponent's procession, hastily climbed on the good citizen's wagon; so convincing in its results that the day after it was impossible to find any but the merest remnant who would own to voting with the "ring." And they said, with emotions mingled as usual, "The women did it."

In our town the women are nearly unanimous on a moral issue. Some effort was made to swing the women who were not "club women" into line against the good citizen. It failed miserably. Personal friendship for the opponent and persistent lying about the "issue" gained the votes of a few women. But the majority saw straight and voted accordingly.

Also the women are not as flabbily partisan as the men. Feminine Democrats, Republicans and Prohibitionists work together easily when they want the same thing. Men "go forth in bands," properly labeled, and often vote for what they do not want, in order to stay with the crowd.

The women in our town have learned to organize and to work quietly. Some of the men saw the larger possibilities in this, and after that time, when questions of civic betterment arose, more than one man, who had never troubled himself about the justice of woman suffrage, owned its expediency for making a clean and decent city government.

Our women are whole heartedly, tirelessly

energetic. They know how to "get out the vote." When the polls opened, the first carriage load of women arrived, and the last carriage drove up five minutes before closing time. When I was coming home, on election evening, I met a white-haired, sweet-faced old lady, who was for many years a teacher in the city schools. "Did you vote?" I asked. "Before breakfast," flashed her answer.

A TEACHER.

OHIO.

Women and Moral Issues.

Kansas women have the municipal ballot. Yesterday (April 6th) was election day in cities of the first class. Following is a cutting from this morning's Topeka *Daily Capital*:

Special to the Capital.

Atchison, Kan., April 7.—Yesterday's city election resulted in the election of Dr. G. W. Allaman, mayor, with a majority of 1,222 over S. S. King, the present incumbent. Dr. Allaman is pledged to a "clean up" policy and an efficient police force. A total vote of 4,700 was cast and almost half of them were women. Allaman's big majority is attributed to the women.

Almost universally the prohibitory law is so well enforced in the State that there is no longer any contention in local elections between what are known as the "wet" and "dry" elements, altho there is occasionally a city, like the one noted above, where the fight is for a "clean up." You will see on which side the women stood there.

The same was true of the women's vote generally in other parts of the State when the question of law enforcement was being decided.

OLIVE P. BRAY,

TOPEKA, KAN.

Equal Suffragists as Home-makers.

I have never lived in a State where equal suffrage prevailed, nor visited a country where women were fully enfranchised, but I was born and have always lived in a home all of whose members were stanch equal suffragists, and it does not seem to me that I have missed a single desirable thing on this account, while I am fully persuaded that it has added much to my joy and usefulness.

In fact, it seems to me we had better care than some of our playmates, and that our mother was not nearly as apt to leave us to attend suffrage meetings as theirs were to leave them for social functions and whist parties, and I am positive she spent no more time studying suffrage questions than they did reading novels and considering fashion plates, and that she punished us just as often and just as severely. I did notice this difference in our home, however, that the members of the so-called weaker sex were fully as apt to have opinions on political issues as the men and were listened to with the same respect, and when my father was in political life he always consulted and planned with my mother and never hesitated to credit a woman with capacity and ability for national affairs. I confess frankly that I always was and still am proud of this.

We children naturally grew up with a great

interest in the cause of equal suffrage and its upholders, but I was human and when I reached the sentimental age, which every girl must pass thru to reach womanhood, I wandered astray and was heard voicing ideas about woman's place being in the home and its being man's part to shield her and protect her and vote for her. My mother said nothing, but she took me with her to the next na-

tion followed the recommendations of a cousin who was a teacher.

This year every woman in the household voted. The longest any one was gone from the house was twelve minutes, and the home suffered no more from the housekeepers' voting than did my father's business or my office from our voting. Indeed, we all seemed to go about our several duties with a new zest,

MRS. HARRIET STANTON BLANCH AND MISS ROSE SCHNEIDERMAN SPEAKING ON WALL STREET IN FAVOR OF EQUALITY.

tional suffrage convention. I came back with a new comprehension of woman's power and possibility, and I have never questioned since that whatever woman may be called upon to do in life she will do it better if the opportunity of the ballot is hers.

Just two instances out of my own home experience, one to refute the assertion often made that women do not need the ballot because they would always vote just as their husbands, fathers or brothers do, and the other to show that the family does not need to suffer when the women vote: For six years we have lived in a city where women may vote for the school board. The first year when the time came around for us to avail ourselves of this privilege we all discuss the issues of the day and then we go to the polls. When we were going to vote, after it was over we compared notes and found that my father, my mother and I had each voted for different candidates. Papa had voted the straight Republican ticket, mamma had picked out people for their individual worth and ability, and I had

because we were each conscious of our individual power and importance, and a new spirit of comradeship pervaded the home as we realized we were all working toward the same goal of a better city to live in. Instead of our having as good a dinner in spite of the woman's voting I believe we had a better dinner because we all voted.

Lest any one infer that an equal suffrage home can produce only old maids with cranky notions about women's rights, let me say that my sister some seven years ago became mistress of another equal suffrage home and her daughter is already imbibing equal suffrage principles.

A. M. M.

ROXBURY, MASS.

"He Blushed and I Blushed."

I remember going early one year to vote and being fairly blinded by the tobacco smoke; two hours later, when I escorted another woman, the policeman asked me if smoke was offensive; two hours later on the same errand

I found not a man smoking. If one or two women could work this transformation, imagine what a power of order and beauty a polling place would be if the men only thought that most of their lady friends would drop in during the day. Doubtless there would be flowers and perchance tea and cake.

One morning when my early appearance took the attending inspector so completely by surprise that he had not time to wipe the tobacco juice away, he blushed and I blushed, and I went away impressed by the fact that men need women more at polling places than anywhere else. If on election day some of that beautiful influence which is so extolled in press and pulpit and yet exhorted to stay at home like a quarantined disease could be sprinkled over every election booth in the land politics might lose its old association with adjectives denoting filth and dirt.

HORNELL, N. Y.

ANNA CADOGAN ETZ.

Suffrage in South Dakota.

Women have the right of school suffrage in South Dakota. They do not exercise that right. Men have the right of school suffrage in South Dakota. They also do not exercise that right. Usually the retiring member of the board is perfunctorily elected to succeed himself. It does not require a large vote to do that. Taking the school election as a criterion, neither men nor women in South Dakota appreciate the ballot or are fit for suffrage. Occasionally there is a live issue for the voters to decide, and then they rally to the polls irrespective of sex. My own observation, made from a business that keeps me in close touch with elections of all kinds, is that women vote in school elections as often as an issue arises that requires a vote, and that at such times they are apt to cast a more conscientious vote than do the men. They are very much like the men in that they do not get out unless there is an issue and even then they do not get out generally unless there is personal solicitation on the part of leaders, which is also like the men.

SOUTH DAKOTA EDITOR.

Oswego's Experiences.

A few years ago, when our city charter was revised, a clause was introduced giving the franchise to tax-paying women whenever the city was to be bonded. Since that time we have held a number of special tax-paying elections. These have been held in the rotunda of the City Hall. Some of the measures which have been voted upon at these elections are as follows: Municipal ownership of water works; the change of obtaining water supply from river to lake; the erection of buildings at the city farm, the old ones having been destroyed by fire; the erection of a new school building; the advancing of salaries for school teachers; the advancing of salaries for policemen and firemen, etc.

Women have taken an active part in all of

these elections and have always voted for the best interests of the city. No complaints so far as I have heard have been made that women did not comprehend the scope of the subject upon which they voted, but, contrary to the prediction of those opposed to the measure, the better and more influential class of women were found at the polls rather than the baser sort.

G. M. GARDENIER.

OSWEGO, N. Y.

"Push Things."

I am a citizen of the State of Idaho, so of course, I vote. As to how it works: First, in my own case, I came from New England, and didn't want to vote. I wasn't the strong-minded kind. But my husband said it was my duty. He is a minister. So I took his advice and voted—as he did. The next time I voted the straight Prohibition ticket. My husband didn't. Before the third election, I knew something about the respective candidates, and scratched my ticket. In my experience, women are voting more intelligently as well as independently. If their husbands or brothers don't know the character of the candidates they find out some other way. Where first I voted entirely from a sense of duty, I now find it interesting. The men behave well; so do the women. I see no indications of direful effects upon the home. My husband still has his buttons sewed on and his weekly baked beans. He is from Boston. To be sure, when the Legislature was in session, we hadn't time to read the *Woman's Home Companion*, but we did know all about the Local Option bill and other reform measures. Idaho has a woman representative, and of course the women elected her. The men didn't; and we are satisfied with her work along educational and reform lines. The women are responsible for Idaho's free traveling library, also the Children's Home Finding bill passed by the last Legislature. When Sheridan said to Grant, "If things are pushed, I think Lee will surrender," Grant said, "Push things." That is what the women in Idaho are doing, and women everywhere are ready to "push things," until no alternative will be left the men but to surrender.

MRS. W. S. HAWKES.

CALDWELL, IDAHO.

Free Dinners and Buggy Rides in Idaho.

Equal suffrage in Idaho seems not to destroy, but, on the contrary, to increase the respect and gallantry of the stronger sex for the weaker. Gentlemen hunt up the lady teachers and take them for a gay ride thru the woods to attend the primaries, bringing them safely home again after giving them the best dinner the hotel of the town affords. The trip brightens the woman's life; she reads the daily papers, altho they do not reach her on the day printed; she is interested in State and national affairs, because she has just as much power to a voice in their control as has the

man from Missouri on an adjoining claim. I know that this is true, because I spent six weeks of the early summer of 1904 on a homestead claim near Princeton, Ida., with a teacher friend who was hoping to defray her expenses by the sale of the timber on the claim.

OLGA BOULMAN RAYMOND

NEW YORK CITY.

A Typical Colorado Woman Voter.

I had been teaching in a country school and was bound up in my work at that time when Colorado enfranchised her women, so that when I reached my majority the subject was all settled and the system working smoothly enough that the oddity of it had worn off and voting seemed to me a duty to be assumed along with many others. The graded schools in our town that I had attended had given me a thoro course in the study of civil government. I had also taught the subject afterward, so the process of voting seemed not unusual at all, and I am a most domestic creature, entirely devoted to my husband, my children and my home. I belong to no women's clubs or lodges of any kind, and have no society proclivities, and so I feel that I am a typical woman voter of Colorado.

Women were sent to conventions a few times, only to be grievously disappointed that their presence did not purify politics in a convention at all, but they were expected to become "one of them." To their honor be it said they do not attend now. They cannot be associated with the professional politician or give their sanction to his methods. So they have retreated from the active field of politics, just as the quiet, honest man citizen voter has done.

Women never discuss politics. We have confidence in each other that we will do what is for the best by voting for the best man, and I am convinced that the most we can accomplish must be done in this way. The politicians, knowing this sentiment, vie with each other in putting the cleanest and best tickets. The standard is much higher than ever before.

A. N.

GREELEY, COLO.

A Professor's Views

In this town of Moscow, where the University of Idaho is located, it was the votes of the women that banished the saloons. In this county of Latah, it was the votes of the women that effected a sweeping and a desirable political change last autumn, and it was the women, largely thro their power as voters, who established the State circulating library. These are only a few of the many reforms, and by no means the most important that the votes of women have brought about. On the other hand it is impossible to point to ruined homes, unsexed women, neglected children and any other of the direful results of woman suffrage predicted by its opponents. Every spring, as one of the inspectors of our Idaho high schools, I travel for a month in various

parts of our State. In the course of seven years of such work I have visited many towns many times. I know of no evil results of woman suffrage in this State. If the opponents of woman suffrage will point to one concrete evil result in Idaho I promise you that I will consider it carefully, and that I will reply with as specific information as I can obtain.

EDWARD M. HULME.

Professor of History, University of Idaho.

MOSCOW, IDAHO.

"They Are Waking Up."

I have lived in that corner of our country where neither man nor woman may vote. I have lived in a State where the woman and the negro share the odium of disfranchisement. I have lived in States where woman is grudgingly allowed a bit of the suffrage, here and there. Finally, and best of all, I am now a citizen of a State where men and women enjoy equal rights at the polls.

Ever since my majority I have been a citizen of the State of Colorado. I have voted whenever the opportunity arose; I have tried to vote intelligently and righteously. I have attended the primaries and caucuses of the party to which I adhered in the main, but I have never felt myself bound to follow the party when it did not meet my ideas as to platforms or candidates. I have learned many things in my experiences as a voter. Most of all I have learned the unpleasant but necessary lesson of distrust. Eternal vigilance is certainly the price one must pay if one would not be misled.

Woman's vote has not yet made Colorado a model State, nor will that desirable result be obtained for many years yet to come. Grant us a little grace, yet, because of the newness of our commonwealth and the rawness of the materials which only time can blend into a harmonious whole. This one thing, at least, may be said: The women of Colorado are gaining a larger intelligence in civic affairs than those of any other State I have known. They are showing as large a percentage of voters on election day as the men—indeed, in many cases a larger percentage. They are waking up.

When people know what they want, they are able to get it. Last fall the women of Denver knew that they wanted Judge Lindsey to continue his work in behalf of the children of the city, and altho he could not get a nomination from the machine of either party he was elected on an independent ballot that required a scratch for every vote for him. Here was the triumph of good intent plus intelligence, and no one questions that it was largely the work of the women of the city. It is a prophecy of what woman will do when she knows as well as feels.

In Nebraska, where women may vote on school matters only, a pupil in a country district where the population was largely foreign said to me, "Why, my father wouldn't let my mother come to school meeting." A man in Colorado who sometimes aspires to honors

at the hands of his party, but without great encouragement, publicly said that if his wife or servant girl should register he would divorce the one and discharge the other. I am not laying down rules for the wife, but the day should come when he will find it hard to keep any other domestic drudge. X. Y.

COLORADO SPRINGS, COLO.

Colorado Progress Not Revolutionary.

My home since 1890 has been in an active Colorado town, where for a number of years I have enjoyed the privilege of voting for all candidates, whether local or national, equally with men. I have never heard of an instance in which the home was broken up, and among my relatives and friends not even minor differences have arisen because the women vote. The women I know cast their ballots quite as independently of the head of the family as their brothers are accustomed to do, and yet no serious results have followed. I think the case of my own family is not unusual: My father and mother voted a straight ticket, choosing the Prohibition whenever possible; while my sister and myself, coming into contact thru our work, with nearly all the city and county officials and many business men, had a better opportunity to decide upon the individual merits of the candidates, and so scratched our tickets.

Colorado has had an equal suffrage law since 1893, and critics claim that the women have done little toward purifying politics. It is true we have not done anything revolutionary, and I believe we should not. The quiet, persistent effort for better local administration is the aim of the civic societies of the State. Our society secured a grand jury which did excellent work, such as reducing street expectoration, regulating the sale of tobacco to minors, and enforcing the Sunday saloon law; and altho a corrupt district attorney refused to prosecute law breakers, we succeeded in indicting every saloon man in the county, and collected \$24,000 in fines. We know that we have votes which we may use to offset those of the saloon men, and so we hope to win in this fight.

The privilege of the franchise gives me a chance to express my views upon these subjects, and also upon measures which affect property, such as franchises, bond issues, control of public utilities and education.

M. M. B.

CHICAGO, ILL.

Mildly Successful in Colorado.

Issues and seasons have affected the practical working of the extension of the franchise in Colorado, and no general statement can possibly be a true one. My careful observation of its working for fifteen years covers a ward in a large city, a small city and a country village of farmers. In the large city the first two elections the women voted up to 85 per cent. of registration, and women candidates for all offices up to Representative were
